### Stain Your Bungalows

Don't paint them. Stain them all over, roofs, siding and trimmings, with

### Cabot's Creosote Stains

The glossy "painty" effect does not harmonize with the bungalow idea, but the soft, deep colors of our stains suit perfectly. They are rich and transparent, bringing out the grain of the wood and increasing its natural beauty. They cost only half as much as paint and only half as much for labor to apply. If your bungalow is in the woods, where skilled labor can't be had, you can do your own staining with perfect results. Our stains are made of the strongest and finest colors, ground in linseed oil, and specially refined Creosote, "the best wood preservative known."

Cabot's Stains are sold all over the country. Send for stained wood samples and name of nearest agent.

## Welch's — the symbol of hospitality

The unexpected or invited guests recognize an extra touch to your hospitality when you offer them Welch's.

A few bottles in the refrigerator or in the pantry keep you prepared for any occasion.

## Welch's

"The National Drink"

Welch's is always absolutely pure. It is just the pure juice of the choicest selected Concord, pressed when fresh from the vines. The juice is at once sterilized and hermetically sealed in glass.

*Do more than ask for "Grape Juice"—say Welch's—and get it!*

If unable to get Welch's of your dealer, we will ship a trial dozen pints for \$3, express prepaid, east of Omaha. Sample four-ounce bottle, by mail 10 cents. Write for new booklet, "Marion Harland's 99 Selected Recipes."

The Welch Grape Juice Company  
Westfield, New York

*Get the Welch Habit—  
It's one that won't get you*

countries that are not governed by autocrats, such as France and England, the movement for the marriage of recruits is as strong as in Germany and Russia, for it is realized by the clergy and the better element of both these countries that a failure on the part of men and women to recognize their responsibilities to the future in this crisis means the moral and physical death of the nation.

... Please tell me, if you can, what the gain will be to Germany, England or France if all their young volunteers are to marry now? Of what gain will half a million men be to Germany twenty years hence, when England has gained a like number? Germany is now being overpopulated but is said to be fighting for more room for its people. What does Germany, England and France want more men for, if it is not to have more men for the next fight?

Why are people so anxious about what will become of their country after they are dead? I could never understand it. Why do we bother ourselves about the dying out of the race? Why not leave that to God? He will surely be able to take care of the world.

I wonder how many of these "war brides" of forty-eight hours are realizing what they are doing when they give themselves to the first fellow in uniform—khaki or feldgrau—but as soon as he has gone, when they have had sufficient time to reflect, then you may be assured that there will be not a few who feel sorry that they have ever let themselves be persuaded to be carried away by "the preservation of the race."

Among the duties and responsibilities that true womanhood should take on its shoulders is, first: To see to it that the man a young girl marries is a clean, healthy specimen of the human race, so that the children she will rear may be healthy. There will then be less graves to fill, but more cradles to rock.

It has always seemed easy for fathers to give their daughters away. Their happiness apparently was the last thing their fathers thought of, so when you speak lightly about "a week's honeymoon and a widow's pension" I do not suppose you have any regard for the word "love."

THYRA FRANDSEN  
Brookline, Massachusetts

This illustrates the point that we have been making from the first, that this fierce condemnation of the war brides is based upon the false assumption that these hasty marriages are loveless. This is absurd to one who either remembers our civil war or who has read the European papers about the present war. The question being discussed in Europe now is whether these marriages being love matches will turn out as well as the alliances arranged by parents for mercenary and family reasons which were previously in vogue. There is a growing belief that they will and if so we may expect that the "American marriage," as it is called, that is, marriage for love, will become more common in Europe.

This question is not to be settled by preconceived notions or blind sentiment. The appeal must be made to the facts where they can be obtained. We ventured in the editorial under discussion to express the opinion that a study of American biography would show that many of the sons of soldiers born in the period 1861-1866 had been distinguished for ability and public service and that consequently the country would have suffered a considerable loss if these war marriages had not been made. Our

*Belle Armstrong Whitney*

## The Best Dressed Women in Europe

—the fashion leaders—those who "set" the styles are the most economically dressed women in the world.

So says Mrs. Belle Armstrong Whitney in the articles she is writing for "GOOD HEALTH." And—Mrs. Whitney knows because her home is in Paris where she is a prominent member of the "American Colony," belongs to clubs of which women of Royal Families are members and buys her own clothes from the great Parisian dress artists. In her own country, Mrs. Whitney is a leader in the social, literary and club life of New York and her writings and other work have made her "the highest paid Fashion Authority in the world."

Mrs. Whitney tells you, in "GOOD HEALTH," that you can have clothes which are at once stylish, beautiful, suitable to yourself and healthful—without excessive cost. She also tells you how. The days of ugliness in common sense clothes are past. The time of frivolous instability in fashions is passing. There dawns an era of sanity in women's clothes. Mrs. Whitney's articles appear only in "GOOD HEALTH"—the magazine which teaches practical efficiency for the individual and the home. Send ten 2c. stamps (20c.) for the April "GOOD HEALTH" with Mrs. Whitney's first article or—get them all by subscribing to "GOOD HEALTH" for a year. Only \$2 and worth more. (Canadian postage 12c. extra, other Foreign postage 24c. extra.) Mail your subscription and remittance to—

opinion, we must confess, is based on nothing better than personal observation and casual reading because, so far as we are aware, no competent investigation has yet been made of the question of how these war babies compared with the children of civilian fathers or of a period of peace. One would think that such a problem would be quite as interesting and profitable a topic for a Ph.D. candidate as the study of "The Anatomy of the Internal Ear of the South Sea Sea Urchin" or "The Typographical Errors in the First Folio Hamlet."

We are not, however, altogether without light on this question. A German monograph by Burchard on the war marriages of 1870-71 reached the conclusion that the offspring were superior to the normal. Several of our critics raise the objection that children born under such distressing conditions will be feeble and inferior. But a professor of the Sorbonne has been studying this point and finds that the infantile death rate in France since the war is less than formerly, notwithstanding the fact that the mothers are suffering from privation, overwork and anxiety. One of the causes of this improvement is that the French mothers have taken to nursing their children, for it is well known that the mortality of bottle-fed babies is three or four times what it should be. Before the war there were in more than half of France more deaths than births every year and infant mortality was high. War slays its thousands, but vice and fashion their ten thousands. Now as the result of the spiritual awakening manifest in France we may hope that in the future there will be fewer graves to fill and more cradles to rock. Already a great reform in marital relations has resulted from the bills introduced by M. Briand, Minister of Justice, to facilitate war marriages. The French marriage laws and customs have been responsible for much irregularity and it is to be hoped that now they are suspended, they will never be restored.

In reference to another point raised by Miss Frandsen, we may call attention to the fact that soldiers are submitted to a strict medical examination and must be clean and healthy, which is more than can be said for civilian bridegrooms. We also would register a protest against her assumptions that fathers are indifferent to the fate of their daughters and that people should be indifferent to the future of their country and the race. Providence has, we believe, left upon the human race a certain responsibility in regard to its perpetuation and prosperity.

The following letter we publish almost in full because it is not merely critical, but presents a practical program of legislative reforms:

I hope there will be some more practical appreciation of "the women who save the race" than a little pat on the shoulder and being called "good" by statesmen and magazine writers. These young wives have a future to face, of a devastated country, a heavy war debt and possibly a child to support as well as to care for and train. As a mother of seven I have found children a serious proposition, even in this favored country. Six are living and there is no

physical flaw among them. In school they average above the standard. A Christian ancestry runs back two generations on both sides of the house with ministers and elders all thru the connection. There is only one flaw. Their father's regular position with what is considered good pay, won't support them. A house that is large enough and cheap enough for us, is old and lacks hot water and stationary wash tubs, and sleeping porches and most modern conveniences. It takes too much time and strength to do the housework. I bake my bread, thereby saving half the price of buying bread—except for the extra gas used to cook it. Of course the washing has to be done at home. The boys can make their clothes by paper routes and odd jobs.

Now I am beset by agents, telling the advantages of one baking powder over another, or perhaps it is flavoring or breakfast food or coffee or some variety of lard substitute. Some of these give free prizes. I feel like crying out, Uncle Sam! Please help your children by starting some little stores in the poorer parts of the cities, where we can get plain, wholesome food without paying enough extra to cover the expense of advertisements and solicitors and free delivery and prizes.

Please start some bakeries where clean, healthy bread can be bought at the cost of production.

Please lift the heaviest job of the week from the tired mothers of the nation, and start some laundries to be run without profit.

Please start a few shoe factories where neat, comfortable shoes can be bought at cost of production.

If intensive farming is the best way to farm and if quality is preferred to quantity in population, then parents ought not to bring into the world any more children than can be reared to efficient citizenship. The hospital bills or home expenses for proper care when the babies are born, also their teeth, eye, ear or throat possible expenses, must be considered. Again I say, Oh, Uncle Sam! Please have more and better hospitals, where a baby can be born without its father feeling branded for a pauper and its mother feeling humiliated because of its birth in a "county hospital."

Please start clinics as companions of the public schools, as well run and as self respecting as are the schools.

In most of our states, unfortunately, a person like the writer, who is well qualified by experience to say what legislation is most needed to aid the home, would, by the very fact of being a mother instead of a man and so capable of acquiring this experience, be prevented from exercising any control over legislation. In Australia, where women vote, the government runs a bakery and grants a maternity allowance to every mother, rich or poor. The German Government has been impelled by the war to take similar action and will provide financial assistance and free medical attendance to all women at childbirth. This, one of the temporary gains of the war brides movement, may be expected to become permanent. We are also glad to see that the French Government has decided that the orphans of soldier fathers are to be raised and educated at the expense of the state. This will give to the war babies a better chance in life than some of the peace babies have had.

A "cub" reporter on a New York newspaper was sent to Paterson to write the story of the murder of a rich manufacturer by thieves. He spread himself on the details and naively concluded his account with this sentence:

"Fortunately for the deceased, he had deposited all of his money in the bank the day before, so he lost practically nothing but his life."—*Harper's.*

## PEBBLES

"He is noted for his moral courage."  
 "Dear me! Is he as unpopular as all that?"—*Life*.

## SHOCKING

"Speaking of electrifying modern dances, have you seen the Induction Coil?"—*Cornell Widow*.

Bilton (sternly)—What's the reason that young man stays so late when he calls?

Miss Bilton (demurely)—I am, papa.—*Judge*.

Rather unexpected was the reply of a Mrs. Tommy Atkins to a gentleman who inquired if her husband was at the front:

"Yus," she said, "an' I 'ope 'e'll serve the Germans as 'e served me."—*Boston Transcript*.

## THE HONOR SYSTEM

John had finished his quiz, and wrote at the bottom of his paper, "During this examination I was unable to catch any one looking at my paper. Further, I wish to state that my own frantic S. O. S. signals were entirely disregarded."—*Minnehaha*.

"Shoe-string's untied, ma'am," a small boy called out to the stout woman who moved majestically up the street. "I'll tie it for you."

Even a less haughty woman would have found it difficult to treat with disdain so kind an offer, and she drew back her skirt in acceptance of his attention.

The little boy pulled the string tight and smiled up at her. "My mother's fat, too," he explained.

"Is the editor in?" asked the man with the unbarbered hair and the shiny coat, as he fished a roll of paper from his pocket.

"No," replied the office boy, "he has just gone out."

"This is the third time I have called to see him," growled the caller, "and each time you have told me that he has just gone out. What's the explanation?"

"I don't know," answered the office boy, "but I guess he must have been born under a lucky star."—*Philadelphia Public Ledger*.

A gallant Tommy, having received from England an anonymous gift of socks, entered them at once, for he was about to undertake a heavy march. He was soon prey to the most excruciating agony, and when, a mere cripple, he drew off his foot-gear at the end of a terrible day, he discovered inside the toe of the sock what had once been a piece of stiff writing paper, now reduced to pulp, and on it appeared in bold, feminine hand the almost illegible benediction: "God bless the wearer of this pair of socks!"—*Punch*.

Two ladies, whose husbands are members of the faculty of Oberlin College, went to call on the new professor's wife. They were shown into a room where the small daughter of the house was playing. While waiting the appearance of their hostess one of the ladies remarked to her friend, at the same time nodding toward the little girl, "Not very p-r-e-t-t-y, is she?" spelling the word so that the child should not understand.

Instantly, before there was time for the friend to reply, came the answer from the little girl, "No, not very p-r-e-t-t-y, but awfully s-m-a-r-t."—*Times*.

Simplified spelling is not the only qualification of the successful stenographer, if we may believe the Cleveland *Plain-Dealer*:

"What did you learn at the school?" the boss asked the fair young applicant for the stenographer's job.

"I learned," she replied, "that spelling is essential to a stenographer."

The boss chuckled.

"Good. Now let me hear you spell essential."

The fair girl hesitated for the fraction of a second.

"There are three ways," she replied.

"Which do you prefer?"

And she got the job.

REGAL

## Making It Easy

When in doubt about YOUR car—when choosing seems so difficult and the merits of one make-after-another is over shadowed by the features that don't appeal to you—just remember there are THREE REGALS supplying pretty nearly every known motor-need.

No matter which one you select, it will have all those sturdy, enduring Regal qualities which have been developed in our eight years of car-building.

Sort of simplifies things, doesn't it? Here they are:

A LIGHT "FOUR" 106 inch wheel base	\$ 650
A STANDARD "FOUR" .....	1085
A "V" TYPE "EIGHT" .....	1250

All models are 5 passenger capacity—fully equipped, including electric lights and starter—have crown fenders, demountable rims and one man top. Send for literature and name of nearest dealer.

Twenty-Five Thousand Students

# THE NEW BOOKS

## TRYING TO EXPLAIN GERMANY

THE English presses turn out a steady stream of books aiming to explain or interpret the German mind. Some of them are vindictive and intolerant; some of them are fair-minded and illuminative, but they suffer from one defect, belatedness. If they had been printed and read in 1913 there either would have been no war or it would have been a shorter one. For at the bottom of every war there is a misunderstanding and history shows no greater or more fatal misunderstanding than this between the two great branches of the Teutonic race. We in America reading the apologetic literature of both sides can see clearly why and where they failed to understand one another.

On the English side this lack of comprehension is largely due, as Mr. Adkins of Sheffield University points out, to the fact that the average Englishman travels little, reads no German and is not taught the history of continental Europe. To remedy this last deficiency his little volume, *Historical Backgrounds of the Great War*, is designed and is well adapted. By retaining the colloquial form of the popular lectures he has made a very readable book in which history, racial psychology and international politics are mingled with personal observations on art, literature and social life. He takes pains to commend such German virtues as he recognizes and is not at all backward about revealing the sins and inconsistencies of British policy in the past. Half of the volume is devoted to Germany; the rest to France, the Slavs and Great Britain. For the young student or for the older reader who feels the need of "catching up" quickly with the historical information necessary to an understanding of the issues of the war there is no more convenient volume.

*Kaiser, Krupp and Kultur*, by Theodore Andrea Cook, editor of the *London Field*, is by no means so interesting or so enlightening. It consists of more or less intelligent comment from week to week on such news as the British censor permitted to appear and such papers as the British Government thought fit to print. Some of these editorial prognostications and surmises make rather amusing reading in view of later events and in light of the fuller knowledge we now have.

Of Treitschke's works, with which most of us are making a belated acquaintance, we have two more volumes. One of them, *Germany, France, Russia and Islam*, contains essays of especial interest, those on "What We Demand of France" written in 1871 and insisting upon the cession of Alsace-Lorraine; those dealing with the Eastern question in which he condemns England for taking the side of the Turk; and those eulogizing Luther and Protestantism. Putnam also brings out Treitschke's

life of Frederick the Great, together with a translation of *The Confessions of Frederick the Great*, about the origin of which the editor, Douglas Sladen, is provokingly vague. He quotes in confirmation of its authenticity his typewriter girl's sense of style!

Stanley Shaw's large volume on *The Kaiser*, published a year before the war, is now brought out in a condensed form and at low price, with a supplementary chapter. It is a graphic and fair-minded description of his varied activities and enigmatic character.

Few monarchs have been so obliging in providing the material for self portrayal and Professor Gauss of Princeton has produced a character sketch in his excellent collection of the public utterances of *The German Emperor*. The range is amazing. He demands a place in the sun. He criticizes modern art. He urges safety devices in machine shops. He discusses questions of theology. He praises American universities for their temperance. He denounces the Socialists. He congratulates Count Zeppelin. He announces that "the German empire has become a world empire." He declares, finally, "they are forcing a sword into my hand." Each of these addresses is given in full and prefaced with a brief explanation of the circumstances calling it forth.

Treitschke is also made use of by Professor Morgan of University College, London, to give weight to his sinister interpretations of *The War Book of the German General Staff*. These

rules of warfare are bad enough as they read and we have sufficient evidence that the German practise in Belgium has gone beyond them in brutality, but that is no reason why the editor should apply the term "cynical" to any rule allowing harsh measures, and "affectation" to any restrictions on violence. If the Allies would live up to the German war book their conduct would have been better than it has been. But of course Professor Morgan makes no reference to the violations of international law by the Russians in East Prussia or Great Britain on the sea, as for instance the rules established by the Declaration of Paris in 1856 relating to blockades.

The Declaration of Paris, as well as the Declaration of London and the other international conventions aiming to regulate land and naval warfare, are contained in the handy manual of *Law and Usage of War*, compiled by Sir Thomas Barclay. The alphabetic arrangement of topics facilitates quick reference to disputed points.

Those who are led to buy the little book entitled *Operations Upon the Sea* because of the red-ink announcement on the slip cover that it contains "A Startling Scheme of Attack upon the United States" are likely to be disappointed when they find that it is merely an ordinary manual dealing with the technical problems of transporting troops. It is one of the chief duties of a general staff to make such studies, and if the officers of our War Department have not on file in Washington a similar plan of attack on Germany as well as every other possible opponent, they should be discharged from the service for neglect of duty. But while Baron von Edelsheim's handbook is not sensational it is useful and should be widely read since in this country we do not leave the question of military preparedness to experts but all of us take a hand in it. Even the most pronounced pacifist may well pause and consider when he reads that the United States has only twenty thousand troops, that is, half an army corps, available for field service, with a reserve of a hundred thousand militiamen, poorly armed, poorly drilled and altogether untrained, while Germany could land two hundred thousand men on our unprotected seaboard within a month. But we may console ourselves with the observation that altho Baron von Edelsheim figures out that it would be still easier to invade England no German troops have yet landed there.

In the "American interpretation" of *Germany Embattled*, by Oswald Garrison Villard, we find what is generally lacking in the British books, that is, a real appreciation of the German viewpoint and of the admirable qualities of the German character. Nevertheless he condemns Germany's present action as emphatically as any of the English av-

## THE NEWEST BOOKS

*King Jack*, by Keighly Snowden, is a picturesque romance, the story of an actual latter-day Robin Hood, who roved in Yorkshire a century ago.

Dutton. \$1.35.

*The Need for Art in Life*, by I. B. S. Holborn. Lectures on Greek, medieval and Renaissance art and the effect on modern life of the lack of love of beauty.

New York: Shaw. 75 cents.

*The Keeper of the Door*, by Ethel M. Dill, reassures the readers that the mid-Victorian heroine, of several lovers and all the virtues save sense and force, still lives.

Putnam. \$1.40.

*A Surgeon in Belgium*, by H. S. Soutar. A vivid, dramatic, not dispassionate account by the surgeon in chief of three months' service with the Belgian Field Hospital.

Longmans. \$2.40.

*The Field of Social Service*, ed. by Philip Davis. Papers by specialists in different branches of community work with chapters on training and on positions open to workers.

Small, Maynard. \$1.50.

*Spoon River Anthology*, by E. L. Masters, gives what wanderers in country churchyards always wish for, the life stories sordid, tragic, lovely, of those who "sleep peacefully side by side."

Macmillan. \$1.25.

thors, and subjects the German propaganda in America to a keen criticism. In discussing the plea that Germany while taking the offensive was really acting on the defensive he makes the strong point that the success of the German armies in holding a five hundred mile line of field fortifications in France has proved that Germany would have been impregnable if she had been content to defend her own territory on the frontier. Mr. Villard ends with an inspiring plea for the extension of our American republicanism thruout the world. We hope his optimism will prove justified for, as he says, Americans "trust that as a result of this war thrones will everywhere come crashing to the ground."

In *Can Germany Win?* an anonymous American endeavors to wake up England to her real danger and to arouse her to a more earnest effort to overthrow Germany. In pointing out the absurdity of the stuff about the German Kaiser and armies and nation with which the British public is fed he evidently speaks from the basis of a long residence in Germany. He says "to me it is amazing that a race, commonly so well informed as the English, should be so hopelessly without knowledge on this most essential point," the spirit of the German people. But he finds the German press vastly more ill-informed and malignant than the British.

In *The Audacious War*, C. W. Barron gives special attention to an aspect of the war which most writers—with discretion—pass over lightly, that is its financial side. He discusses the questions of national resources, international commerce and gold reserves in a compact and not too technical style.

*Historical Backgrounds of the Great War*, by Frank J. Adkins. New York: McBride, Nast. \$2.

*Kaiser, Krupp and Kultur*, by Theodor Andrea Cook. Charles Scribner's Sons. 75 cents.

*Germany, France, Russia and Islam*, by Heinrich von Treitschke. G. P. Putnam's Sons. \$1.50.

*The Confessions of Frederick the Great, with Life*, by Heinrich von Treitschke. Translated by Douglas Sladen. G. P. Putnam's Sons. \$1.25.

*The Kaiser, 1859-1914*, by Stanley Shaw. The Macmillan Co. 40 cents.

## FICTION AS SOCIAL HISTORY

It takes an interpreter familiar with the history of an epoch to determine to what degree a given novel is historically representative. As such a commentator Allene Gregory presents *The French Revolution and the English Novel*, which concerns itself with a group of minor English novelists of a century ago. The book follows the historic method in its researches and emphasizes the

## THE BEST NEW BOOKS OF THE SEASON

# C WINSTON CHURCHILL'S NEW NOVEL A FAR COUNTRY

Cloth, 12mo.  
Illustrated  
**\$1.50**

By the Author of  
"The Inside of the Cup"

In "A FAR COUNTRY" Mr. Winston Churchill has written a novel that will probably arouse greater interest than its immediate predecessor, "The Inside of the Cup," one of the most successful novels ever written. In this new novel Mr. Churchill turns to another of our social ills and with even greater daring lays bare the truth. Mr. Churchill has spread a big canvas and on it he has drawn another true picture of contemporary American manhood and womanhood.

### The Best New Novels

Mr. H. G. Wells's New Novel

**BEALBY** By H. G. WELLS, Author of "The Wife of Sir Isaac Harman," etc. A novel told with Mr. Wells's inimitable humor. No one can read *Bealby* without enjoying it, for it has all the exuberance and the irresistible charm of youth. **\$1.35**

**GETTING A WRONG START** The author of this novel is a well-known American writer who here tells the intimate story of his eventful life. An exceedingly real tale, graphic and unfailingly interesting. **\$1.00**

Mr. Eden Phillpotts's New Novel

**BRUNEL'S TOWER** By EDEN PHILLPOTTS, Author of "Faith Tresilion," "The Three Brothers," etc. Humor and a genuine sympathetic understanding of human nature characterize this story throughout. Mr. Phillpotts has here written a real contribution to literature. **\$1.50**

**THE HAND OF PERIL** By ARTHUR STRINGER. A striking novel developed with consummate skill enhancing Mr. Stringer's reputation as one of the foremost writers of good detective stories. **\$1.35**

### The Best New Poetry

Mr. John Masefield's New Book

**PHILIP THE KING** By JOHN MASEFIELD, and Other Poems Author of "The Everlasting Mercy," etc. "*Philip the King* ranks with the drama of the greatest Victorian poets." — *Phila. Public Ledger*. **\$1.25**

**SPOON RIVER ANTHOLOGY** By EDGAR L. MASTERS. A remarkable collection of verse essentially American in character, written in a new free form of poetical expression. **\$1.25**

Mr. Tagore's New Book

**SONG OF KABIR** By RABINDRANATH TAGORE, Author of "The King of the Dark Chamber," etc. A deeply sympathetic interpretation and rendering of the Songs of Kabir. One of the most important of Mr. Tagore's works. **\$1.25**

**THE CONGO AND OTHER POEMS** By VACHEL LINDSAY. A fresh contribution to the new spirit of poetry. Something different and well worth while. **\$1.25**

### The Best New Books on Current Topics

**RUSSIA AND THE WORLD** By STEPHEN GRAHAM, Author of "With Russian Pilgrims to Jerusalem," etc. A record of recent observations in a country of which the author has long been a sympathetic student giving an intimate picture of the Russian people. *Illustrated*, **\$2.00**

**GERMAN WORLD POLICIES** By PAUL ROHRBACH. Translated by Dr. Edmund von Mach. A clear insight into the character of the German people, their aims, fears and aspirations, by one who has been for several years the most popular author of books on politics and economics in Germany. **\$1.25**

**THE CONTROL AND LEADERSHIP OF MEN** By ENOCH BURTON GOWIN. A book of interest to all business men and executives, showing how personal efficiency and ability may be developed to the fullest. **\$1.50**

**AMERICA AND HER PROBLEMS** By PAUL BENJAMIN D'ESTOURLLES de CONSTANT, Senator of the French Republic, etc. A penetrating discussion of our national and international problems as seen by a statesman of rare genius and a keen observer of governmental affairs. **\$2.00**

# THE HARBOR

By ERNEST POOLE

"By all odds the best American novel in many a long day."

—N. Y. Times.

The N. Y. Tribune says: "The Harbor" is "One of the ablest novels added to American fiction in many a year. A book of the past, present, and future, not only of New York, but of all the world."

The N. Y. World says: "The Harbor" is "A fine new American story, in the spirit of the hour. . . . A work which must be placed at once among the rare books that count."

Cloth, 12mo. **\$1.40**

"The North American Review" may be substituted for "Harper's Magazine."

influence of industrial changes on literary, political and social conditions and theories. It is with second-rate novelists that we have here to do. Shelley, to be sure, is among them, but he wrote his novels with his left hand. The same is true of Mary Wollstonecraft, whose distinction is as the pioneer of English feminism. Other outstanding names are William Godwin, whose *Caleb Williams*, with one foot in the grave, still lives a half life; Thomas Holcroft, the most representative novelist of the group; Robert Bage, Mrs. Inchbald and Mrs. Opie. These and the rest are clumsy and heavy-handed artists, but for all their literary sins they do help to conjure up for the imagination the dead world from which they sprang. Cries of liberty, equality and fraternity ring thru the pages and heady denunciations of kings, priests and aristocrats; the deist intones his creed with the unction of the Savoyard vicar; the anti-slavery advocate crusades; from the contamination of the feminist vindicating the rights of women, the anti-feminist draws her skirts away; matrimonial heresies and educational theories are rife; echoes of Rousseau in praise of primitive innocence and ignorance fill the air; cloudy dreams of utopias, communes and pantisocrasies scud across the idealist's sky. These novels constitute indeed a microcosm of the England of their day, and the author, with trained scholarship, has set in order, probably once and for all, a little corner in the great house of letters.

*The French Revolution and the English Novel*, by Allene Gregory. G. P. Putnam's Sons. \$1.75 net.

### PAUL ON MINISTERS

Alexander Nairne's *Epistle of Priesthood* is an exposition and discussion of the more important aspects of the Epistle to the Hebrews. It is scholarly, reverent and theological.

Scribners. \$3.

### THE DISEASE OF THE AGE

The wise little book, *Don't Worry*, points out what all admit to be the cause of many of their troubles, physical as well as mental and moral. But C. W. Saleeby makes the readers feel that worry has far more baleful power than we realize, and places the habit in its rightful position as one of the "seven deadly sins."

Stokes. 50 cents.

### FOR THE STUDENT OF SOCIOLOGY

The social problems of the modern city are analyzed and set forth in outline form by Seba Eldridge in *Problems of Community Life*. The book is descriptive and critical. Students of conditions in New York will find it particularly interesting and the well presented material will be valuable as a reference work to all those engaged in municipal reform.

Crowell Co. \$1.

### POTBOILERS

Altho he carefully refrains from telling us so. *The Pretender*, by Robert W. Service, may very well be autobiographical in its story of an author's yielding to a popular demand for the hackneyed, sensational melodrama-story. Mr. Service's poetry led us to expect better than this uninteresting succession of sentimental and sensational episodes held together by the mere semblance of a plot.

Dodd, Mead. \$1.35.

### A B C IN HEALTH

Dr. Woods Hutchinson's *Civilization and Health* contains flashes of light on common topics, as, that the reason milk

when boiled is less wholesome than when raw is that it contains certain enzymes in its fresh state which help to digest it. Another illumination is "Let the real Gold Dust Twins, sunlight and fresh air, come into every room in your house the year round and the fever debauch of spring cleaning will not be necessary."

Houghton Mifflin. \$1.50.

**BOY SCOUTS**

*The Boy Scouts of Black Eagle Patrol* are jolly, interesting boys, full of fun and life. Their good times and their problems, their friendships and their work, make up a story that will captivate the attention of every normal boy. Leslie W. Quirk has a delightfully youthful point of view and he cleverly shows us the charm and the value of scout work for any boy.

Boston: Little, Brown. \$1.

**THE OUTDOOR PALETTE**

Not every artist can do what F. Hopkinson Smith in *Outdoor Sketching* did well, write for both artist and art-lover. With a charming description of significant personal experiences he held out an illuminating and practical message of art. With enthusiasm born of love of nature that made him critical of those who, like himself, worshiped all her phases, the author touched upon the principles which govern outdoor sketching, and, informally, upon the work of its masters.

Scribner. \$1.

**A GROWN-UP'S FAIRYLAND**

Opera has never been amenable to the laws of the drama, hence in reading the book of the prize-winning American opera, *Fairyland*, by Brian Hooker, allowance must be made for the difference in aim. Theme is a secondary consideration, and if the allegory of the text seem a bit shadowy, tho poetic, as Mr. Hooker's elaborate myth of Rosamund and Auburn is, it may detract nothing from its operatic possibilities. That it is an American opera is distinctly encouraging.

Yale Press. \$1.

**INDIAN SUMMER**

Denied her youth by an exacting father, not until middle age does romance come into the life of Mary Ellen Barstow. Then for a brief moment of joy with Peter Hale, of the poet's heart, she becomes one of the simple *Children of Earth*. But the chance reflection of a woodland spring shatters the idyll and the past reasserts itself. Such is the simple plot of the Winthrop Ames \$10,000 prize play, which Alice Brown has set in the same quaint New England dialect and custom made familiar in her short stories.

Macmillan. \$1.25.

**A HANDBOOK FOR THE WOODS**

F. Schuyler Mathews is the author of field books of flowers and birds, and he has the skill to put in a compact volume just what the amateur wants. In his new *Field-book of American Trees and Shrubs* the descriptions are exact and full enough, and opposite every page are figured from three to eight trees or shrubs, giving leaf and either flower or fruit. Besides these there are sixteen full page colored illustrations. The book is compact enough for field use and is heartily to be commended.

Putnam. \$2.

**A NEW DREAM OF THE BEYOND**

"When men's bodies go to sleep their souls cross the border to *The Unknown Country* and recover all they have lost, and gain all they have hoped for that is best." Upon this thought has Coningsby Dawson based his little story of a man whose great love for the sister who died makes it possible for him to penetrate that Other World, where "nothing is different, save only men's happiness." It is all simple in the extreme, but that very unpretentiousness is its most pleasing quality.

Hearst's. 50 cents.

**LAND FOR CITY USES**

The practical application of American law in the acquisition of land for municipal social service is comprehensively treated in

# SCRIBNER BOOKS

## Satires

the types that we all meet every day: "The Writer," "The Housewife," "The Schoolmaster," "The Artist," "The Plain Man," etc., quite without the cynical element give **THE LITTLE MAN AND OTHER SATIRES**, by John Galsworthy, a universal human appeal.

## Interlaken— a school on a farm

where boys learn by doing. Actual contact, under competent instructors, with growing of crops and care of live stock on a 670 acre farm. Shops, work with tools and animals, deep woods, beautiful lake, boating, bathing, skating, healthful sports, right associates.

High standards of scholarship—under experienced instructors who know life and modern educational methods. Preparation for American and European universities. An exceptional school plant—gives opportunity for imitative and executive work. Only the sons of American business and professional men of good moral character admitted; the number is limited. Send today for catalogue.

EDWARD M. RUMELY, Principal  
Rolling Prairie, Indiana

*Carrying out the City Plan*, a handy volume by Flavel Shurtleff, of the Boston Bar, in collaboration with Frederick Law Olmsted, Fellow of the American Society of Landscape Architects. Such questions as the public ownership of land, excess condemnation, and the use of police power in carrying out the city plan are taken up in detail.

New York: Survey Associates. \$2.

**ONCE HOLIDAY LAND**

Charles Pears' diary of a trip along coast lands *From the Thames to the Netherlands* now partly devastated by war, is full of chit-chat and anecdotes incident to such a journey. There are many pleasant illustrations in color.

Macmillan. \$2.

**WREN AND OTHERS IN THE NEW WORLD**

A delightful book on *Early American Churches*, with more than a hundred illustrations, has been written by Aymar Embury II. None of the original church buildings of the American colonies is now standing, but there are many of the second and third generations in New England and in the middle and southern states, and quite as interesting as the New England styles are the Dutch buildings and the historic churches of Virginia.

Doubleday, Page. \$2.80.

**STUDIES OF HUMAN NATURE**

With insight into the actions and reactions of everyday life, St. John G. Ervine has sketched in *Eight O'Clock and Other Studies* a series of clear-cut pictures of human emotion in many familiar phases. Full of dramatic force and subtle suggestions of a deeper moral purpose, which is never allowed to mar the artistic effect of the story, these studies are interesting and worth while.

Macmillan. \$1.

**WHAT ANIMALS THINK**

The war from the point of view of a Belgian dog, and how it affected one typical peasant family, makes the story of Pierrot, *A Dog of Belgium*, by Walter A. Dyer. In contrast is *Don, His Recollections*, the autobiography of a fine horse of the Black Beauty type. Both books convey an appeal for sympathy. The Pierrot Fund for Relief in Belgium is the practical outlet for the one, and the American Humane Education Society takes care of the other.

Doubleday, Page. \$1.  
Am. Humane Education Society. \$1.25.

**WOMEN CITIZENS**

*What Can She Do?* was the title of an old-fashioned book in the years that were. *Woman's Work in Municipalities* might well be called "What Doesn't She Do?" Mary Ritter Beard, the Beatrice Webb of America, here reviews the varied civic activities of women. That ideals of honesty, beauty and order are becoming realizations in our cities is largely due, the author thinks, to the unselfish work of women, and the array of facts marshaled in support of her contention has distinct sociological value.

Appletons. \$1.50.

**HISTORY BY ITS MAKERS**

Under the editorship of Charles M. Andrews, the first of the series of *Original Narratives of Early American History* has been issued under the title, *Narratives of the Insurrections*. The book is a compilation of letters, reports of colonial governors, pamphlets, and historical accounts of men engaged in or witnesses to the revolts of 1675-1690 in the colonies. To both student and general reader the book is welcome, as showing the attitude and thought of the hardy men who paved the way for the Revolution.

Scribner's. \$3.

**THE NATION'S WARDS**

Warren K. Moorehead in *The American Indian in the United States*, as a member of the Board of Indian Commissioners, takes up the later progress of the Indians toward the civilization forced upon them, the great wrongs which they have suffered, and their late wars. A large field has been covered. It is in Oklahoma

that the last great wrongs are being done to the Indians, and the congressmen of that state at Washington are the chief and powerful defense of the robbers who by various devices of legal chicanery are taking advantage of the undefended Indians.

Andover, Mass.: Andover Press.

**A CHILDREN'S CYCLOPEDIA**

Of the four volumes of the *Human Interest Library* one is devoted to American history, one to general history, and two to science. The style is simple and swift. The books are full of illustrations, and tho the workmanship is cheap there is much wholesome pleasure within the red covers.

Chicago: Midlands Press.

**A TALE OF ALASKA**

The adventure and the zest of life in the open give something of their own atmosphere to *The Rim of the Desert*, a dramatic story of Alaska and of people who loved it, by Ada Woodruff Anderson. Along with the plot are cleverly interwoven forceful tales of Alaskan life and vivid pictures of Alaskan scenery. Even the inevitable love story has the charm of an unusual development.

Little, Brown. \$1.35.

**A SCIENTIST'S WHO'S WHO.**

*The Naturalist's Directory* gives the names, addresses and specialties of 2500 men and women in the United States and Canada who are devoted to the natural sciences, and of nearly as many more in other English-speaking countries of the world. Such a volume must be of great use to all scientific students and workers or those desirous of exchange of information or specimens.

Salem, Mass.: Sam'l E. Casseno. \$2.

**A CASTLE IN IRELAND**

A charming girl, an interesting man and a haunted castle are the main ingredients in *The Curse of Eagle Castle*, a well-told love story by Katharine Tynan. Its scene is a beautiful old country estate in Ireland, where folk-lore superstitions and weird tales of doom have woven a spell of dread imaginings on the inhabitants. How Meg Hildebrand lifts this spell is the interest of the story.

Duffield. \$1.25.

**THE FLASH OF A METEOR**

*Loneliness?* the posthumous book of Robert Hugh Benson, shows him in a new light, that of a student of music, and is unusual both for its study of temperament and its novel bits of analysis of Wagner operas. Monsignor Benson is first the Catholic priest, but in spite of the book's religious purpose, the final renunciation seems to result not from the author's conviction, sincere as it is, but from the subtle analogy of the life of the brilliant prima donna and the fate of *Elsa* in whom she lived.

Dodd, Mead & Co. \$1.35.

**ALL IN A NAME**

*August 1st*, by Mary Raymond Shipman Andrews and Roy Irving Murray, is one of those satisfactory little stories that are more often arranged by authors to whom all things are possible than by Providence. Dramatic entrances are carefully provided and every one "lives happily ever after." But its sane, happy, philosophy of life makes the book rather more than a pleasant romance of a whole-souled young curate and a girl to whom he gave courage to face life.

Scribners. \$1.

**A QUEEN OF SONG**

Lilli Lehmann has written an account of her career, now published in an English translation by Alice Benedict Seligman under the modest title of *My Path Thru Life*. It is one of the most interesting and valuable musical autobiographies, a record of a high and noble service to art—there was never a more amiable prima donna, for Mme. Lehmann was always ready to step into the breach and save a performance from failure, and it is a revelation of the spirit and personality of a big-hearted, noble-souled, broad-minded human being.

Putnam's. \$3.50.

## Your Hands Can't Earn the Money You Need

CUNARD LINE, 24 State St., N. Y.

## EUROPEAN TOURS FREE

We operate a special plan of particular interest to persons capable of organizing their own European Touring Parties by which the organizer secures his or her complete expenses free. You can easily organize a party with our help. We make all arrangements and furnish tour manager. Also tours to South America, Spain, the Riviera, Japan, Hawaii and the Philippines. For full particulars, address Dept. I.

**TOPHAM TOURS**

305 S. Rebecca Street  
Pittsburgh, Pa.

## FIGHTING IN THE FRENCH HILLS

The trenches—that word calls before readers of current war news a pretty definite picture. But we have heard less about the artillery and the wonderful telephone control of the far-off batteries. The correspondent of the New York Times whom we quote saw both aspects of the French battle line and tells what he saw in a very graphic way:

I stood in an observation trench out beyond the battle line. To get there I crawled on my hands and knees and was not allowed to speak.

Looking thru a periscope I could see the German trenches only twenty yards away. Between was a maze of barbed wire entanglements.

An officer whispered in my ear to notice how some of the barbed wire had been cut. When we crawled back to comparative safety he explained that only two nights before the Germans made a desperate attack at that point, cutting half way thru the wire before they were discovered.

In just forty seconds the French artillery was upon them; the result was simply a massacre. It was scarcely necessary for the French infantry, only a few yards away, to fire a shot, so complete was the work of the "seventy-fives."

These batteries, which were 'way behind in the hills, merely received a telephoned message from the trenches to fire at a point they could not see, but which the mathematician at the trench end of the telephone mentioned in figures with the most careful precision. . . .

### THE INVISIBLE WAR

I was taken to an observation station on a mountain top. The station was cleverly concealed by pine boughs to prevent discovery.

We were at the edge of a dense pine forest. Sheer down, stretching before us east and west as far as the eye could see, was a beautiful rolling valley, apparently sleeping in the warm spring sunshine. Away to the north was another range of high hills. . . . Thru glasses we could sweep the valley for fifty miles. If a horse or cow moved across a field, miles away, we could see it. If a dog barked, we could almost hear it, so intense was the silence of that drowsy afternoon.

We could distinguish far off a narrow, wavy-white line, stretching the length of the valley and disappearing in the distance. Nearer to us and parallel we saw another long, wavy disappearing line. Those lines were the trenches of the complete opposing armies. In them were nearly half a million armed men.

But aside from horse and cattle grazing in the distant pastures we could not see a living thing. We could not hear a sound beyond the bark of a dog and the sighing of a breeze thru our pines.

"This is modern war," said the captain who escorted me. "Since the first day's battle I have not seen a single German except prisoners."

As we turned to leave our platform the distant rumble of heavy artillery broke the silence. We could see white puffs of smoke from the direction of the French batteries breaking over the valley, probably ten miles away. . . .

### THIRTY SECONDS TO KILL

The section of the front I visited is one bristling row of artillery from end to end. A major met us back at brigade headquarters. He carried a bouquet of violets. He explained that we must be careful not to be seen entering the artillery observatory. He added naïvely that it did not matter so much on our account, but he did not desire to have the observatories discovered. Besides, his observers were valuable.

He smelt his violets and explained that artillery is a highly scientific branch of

"WILLIAMSTOWN THE VILLAGE BEAUTIFUL"

service—that the lives of observers were not to be wasted.

He led the way up the mountain side between batteries, perched back of the ridge and observatories that sort of hung on the precipice, overlooking the valley. They were covered over with shrubbery and boughs of trees so as to make them invisible.

We crawled up the steep steps, cut in the mountain. The major waved us to stoop low and crawl into a little thatched cave with a tiny slit in the foliage thru which we could see the operations. He waved his bunch of violets toward the valley, speaking cheerfully:

"We will direct fire there at those German trenches."

The bunch of violets pointed out toward a village a mile away. He turned his scale telescope to a point, and read the figures thru a telephone at the rear which connected with the battery. We leveled our glasses parallel with the telescope.

"It will take just thirty seconds after telephoning," he said.

I kept my eyes to the glasses. I heard a loud roar from the battery behind and the scream of a shell passing overhead. Then I saw a puff of smoke and heard the sound of the explosion as the shell struck a trench exactly where indicated.

Overcome with admiration of this marksmanship, I dropt my glass and turned toward the major, whose face was buried in the bouquet of violets.

We went into several observatories before going over the ridge to visit the men who had been firing at things they did not see, but who followed mathematical instructions with deadly accuracy.

In every observatory the result was the same. Thirty seconds after telephoning came the explosion, and white smoke was soon over the point aimed at by the telescope. . . .

### FALSE BATTERIES AND REAL GARDENS

In a strip of wood between real batteries and an open space, where false batteries were erected for the purpose of being photographed from German aeroplanes there was a fine garden, which sprung into being as a result of the soldiers' leisure between firing cannon.

There are model flower beds, typically French in their regular formation, with little graveled walks between. A little way off was an outdoor gymnasium with parallel bars and other equipment.

Further down the hill was the battery captain's villa. Like all the other houses at the front, it was merely an underground dugout, but in front and around it ran little graveled paths with flowers growing on either side. Cut flowers were on the little table and an empty German shell was used as a vase.

### WAR AS AN ART

The officer I have mentioned said to me: "The Germans have made war a thing of science. They make it begin and end with science. We claim that science only goes to a certain point. France believes, as all her history proves, that from the point where science leaves off warfare is art. Art is a thing of the spirit as well as of the brain."

This same spirit is oftentimes humorous. I noticed it a dozen times daily. For instance, outside a cook's dugout, behind a long line of trenches, I saw worked with tiny white stones, stuck in mud, a perfect picture of a rabbit entering a large kettle. The rabbit was waving the tricolor joyously, altho soon to become a soldier's dinner. . . .

The best commentary on the French commissariat is summed up in a single sentence from a private to our captain, who said to him: "Do you get enough to eat here?"

The soldier knew the captain was from General Headquarters. He knew that the captain's question invited a statement of honest fact. He saluted respectfully and said, hesitatingly:

"Well, don't you think we might have a little more salad?"

Our captain nearly fainted. Afterward he gasped to me the French equivalent of "Wouldn't that jar you?"

## Charming Vacation Spots await you in the lake and mountain country of Northern New York reached by the Delaware & Hudson Lines

Shortest, Quickest and Best  
Between New York and Montreal

Saratoga Springs, Lake George, Lake Champlain, Ausable Chasm, Lake Placid and Cooperstown, with their historic associations and natural beauty, are among the best known of the many popular centres which attract a host of visitors during the Summer season.

# The Market Place

## IN THE SECURITIES MARKET

There was great activity in the market for securities again last week, transactions on the New York Stock Exchange amounting to 5,426,144 shares, against 5,896,401 in the week immediately preceding. In one day 1,453,000 shares were sold. It is noticeable that the interest of the public is now shown in the market for bonds, the week's business in these securities rising (from \$21,155,000) to \$32,549,000. In the last four years the average for the corresponding week was less than \$14,000,000.

While there was an advance in the prices of a majority of the bonds, the week's net gains in the share list were much more noticeable, and, as a rule, they were shown by the industrial companies which have, or are said to have, large orders for war supplies, and by the copper mining companies. For nearly all the leading railroad shares prices were higher, and the upward movement was not checked by the announcement on Tuesday that receivers had been appointed for the Chicago, Rock Island & Pacific. Even for the New Haven shares there was an increase of 3 points.

The market is affected from day to day by certain influences that are merely temporary, but there are underlying and continuing causes which have been effective and may be so for some time to come. A rumor about a great order for war supplies may prove to be without foundation, but there is abundant official evidence that war orders have very greatly increased our exports, and the excess of exports over imports. This excess was \$719,813,000 for the nine months ending with March, and in the four months beginning with December it was \$591,000,000. The condition of business has improved, and the outlook for large crops is highly favorable. The situation has warranted a general advance, and higher prices for the shares of several manufacturing companies were due naturally to their greatly increased profits.

## THE TRAIN CREW LAWS

Pennsylvania's House of Representatives has passed, by a vote of 135 to 68, a bill repealing the railroad full-crew law of 1911. The large majority indicates similar action in the Senate. It is provided in the repeal bill that power to regulate the number of employees on each train shall be given to the state's

Public Service Commission. This is as it should be. The number of men serving on each train ought not to be determined arbitrarily by a statute, which makes no allowance for the varying conditions. Obedience to the law's requirements has considerably increased the railroad companies' annual expenses for operation and has served no good purpose. The bill has been opposed at Harrisburg by labor unions, and the leading speaker against it in the House was the Socialist member, James H. Maurer.

A similar repeal bill in the New York Legislature has, unfortunately, failed to become a law, altho it was passed by the Senate. When the vote was taken in the Assembly, or House, there was a small majority in its favor, but the number of affirmative votes was not sufficient. There were eight votes lacking. And so no action was taken before the end of the session, which was at hand. This repeal bill, like the one in Pennsylvania, empowers the Public Service Commission to determine the size of each train's crew.

#### COPPER

Soon after the beginning of the war the price of our copper fell below twelve cents a pound. Thruout last week the price was rising, and at the end it was eighteen cents, while twenty-one cents was paid for special Lake Superior brands. With this advance in the price of the metal, the prices of the shares of copper companies have moved upward. Stock of the Amalgamated Copper Company was sold last week at 79½. A few months ago the price was 48. On the New York Stock Exchange last week there were gains for all the copper shares—Amalgamated, 2½; Anaconda, 1⅞; Chino, 2⅞; Inspiration, 4½; Miami, 2¼; Utah, 5⅜. A few months ago the companies producing copper were operated at about fifty per cent of their capacity; now the proportion ranges from seventy-five to ninety per cent. The price of the metal is higher now than it has been at any time since the summer preceding the panic of 1907.

Copper prices are high because the metal is needed in the manufacture of ammunition. England and France want it. Our own manufacturers must have it if they are to fill their foreign orders. Our exports, which have been growing, are not yet equal to the quantities shipped in normal times, when Germany and Austria took forty-five per cent of our surplus, and the demand for consumption at home, war orders excluded, has not its normal force, but there is a market abroad, or at the war order factories in this country, for all that can be produced. In no other war has there been such a consumption of ammunition. Near St. Mihiel, not long ago, 20,000 shells were used in ninety minutes. It is said that the British at Neuve Chapelle used more ammunition than was consumed in the entire Boer war. For much of the ammunition copper, or brass, is required. Some predict that prices will continue to rise.

## DUTCH BULBS

Hyacinths, Tulips, Narcissi, Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden, from earliest spring until the middle of May. Bulbs are grown almost exclusively in Holland, in enormous quantities, and sold at very low prices. Usually they cost double before reaching you.

By ordering from us now instead of waiting until Fall, you make a large saving, get a superior quality of Bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import Bulbs to order only. They need not be paid for until after delivery, nor taken if not satisfactory. (References required from new customers.) For prices on smaller quantities see our import price list, the most comprehensive catalogue of Bulbs published, may be had for the asking.

A FEW PRICES	Per 100	Per 500
Fine Mixed Hyacinths	\$2 90	\$14 00

## 1915 Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## Insurance

Conducted by  
W. E. UNDERWOOD

### THE CONNECTICUT FIGURES

The annual fire insurance report of the Connecticut Insurance Department, a bulky volume of 1086 pages, covering the operations, financial condition and kindred information of the companies within that jurisdiction during the year 1914 contains, as usual, an analysis of the business for that period. The detailed figures of 164 companies are presented: ten stock and fourteen mutual companies of Connecticut, eighty stock and nineteen mutual companies of other American states, and forty-one stock companies of foreign countries. Fifty companies—twenty-eight stock and twenty-two mutual—made a profit on their underwriting and 114 scored losses. Of each group taken by itself, we find that the ten Connecticut stock companies show a net loss of \$1,362,338; the eighty stock companies of other states a loss of \$4,191,332; forty-one foreign companies a loss of \$3,449,726; fourteen Connecticut mutuals, a loss of \$21,783; nineteen mutuals of other states, a profit of \$228,471.

Going more into details, we find the following for each one of the five groups:

Ten Connecticut stock companies—Earned underwriting income, \$48,279,140; losses incurred, \$29,361,617; underwriting expenses incurred, \$20,279,861; underwriting loss, \$1,362,338; net gain from investments, \$117,458; net decrease in surplus, \$1,244,880.

Eighty other state stock companies—Earned underwriting income, \$159,525,246; losses incurred, \$98,930,064; underwriting expenses incurred, \$64,786,514; underwriting loss, \$4,191,333; net gain from investments, \$2,382,748; net increase in surplus, \$1,808,585.

Forty-one foreign stock companies—Earned underwriting income, \$83,596,771; losses incurred, \$53,642,525; underwriting expenses incurred, \$33,403,972; underwriting loss, \$3,449,726; net gain from investments, \$4,024,104; net increase in surplus, \$574,378.

Fourteen Connecticut mutuals—Earned underwriting income, \$310,464; losses incurred, \$192,273; underwriting expenses incurred, \$139,973; underwriting loss, \$21,783; net gain from investments, \$61,034; net increase in surplus, \$39,252.

Nineteen other state mutuals—Earned underwriting income, \$4,769,119; losses incurred, \$3,026,598; underwriting expenses incurred, \$1,514,050; underwriting profit, \$228,471; net loss on investment income, \$656,413, net decrease in surplus, \$427,942.

As will be observed, the companies comprising the first four groups lost money on their underwriting, the ag-

## MANUSCRIPT

Suitable for CLOTH BOUND BOOK issue; any field, 25,000 words and upwards, carefully read and considered WITHOUT charge. Published under our imprint and management, in A-1 style, if accepted. Copy must be forwarded COMPLETE to warrant examination. Roxburgh Pub. Co., Inc., Boston, Mass.

### Poultry Paper

44-124 PAGE periodical, up-to-date; tells all you want to know about care and management of poultry for pleasure or profit. Four months for 10 cents.

POULTRY ADVOCATE  
Dept. 216, Syracuse, N.Y.

ORATIONS, Addresses, Debates, Essays, etc. prepared to order. Manuscripts revised and reconstructed. Outlines furnished. Twelve years' experience.

P. A. MILLER'S LITERARY AGENCY, DAYTON, O.

## Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

gregate being \$9,025,180, and those of the fifth group made a profit of but \$228,471. This gives us a net underwriting loss by the whole number of \$8,796,709.

The net investment gains made by the companies of the first four groups, aggregating \$6,585,344, partially repaired the losses incurred on the insurance side of the year's operations and resulted in a net increase in surplus of \$1,177,334. A reversed situation of affairs, it will be observed, obtains in the fifth group, composed of other state mutual companies. They made an underwriting profit of \$228,471 but suffered a net investment loss of \$656,413, leaving their account \$427,942 to the bad.

The difficulties and complexities of the fire insurance business, as well as the ability and skill with which it is conducted, will be appreciated when we note that the underwriting loss of \$8,796,709 and investment gain of \$6,585,344 are the close results achieved after handling a gross income of \$342,114,570.

Glancing at the results of individual companies, we find that eight of the ten Connecticut stock companies, five of the fourteen Connecticut mutuals, fifty-nine of the eighty stock companies of other states, six of the nineteen mutuals of other states and thirty-six of the forty-one foreign companies show an underwriting loss. Altho a larger proportionate number of mutuals managed to make a profit, the net total for the entire thirty-three, on an earned underwriting income of \$5,079,683, was but \$206,688.

Considered as a whole, the state of the fire insurance business as revealed by the latest Connecticut report is not a just subject for adverse legislation by any of the states.

L. E. S., Griffin Corners, N. Y.—The company you ask about is first class in every respect.

S. C. W., McAllisterville, Pa.—The company you name is doubtless in process of organization. The name does not occur in any lists to which I have access. As an investment I regard stock of that character as a pure speculation with the chances of loss extremely good.

G. B. K., Erie, Pa.—The internal affairs of the company you inquire about are far from satisfactory. On the face of the last financial statement accessible (December 31, 1913) it is solvent and shows a good surplus. But my opinion of it as a permanent insurer is adverse.

D. McL., Neche, N. D.—The card you send affords no information. It is the advertisement of a "registry" company which may or may not possess financial resources. The accident policy it offers is issued by some accident insurance company the name of which is withheld. Until that is revealed no conclusion is possible.

M. S. W., Marietta, Ga.—Both the original company and its reinsurer seem to have had a troubled existence. And now your policy is again transferred to another company. The reports I have of the latter are not encouraging. Your security lies in taking insurance in a thoroly established company. It is imprudent to support life insurance companies that are organized principally for the purpose of affording professional promoters and stock salesmen a handsome livelihood. Your policy may pass by reinsurance to any number of companies of that class.

## "Standard" Built-in Bath

You can afford and should have a "Standard" Built-in Bath in your home. They are far superior in sanitation and convenience to the bath on feet. Yet, they cost but little more and their quality is assured by the "Standard" Green and Gold label.

### EASIER TO CLEAN MORE SANITARY INEXPENSIVE

"Standard" Built-in Baths (like "Conred" pattern shown above) are made complete in one piece, porcelain enameled inside and out, combining the beauty of china with the strength of iron. The outside surface is as permanent and easy to clean as the inside. They are made for building into right or left corner, in a recess, or into wall at back. They are five inches lower than the ordinary bath, yet have better bathing accommodations.

Ask your Architect or Plumber about "Standard" Built-in Baths, or see all patterns in the "Standard" Showrooms. Our books "Standard" "Built-in Baths" and "Modern Bathrooms" showing complete line of "Standard" Plumbing Fixtures, sent free upon request to persons interested. If possible, send name of Architect or Plumber when writing for booklets.

### GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

## J U S T A W O R D

A good friend of The Independent has just brought to our attention a letter addrest on November 29, 1878, to Dr. William Hayes Ward by the famous Abolitionist, William Lloyd Garrison. It is written with reference to the thirtieth anniversary of The Independent, and is good reading in this sixty-seventh year of its progressive development. Therefore we print it in full:

DEAR SIR—In the vicissitudes attendant upon periodicals of every description—so many appearing and disappearing within a comparatively short period, after fruitless efforts to give them permanence—your coming thirtieth anniversary number of The Independent must be an event especially gratifying alike to all who are concerned in its management, as showing a marked longevity and a steadfast appreciation on the part of its patrons. Certainly, the most reliable and effective recommendation of any periodical is to be found in its real merits; which, in the case of The Independent, have long since been recognized to the extent of securing for it a very wide circulation, and placing it conspicuously among the most readable, instructive, and practical religious journals of the day. Its editorial department is ably sustained; its list of contributors large, varied, and strong; its ruling spirit without bigotry or dogmatism; and its scope such as to include much that pertains to literature, science, art, religious and secular intelligence, and the most important events connected with the political history and destiny of the country—affording in the aggregate, annually, a large amount of useful information at a very cheap rate.

Very cordially yours,  
WM. LLOYD GARRISON.

## IF YOU GO CAMPING

Inside tent poles are an abomination unless the tent is a large one; try to rig your shelter by means of guy ropes attached to trees or with ropes and outside poles.

If your boat upsets, don't try to climb on board; place your hands on the stern and paddle to shore. Enough air will be imprisoned under the boat to float it and several persons.

If you sleep on the floor of your tent, be sure that the earth is hollowed away beneath at the point where your hip rests—otherwise that part of your anatomy will remind you of its presence thruout the night.

A good cook-kit for a small party is one of the old-fashioned tin dinner pails, with prest—not soldered—seams. Its compartments, when separated, provide a variety of vessels for boiling, baking or frying.

Should a cold night catch you with insufficient covering, wrap up a hot stone or a bottle of hot water at your feet; with the extremities warm, the balance of the body may be more or less neglected.

The open-front tent or lean-to is, in spite of appearances, one of the warmest of tents; it should be pitched with its back to the wind and the camp fire kept burning in front. Its shape is such as to reflect the heat down upon the sleepers instead of allowing most of it to escape.

A camp bed which has some little spring and will keep you off the ground is made by driving four crotched sticks into the soil and fitting them with cross-pieces. Enough heavier saplings are laid across to support your weight and the whole covered with hemlock browse, your blankets being spread on top.

As a variation of corn, fish, etc., roasted in the ashes or fried over the coals, try the method of placing hot stones in a shallow pit, covering them with damp cloths or leaves with the edibles placed on them, adding more leaves and filling the pit level with earth. The effect is that of steaming and the results are excellent.

For small camps one of the pocket cook-kits, supplemented by a reflecting baker, will supply all ordinary needs; but where many are in the party or where the location is to be more or less permanent, a camp stove is almost a necessity. If your tent has a built-in floor cloth, pack along a small oil-stove; then you can cook indoors on rainy days.

No matter how waterproof the tent, a long continued rain is almost certain to dampen the interior walls or to work into the inside. To prevent this, rig a fly over the tent—this adds to the coolness in hot weather because of the air space, besides shedding rain effectually; dig a shallow ditch around the outside to carry off the surplus water, and, if the extra weight is not objectionable, a sod-cloth or even a floor-cloth will repay the extra trouble of transportation.

## FIGHTING WITH FUMES—A HUMANE INNOVATION?

**M**ODERN warfare is a branch of applied chemistry. In the taking of life and in the saving of it the chemist has been the leading spirit. The products of his laboratory propel the submarine and aeroplane, project the bombshell thru the air and explode it at its target. It is also thru his skill that wounds are quickly healed, that suffering is alleviated and that the plague no longer follows in the wake of armies, slaying more than the soldiers. Thus chemistry hovers over the battlefield in a double guise—as angel of destruction and angel of healing.

The newest weapon which the chemist has put into the hands of fighting man has this dual aspect, for it appears to be both effective and merciful. The English report that the fumes generated by the new German apparatus at Ypres irritated the eyes of the soldiers so they could not take aim and drove them out of their trenches, staggering blindly to the rear. They also report that the number of fatalities was surprisingly small in proportion to the number of men temporarily incapacitated. Some were suffocated where they lay, others died later of bronchitis or pneumonia resulting from the injury to their throats and lungs. But most of those who were overcome by the gas were revived by fresh air and suffered no permanent harm. Shrapnel and explosive bombs, on the contrary, cut, bruise and mangle the body, and those who are not killed have to endure prolonged torture and perhaps be maimed for life. In this connection we should remember that the Animal Rescue League has adopted asphyxiation by gas instead of shooting as the most humane way of putting poor dogs and cats out of their misery.

**I**F later experience confirms these first reports it would seem then that a real step has been made in the direction of making war humane. It comes apparently nearer to that ideal weapon of offense which shall instantaneously render the enemy incapable of resistance with the least possible danger of death or permanent injury. This would be, we may imagine, something like chloroform, diffusing a heavy vapor which would stupefy those who inhaled it so that they could be disarmed and captured by the advancing foe. The gas actually used in Flanders seems, however, to be chlorine, or hydrochloric acid, accompanied by some thick yellowish smoke which serves to indicate its presence and keep it to the ground. Nitric and sulfurous fumes are also surmised. Any one who has worked in the chemical laboratory knows what it feels like to be choked by such irritant gases. The breaking of a bromine bottle or the reversal of the air current when chlorine is being generated under a hood stampedes a class, for a whiff of the gases strikes like a knife to the

lungs. But even when a student is overcome by the fumes he can usually be revived without difficulty and may be able to go on with his work. The antidote is the inhalation of alcohol, so here is a chance to utilize the spirit which is being debarred in the belligerent countries. It will be possible to guard against the danger now that it is recognized by providing the soldiers with respirators such as are used by firemen, coal miners and workmen in chemical factories. On account of the rapid diffusion of all gases and the consequent dilution with air the new weapon is likely to be of use only in confined spaces like the casements of a fortress and in close trench fighting. Therefore we cannot, unfortunately, hope for the abolition of the bombshell and the bullet.

**I**T is naturally a matter of gratification to Americans that this, the first experience with asphyxiating gases in modern warfare, tends to confirm the American view as to their propriety. The United States has had to endure considerable opprobrium for its stand on this question at the First Hague Congress, where our representatives alone voted against the clause, "The contracting powers agree to abstain from the use of projectiles the [sole] object of which is the diffusion of asphyxiating or deleterious gases." The word "sole" (*unique*) which appears in the original French text of The Hague convention is left out of the official English translation. This is a strange omission considering that the French and British have been defending their use of explosives which diffuse asphyxiating and deleterious gases on the ground that this was not the "sole" purpose of the bombs but merely an accidental effect of the nitric powder used. The new German weapon, whether it be cylinders of liquefied chlorine or bombs of other gases, has as its sole purpose the spreading of noxious gases.

The British delegates at The Hague took the same view of the question as ours and also refused to sign, but their Government gave its adhesion to the rule. But altho the vote went against us the argument presented by the late Captain Mahan was so cogent and well expressed that it has been quoted in treatises on international law ever since. We give it entire:

These reasons were, briefly: 1. That no shell emitting such gases is as yet in practical use or has undergone adequate experiment; consequently, a vote taken now would be taken in ignorance of the facts as to whether the results would be of a decisive character or whether injury in excess of that necessary to attain the end of warfare—the immediate disabling of the enemy—would be inflicted. 2. That the reproach of cruelty and perfidy, addrest against these supposed shells, was equally uttered formerly against firearms and torpedoes, both of which are now employed without scruple. Until we know the effects of such asphyxiating shells, there was no saying whether they would be more or less merciful than missiles now permitted. That it was illogical, and not de-

monstrably humane, to be tender about asphyxiating men with gas, when all were prepared to admit that it was allowable to blow the bottom out of an ironclad at midnight, throwing four or five hundred into the sea, to be choked by water, with scarcely the remotest chance of escape.

As Captain Mahan says, the same objection has been raised at the introduction of each new weapon of war, even tho it proved to be no more cruel than the old. The modern rifle ball, swift and small and sterilized by heat, does not make so bad a wound as the ancient sword and spear, but we all remember how gunpowder was regarded by the dandies of Hotspur's time:

And that it was great pity, so it was,  
This villainous saltpeter should be digg'd  
Out of the bowels of the harmless earth,  
Which many a good tall fellow had destroy'd  
So cowardly; and but for these vile guns  
He would himself have been a soldier.

The real reason for the instinctive aversion manifested against any new arm or mode of attack is that it reveals to us the intrinsic horror of war. We naturally revolt against premeditated homicide, but we have become so accustomed to the sword and latterly to the rifle that they do not shock us as they ought when we think of what they are made for. The Constitution of the United States prohibits the infliction of "cruel and unusual punishments." The two adjectives were apparently used almost synonymously, as tho any "unusual" punishment were necessarily "cruel" and so indeed it strikes us. But our ingenious lawyers were able to persuade the courts that electrocution, tho unknown to the Fathers and undeniably "unusual," was not unconstitutional. Dum dum bullets are rightfully ruled out because they inflict frightful and often incurable wounds, and the aim of humane warfare is to disable the enemy, not permanently to injure him.

The Germans began the war with 17-inch shells; now they have got down to molecules. There is no smaller projectile unless they use the electron stream of the cathode ray. This, however, has appeared only in the pages of our scientific romancers and is not likely to figure in the present war.

### THE WOMEN'S PEACE CONGRESS

WE recall no parallel in history to the International Congress of Women that concluded its sessions at The Hague last week. It was not only the first time that a Peace Conference was held during the hight of war and participated in by representatives of both belligerent and neutral nations, but it was the first time that the sex that creates and does not destroy life has organized for the purpose of being heard on the issues of war and peace.

From the meager reports of the Congress the women have apparently done well.

They have among other things unanimously favored the plan of "continuous mediation" on the part of the neutral nations as first suggested by Miss Julia Grace Wales of Wisconsin and endorsed by the Wisconsin Legislature and the Chicago Peace Conference. They have also voted to have a Committee or Congress of Women sit thruout the peace negotiations at the close of the war with a view to bringing the pressure of public opinion to bear so as to effect a settlement that will prevent the recurrence of war.

These are both good proposals. The first we have discussed at length and with approval in our issue of

March 29. The second is a novel idea in international relations and can only be likened to the activities of Mr. W. T. Stead at the Second Hague Conference, whose daily paper, the *Courrier de la Conférence de la Paix*, had a far greater effect in keeping the delegates to the line than they cared to admit.

Many good people have ridiculed the women for going on this "wild goose chase." In some countries the opposition was so great that the governments would issue them no passports. Miss Jane Addams, who led the American delegation and was made on her arrival at The Hague President of the Congress, said before she left New York that almost every leading man in Chicago whom she consulted advised her not to go and assured her that she could accomplish nothing.

It may turn out that they were right. Nevertheless what is it that makes Jane Addams perhaps the foremost woman in America? Is it not this: that when something is to be done, she is ready to try, no matter how formidable the task and how meager the chances of success? Jane Addams is not afraid to be seen in the minority.

The little band of women have done well. May their efforts bear rich fruitage!

### DEMOCRACY THAT PAYS ITS WAY

WHEN that clear-headed publicist and excellent literary artist, M. Emile Faguet, wrote on "The Dread of Responsibility," he found in America, as in France, abundant facts for his inductions. In every department of political activity we have seen the dread of responsibility all too shamelessly exhibited. In national, state and municipal administrations, in national and local legislative bodies, in the judiciary as in the executive branches, responsibility has been shifted, or so distributed as to become wholly indeterminate.

But M. Faguet found in modern democracy a vital process which tends toward the creation and the centering of responsibility, and so toward the correction of what is probably the gravest defect of popular power. Democracies tend to evolve from within themselves true aristocracies—not privileged classes, but groups of men of specialized abilities, that may and should assume leadership. Among these spontaneously generated aristocracies are the business men of initiative and daring, the inventors, discoverers and philosophers, the artists and the poets, the professional men. It is perhaps the chief merit of democracy that it keeps open the way for gifted men to rise into these aristocratic groups, unhindered by hereditary class distinctions.

Among these groups of initiating men there is one which M. Faguet has not in any special way recognized but which in America at least is of prime importance. This is the group of good citizens who are ever alert to watch the progress of legislation and the work of administration, to organize spontaneous movements as from time to time they are needed to correct evils in the public service, to call a halt upon extravagance, and to promote progressive measures that an enlightened public opinion calls for. Everywhere in America the political experiment has been immeasurably more successful, all things considered, because of this element in our society, quite unrecognized in the treatises on political science.

Not often is the value of the work done by these vol-

untarily formed groups so instructively manifested as it has been in the regeneration of the municipal government of New York City by the men put into office nearly six years ago thru the efforts of the Committee of 100, and continued, with the addition of Mr. Mitchel as Mayor, thru the efforts of the Committee of 107, organized two years ago; and never within our recollection has the true work of a municipal administration been more incisively set forth, and an accounting for stewardship more frankly and clearly made, than it is in Mayor Mitchel's own authoritative words, printed on another page. It is a story of how the municipal government of one of the two largest cities in the world has been brought measurably up to the standards familiar to the town-dwellers of Europe, but unhappily new to most Americans: a story, therefore, quite as important to the whole American people as to the citizens of New York.

If the democratic experiment is to succeed, it must demonstrate not only that democratic rule offers to the average man justice and opportunity, but also that it is good business. The most serious shortcoming of democracy—let us not say failure, for assuredly it is not that—has been on the business side; and only by the most earnest efforts of its wisest leaders can it hope to handle successfully the increasingly complex problems of the budget which a growing and progressive community will create. Democratic rule must also demonstrate that it is good civilization, in the largest and noblest sense of the word. It must stand for order and decency, for public health, and for enlightenment.

Thruout his public career, Mayor Mitchel has shown himself a strong and a wise democrat, in these good meanings of the word. A master of accounts, tireless in his scrutiny of details, he stands preëminently among public men who realize, and who try to make the public understand, that democratic rule must be good business, if it is to hold public confidence. Also he has sought to make democratic rule good civilization. He would gladly see generous appropriations made to hopeful experiments in the promotion of social welfare, if financial conditions justified them. But he is too wise and too honest a man to plunge the community into obligations that cannot be met.

When John Ruskin was asked to help pay off a church debt, he bluntly replied that he did not believe in a Christianity which built churches that it could not pay for. Mr. Mitchel is a civilized man, and he stands ready to do anything in reason to make our civilization better; but, happily for the city of New York, he does not believe in the kind of civilization which undertakes noble enterprises that it cannot pay for.

### ALCOHOLIC MARKSMANSHIP

THE musketry instructors who are training Kitchener's army near Brighton report that the recruits are apt to be bad shots late in the day owing, as they frankly admit, to "too many beers and whiskies." It is therefore proposed to keep the public houses closed until after target practise is over.

Perhaps Kitchener, being an Irishman, was in the congregation when the priest gave the sermon on temperance which ended with the impressive words: "Drink is the ruin o' the counthry. 'Tis drink that steals your

wages. 'Tis drink that makes ye beat your wives. 'Tis drink that makes ye shoot at your landlord, and 'tis drink that makes ye miss him."

The hostility of the late Lord Roberts of Kandahar toward liquor was the only grudge that Tommy Atkins had against his favorite leader, if we may take Kipling as interpreter of the feeling of files-on-parade:

'E's a little down on drink,  
Chaplain Bobs;  
But it keeps us outer clink—  
Don't it, Bobs?  
So we will not complain  
Tho 'e's water on the brain  
If 'e leads us straight again—  
Blue-light Bobs.

When Lord Kitchener became the head of the army the liquor-loving soldier looked for alleviation of his lot, but his hopes were disappointed, for the new Secretary for War put his household on the water-wagon and seems disposed to treat his army in the same way. The twentieth century version of Cromwell's motto is "Trust in God and keep your army dry."

### ON CONVERSATION BY TELEPHONE

CONVERSATION seems to be no more. Where are the *salons* of yesteryear? Has not the very word *conversazione* become hopelessly affected with a flippant, slangy connotation? We are too busy to converse, or too restless, or too thoughtless. Instead, we play auction, or dance, or go to the movies. Of course we talk a plenty. But talk and conversation are two things.

Is it because this is a scientific age? Or a commercial age? Or a material age? Or is it just because it is the age we happen to live in, and the golden age of art or literature or morals or—conversation is always just a decade or a generation or a century in the background?

Whatever the reason, the situation needs a cure. Conversation is too fine an art to take a place in the museum with quill pens and sampler making and Rogers groups. Conversation, if there were any, would sharpen the wits, improve the manners, broaden the mind, and mellow the spirit.

A reviving remedy has been found, and, appropriately, it is a scientific remedy. The age which has slain the conversational gift provides the wherewithal for its resuscitation. Behold the telephone.

Until now the telephone has seemed merely an irritating convenience. It has been like the quick lunch, an evil mitigated only by its contribution to the speed mania of the time. We have used it as a tool of the efficient life.

Now it presents itself as an instrument of culture, a disseminator of sweetness and light. One has only to try conversation over the wire to find a new joy in talking.

Conversation by telephone is talk shorn of all the adventitious aids that spring from the fact of physical and visual proximity. There are no smiles to illuminate the text. Giggles there may be, chuckles, or even guffaws, but a smile is none of these and better than all. There are no gestures to round out a period or drive home an emphasis. However much we may find ourselves gesticulating with the transmitter, the distant listener gets nothing but sound waves. There is no flashing glance to "register," as the movie actors have it, wrath; no curling lip to betoken scorn; no twinkling eye to suggest whimsicality; none of the charm of personal presence that might give substance to an attenuated argument or power to

a feeble retort. The voice must do it all—the voice and the words it carries and the thought they express. So the words must be better chosen and more effective, the thought clearer, more orderly, more interesting.

Then, too, a telephone conversation must march. If you run out of thoughts for the moment or merely fall silent, as *tête-à-tête* one might well do with impunity, your hearer hangs up the receiver or central breaks the connection. You cannot “loaf on the job.” Your brain must be nimble, your wit quick.

There are, it is true, disadvantages in conversation by telephone. But, if you have unlimited service so that the specter of the mounting “jitneys” need not plague you, they are mostly disadvantageous for your neighbors. Wire monopolization is likely to lead to unpopularity. Also, if you are a man, you cannot smoke, if a woman you cannot knit for the Belgians while conversing by telephone. But after all, these collateral pursuits are more appropriate accompaniments of gossip or story telling than of conversation.

It is just because telephone conversation can have no such extraneous helps that it offers so fascinating a field for adventure. It stands on its own bottom. You either like it for conversational reasons alone, or you like it not. If you like it not, it matters not a straw why. You would better play bridge, or talk scandal, or go to a musical comedy. You are not worthy to partake of this splendid discovery.

### THE SOLDIERS WHO MAKE PEACE

FIFTY years ago when the Great Peace put an end to our Civil War it was the men on the firing line who showed the least vindictiveness. It was Lee who had the courage to surrender when some of his people were urging the indefinite continuance of guerrilla warfare. It was Grant who told the southern soldiers to keep their horses for use on the farms and who refused to allow the captive army to be paraded in triumph thru Washington. It was mostly northern stay-at-homes who clamored for the execution of Jeff Davis and it was a southern actor who assassinated Lincoln. When the Great War in Europe comes to a close it will probably be also found that the men who are now making war will be found the first to make peace.

### BRITISH CENSORSHIP OF THE UNITED STATES

IF the British wish to deprive themselves of the opportunity of learning what their enemies are saying and doing by shutting out German newspapers and books from the United Kingdom and the Dominions we must admit that is their right, altho we may wonder at their action. Our tourists returning home from Europe since the war have found it annoying—to use a milder term than they employed—that they were compelled to throw overboard their German pamphlets in order to take passage on a British vessel, but they were glad enough to get home on any terms. We have been more puzzled and amused than angry to see that the British censor deems it his duty to shelter the American people from improper intelligence by eliminating and altering the news dispatches from Berlin as they pass thru London, altho he must know that we now get the same dispatches direct from Berlin and so can discover his sins of omission and commission and can spec-

ulate as to their motive. The cables indeed are British, but the ether still is free.

Not so the sea, even to neutral vessels. The British censorship is now extended to cover any German literature coming thru any channel. The Italian steamship “Dante Alighieri,” which had been passed by the British patrol at Gibraltar at midnight of April 22 and was on the high sea bound for New York, was ordered held by wireless at two o'clock in the morning. The British officers who boarded the vessel at Gibraltar inquired of the captain if he had any German or Austrian books and pamphlets intended for American readers. Captain Sturlese showed his manifest, which listed eight cases of such literature. He was told that these would have to be left behind. Captain Sturlese remonstrated that the books were down deep in the hold under hundreds of tons of other cargo where it would cause a delay of many hours to get them out. After a few hours spent in discussing the matter it was agreed that the steamer should be allowed to proceed on condition that the books be not taken off at New York but go back to Genoa on her return trip.

Now we must confess that we have at times become a bit bored by the very voluminous propaganda literature which has been so diligently circulated by German sympathizers in this country, but we have the most ardent desire to get at that which is buried in the hold of the “Dante Alighieri” only a few blocks away. If we had one of the books now we would read it thru if we wore out the Deutsch-English dictionary in doing it. We want to know what it is that our guardians at the Strait do not deem fit for our eyes to see. Americans returning from Berlin tell us that the *Times*, *Spectator* and *Punch* are “as usual” to be read in any of the cafés of Unter den Linden. Now that the British Index Expurgatorius is forcibly extended over America we may have to go to Germany in order to hear both sides. Notwithstanding our love for English literature we do not wish to be confined to it in time of war. The worse the things are which the English say about the Germans the more we want to know what the Germans have to say for themselves.

### THE TIE THAT BINDS

ONE of the lessons taught by the present war is the importance to the United States of the possession or control of tropical territory. We have heard people say that “what goes on in Mexico is none of our business,” but when Carranza announced the blockade of Progreso it was discovered to be very closely connected with “our business,” and the Government, in spite of its reluctance to any intervention in Mexico, found it necessary to compel the opening of the port. The reason is that Progreso is the outlet of Yucatan, where is grown the henequen from which binder twine is made. Over two hundred million pounds of fiber are needed for our grain crop this year and four-fifths of it comes from Yucatan thru Progreso. If Carranza had been allowed to carry out his plan we should have had to fall back upon the Manila abaca or the Hawaiian sisal. The supply of these is inadequate and more expensive; so that we should have felt the change in our bread bills. What we should have done if we did not own Hawaii or the Philippines is a question which may be referred for answer to those who opposed the acquisition of these territories.

# THE STORY OF THE WEEK

## THE GREAT WAR

**April 26**—French cruiser "Leon Gambetta" torpedoed in Otranto strait. British land on Gallipoli peninsula.

**April 27**—Russian fleet bombards Bosphorus forts. Germans continue attempts to regain Les Eparges, Woevre.

**April 28**—German aviator drops bombs on American tanker "Cushing" in North Sea. Germans and French dispute possession of Hartmannsweilerkopf, Vosges.

**April 29**—British repel Turkish attacks and occupy tip of Gallipoli peninsula. Dunkirk bombarded from German lines, twenty miles away.

**April 30**—Struggle for Uzsook Pass continues. French attempt to regain lost trenches at Le Mesnil, Champagne.

**May 1**—Germans advance fifty miles toward Riga, Russia. American tanker "Gulfight" torpedoed off Scilly Islands.

**May 2**—French artillery within range of Metz fortifications. Indecisive fighting about St. Julien, near Ypres.

### On the Gallipoli Peninsula

In the joint attack on Constantinople by land the French

have been assigned to the Asiatic side of the Dardanelles and the British to the European. The French force is largely composed of African troops from Algeria and Senegal. The British troops mostly come from Australia and New Zealand, and the latter contingent includes some Maoris, the fierce aborigines, who cost the pioneers more than one bloody war before they were subdued.

The troops landed near Enos on the Ægean Sea are said to be making their way inland toward the railroad to Adrianople, which if reached would cut off Constantinople from communication with Europe. But the British are directing their main efforts toward the conquest of the Gallipoli peninsula, which would open up the Dardanelles and bring the fleet to Constantinople. The peninsula varies in width from four miles at the Bulair neck to fourteen at its widest part, so all parts of it are within range of the big guns of the British and French dreadnoughts as they steam up and down the Gulf of Saros.

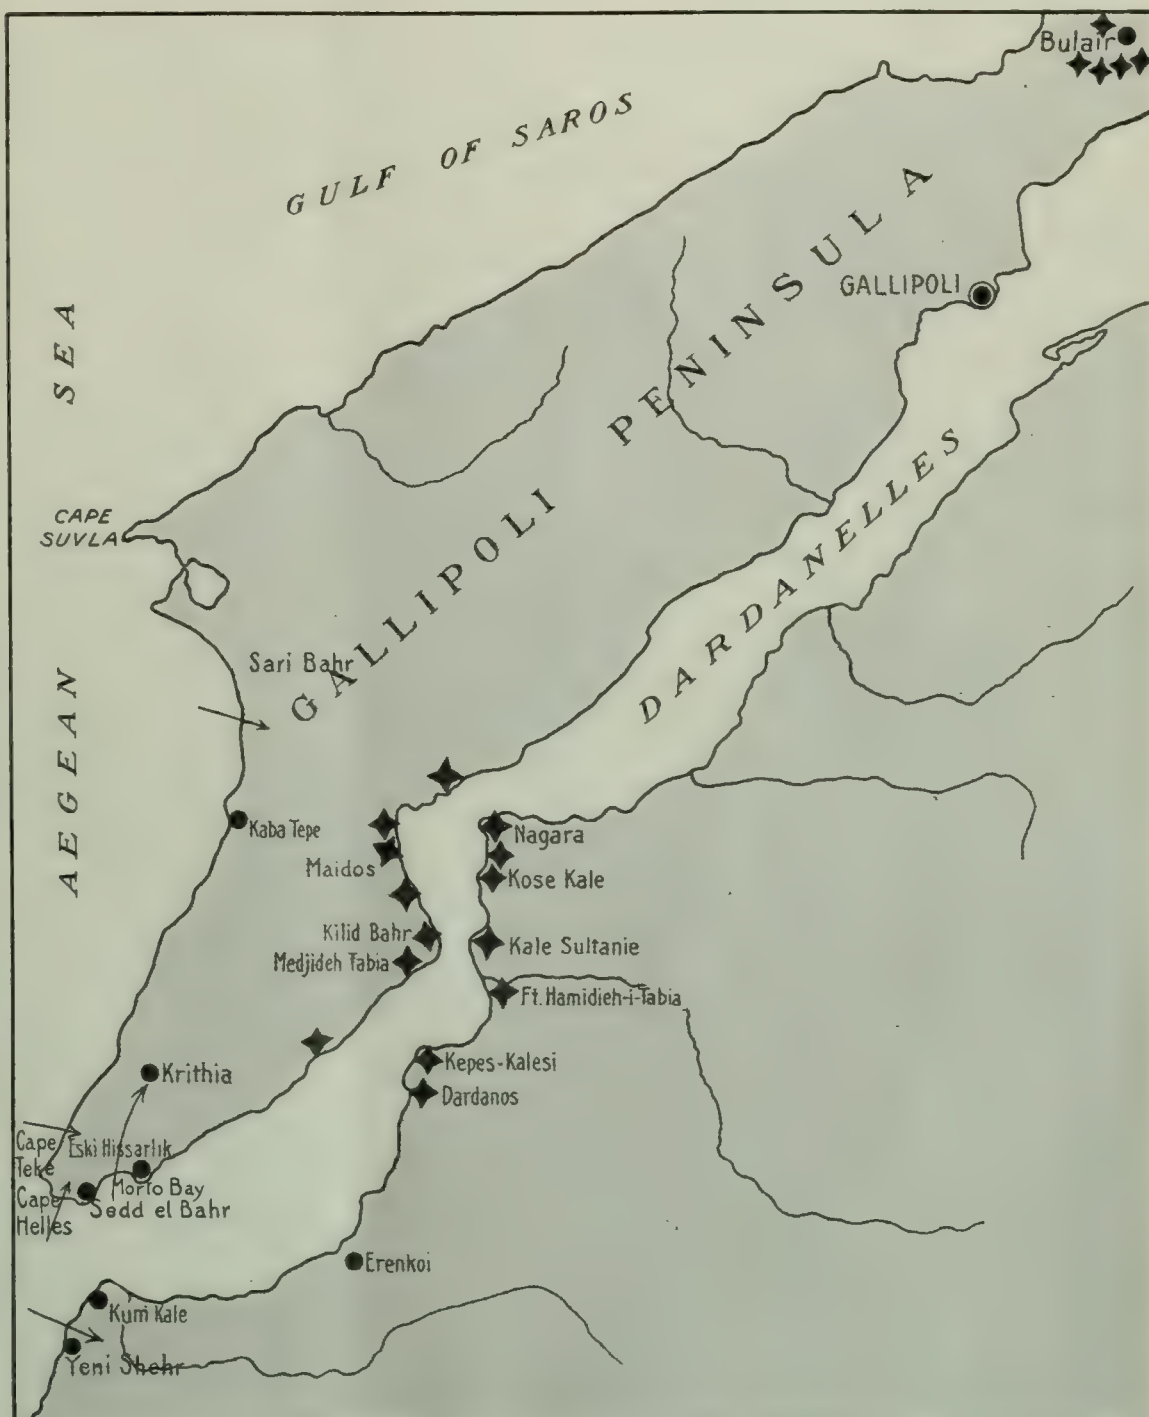

Under cover of the fire of the fleet British troops began to land at six beaches on the lower end of the peninsula before sunrise on Sunday, April 25. The Turks, prepared for the attacks by entrenchments, barbed wire entanglements and concealed batteries, gave them a hot welcome and the landing troops lost heavily. Nevertheless, they all secured a footing on the shore before nightfall ex-

cept the party which tried to disembark directly under the entrance fort of Sedd el Bahr. Here the ground had to be cleared for it by the troops which had landed near Cape Teke on the opposite side of the point. Other parties were landed at Morto Bay on the Dardanelles side and near Sari Bahr, Gaba (Kaba) Tepe and Suvla Bay on the outer side of the peninsula. In spite of the strong and persistent assaults of the Turks during the next three days, the British succeeded in holding their ground and getting the rest of their troops ashore. They are now in secure possession of the tip of the peninsula for about five miles.

According to a Greek account the

landing was facilitated in one case by an ingenious ruse. Nearly a thousand decrepit donkeys, which had been bought cheap in the islands, were put ashore loaded with dummy guns and baggage. This drew the Turkish troops while the British were successfully landed upon an undefended part of the shore.

The French African troops effected a landing on the other side of the Dardanelles at the same time as the British. They beached their boats on the outer side of the point near Yeni Shehr and captured the entrance fort of Kum Kale. Here also the Turks put up a very stout resistance, and only after many fatal assaults gave way and retired across the plain of

THE GALLIPOLI CAMPAIGN

The attempt in March to force the Dardanelles by the fleet alone having failed, forces are now being landed upon the Gallipoli peninsula in order to take in the rear the forts along the narrows. The arrows indicate the points at which the British troops from Australasia were landed. They have entrenched themselves at the point of the peninsula below Krithia and on the coast west of Kilid Bahr. The Turkish troops occupy the hills along the Dardanelles between Bulair and Maidos. The French African troops landed simultaneously near Yeni Shehr and took the fort at Kum Kale. The tombs of Achilles and Patroclus and of Ajax are near these points and the battle between the French and Turks on April 25-29 was fought on the plain of ancient Troy

Paul Thompson

## RUSSIAN PRISONERS—ALL

Fifteen thousand of them at Augustowo on their way to detention camps. Here they are lined up to receive rations of bread

ancient Troy. In one of these attacks 500 of the Turks were cut off from retreat by the fire of the warships and forced to surrender. It is reported that the French troops have been withdrawn, as it was not intended to push the attack on the Asiatic side.

During all these operations the fleet kept up a furious bombardment of the Turkish forts and forces. The 15-inch shells of the British super-dreadnoughts, soaring over the Gallipoli hills, fell upon the fortifications of both sides of the narrows as far up as Nagara and cut off the reinforcements which the Turks attempted to send from Constantinople. But the examination of the entrance forts of Sedd el Bahr and Kum Kale, which were supposed to have been completely demolished in February, showed that such a bombardment does not do as much damage as was supposed and that it is not safe to assume that a fort is disabled when it is silenced. According to the Constantinople accounts, three of the Allied battleships were so badly damaged by the Turkish guns that they had to retire, the French "Jeanne d'Arc" and the British "Majestic" and "Triumph."

## Bombarding Dunkirk

The German objective on the English Channel has been Dunkirk or Dunquerque, probably the strongest fortress of the French seaports. After the capture of Antwerp the Germans advanced rapidly along the coast toward Dunkirk, but were checked at Nieuport, ten miles within the Belgian border. Since then they have made no progress in this direction, for the combined French, British and Belgian force has held tenaciously to the line passing near

the three Flemish cities of Nieuport, Dixmude and Ypres. Disappointed in obtaining a French port such as Dunkirk, Calais or Boulogne, the Germans made the best of the only outlet to the sea west of the Netherlands, that is, Zeebrugge, the modernized port of the Belgian city of Bruges. This was cleared of its inhabitants and converted into a strong naval base, to which the German submarines were conveyed by rail. During the past week reports have been current that some of the swift German cruisers have slipped out of their shelter behind Helgoland and appeared off the coast of Belgium. It is also rumored that Zeebrugge has been bombarded by the British fleet.

Zeppelins and Taubes have of late flown over Dunkirk almost every day, sometimes dropping bombs, but doubtless chiefly for the purpose of making reconnaissances for the bombardment which began on Thursday. At 11.30 a. m. a 15-inch shell dropt into the city from a battery located somewhere back of the German lines. It was followed by others of the same sort at intervals of about seven minutes for three hours. The German gunners had the correct range from the start and their aim was directed by aeroplanes hovering high above the French fortress. On the following day the bombardment was renewed, but only ten shells were used.

According to the French bulletin twenty persons were killed and forty-five wounded, mostly civilians, but the bombardment failed to effect any military result. Refugees from the city, however, say that more than a hundred people were killed and that the exploded shells dug deep craters forty-five feet across. The people of

Dunkirk, alarmed by this unexpected attack, fled in thousands to Calais.

The most advanced line of the German entrenchments is some twenty miles east of Dunkirk, so the battery must have been fired from a greater distance, thus making a new record in long-range bombardment. It is believed that the big guns have been erected upon concrete foundations near Dixmude by engineers from the Krupp works.

## The Battle of Ypres

The series of engagements which will probably be called in history "the second battle of Ypres" has been continued thruout the week with little apparent gain on either side. The Germans still hold the bridgeheads at Steenstraete and Het Sas on the western bank of the canal connecting Ypres with the Yser River, as well as St. Julien, which is only three miles north of Ypres. At both these points, however, the Allies have made advances and report the capture of trenches, guns and prisoners. The Canadians have again borne the brunt of the battle in their efforts to regain their lost ground northeast of Ypres. The losses of the Germans in the recent fighting here are estimated by the English at 12,000.

The German artillery has been active and towns eight miles in the rear of Ypres have been struck. The town of Ypres, which has for seven months been the center of conflict, is practically destroyed by the recent bombardment. The famous Cloth Hall and Gothic Cathedral, dating from the thirteenth century, have been demolished. By mounting their 4.7-inch guns on armored trains which run on light railways connecting all positions along their front the Germans are able to bring their artillery to bear upon any desired point very quickly and shift it as soon as the enemy gets the range.

## Gas Grenades

The Germans have continued to use poisonous gases, but are not finding them so effective as at first because they are not fighting in such close quarters as at first and their opponents are prepared, or at least accustomed, to this new mode of attack. Its success when first used on April 15 in driving the Canadians from their trenches was owing largely to the surprise and alarm occasioned by the appearance of the greenish-yellow cloud of smoke which formed in front of the German line and was borne down upon them by the favoring breeze, stupefying or strangling those in its path. The German soldiers manipulating the gas gener-

ators were provided with respirators or smoke helmets such as are used by men who have to enter burning buildings or mines. Similar protective apparatus is being procured for the British troops in Flanders.

According to the Belgian war committee appointed to investigate this violation of The Hague rules, the Germans have used four different methods of generating the noxious gases. In some cases the stifling smoke from fires in the front trenches was wafted by the wind toward the enemy. Cylinders of compressed or liquefied chlorine seem to have been employed and also grenades or bombs which send out an asphyxiating gas as they explode. The Germans are doubtless experimenting to see which of the different gases or modes of production is most effective. Most of those who are overcome by the gases recover consciousness in two or three hours, but the inflammation of the lungs and throat may prove fatal a day or two later. The London correspondents at the front accuse the Germans of bayoneting men stupefied by gas.

The War on the Sea The French armored cruiser "Leon Gambetta," while patrolling the Strait of Otranto in order to keep the Austrian fleet from leaving the

Adriatic, was torpedoed at midnight of April 26 by the Austrian submarine "U-5." The night was clear and the moon shining, but the lookout saw nothing of the enemy until an explosion occurred. There was no time to lower boats, for the vessel sank within ten minutes. In response to her signals for help two Italian destroyers rushed to the rescue, but were able to pick up only 136 out of 714 on board. Every one of the twenty-two officers went down with the ship. The submarine returned safely to Cattaro.

The British steamer "Edale," carrying grain from the Argentine to Manchester, was torpedoed off the Scilly Islands by a German submarine and sunk, May 1. The crew took to lifeboats and were saved by a British patrol. A Russian steamer was attacked on the same day.

The American tank steamer "Cushing," laden with petroleum for Rotterdam, was attacked by a German aeroplane in the North Sea on the afternoon of April 29. It was a clear day and the crew were out watching the aeroplane flying less than 1000 feet overhead when a bomb exploded in the sea so near that the water was dashed over the deck. Another bomb fell as close and then a third was dropped and exploded on the rail, sending the splin-

ters flying in all directions and tearing the American flag. The name of the vessel was painted on both sides in six-foot letters, but apparently these were not visible from above and so she was mistaken for a belligerent ship. The "Cushing" belongs to the Standard Oil Company and was under German registry before the war. She was insured by the Government War Risk Bureau for \$419,000.

Another American tanker, the "Gulflight," from Port Arthur, Texas, bound for France, was struck by a torpedo off the Scilly Islands on May 1. Most of the crew were rescued by trawlers, but two were drowned by jumping overboard and Capt. Alfred Gunter died of heart failure.

Germans Invade Russia A renewal of activity is reported all along the eastern front. The Germans are attacking at half a dozen points in Poland, and it is uncertain yet which of these they intend to push. On the Pilica River, before Warsaw and to the north of the Vistula the Russians have been kept busy by German bombardments and assaults, but do not yet know where they must mass their strongest forces.

Besides these renewed attacks

Cleveland Plain Dealer

THE GROWING SEASON

## UNCLE SAM'S BUSINESS IS LOOKING UP

upon the old battlegrounds, the Germans have undertaken a drive in a new direction, that is, from the extreme north of East Prussia into the Baltic provinces. According to the Russian account this is a mere raid or foraging expedition, but so far they have not succeeded in stopping it, altho it obviously threatens their interior lines of communication, which are too few at best.

Already the German advance north of the Niemen River has penetrated some fifty miles into the province of Kurland and has cut the railroad which connects Vilna with the port of Libau. This is half way to Riga, one of the most important of the Russian Baltic ports. Here the Germans claim to have taken 1000 Russian prisoners, ten machine guns and a large amount of ammunition. German torpedoboats have appeared in the Gulf of Riga and at Libau. Last fall the Germans made a demonstration in the direction of Riga, but did not succeed in getting so far as they have now gone.

#### Oppose Shipment of War Supplies

An attempt to prevent exportation of war supplies has been made in Milwaukee, where Samuel Pearson, formerly a Boer general in the war against Great Britain, has brought suit under what is called the Discovery statute of Wisconsin against the Allis-Chalmers Company, alleging that the company has conspired with the Bethlehem Steel Company to manufacture shrapnel for use in the war. It is asserted in the complaint that Federal neutrality laws have been vio-

lated, but Pearson's counsel says that the charge is really that the company is guilty of a crime because it has become an accessory before the fact to the commission of a murder. Under the statute the defendants are required to appear in court and produce all the correspondence and papers relating to the manufactured articles.

It is recalled that Pearson in 1901 brought a similar suit in New Orleans, asking for an injunction to prevent exportation of mules for the British army in South Africa. That complaint was thrown out of court. This time he asserts in his suit that he has valuable property in Germany and German securities, all of which will be injured by a victory for the Allies, whose purpose, he adds, is to destroy German property and subject Germany to their domination. He has the support of prominent German-Americans in Wisconsin and will try to bring similar suits in Pennsylvania, Illinois and other States.

The president of the company says it has been making parts of shells and shipping them to the Bethlehem company, but has not exported them. At Mr. Wilson's direction an inquiry will be made, but it is pointed out at Washington that our Government's attitude toward the exportation of ammunition has been clearly defined in the letter to Ambassador von Bernstorff. Our Government holds that to impose an embargo on such exportation would be an unneutral act.

President Schwab, of the Bethlehem company, has recently been ac-

cused by one G. B. Means, who says he represents a Peace Institute, of breaking his word concerning the shipment of parts of submarines. It is understood that official inquiry finds no warrant for the charge.

The stock market was affected last week by reports about large new orders. These included one for \$66,250,000 worth of shrapnel for the British Government, to be filled by the American Locomotive Company, the New York Air Brake Company and the Westinghouse Air Brake Company; another for \$27,500,000 worth of rifles, given to the Westinghouse Manufacturing Company, and one received by the Pressed Steel Car Company for \$35,000,000 worth of cars and other railroad equipment. The president of one surety company, judging from applications for bonds, estimates the value of war orders at \$1,000,000,000. The President of another says the total may be \$1,500,000,000.

#### Wage Arbitration Award

At the close of a long hearing, on the 30th, an award was announced in Chicago by the arbitrators who have considered the demands of the 64,000 locomotive engineers, firemen and enginemen employed by ninety-eight Western railroads having 140,000 miles of track. The award was a compromise, satisfactory to neither party. The two representatives of the railroad unions or brotherhoods declined to sign it, and filed a dissenting opinion saying that the arbitration proceedings were a failure. The chairman of the board, Judge Pritchard,

of Virginia, admitted that he had desired to give the men more but had made concessions in order that there should be an award. Other members were Charles Nagel, formerly Secretary of Commerce and Labor; Vice-President Parks, of the Illinois Central; Vice-President Byram, of the Burlington; F. A. Burgess, assistant chief of the Brotherhood of Locomotive Engineers, and Timothy Shea, vice-president of the Brotherhood of Firemen and Engineers. The award relates to many things besides wages, including overtime rates, transfers, seniority, pay for delays, etc. The wage advances granted are small. As the award is binding for only one year, the contest will be renewed at the end of that time. It was asserted by the union men that the decision had settled nothing.

They had protested against the appointment of Mr. Nagel, asserting that he was biased because he was a trustee of the Busch estate, whose assets include many railroad securities. Notice is given that they will insist upon a Congressional inquiry to ascertain why he was selected.

The number of men on strike in the building industry at Chicago has been increased to 32,000, and more than 125,000 are idle. A Federal grand jury has indicted eighteen labor leaders, eighty-two contractors and two corporations for conspiracy to restrain trade and other offenses. It is alleged that the corporations, dealing in electrical fixtures, are unlawful trusts, and that the labor leaders are guilty of blackmailing employers.

#### Villa and Obregon

It was expected in Mexico at the end of last week that a great and decisive battle between Villa and Obregon would be fought within two or three days. After his defeat at Celaya, Villa retreated to Aguascalientes and there drew to him a majority of his troops that had been engaged in other projects. It is now denied that he gave up Monterey and San Luis Potosi, and there is evidence that the attack upon Tampico was not abandoned, for General Chao has won a victory in the movement against that port, capturing the town

of Chico and driving a part of the Carranza forces back to the coast. It is also admitted that Villa's men have taken and occupied Victoria, which is on the road to Tampico. Knowing that 1500 Carranza soldiers were on their way from Sonora to Juarez—the border city across the river from El Paso, where there was a garrison of only 300—he sent 1200 men northward to that place. But he gathered around him all who could be spared in other parts of the north, and prepared for the battle which might be the last in which he should be a leader.

Obregon had been moving northward slowly. There were reports that Zapata had sent 10,000 men from the capital to attack the rear of his army, and that he had been separated from his source of supplies. These were not confirmed. It was known, however, that a part of Zapata's forces had been whipped at a point between the capital and Vera Cruz. An official report from Carranza admitted that the twenty-two prisoners taken had promptly been put to death. Villa, it was said, would

New York Sun

THE CLOUD WITH THE SILVER LINING

New York Sun

RINGING THE BELL

THE RETURN OF CONFIDENCE

have 30,000 men in the decisive battle. Carranza ordered in New York 60,000 uniforms for Carranza's army, but there was no evidence that he had so many soldiers, nor was there any confirmation of a report that Obregon no longer acknowledged Carranza's authority but had said that he was fight his campaign for himself.

There are cases of smallpox and typhus in the capital. Vaccine and other medical supplies procured from this country were sent to the city from Vera Cruz on the train which brought back to the coast Duval West, President Wilson's agent. From Tampico 300 refugees have been brought to Galveston on a naval transport. In Tampico there is much destitution, and the looting of supplies by mobs was prevented only when a fund of \$300,000 was raised by the merchants. This was expended for food bought in New Orleans.

Ex-President Huerta remains in New York, but it is said that he will soon go down to the Mexican border. At Juarez, Villa has the border patrolled, thinking of a possible attack by supporters of Huerta. Several of the latter's generals have recently been in El Paso, and much ammunition has been carried across the line in the vicinity of Ysleta. There are reports in New York that the rich Mexican refugees or exiles were looking for a "strong man" to act for them in the present crisis, and were inclined to take Huerta if he could effect a reconciliation with President Wilson; also that Huerta has been rejected because of indications that Mr. Wilson will not even grant him an interview.

A Carranza agency in New York, called the Mexican Bureau of Information, gave to the press copies of two letters. In one, said to have been sent to General Angeles, Villa's chief military assistant, in June, 1913, by Porfirio Diaz, the latter urges Angeles to save the Mexican army, which, on account of the murder of Madero, must either "overcome the fury of the people or be annihilated by them." He suggests that Huerta and Felix Diaz may have "provoked" the killing of Madero to save the army.

In the other letter, said to have been sent a year ago by José Limantour, Porfirio Diaz's Finance Minister, to Francesco de la Barra, formerly Provisional President, the writer denounces Villa and commends Angeles, his assistant, proposing that Villa be bought and that Angeles be used to promote a restoration of those formerly in power.

The purpose of the agency is to discredit Angeles and to suggest that the latter has all the time been, as it says, "the dark horse, carefully groomed," of the reactionaries. But Señor Limantour says that he never wrote such a letter as the one bearing his signature, Angeles declares that he never received the Diaz letter, and the agents of Villa assert that both letters were fabricated by a Carranza consul on the west coast.

Carranza has been suggesting recognition of his Government by President Wilson, claiming that he controls nine-tenths of the territory of Mexico, but recognition will not be considered until the country has a Government strong enough to restore peace and hold an orderly national election.

Paul Thompson

#### GERMAN LINESMEN AT WORK

They climb the pole not by fixed or boot spikes but by a rope sling. The use of the field telephone and telegraph for the detailed direction of the movement of troops and the fire of artillery has never before been carried to such perfection as in this war.

#### Hayti's Latest Revolution

The revolt against President Guillaume Sam, in Hayti, promises to cause another change in what is called the Government. Last week, General Petion and General Moreno, leaders of the movement that was started by Dr. Bobo, captured Cape Haytien without firing a shot, and it is said that they control the northern part of the country. In a year and a half Hayti has had three Presidents, all of whom gained office by leading revolutions. Zamor overcame Oreste, and was then driven into exile by Davilmar Theodore. The latter was driven out by Sam, who is now in danger of being forced to join his predecessors.

President Wilson will send to Hayti Mr. Paul Fuller, who recently represented him in a visit to Mexico. A commission led by ex-Governor Fort, of New Jersey, failed, some weeks ago, to procure acceptance of such a fiscal protectorate as was established in Santo Domingo.

France, Germany and Italy recognized Sam's Government, which we had declined to do, and France loaned him \$1,000,000. Our Minister, Mr. Bailly-Blanchard, was called to Washington for a conference, and last week Secretary Bryan was in consultation with him and ex-Governor Fort concerning Hayti.

For nearly three years a large party of United States marines has been stationed in Managua, the capital of Nicaragua. They are part of a force that was landed to protect American interests during a revolution. Since they became residents of the capital they have taken part in none of the collisions between the Government and bands of rebels, but their presence has been serviceable to the President, Adolfo Diaz. The leaders of the Liberal party in Nicaragua are now asking our Government to withdraw them, and are saying that failure to do this will cause a revolution. A few weeks ago there was an uprising, but it was quickly suppressed. Supporters of the Government say that removal of the marines is sought in order that withdrawal of our moral support may encourage revolutionists and promote the overthrow of Diaz.

Nicaragua is trying to negotiate in New York a loan of \$15,000,000, desiring to use the money in paying old debts and in building a railroad from Managua to the Atlantic coast. The Government still hopes for the ratification at Washington of the pending treaty, by the provisions of which the republic would receive \$3,000,000.

# WHAT WE HAVE DONE FOR NEW YORK

BY JOHN PURROY MITCHEL

MAYOR OF NEW YORK

**A** FEW days ago the New York City administration, elected November, 1913, on the nomination of a citizens' fusion committee, gave an accounting of its stewardship. We told the men who are primarily responsible for our official existence what we had done, what we proposed to do, and in what respects we were being hampered by existing laws and by legislative meddling. It was a good thing, a necessary thing to do, this reporting to a responsible, representative body, and we hope that it is only the first of a series of such reports, in order that the citizenship of the city shall be kept informed of the acts and plans of its government.

City government in New York, as in the other cities of the country, is in process of reconstruction. The fifteen months just passed have been distinctly months of preparation and business reorganization. They have also been constructive, particularly in policy making. The immediate future for us here in New York, I believe, holds still more radical departures from the ineffective political practises of the past.

I cannot, for the purposes of this article, enter into details of the accomplishments in our city departments, but, in the thought that there may be some national significance in our general policy, I shall try to summarize the chief points in my accounting to the Committee of 107. After all, New York, vast as is the scope and volume of its municipal activities, must proceed thru the same steps to achieve efficient government that smaller American cities must follow. A progressive government of New York City is answerable not only to its immediate constituency for efficient service, but to the public opinion of the nation. As New York's wealth and international prestige is a matter of American concern, so the character of its government is a national benefit or a national humiliation as it is efficient and progressive or servile and reactionary.

The citizen movement of which the Committee of 107 was the expression was unique. It was predicated upon the theory that the people of New York were so disgusted with corrupt, machine-controlled, extravagant and inefficient government in state and city in the past, that the force of their opinion would compel all those parties opposed to autocratic boss government to accept a citizens' ticket nominated by a representative committee, irrespective and in spite

of immediate partizan interests and desires. The result established the soundness of the theory.

The fusion was a genuine citizen movement pressed upon the parties by the force of public opinion and the ticket was selected by the general citizenship through a representative committee and not by the parties. It follows that the present city administration thru its fifteen months of life has had to look for its support not to any party or parties, but to the citizenship of the city. It must look only to the same source for support for the remainder of its term. This administration is without a party. It is responsible to no party, and no party feels responsible for it.

## APPOINTING EXPERTS

The first duty that devolves upon the mayor is the selection and appointment of the heads of his departments. I have already stated the principle upon which this was done. The field was canvassed to find men not only of capacity and personal ability, but men peculiarly qualified by specialized training for the discharge of the duties of each respective department. When private business organizes itself, it will not select a railroad man to run an industrial enterprise, or a civil engineer for the presidency of a trust company. It regards specialized training as essential to success in a specialized field. This principle I recognized as mayor in selecting the heads of my departments. When men of the caliber and training I desired were found within the ranks of a party contributory to fusion, they were appointed, and I was glad of the opportunity to select them. When, however, men better qualified and better trained were found outside the lines of party organizations, they were appointed despite that fact. The result has been, I think, that the present commissioners of the city departments comprize as able and qualified a group of administrators and specialists in the problems of their respective departments as has ever been brought together in any governmental enterprise.

Every preceding administration has been shipwrecked on the rocks of the police department. We have weathered fifteen months of storms, and the police department is better organized, more efficient, better disciplined, and with a spirit more responsive to the commissioner and the administration than ever before. We have had no scandal and no break-

down of police work. We have effected a broad reorganization of the department and have inspired the men with a confidence in their commissioner and in their officers, based on the assurance of a square deal and support in the discharge of their duties. Reward or punishment depend solely upon the character of service rendered and are today divorced absolutely from influence, political or personal.

## THE HEALTHIEST AMERICAN CITY

In no department have greater constructive results been attained than in the department of health. Dr. Goldwater is the first commissioner to realize and avail himself of the extraordinary powers conferred by the charter upon that department, and while broadening the work of the department and carrying it to a higher plane, he has inaugurated a great campaign of public education in health matters. As an aid to his own judgment, he has established an advisory council of 175 representatives of science, and of the business and social life of the city, and has associated with himself this committee in the consideration of questions of department policy. The general work of the department is reflected in the lowest general death rate and lowest infant mortality rate of any city in the United States.

Perhaps the most interesting of the undertakings of this department has been that to secure better conditions of transit for the people of the city. Everyone has known for years that our surface and subway cars have been crowded to a point dangerous to the public health. Every agency supplied by state and city has unavailingly attempted to better these conditions. The health department, by the simple expedient of notifying the transit companies that the operation of overcrowded cars is a menace to public health, and by the promulgation of an order of the board of health forbidding overcrowding in the cars, has compelled these companies to increase their service and decrease congestion. This order is issued under power conferred by the charter and its breach is punishable by heavy fine. In the successful use of this power has been found the only effective means of attacking the overcrowding problem in the surface cars and subways of this city.

The work of street cleaning is technical and specialized. For that reason, I appointed a specialist, a man who had developed his specialty

by years of training. The work of the department has been reorganized and systematized, with the result that the streets of the city, even under the great handicap of construction work proceeding at so many points, are cleaner than at any time since Colonel Waring's day. A general system of street flushing has been put into force, and the equipment for street scrubbing has been doubled. The equipment of the department is being gradually modernized. Five hundred of the two thousand ash and garbage carts of the department have been covered, and arrangements completed to cover eight hundred more within a very short time. A model district has been organized and laid out, in which thoroly modern and scientific equipment will be used. On the basis of the results obtained here, the city will be able to determine the value in results and the cost of modernizing the equipment of the department thruout.

#### DOCKS AND FIRES

The largest physical constructive problems which this administration is called upon to solve falls within the jurisdiction of the dock department. They are also the most important to commerce and to the business interests of New York. In 1914 the department constructed 134,000 square feet of new piers as against 59,000 in 1913. It has negotiated a great number of new leases at increased rentals, and has secured the extension and reconstruction by private capital of piers upon city owned land at increased rentals to the city. It has readjusted leaseholds and provided better facilities for the marine commerce of the city, and in 1914 it transacted its business with a decreased administrative expense of \$312,000 under that of the preceding year. Furthermore, it has translated a deficit on the Staten Island Division of the Municipal Ferry, which in 1912 was \$189,000, into an operating profit of slightly over \$15,000.

The fire department, upon a budget lower by \$55,000 than in 1914, has organized a series of new companies which, by July, will equal a fire department of a city the size of Rochester or Buffalo. It has done this by the exercise of strict business economy, and by a reorganization and redistribution of its personnel. The work of fire prevention has been carried forward and improved, with the result that the fire loss was kept to a figure lower than that of any year since 1907, with the exception of two years, and in this field the power of the department has been materially increased by the action brought by the commissioner, who has estab-

lished his right, for the first time in the city's history, to collect the expense of fighting a fire caused by culpable and willful negligence.

#### MAKING OVER CRIMINALS

The achievements of the department of correction have been both administrative and in the field of constructive planning. Effective checks have been placed upon the drug traffic in the institutions, and broad improvements in the medical service have been made. The institutions under the department of correction have hitherto been corruptive rather than correctional. Almost every condition existing within them combined to degrade and vitiate the prisoners, and to send them back into the community worse equipped for participation in its social life than before. The great work of the present administration has been to change the spirit and character of these institutions and to make them correctional in fact.

Most important of the contributions of Miss Davis is her establishment of the true principle of correction. Her administration recognizes that useful employment, decent sanitary conditions and proper treatment are necessary to make these institutions curative as well as punitive.

#### THE BURDEN OF UNEMPLOYMENT

A heavy burden has fallen upon the department of charities this year. Probably never before in the history of the city has there been so severe a demand upon the generosity and good will of the community. During the year 1914 the Commissioner of Charities has been pressed on the one hand by the consequences of war abroad, and by abnormal industrial conditions at home, and on the other hand by the activity of a host of detractors and enemies, who have had special interests or prejudices to serve. Despite these conditions, the department has been able to add no small number of constructive achievements to its credit.

We want to make the Municipal Lodging House something more than mere sleeping quarters for tired, hungry men, out of work; we want to make it a great human repair shop, manned and equipped to rebuild the broken lives of those who enter its doors for help. Thru our Bureau of Social Investigations we want to carry on preventive social service work in the houses of the poor.

The European war and business depression at home created last winter an unprecedented condition of general unemployment. This the government of the city, while not recognizing any legal obligation, under-

took to relieve as far as lay in its power. Public works of all kinds projected for the immediate future were advanced by the departments and by the board of estimate to the point of actual beginning with all possible speed.

A large citizens' committee, representative of the business, financial and social interests of the city, was appointed by me, and undertook at once a study of the underlying conditions of unemployment and the immediate relief of those in most pressing need. This committee collected approximately \$200,000, and established thruout the city some twenty-two workshops, in which over 4,500 men and women have been employed during the past winter on useful work, and at wages sufficient to keep them from becoming public charges, and under conditions which permitted them to seek, and many of them to find permanent employment.

I might go on, if space were at my disposal, to review the work of the other departments—to point out how the department of water supply, on a budget decreased by \$570,000, has extended the lighting system of the city and improved its quality; how this department has obtained lower rates from the lighting companies; how the department of licenses has established its new employment bureau, has controlled the theaters and the moving picture houses, has exercised sanitary control over the issue of new licenses, and has protected the morals of the community thru its supervision of dance halls and public exhibitions—but a complete review of these and of the other departments would require too much space, and the record has been made, in part, currently in the press.

#### THE MAYOR AS BUSINESS MANAGER

It is not sufficient for the mayor to appoint the heads of his departments and send them into the field. If his administration is to be successful, he must work with them constantly day by day. No mayor heretofore has ever tried to be the business manager of the city. I conceive that he should be, that he must be if his control is to be real as well as theoretic. It is not enough to sit quietly by, as has been the custom in the past, and wait for situations to arise, for difficulties to be presented by the administrative heads of the departments, to commission them to make good if they can, and to supplant them if they fail. The mayor should work day by day with them on the problems of administration and of policy. That he cannot do directly personally. His time is too far consumed by the meetings of deliberative boards,

and by essential interviews, conferences and public meetings. He must have time at his disposal for consideration of the great questions of city-wide policy. His executive control, therefore, must be thru an agency. The agencies I have employed for this purpose have been the Chamberlain and the Commissioner of Accounts.

#### THE DEPUTY MAYOR

I invited Mr. Bruère to become Chamberlain with this particular plan in mind. I wanted someone with a thoro knowledge of the organization of the city government, and with capacity for handling the problems of administration, to assist me in keeping a centralized executive control of the administration of the departments within my jurisdiction, to work with the heads of departments critically and constructively, and with them, bringing to the consideration of questions the point of view of the executive, to formulate and present to me in thoroly digested form the questions that require executive decision.

The office of the Commissioner of Accounts, altho primarily investigative and auditing in the nature of its duties, has also been valuable for a great portion of this work. It was my plan to reorganize that office, to make it a single-headed commission, to make its duties constructive as well as critical and analytic—to make it, in short, the mayor's arm and agent of administration, studying problems of the departments, coöperating in the solution of them, developing with them, from the executive point of view, methods and processes, and principally keeping the mayor constantly informed directly of the operations of all those portions of the government for which he is responsible. The Legislature of last year denied my application for a one-headed commission, constructive in name as well as in duties. This year the bill died in committee.

In the meantime, the Commissioner of Accounts has continued the effective discharge of his general investigative duties, with the result that his report upon an exhaustive study of the elective coroner system has brought about the enactment of a law which will abolish that system at the expiration of the terms of the present coroners, and will substitute for it an effective and economical system for the investigation of homicide cases.

Gradually over a period of much more than half a century, the City of New York has been piling up a municipal debt of huge proportions. This debt was incurred for almost every conceivable purpose. Altho the-

oretically contracted only for physical improvements of a permanent nature, partly thru loose practise and partly by fraudulent design, the proceeds of the city's borrowings were used for purely temporary purposes—such as wages of maintenance forces, and the cost of perishable personal property.

Gradually in recent years a better practise has been built up until, under the administration of Mayor Gaynor, the board of estimate carefully distinguished between the permanent improvements for which long term bonds were issued, and maintenance charges carried out of the tax levy of the year. But when this administration came into office, the gross debt of the city had reached the staggering figure of \$1,223,918,429.58, while the net funded debt was \$898,013,401.88. In the budget of the present year we carry the sum of \$59,000,000 on account of debt service alone. Manifestly it was incumbent upon some administration to put a stop to the increase of this crushing debt. The present administration faced the situation frankly and undertook that duty.

#### A PAY-AS-YOU-GO POLICY

At the time when we negotiated the \$100,000,000 loan in order to meet our obligations abroad in September, we declared a new financial policy. We declared that we would hereafter carry in the tax budget of the city, in increasing proportion, the cost of permanent public improvements of a non-self-sustaining character until, at the expiration of four years, we would carry in the budget the entire cost of such improvements.

This is a radical departure from the city's former policy. It will, of course, add in the immediate future large sums to the budget of the city. It was necessary, however, as a step

to protect the credit of New York. It puts the city, for the first time in its history, upon a pay-as-you-go basis.

#### HOME RULE

New York City is governed very largely from Albany. We have not the power to regulate our local affairs. We are compelled when we need to make slight changes in the organization of our departments, and often even in purely administrative matters, to go to Albany. This year we asked the Legislature for a series of bills necessary to the economic and effective conduct of our business. A number have been given us; other and still more important bills are before the Legislature.

We have asked for a small board of education. Every intelligent, disinterested student of the question agrees that the present board is unwieldy, and that a small, compact, businesslike board could administer the schools vastly more economically and efficiently. That bill would mean millions in saving to New York.

Most important of them all, we have asked a bill giving to the board of estimate and the board of aldermen the same jurisdiction over the salaries and numbers of city and county employees, which they now have over those in the departments under the jurisdiction of the mayor. This bill would give the board of estimate the power to save the taxpayers many millions of dollars in the next and ensuing budgets. It was defeated. City employees opposed it. It has come to the point when the organized city employees are stronger at Albany than the government of the city and the taxpayers combined.

All this legislation, asked, granted, or denied, merely demonstrates the imperative necessity for genuine municipal home rule.

Real home rule New York will never get from the Legislature. We will go to the Constitutional Convention this year, however, with a demand for home rule fortified by constitutional provision, a demand which will not be exprest by the voice of this city alone, but will be dinned into the ears of the constitutional delegates by the united voices of fifty-four cities of this state. At last, I am happy to say, the cities of this state recognize their common necessity, and are banded together in a federation of mutual interest to obtain from the convention the powers that will permit them to develop their local governments and their local opportunities untrammelled by legislative interference.

*New York City*

#### CONSTRUCTIVE ACHIEVEMENTS OF FUSION IN NEW YORK

*Experts appointed to office  
Police Department purged of political favoritism  
Board of Health compels better transit service  
Street cleaning equipment modernized  
Dock Department saves money  
Fire Commissioner establishes right to recover expenses of fighting fires caused by negligence  
Penitentiaries made correctional rather than corruptive  
Mayor, thru City Chamberlain, becomes effective business manager  
Increase in city debt checked*

THE BATTLESHIP "NEW YORK" AS SHE PASSED UNDER BROOKLYN BRIDGE

"Taking facts as they are, there is no navy in existence today so situated as to be capable of successfully competing with our own"

# IS ANYTHING WRONG WITH THE NAVY?

BY PARK BENJAMIN

THE INDEPENDENT'S NAVAL EXPERT

SOME people are questioning the preparedness of the navy; others oppose any enlargement of it as tending toward "militarism" or "navalism"; others claim that its efficiency has become impaired; others say that its fighting condition was never better, and underlying these and many other equally divergent opinions is a widespread inclination to pitch into Secretary Daniels, not merely for what he has done or not done, but for acts of commission or omission for which Congress or his predecessors are responsible. Fifty years of somewhat intimate acquaintance with the service, I presume, is the reason why I am asked by the editor of *The Independent* to suspend looking at the trouble across the ocean and observe this one at home. With much diffidence, for the factors in the problem are many, complex and often obscure, I venture to offer the following considerations:

First, as to "militarism" in general, and so-called "navalism" in particular.

Militarism does not mean the possession of a relatively large military establishment, but the exaltation of the military power, no matter whether great or little or whether under color of law or otherwise, above the civil power. War is an effort by one people to impose by force its will upon another people. Militarism is the attempt of the military servants of a people to impose their will upon their master. There is little to choose between the imposition of one will or the other: both are directed to the destruction of the nation.

There has never been a naval Pretorian Guard. No navy has ever set up or pulled down king or parliament, nor in the nature of things can any navy do so. The reasons are obvious, and chiefly because the habitat of the navy is the sea and not the land. It is equipped for sea fighting and not for land fighting. It manages certain great war machines useful at sea only. Without the men these machines are mere float-

ing obstructions to navigation; without the machines the men if sent to fight on shore amount to no more than a small body of infantry. But the product of a modern battleship and its eight or nine hundred men on its and their own element—the sea—is an offensive and destructive force approximating that of an army of 150,000 men.

In this country there can be no militarism, as above defined, without, first, a political revolution. And there is no such thing as "navalism." These considerations may, therefore, at the outset be laid aside in dealing with present questions.

The latter as affecting the navy, have reached a stage wherein personal attacks, fanciful speculations and Cassandra-like prophecies are so intermingled that the man in the

street, who has contributed his share of the \$140,000,000 per year which the navy costs us and has supposed he was getting something good for his money, is approaching a state of muddle and apprehension. The President at the outset of the discussion in Congress called it good dialectic exercise, left it there and has not changed his attitude. Congress after an investigation authorized such changes and augmentations in the navy as it thought best. The storm center is Secretary Daniels, who contents himself with enumerating the things accomplished during his administration. As among these are a saving of three million dollars in building the "Arizona" and a scaling down of the profits of the armor and ammunition making concerns, naturally the latter are not found among his enthusiastic adherents.

The condition of the navy has recently been set forth by the Secretary in a letter to President Garfield of Williams College. We have in active service 225 vessels of all characters and 101 vessels in reserve. We have under construction and authorized seventy-seven vessels, namely, nine dreadnoughts of the most powerful kind, twenty-three destroyers, thirty-eight submarines and seven auxiliaries. We have largely increased the number of mines on hand and in process of manufacture. We have increased torpedoes by ninety per cent, and we shall soon have very much greater facilities than at present for constructing these weapons. The enlisted strength of the navy is at the maximum figure allowed. There are no better guns than those which we have. Aviation in the navy is being developed, with an appropriation of a million dollars in its support. War plans have been formulated and will be put in practice, and a Chief of Operations, now regularly created by law, will hereafter perform the substantial functions of a General Staff.

It may be added, though not specially noted in the Secretary's letter, that the rate of desertion in the navy has never been lower

© G. V. Buck

SECRETARY DANIELS

"He is for the moment the director of the most powerful free navy in the world. It only remains for him to do his best to keep it so"

and is now far below the figures which in past years were supposed to represent an irreducible minimum for all navies; that the enlisted force is made up of ninety-eight per cent American-born citizens, the rest being naturalized; that the drunken tar of the old days is as extinct as the dodo, and that the present enlisted force, coming as it does from the same social strata as its officers, is beyond doubt the most intelligent body of young men in any navy in the world. All of these facts are verifiable in official reports and are not based upon the assertions of the Secretary. Collectively they also show that ship for ship and man for man no navy surpasses our own.

Owing to the stay of a portion of the fleet in Vera Cruz for a year or more, many drills and exercises had to be omitted, and as a result there was undoubtedly some loss in the absolute efficiency of the fleet as a whole. Against this is to be balanced the experience gained under practically war conditions and results of the drills which have taken place since the fleet returned to its regular practice ground. If the efficiency loss has not been wholly made up, there is no reason apparent why it may not be made up in no unreasonable period of time.

Preparedness, however, does not depend upon the absolute condition of a navy, but upon its relative condition with respect to other navies, with one or more of which there is an assumed possibility it may be called upon to contest command of the sea. This brings in the time element, and a comparison of conditions not existing at some indefinite, but at some particular and fixed, period.

At the moment of this writing the German fleet is locked up in its harbors by the English fleet, which, as a consequence, is itself locked up. The French fleet, which has played but little part in the present war, is engaged in neutralizing the Austrian fleet and incidentally helping in the attack on the Dardanelles forts. The Russian fleet is shut up in the Baltic and in the Black Sea. The Japanese fleet has been withdrawn to Japanese waters and will stay there. Other fleets are of inconsiderable relative strength.

Taking facts as they are, there is no navy in existence today so situated as to be capable of successfully competing with our own. Nor will this condition be changed materially by the long anticipated battle between the British and German high sea fleets; for the mauling which both will get will still leave our naval strength greater than that of the victor; and this will continue until the

latter by new building regains his former power.

Present need for building any more enormously expensive battleships than have been provided for is not apparent. The shipbuilding facilities of this country appear to be sufficient to enable us to turn out vessels of any kind quite as rapidly as can be done abroad. Therefore in the time which the victor may require to bring his fleet back to normal condition, it is not clear why we cannot *then* increase ours, either correspondingly or to whatever extent may be found necessary.

The war has not solved completely a single one of the pressing naval problems, although in various ways it is leading toward possible solutions. It is not certain that it will leave the battleships of today the most formidable of fighting ships—or that another type of vessel may not arise as different as the turreted monitor was from the iron-plated steam frigate. The war efficiency of the submarine, in the face of the failure of the German invisible blockade, is more in doubt than ever. The repulse of the British and French fleets by the Dardanelles forts, through the agency apparently of gunfire, is striking at the roots of many preconceived notions. It is becoming doubtful whether these great armored structures require the penetration of projectiles to put them out of action, or whether they can be practically destroyed by impact of tremendous shells which may not pierce their armor. Nothing but the actual tests of war can settle such issues as this. And if they are to be settled by this war the time cannot be far distant. It does not seem prudent, therefore, that by shouts of "unpreparedness" we should be stampeded into constructing a navy not in accordance with the relative conditions which exist now, not in accordance with whatever relative conditions may be brought into existence as the outcome of the present war, but with those which obtained before this war began, and which may never be reproduced.

The attacks on Secretary Daniels become grave only in so far as his assailants aver that certain of his official actions tend to undermine the discipline of the navy. The discipline of a military body is the great organic force which holds it together and upon which its efficiency ultimately depends. The navy is nothing but a fighting machine pure and simple. It has but one object and purpose; that is, to win our battles on the sea. The moment we attempt to divert it to any other

purpose just to that extent it is impaired. It is a bad tool for the new purpose because it has never been adapted thereto. This is why warships cannot properly be used as passenger liners or to drum up trade in South America or to carry the mail or be taken from their legitimate duties to any but a very limited extent, in order to attend flower shows, Sunday school celebrations or to exhibit themselves in the Hudson River.

In the naval officer the same singleness of aim is also essential. His business is to fight battles. When he is not doing that his business is to think battles—to think battles all the time, and nothing else. It does not help him a bit in doing this to have prominent citizens "receive" him, make speeches at him, or drag him about in street processions. The moment he is converted or converts himself into an explorer, a pedagogue, a social leader, a Navy League lecturer, or a specialist in any of the various arts and sciences, he is departing from his true use and purpose, for which he is paid. The difference between him and the doctor or lawyer who wishes to follow some other calling side by side with his own is that upon the proficiency of either doctor or lawyer in his chosen profession the safety of the country does not depend, while upon that of the sea-fighter in his it does.

Excluding the criticism of the ammunition and armor makers, Secretary Daniels appears to be diverting the minds of the naval officers from thoughts about battles which they ought to have to thoughts about something else which they ought not; and it is further asserted that he is doing this in an exasperating fashion. For example, shortly after his assumption of office, he created much extraneous and hence useless thought by prohibiting the use of wines, or even beer, in the officers' mess aboard ship. However commendable this might be to temperance advocates generally, it was open to the inference that he regarded the very men into whose hands the safety of the country is placed as incapable of governing themselves. It was also illogical, because it related to place and not to persons. It does not prevent the individual from going ashore or from walking out of the gate of a navy yard and getting all the drinks he wants. And besides, such alcoholic liquors as whiskey and rum have been contraband afloat ever since 1855. Officers do not get drunk on board ship. Their own safety, if nothing else, would prevent it. They

have a natural dislike to being drowned, and no one better than they knows that that is exactly what might happen if an obfuscated intellect were in responsible charge of the bridge.

The Secretary seems to be convinced that it is his duty not merely to keep up the efficiency of the service, but directly to provide for the moral and educational welfare and uplift of everybody in it, and of the enlisted man in particular, whether he likes it or not.

For example: he seems to think that the navy should be a great floating university, in which the curriculum should include primary education of the bluejacket of about the kind the average citizen gets in his crossroads district school. Now, the navy is already a great technical university, having for its aim and object the most efficient fighting sailor. It has its Naval Academy for the education of its officers, which now maintains postgraduate courses in special naval subjects; and similar courses are available to them in the colleges. It has its training schools scattered over the country

for the men themselves. It has schools of gunnery, schools of telegraphy, schools of aviation, schools for artificers, and a variety of other establishments, all intended to enable men to specialize in particular branches of naval work. None the less, Secretary Daniels requires an hour or so per day to be taken out of the already extremely engrossed time of the enlisted man aboard ship in order to instruct him in primary fundamentals, and the officers are diverted from their legitimate work to become teachers. It is not a question of whether in the abstract the men are benefited by this instruction, but whether, as a business proposition, the taking of that time for that purpose, from their regular duties aboard ship, pays. It certainly does not. It would be much cheaper to build primary schools on shore, provide teachers and equipment, and compel the men to pass thru them before they join their ships, rather than take this time from their working hours. This for the same reason that it would not pay for the Bethlehem Steel Company, for example, to intermit the manufacture of war

material at the present time in order to instruct its men in reading, writing and arithmetic for an hour in the afternoons. The diversion hurts discipline as it would hurt business. It puts officers and men in a different relation from that which long-continued custom and tradition has established in all navies as the best.

The Secretary's notions as to uplift of the enlisted man appear to be based on conclusions somewhat resembling those which controlled the French Revolutionists of 1793. When they assumed the charge of the French navy, they wanted "equality"—forgetting that there can be no such thing as equality in an organization in which some of its members must obey the orders of the others. The result of their efforts to establish such an equality is written large in many a memorable defeat. Secretary Daniels, of course, has not gone to any such lengths as the French Revolutionists did, but when he talks publicly in a way to lead the enlisted man to think himself somehow the victim of an aristocracy (his officers) and that his rights as a citizen before the law are in some way abridged,

#### THE CREAM OF THE WORLD'S NAVIES

"The enlisted force is made up of ninety-eight per cent American-born citizens; the drunken tar of the old days is as extinct as the dodo, and the present enlisted force is beyond doubt the most intelligent body of young men in any navy in the world"

the Secretary is striking squarely at the discipline of the navy. Having his photograph taken embracing with one arm a corporal of marines and with the other a smiling bluejacket, is in itself merely funny, but for the above reason it might better have been omitted. So also when the Secretary suggests that the enlisted men should write to him about their grievances directly instead of sending their letters thru their captain, who is compelled by law to forward them, he overlooks the fact that the object of the rule is simply to enable the superior officer to present his view of the case. The enlisted men know their rights and their duties both as citizens and as members of the navy, and hence are just as well aware of the value and importance of discipline as their officers are. In so far as the Secretary may impair it, he will lose their respect. He may deceive himself, but not them.

Another complaint is that the Secretary refuses to take the advice of the naval officers in matters bordering on questions of national naval

policy. The difficulty here is that the dividing line between policy and how a given policy is to be carried out is not always clear either to the officers themselves or to the Secretary, and no two secretaries have ever dealt with this issue in the same way. Some of them realizing their own lack of knowledge have merely followed the counsels of the officers. Others influenced chiefly by political reasons have asserted themselves in direct opposition. Of course the civilian Secretary must in technical matters rely upon the advice of the expert naval officer; but it is for the Government of the country to dictate its naval policy and not for the persons who are hired to carry that policy into effect. That way militarism lies, and when the naval officers get the public confused as to whether they are trying to direct or trying to advise their civilian head they have only themselves to blame if some people think the militaristic specter is beginning to walk.

A great deal if not all of this trouble will probably be terminated thru the new Chief of Operations.

As for the other complaints against the Secretary, some are trivial, such as wearing a lieutenant's gold-laced cap while visiting a battleship—which at most only establishes a precedent for future secretaries—and others which more or less involve political questions. He is by no means the first Secretary who has done unusual things, and if his actions are to be gauged by the wardroom's growls, he has perpetrated nothing equal to Secretary Chandler's famous order which prohibited the wives of naval officers from following their husbands to foreign stations. About the worst that can be said of most of his alleged shortcomings is, in the language of "Dick Deadeye," that he "means well but don't know"; and that is true of every naval Secretary we ever had.

He cannot fairly be said to have impaired the efficiency of the service much, if at all. He is for the moment the director of the most powerful free navy in the world. It only remains for him to do his best to keep it so.

## EDISON

### BY PERCY MACKAYE

Read by the Author at Carnegie Hall, New York, May 6, on the Awarding to Thomas A. Edison of the Civic Forum Medal of Honor for Distinguished Public Service

A thousand leagues on the Arctic sea  
A ship went down thru the frozen floe.  
Captain and crew they watched her go:  
They ran her colors free;  
They cheered her lustily;  
And far peoples chanted her praise with them  
Where a phonograph, from her plunging stem,  
Pealed to the stars her requiem.

A thousand leagues thru the Afric wood  
A man went looting the jungle's wealth:  
Leopard nor lion could stay his stealth,  
Nor sleeping-death nor flood:  
He drew not the monsters' blood,  
But he led them alive thru the scorching day  
By a tape of moving film, to play  
With the wondering children of Broadway.

A thousand leagues, or a thousand years,  
Are motes in the gaze of the seeking mind:  
By its own radiance thought can find  
Its way to ultimate spheres  
Dark, till its beam appears  
To blazon them. So on that beam hath run—  
Round Arctic moon and Afric sun—  
The electric mind of Edison.

Thru delicate engine and disc and reel  
He quickens the elemental cause,  
Kindling the lightnings of its laws  
Till atoms of jelly and steel  
Are made to stir and feel,  
And mortals, that long have ceased to be,  
Live on—for the world to hear and see—  
In a semblance of immortality.

The throbbing ticker resounds his fame  
With its ominous pulse, and the mart responds,  
Selling his magic in stocks and bonds;  
But they who toss his name

With gold in their mighty game  
Behold not the soul of the mightier One  
Who sits in the brain of an Edison  
And weighs the dreams when all is done.

For all that the millions sell and buy  
And wrangle for is a dreamful thing  
Wrought of a lone imagining.  
Tower'd cities that top our sky  
Loomed first on the pensive eye  
Of brooding architects; the glories  
Of art and science, their sounding stories,  
Have birth from silent laboratories.

So out of his visioning silences  
The great inventor reveals for us  
New pathways of nature, perilous  
With unknown skies and seas,  
For new astronomies  
To chart; and each dim discovered trail  
Is lit by the gleam of a luring grail  
With the legend: *What shall the search avail?*

What at last shall avail our invention? Yea,  
What avails our soul its cunning brain  
If our paths be hatred, our goal be pain?  
Brain searches in cloud and clay,  
But our soul must point us the way  
Thru cloud to a star, thru clay to God's breath,  
Or else it were wiser to welcome death  
On the starlit road to Nazareth.

But they *shall* avail—both—brain and soul!  
They avail us *now* in him who has won  
Earth's wondering homage—Edison.  
For his mind has held as its goal  
The good of a world made whole,  
And his spirit girds it with lightning span—  
The planetary American  
Whose master-thought is the joy of man.

Karl Struss

THE HOME OF THE LIBRARY OF CONGRESS

## THE LIBRARY OF CONGRESS—AND YOU

BY HERBERT PUTNAM, LIBRARIAN OF CONGRESS

**M**OST of the activities of the Federal Government reach out from Washington to confer some benefit upon local enterprise or the individual citizen. But the National Library, with its comprehensive collection of books, prints, music, and (within the field of American history) of manuscripts, might seem to be of use only to the visitor to Washington.

The fully effective use of the collection can only be upon the premises. But this is not to say that the books and other matter remain inert upon the shelves except as some inquirer, visiting Washington for the purpose, seeks them here. The Library also is a publisher, and a considerable one. It issues numerous "lists" which, if they are not contributions to science, in the sense that they advance knowledge of the subject matter, are something more than mere accumulations of titles. They set forth the books, documents, and articles in periodicals which bear upon particular topics of current interest. They are distributed widely to libraries; and they enable the citizen, wherever resident, to begin his study of such a topic intelligently.

Nor is he limited to the published lists. Should his topic be unrepresented in them he is at liberty to write directly to the library for a special list upon it; and unless the topic be one upon which the aid of his own local library should prove sufficient,

he will get what he asks for. Twelve or fifteen thousand such requests reach the library each year and are answered, even if they are not for a list of books but for some specific information; provided, of course, the answer is possible thru a moderate reference, and can be kept within a moderate compass.

The justification of the response (which in a way assumes the library to be a sort of bureau of information) is that with its great collections (exceeding now three million items), its efficient bibliographic apparatus, and its staff of employees expert in the handling of this, it can with a minimum of effort and expense render a large and varied service which local institutions could render, if at all, only by the multiplication of effort and expense.

But the inquirer thus directed to the sources of information is only past the threshold of his inquiry. He still needs the books themselves. Well, if the books are books which are not to be had nearer at hand, *he may secure them from the National Library*. He has only to ask his local library to borrow them for him, and they will be sent—at his expense for the transportation.

There are, of course, limitations to such loans; it is not the duty of the Federal Government to substitute itself for local enterprise. It is not practicable to furnish books for mere recreation, or for ordinary self in-

struction or culture. These are within the province of the ordinary public library. But where the book is an unusual book, for the unusual need, and the National Library has it, and can at the moment spare it, it will be lent.

Our citizens engaged in serious research—tho not a class by themselves, for they include everyone with a problem of the moment, even if unprofessional—are but a fraction of the population. To the others who are using their local libraries for ordinary purposes, there is another service, which, tho indirect, may prove of fundamental concern. This consists in the relief afforded by the National Library to local libraries by the publication and sale of its catalog cards. These cards embody a complete catalog entry by author, and for the most part by subject also, for every book currently received by the National Library, and the major portion of the books in its existing collection. They also indicate the classification of each book in the collection here. They are "standard" in size and form and may be inserted into the card catalog of any American library. The price charged is but nominal.

There is no citizen having a serious problem to which a library may respond, and for which his local library proves inadequate, who may not look to the National Library for assistance.

Washington, D. C.

#### TO CARRY CITY FOLK INTO THE WILDERNESS

A FINE SPOT ON OREGON'S NEW STATE HIGHWAY, WHICH PARALLELS THE COLUMBIA RIVER ALL THE WAY FROM THE PACIFIC TO PENDLETON, A COUNTY SEAT IN THE ROCKY MOUNTAIN FOOTHILLS IN THE NORTHEASTERN PART OF THE STATE. FIVE HUNDRED MILES OF GOOD ROAD, CALLED THE COLUMBIA HIGHWAY, WILL BE READY FOR DEDICATION THIS SUMMER. THE STATE HAS SPENT \$1,600,000 ON THIS THOROFARE, WHICH IS A STRIKING EXAMPLE OF TODAY'S TENDENCY TOWARD THE CREATION OF LONG-DISTANCE HIGHWAYS

WHICH, WITH DEFINITE OBJECTIVES AND WELL KNOWN ROUTES AND WITH NAMES OF THEIR OWN, ARE MAKING THE WAY OF THE MOTORIST EASIER, AROUSING LOCAL PRIDE IN CO-OPERATIVE ENTERPRISE AND INCREASING THE PEOPLE'S ENJOYMENT OF THE BEAUTY THAT THE COUNTRYSIDE OFFERS. MULTNOMAH FALLS, HERE SHOWN, 277 FEET HIGH, IS A FEW MILES EAST OF THE CITY OF PORTLAND. THE SUBSTANTIAL AND COMELY CONCRETE BRIDGE IS CHARACTERISTIC OF THE HIGHWAY. UP THE GORGE IS A FOOTBRIDGE:

# THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

AMONG those who have part in shaping the trend of popular educational influences in the Lyceum and Chautauqua movement Dr. William A. Colledge has a double distinction.

As president of the International Lyceum Association he voices the ideals of many Lyceum and Chautauqua workers who are constantly in the field. And as director of the Educational Department of the Redpath Lyceum and Chautauqua Bureau his services are enlisted in behalf of the maintenance of educational standards in program building.

Dr. Colledge is a Scotchman who, after preaching and teaching and University Extension lecturing, has given his whole time to the Lyceum and Chautauqua since 1911. Not long ago he filled the 1000th engagement to deliver his literary lectures, with the record of never having missed a single date.

The International Lyceum Association is a voluntary social organization for mutual improvement and service whose membership of approximately 800 persons includes many of those who are known as professional platform people, bureau representatives and local committeemen. Its province, Dr. Colledge says, is to create sentiment that will cause abuses and inconsistencies to die out, "and by friendly intercourse establish a feeling of confidence and sympathy among the varied interests that in time will create a sentiment of high standards and endeavor in all branches of the Lyceum, a sentiment more powerful in its unconscious influence than any form of legislative action." For Dr. Colledge is confident that the Lyceum and Chautauqua constitute one of the greatest present-day educational forces, whose value is not to be estimated in money but in the influence exerted in the building up of higher manhood and womanhood.

As director of the Redpath Educational Department this season Dr. Colledge has selected the morning hour lecturers on literary, economic and community building subjects for the territory south and east of Chicago. The Chautauqua Reading Course plan will also be presented at these hours. He has also selected the playground and children's workers for the same territory,

## A MONTHLY FEATURE

CONDUCTED BY

FRANK CHAPIN BRAY

CHAUTAUQUA EDITOR OF  
THE INDEPENDENT

planning for successive days of Indian, Russian, German and Scandinavian folk tales and dances, as well as informal talks to parents. Plans for a Lyceum Course building, special courses under the auspices of educational organizations, and a system of correspondence reports from the field concerning the character and effects of programs as given, are in his hands.

Dr. Colledge was educated in Glasgow and London, was a Congregational pastor 1887-1903, extension lecturer at the University of Chicago, was for nine years at the head of the Department of Language and Literature at Armour Institute, Chicago, was the first editor of the *Technical World Magazine*, and is the author of *Interpretative Studies of Scottish Literature* and other books.

DR. WILLIAM A. COLLEDGE

If you were looking for a Chautauqua-maker, would you go to a Quaker college? One is to be found at Swarthmore, Pennsylvania. The Chautauqua Idea caught him, took possession of him and found expression in an adaptation, first to the popular educational needs of the small towns in the State of Pennsylvania, whence he has spread his innovation successfully northward into New England and southward to the Carolinas. He has found a way to give an

inspirational Chautauqua program to a town each afternoon and evening for seven days, with thirty-one events, for a season ticket at \$2, or less than seven cents an event. More than 200 of his tent Chautauquas were held in fourteen states in 1914.

Behind him is The Chautauqua Association of Pennsylvania, organized not for financial profit but devoting the surplus, if there is any, to the enrichment of programs and the extension of the movement. "Our proposition in every town," he says, "is that the people can lose, but that they can't make a penny. We pledge ourselves also that if we should take in money above expenses that would be used for furthering the work. In this way we put the towns at their best. People are willing to make almost any sacrifice or do almost any amount of work if the commercial element is eliminated. We have eliminated it from practically all of our towns. In a few places they are urging us to make it pay some money for their fire company or library or some other institution."

Mr. Pearson believes that the Chautauqua platform is the freest forum in America for discussion of educational, religious, sociological, economic and political questions without partizanship or sectarian bias. Even radical lectures, telling what people of other states have done to gain freedom to register their will, serve to shock people into thinking for themselves. Debates on such questions as Woman Suffrage and Socialism are educational. The use of a musical prelude to prepare audiences for a speaker has been tried and proves to be a practical device.

Mr. Pearson has been Professor of Public Speaking at Swarthmore since 1902. He is a graduate of Baker University, with postgraduate work at Northwestern and Harvard. He belongs to the Society of Friends and has written books on extemporaneous speaking and oral English. He founded the Chautauqua Association of Pennsylvania in 1912.

The American love of music, often proclaimed, and attested by box-office receipts in the few great cities, has had new proof in the annual engagement at Chautauqua, New York, since 1909, of some well-known orchestra with a program of classical and thoroly musical modern works. The greatest audiences of the entire summer gather for these orchestra performances and the coun-

try for twenty miles around Chautauqua, having learned to take much of what the Chautauqua platform offers as a matter of course, nevertheless rouses itself to unmistakable enthusiasm every year as to the visiting orchestra. The Russian Symphony, under the leadership of Modest Altschuler, is engaged for August 9-14, 1915.

Prospects for the season are regarded as excellent by the management of Chautauqua Institution, and if this view is correct it argues favorably for all summer schools and legitimate vacation resorts in America next summer, particularly those which appeal to quiet tastes. As an example of what the closing of opportunity in Europe may be expected to do, William Hinshaw, perhaps the foremost American baritone, who would under normal conditions have been singing in the great opera houses of Germany all summer, is engaged as head of the department of vocal instruction at Chautauqua. He is taking there with him the entire group of American students who appealed to him for professional help when deserted by their German masters at the opening of the war. Ernest Hutcheson, pianist, whose recitals have been a feature of the winter musical season in New York, instead of Berlin as usual, heads the colony group of piano students at Chautauqua each summer. Many thousands of cases could be found of people whose plans for either diversion or study abroad are balked. For the most part they will, it is argued, find some substitute at home.

The tendency to financial caution, which undoubtedly exists, will not cause many Americans, even of moderate means, to forego their vacations, which have come to be regarded as necessary for personal effectiveness. It may cause extravagances to be avoided by people of all sorts, which would bring into special favor such attractions as the summer schools and the Chautauqua hold out. As between sitting like one's "grandsire carved in alabaster," on the one hand, and giving way to expensive and profitless orgies of pleasure on the other, many will doubtless think a week to a month or so at a summer assembly, with liberal indulgence of wholesome outdoor life, represents a good middle course.

Travel bureaus directing tours in this country already report their correspondence heavier than ever before, notwithstanding that several concerns, always heretofore engaged with European travel, have now turned to the American and South American fields. That the Pacific coast comes in for an extraordinarily large share of attention hardly needs to be said, but that is de-

clared by no means to account for the volume of inquiries.

Ashland, Oregon, has a Chautauqua park in the center of the town and a bee-hive auditorium on a natural slope of land built after the plan of the Mormon Tabernacle at Salt Lake City. It is said that the Chautauqua programs during twenty-two years have cost some \$50,000, the list of speakers being particularly notable. The man behind this independent Chautauqua, G. F. Billings,

PAUL M. PEARSON

says that the money and effort have done far more than similar expenditure for paving or business structures, "in making a high-minded community, in uniting our people, in refining them, in making young men and women of the highest type, and in bringing all the world to Ashland."

*The Lyceum Magazine*, published monthly, is devoted to all aspects of the Lyceum and the Chautauquas. From its text and advertising pages the most comprehensive information available regarding bureaus, talent, and the various developments in the field may be obtained. *The Lyceum World*, monthly, also appeals to the same constituency of bureau men, local managers, local committees and program people.

*The Community Builder* is the name of a new publicity organ of the Redpath Bureau edited by W. Frank McClure. The name indicates the emphasis now uppermost in the promotion of Lyceum and Chautauqua business. It is an interesting and attractive publication circulated free in big editions and reflects the application of modern advertising methods to popular educational propaganda.

The books of the new Chautauqua Reading Course for the "American

year" of 1915-16 now announced are: "Social and Economic Forces in American History," edited by Professor Albert Bushnell Hart; "Changing America," by Professor Edward A. Ross; "American Ideals in Character and Life," by Hamilton Wright Mabie; "The Ways of the Planets," by Martha Evans Martin.

From the Redpath-Horner Chautauqua Circuit comes the statement that the Indians do not ordinarily "warm up" to Chautauquas, but at Wetumpka, Oklahoma, an Indian real estate agent named Johnson Tiger, a Creek, bought a hundred dollars' worth of season tickets and gave them to members of his tribe. They went to every session and showed great interest in the programs.

Chicago is a center for several new coaching schools, independent of bureau coaching systems which offer training to musical and entertainment companies for Lyceum and Chautauqua engagements. And a School of Oratory in Massachusetts has recently changed its name to Boston Lyceum School.

Ingenuity in Chautauqua Circle meetings during an "English year" of reading is represented by a "Tennyson Tea" in St. Petersburg, Florida, and a dramatic presentation of "Cranford," based on Mrs. Gaskell's novel, at Chautauqua, New York.

In Fulton, Kentucky, at the initiation of the Merchants' Association, an \$1800 Chautauqua auditorium was constructed in the city park within twenty-one days. City Council doubled the association fund, each of four churches contributed, merchants and citizens donated some of the materials and labor, and profits from the Chautauqua were assigned to high school equipment.

The late Captain John W. Kitchell gave a forty-acre park to Pana, Illinois, provided that the Pana Chautauqua could occupy it for at least twenty-one days each year, erect buildings and expend any profits upon the park grounds.

The Ben Greet Players in Shakespearean plays and a royalty company presentation of Kennedy's "Servant in the House" are Lyceum and Chautauqua attractions this year.

In Massillon, Ohio, the Board of Education manages the Lyceum Course and the Board of Trade manages the Chautauqua.

Rural school Lyceum Courses in the South have recently been inaugurated with considerable success.

## WOMAN A-MENDING

BY MARGUERITE O. B. WILKINSON

What time I went at early dawn  
Upon the King's Highway,  
When all the winter air was keen,  
When all the world was cold and  
gray,

I saw a woman old and gray;  
Her face was turned away  
And she was sitting there alone,  
Alone upon a stone.

And weird she seemed, as one might be  
Who had lived hard and spare;  
Ay, weird, as if a chancy dream  
Had brought her there and set her  
there.

"What loveless child hath left her  
there?"

What whiteneth her hair?  
Why should I hasten on and on  
With fear lest she be gone?"

Such was my thought; wherefore I  
called,

"Good morrow, Ancient Dame!

Behold, I journey to the Town,  
And, worshipful, would know thy  
name!"

"Young Brother, come and learn my  
name—

(Her voice had strangest claim)  
Who challengeth my name and  
grace  
Must meet me face to face!"

She said, "I may not turn about  
From this fair way to Town."  
And I was near enough, by that,  
To note her quaint and homely gown.  
A clarion voice! A homely gown  
Of gentle gray and brown!  
And low in toil she bent her back  
To mend an old gray sack!

She said, "I may not go to Town  
Until my task is done,  
For I must bear Life's treasure in  
When as my way to Town is won;  
This sack must hold what I have  
won—  
(Her gray hair gleaned the sun)  
Here is a deal of work to do,  
No treasure must slip thru!"

But when I came abreast at last  
(For never would she turn),  
Behold! her face was fresh and young,  
Her eyes had all youth's power to  
burn!  
Ay, warm with light her eyes did  
burn,  
My sudden fear to spurn;  
Beneath the shadow of gray hair,  
Strong youth was shining there!

My many questions muted me—  
She answered them at last:  
"I am the Present journeying,  
Arrayed in all the hoary Past,  
Deep shadows of a long, grim Past;  
Behold, I labor fast!  
I am all women of the earth,  
And I am their new birth!"

"I am most eager for the Town,  
And yet, awhile I wait;  
Young Brother of the King's Highway,  
Go, and unbar the heavy gate,

# Great Spring Sale

## Housekeeping Linens

McCutcheon's Spring Sale of Housekeeping Linens has each year become of greater importance to women who know that the name McCutcheon's means "The best in linens".

In spite of the unsettled condition of the linen markets of the world, the sale is taking place this year as usual, and will continue until May 29th. It affords a most favorable opportunity to buy at *reduced* prices linens that we purchased when prices were 10% to 20% lower than at present.

The collection includes a great range of qualities and sizes, as may be seen from the items listed below:

**Table Cloths**—from \$1.90 to \$50.00 each.

**Napkins**—from \$1.85 to \$21.00 per dozen.

**Sheets**—from \$5.00 to \$14.50 per pair.

**Pillow Cases**—from \$1.25 to \$5.00 per pair.

**Towels**—from \$2.00 to \$13.50 per dozen.

And some special values in Tea Cloths, Bath Sets, Blankets, Comfortables and Bed Spreads.

We repeat that this is a most favorable opportunity for the thrifty housekeeper to lay in a supply of linens for autumn as well as summer use.

*Write for Illustrated Booklet.*

# LUXEBERRY WHITE ENAMEL

*Whitest White Stays White*

## *In the wake of the brush*

A surface finished with Luxeberry White Enamel becomes whitest white and lastingly so. No trace of brush marks remain—only a smooth snow-white effect, dull or brilliant as you prefer. It is a finish that never turns yellow, nor does it chip or crack.

You can enjoy these unusual qualities—heretofore obtainable only in imported enamels—by specifying and using American-made Luxeberry White Enamel. The varnish for your floors and exposed natural woodwork should be of highest quality, too. Liquid Granite like other celebrated Berry Brothers' products has withstood the hardest wear and tear in homes and public buildings for over 57 years.

These products are specified by architects, used by painters and decorators and sold by paint and hardware dealers everywhere. Let us send you free interesting literature on home finishing.

MEMBER RICE LEADERS OF THE WORLD ASSOCIATION

**LIQUID GRANITE**  
Lasting Waterproof Floor Varnish

Swing wide for me the heavy gate;  
I come, tho it be late,  
Rich treasure bearing on my back  
In this poor mended sack.

"God wrought the fabric from the first,  
And gave it to my hands;  
Man tore it for his rougher need—  
To mend he hardly understands,  
To fill, to bear, scarce understands;  
I fasten the torn strands,  
I fill with love and peace and grace  
The burden of the Race.

"If I could walk as you," she said,  
"Upon the King's Highway,  
As free as wind, and burdenless,  
Forsooth, I could go on today;  
Indeed, I could go in today,  
To that fair Town, and stay.  
I bid you look for me to come,  
Who am the Race, the Sum!

"Yon pinnacles, yon gracious spires  
That in the sunlight shine,  
Were builded by my stalwart sons;  
Why, wherefore, may they not be  
mine?  
My soul hath sworn that they are  
mine!  
Each Heaven-aspiring line!  
For I have builded not in vain  
Who build men out of pain.

"Young Brother of the King's Highway,  
When I have reached the Town,  
God's fair, far City of the Hills,  
I shall put off this ancient gown,  
This gray and brown, this homely  
gown,  
This silver, hoary crown;  
A future yet unsaid, unsung,  
Shall see me lithe and young.

"They will unbar the heavy gate  
With pride to let me in,  
Their sister of the early dawn,  
The mate whom they have died to win,  
The love that they have yearned to  
win,  
A mother without sin;  
For I, with treasure in my sack,  
Will never turn me back!"

The library of the Brooklyn Institute of Arts and Sciences has equipped a "print laboratory." Its various appliances for studying prints include a press on which etchers may make proofs of their plates.

The exhibit relating to American libraries and library methods, which was on view at the Leipzig Book Exhibition, has been returned and is being used for similar purposes at the Panama-Pacific Exposition.

At a recent library meeting in Chicago, the question whether public libraries should provide newspaper reading rooms was discussed. It was urged on the one hand that newspaper reading rooms were not seriously used, and that they brought an undesirable class to the library; and on the other hand, that some newspapers are more valuable than periodicals, that their size necessitates special rooms and furniture, and that undesirable readers can be dealt with as a matter of administration.

## Send for our Book of "CREO-DIPT" Homes

A help if you plan to build, buy or remodel. It shows a selection of over 100 homes in different parts of the country. It enables you to investigate for yourself the artistic and economical use of

### "CREO-DIPT" STAINED SHINGLES

Architect Geo. L. Falk, Brockton, Mass., for Dr. N. M. Preston 2 shades "CREO-DIPT" Shingles through Taunton Lumber Co.

## Independent Opinions

### OUR MENTAL INVENTORIES

The publication of the hundred questions designed to test one's knowledge of current events and their backgrounds has given readers in various parts of the country an Oliver Twist expression:

The youngsters first answered what they could and were interested enough to hunt them up in the cyclopedia and quiz whom they could for the rest. Give us something of the kind often.

*Kinbrae, Minnesota*

I especially liked the hundred test questions given on March 8, 1915. Why could we not have something of the kind frequently? It keeps one up on current events.

*Carlisle, Indiana*

### THE PSYCHOLOGY OF WAR

There seems to be considerable haziness in the minds of many persons innocent of homicidal intentions, as to what murderous emotions really are. It has frequently been declared of late that the poets and journalists and professors who remain at home feel more hatred of the enemy than do the soldiers actually fighting in the trenches. As The Independent pointed out, "it is impossible for two rows of brave fellows to stand opposite for weeks without gaining a certain respect for one another. The difficulty is to keep them enemies," so that they will continue to kill each other. It has always seemed to me that to continue to attempt to kill men that one has come to respect—men whose courage and fellowmanhood and freedom from hatred for you has been witnessed by you—is much more inhuman and truly murderous than it is to kill men who are so removed from you by your own prejudices and hate that they appear from a distance more like dangerous beasts than men. The crime of the hating professor is that of ignorance of the facts; the crime of trench warfare is that of hateless but almost unbelievable inhumanity.

FREDERICK J. POHL

*Columbia University*

The emotions of the men on the firing line are difficult to realize and still more difficult to explain. We would merely suggest that correspondent's quandary is largely a question of words, of the propriety of applying the term "murderous" to impersonal and unimpassioned warfare. That there is such a thing as hateless homicide cannot be doubted whatever we may wish to call it. We imagine that a soldier's feeling toward his opponent is not unlike that of a politician who devotes all his energy to the overthrow and ruin of a candidate whom he personally respects but believes to be dangerous to the country.

A curious revelation of the psychology of the soldier occurs in one of the letters from the front, in which the writer says that he does not mind sticking his bayonet thru a man who is charging his trench but that he feels an unconquerable repugnance and horror at firing a big gun into the air, knowing that the bursting shell will scatter slaughter five miles away among men he has never seen.

It was, if we remember rightly, Voltaire who proposed as a test of one's

## Neighborhoodizing the Farmer

One of the most significant facts of our telephone progress is that one-fourth of the 9,000,000 telephones in the Bell System are rural.

In the days when the telephone was merely a "city convenience," the farms of the country were so many separated units, far removed from the centers of population, and isolated by distance and lack of facilities for communication.

But, as the telephone reached out beyond cities and towns, it completely transformed farm life. It created new rural neighborhoods here, there and everywhere.

Stretching to the farthest corners of the states, it brought the remotest villages and isolated places into direct contact with the larger communities.

Today, the American farmer enjoys the same facilities for instant,

direct communication as the city dweller. Though distances between farms are reckoned in miles as the crow flies, the telephone brings every one as close as next door. Though it be half a day's journey to the village, the farmer is but a telephone call away.

Aside from its neighborhood value, the telephone keeps the farmer in touch with the city and abreast of the times.

The Bell System has always recognized rural telephone development as an essential factor of Universal Service. It has co-operated with the farmer to achieve this aim.

The result is that the Bell System reaches more places than there are post offices and includes as many rural telephones as there are telephones of all kinds in Great Britain, France and Germany combined.

ethics the question whether if you knew that by crooking your finger you would become immensely rich and at the same time cause the death of some unknown man in the interior of China, would you resist the temptation? But this, like many other ethical questions would, it seems to us, depend more upon the power of the individual to imagine remote consequences than upon his real kindness of heart.

**WAS THAT ZEPPELIN BURNED?**

In our issue of January 11 we published the story of an English aviator who raided the German airship factory at Friedrichshafen. According to his account he set fire to the shed containing one completed Zeppelin and one dirigible nearing completion and both of these were destroyed, as well as two gasometers and a hydrogen reduction plant. This, he said, was confirmed by the Swiss workman, altho the Germans denied any serious damage.

Additional evidence on this disputed point comes to us thru the courtesy of two of our readers who have relatives on the spot. The Rev. Dr. Kistler of the Central Presbyterian Church of Bristol, Virginia, writes as follows:

The article by Henry Beach Needham is exceedingly interesting reading matter, well written, convincingly and thrillingly. It is full of "inside" information and ought to be a joy to the Allies and their sympathizers. There is only one objection that I could raise to it, and that is, that it has very little truth in it as far as the raid of the Zeppelin works at Friedrichshafen is concerned. I do not mean to say that the author of that article willingly, deliberately, wished to deceive; but I imagine that he was "stuffed" with a very likely story, so convincingly told that it certainly sounded like truth. Now the reason why I make this statement is that I had an account of it from a witness nearer than Romanshorn, eleven miles away. The account was written to me by a nephew of mine the very next day after the raid. It was not written for publication, but just simply told by a young man to his uncle, who, he supposed, would be interested in the matter. This nephew of mine is employed in the Zeppelin works, was brought back from the seat of war and the midst of battles, upon the petition of Count Zeppelin, who desired to have some of his experienced workers. My nephew went to the war from those works. He was present when the raid was made "on Saturday, November 21, between the hours of 12:30 and 1 p. m." "The Zeppelin That Never Flew" was there all right, finished and ready for use. It was still there, wholly uninjured and ready for flight after the one aviator left, the other having been wounded, forced to descend, and taken to the hospital. As far as the other points of the raid are concerned they are no more truthful.

I thought you, and the author of the article, would be interested to know the truth in the matter and that is the reason why I write this letter. There is not a word of blame in this letter for either the author of the article, nor for the editor of The Independent. War correspondents are supposed to write interestingly, and they, like we preachers, are sometimes "taken in."

Mr. E. Suskind of Jacksonville, Florida, has received a somewhat different version:

Your article by Mr. Needham of January 11 looked to me so much like the effusion of a yellow journal that I wrote to my cousin who lives not far from Friedrichshafen for the facts. Here they are. Instead of three British aviators only one reached the spot; his bombs destroyed a small out-house. The rest is bombast.

## PEBBLES

Randall—Delaney is very gloomy—says he doesn't care how soon he dies.

Rogers—Then he ought to consult a specialist.—*Life*.

Small Boy (much interested in shopman's reason for high price of eggs)—"But, mummy, how do the hens know we're at war with Germany?"—*Punch*.

Mary had a little waist

Where Nature made it grow,  
And everywhere the fashion went  
The waist was sure to go.

—*New York Times*.

A negro mammy had a family of boys so well behaved that one day her mistress asked:

"Sally, how did you raise your boys so well?"

"Ah'll tell yo', missus," answered Sally. "Ah raise' dem boys with a barrel stave, an' Ah raise' 'em frequent."—*Everybody's*.

An examination was being held in little Emma's school and one of the questions asked was:

"Upon what do hibernating animals subsist during the winter?"

Emma thought for several minutes and then wrote:

"On the hope of a coming spring."—*New York Times*.

After a period of six months of widowhood, Bridget consented to again enter the married state. Some weeks after she was led to the altar, says London *Tit-Bits*, her old mistress met her in the street dressed in the deepest mourning.

"Why, Bridget," she exclaimed, "for whom are you in black?"

"For poor Barney, my first husband, mum. When he died Oi was that poor Oi couldn't afford to buy mourning, but Oi said if iver Oi could Oi would, and me new man, Tim, is as generous as a lord."—*Current Opinion*.

One evening during the summer, as Pauline's mother was putting her to bed, she said:

"Now go right to sleep, dear. Don't be afraid, for God's angels are watching over you."

Shortly after, while the mother and father were reading in the library, the child called to her mother.

"Yes, dear," replied the mother, "what is it?"

"God's angels are buzzing around just awful, mother," cried the little girl, "and one of 'em's bitten me!"—*New York Times*.

Little Elsie, aged five, was quietly playing on the porch one afternoon, while her father and one of his friends were enjoying a smoke and having a chat on political matters. They paid no attention to the little girl's presence, and Elsie seemed wholly absorbed in her dolls.

That evening Elsie appeared to be unusually silent and thoughtful. When bedtime came and she knelt down to say her prayers there came the usual petitions, and then, with a slight pause, she resumed in a very earnest manner:

"And now, God, please take good care of Yourself, for if anything should happen to You, we should only have Mr. Wilson—and he hasn't come up to father's expectations."—*New York Times*.

An old circus man tells this one:

"The usual crowd of small boys was gathered about the entrance of the tent in a town in Illinois. A benevolent looking old gentleman standing nearby watched them for a few minutes with a beaming eye. Then, walking up to the ticket-taker, he said, with an air of authority:

"Let all these boys in, and count 'em as they pass."

"The gateman, thinking that the benevolent looking old gentleman was indulging in a bit of philanthropy, did as requested. When the last lad had gone in, he turned and announced: 'Twenty-four, sir.'"

"Good," said the benevolent looking old gentleman, as he walked away, "I thought I guessed right."—*New York Times*.

## A Short List of Books You Should Read and Keep

### America and the New World State

by Norman Angell

Author of "The Great Illusion," "Arms and Industry," etc.

12°. \$1.25.

A masterly plea for American leadership in international organization. Mr. Angell believes the time is ripe for America to do for Europe what Europe cannot do for herself.

### The Third Great War

by Laurie Magnus, M.A.

Introduction by George Haven Putnam.

12°. \$1.00.

Why the treaties of 1713 and 1815 failed to prevent the catastrophe of 1914.

### Out of Work

by Francis A. Kellor

12°. \$1.50.

A study of unemployment in America with a program for dealing with it. The book is addressed to every man or woman with a job and neighbor without one; every industry that has retrenched this year and others.

### Honest Business

by Amos Kidder Fiske, A.M.

Author of "The Modern Bank," etc.

12°. 333 Pages. \$1.25.

Factors that control the organization of and principles that must direct the conduct of honest business.

### Tabular Views of Universal History

by George Palmer Putnam

New Edition. Revised. 8°. \$2.50.

Chronological tables in parallel columns of historical events from the earliest times to 1914.

## THE NEW BOOKS

### THE GREATER REFORMATION

The attention of the historians of theology has shifted somewhat from the Protestant revolt against Catholicism to the more recent and perhaps more significant change which has taken place within the various Protestant churches; comprehending many different tendencies under the general label of "liberalism." Professor McGiffert's study of *The Rise of Modern Religious Ideas* deals with the demolition and reconstruction of the elaborate theological system which the early reformers took over from the Catholic scholastics, with only such minor changes as the substitution of the authority of the Bible for that of the Church. The first disintegrating force, according to the author, was the Pietistic movement. It involved no challenge of accepted doctrine, but shifted the emphasis from the intellectual acceptance of dogma to faith as a personal experience. Then the critical tendencies of the Enlightenment, reinforced by the new physical science, challenged the whole superstructure of revealed religion and substituted a rationalistic Deism based upon demonstration rather than faith. But the telling criticisms which Hume and Kant directed against the current proofs of existence of the Deity and the growth of naturalistic explanations of those wonders of organic nature which had been the stock-in-trade of Paley and the Bridgewater Treatises, made Deism itself seem untenable.

Reconstruction came from two directions. The new evolutionary science which meant for some the end of all religion, natural as well as revealed, was for others nothing less than a new revelation of the divine. To be sure, it was no longer possible to conceive a God alien to the cosmos and overruling its "natural laws." But belief in a God within the universe whose laws are His very thought and will, was not only conformable with the new science, but with any future discoveries which scientists might ever make. As soon as theology abandoned its championship of the scientific system of the past, the unhappy warfare which had raged for so many decades between the churches and the schools was over forever, altho like other wars its ill effects did not disappear at once upon the conclusion of peace and some irreconcilables in both camps still cherish bitter memories of the conflict. Another avenue toward theological reconstruction was the rehabilitation of faith as a rational method. Pragmatism was familiar to theologians before its name was known. It was discovered that there were other methods of reasoning besides the mathematical; that hypothesis was legitimate and even indispensable both in natural science

and in religion, and that experiment rather than logical deduction was the final test of truth. The twentieth century opened with Christian theology occupying the strongest theoretical ground it had ever held and regaining all of the practical influence over the lives of men which it had ever lost. Professor McGiffert makes this conclusion the more irresistible because his book is not in the least apologetic, but simply a straightforward and candid history of modern thought by a man who does not separate theology, philosophy and science into water-tight compartments, but recognizes that even theologians are more aware of the intellectual world in which they live than many people are willing to admit.

*The Rise of Modern Religious Ideas*, by Arthur Cushman McGiffert. New York: The Macmillan Co. \$1.50.

### MAN THE CLIMBER

We have not seen a better account of the "missing links" than is given in *Prehistoric Man and His Story*, by Professor Scott Elliot. The first primates were probably lemur-like animals hiding in the trees over a region of the earth now occupied by North America. But in the course of their wanderings and transformations they roamed to Africa and Europe before anything really man-like appeared. The gibbon and chimpanzee in their present distribution in Africa south of the Sahara, and in India south of the Indian desert, mark the extent of the wanderings—and man himself marks the limit of the transformations. The geological evidence points to a more or less continuous forest from India thru northern Africa over what is now impassable desert; and it helps us trace the migrations of the anthropoids. The discovery in Java some twenty years ago of the few bones that established for the scientists the type *Pithecanthropus erectus* or the erect ape-man, furnished a concrete answer to those who were in search of a "missing link." A comparison of details (which are of very little interest to the casual reader) shows improvements in jaws, teeth and brain-capacity in a considerable series of fossil human remains from various parts of Europe. The Heidelberg man is a distinct improvement on the Java ape-man; and the Neanderthal man had more brain still. But these are mere names unless they are associated with the "setting" of description and historical detail, or, better still, with the beautiful pictures of the reconstructions made under the direction of Professor Rutot of Brussels. With these pictures and descriptions before you, the names come to mean something more than bundles of old thighbones and skull caps dug out

of the earth at various points on the map.

More interesting still are the evidences of the mental development of our prehistoric ancestors, as revealed in the stone implements that they used in their struggles with their more brutish contemporaries, as revealed in their attempts to picture their fellow-inhabitants and their struggles, as revealed in their crude pottery and metal work. The speculations stimulated by an examination of the crude drawings and implements are more like those we are tempted to indulge in when we read a detective story or the newspaper accounts of mysterious crimes, than they are like metaphysics; and the problems of early man should accordingly appeal to a much wider range of readers than is usually reached by "scientific" literature. The problem of *how* man lived in prehistoric times has to be solved by the same kind of mental processes as are involved in the solving of the problems of *who* killed Cock-robin or who robbed the bank. The inferences as to our ancestors' thoughts and activities are based altogether on circumstantial evidence, and the piecing together of the bits of evidence has all the charm of a good puzzle.

The author of this book has drawn upon a very wide range of sources (which are all given unobtrusively at the ends of the chapters, in small print so that the layman will be neither tempted nor offended by them) and has brought together material that is wonderfully suggestive. Thus, the comparison between the drawings of modern school boys and those found in the caves of France helps us toward an insight into the mental development of primitive man. No less suggestive are the comparisons between the ornamental and symbolic markings of present-day savages and those found among the leavings of earlier times. Dr. Elliot frankly states the various conflicting theories and interpretations of the scholars, without yielding his own opinion to authorities. The book is as interesting as fiction and as informing as a good text-book.

*Prehistoric Man and His Story; a Sketch of the History of Mankind from the Earliest Times*, by Prof. G. F. Scott Elliot. Philadelphia: J. B. Lippincott Co. \$2.

### THE BACKGROUNDS OF THE WAR

The new series of "Century War Books" could not have a more favorable introduction than *The New Map of Europe* by Herbert Adams Gibbon. Its only fault is the title, for it is the old map of Europe that Dr. Gibbon deals with in his account of the events that have led up to the present war. Unlike most writers on the subject he has taken part in the stirring scenes he describes, for he narrowly escaped the massacre at Adana and reported the Balkan wars to American newspapers including *The Independent*. His grasp of diplomatic complications is masterly and he presents in an interesting way just that information which is most needed and hardest to get, that is, the

## MOONGLADE

By the Author of "The Martyrdom of an Empress"

Brittany and Russia—the two countries the author knows so well—form the picturesque settings of this cosmopolitan story of aristocratic life. All those readers who are familiar with the other books of this author will find this new novel different except for the colorful descriptions of ancient castles and modern palaces, of loyal servitors and graceful customs. A Russian Prince who successively falls in love with two women, one English and the other French. *Frontispiece. \$1.35 net*

Johnny Appleseed

By ELEANOR ATKINSON

A sympathetic story of a real character into whose unusual and quaint personality the author has succeeded in penetrating as she did into the dog nature of the real "Greyfriars Bobby." All the romance of our early frontier life, with its hardships, its courage, its sacrifices, and its joys, fills the pages of the book. It is a portion of our border romance that waited to be written, not the fighting only, but the upbuilding, the conquering of the forests.

*Illustrated. \$1.25 net*

Best Selling Book in America

## THE TURMOIL

By Booth Tarkington

"I think this is the best novel that he has written; and apart from its charm, it is a book every American ought to read."—William Lyon Phelps of Yale University. "F. P. A., writing in the *N. Y. Tribune* of his Grand Tour, says: 'I don't have to see the Great Salt Lake. Far pleasanter to read 'The Turmoil,' and to realize that Booth Tarkington is quite as important in the nation's development as Pikes Peak or Uintah Mountain Range. I'm prouder of him, if you must know.'"

*Illustrated. Cloth, \$1.35 net. Limp Leather, Thin Paper, \$1.50 net*

## PALS FIRST

By Frances Perry Elliott

A delicious story, full of spirit and dare-devil romance and humor. A romance of mistaken identity, fascinating in its quality, with a charm of plausibility which recalls "The Prisoner of Zenda." Two picturesque vagabonds are traversing a highway in the South. They come to a stately old mansion. The negro servant who meets them welcomes the younger as the long-absent master of the house. They are taken in and—then—things happen.

*Frontispiece. \$1.30 net*

HARPER & BROTHERS

The Life-Builders

By ELIZABETH DEJEANS

Who is the more conservative—man or woman—when it is a question of home and marriage? This is the question which the author asks, the theme of her clean and earnest romance of a vital, gracious, and graceful woman. The author's handling of their decision is unusual, but full of insight into the differences in masculine and feminine nature.

*Frontispiece. \$1.35 net*

events which happened too late for the cyclopedia and too early for the newspaper, the missing link in our knowledge of the past. For the reader who has recently waked up to the fact that he ought to know more about recent European history in order to understand the causes of the conflict and the forces involved in it there is no better book on the market.

Dr. Gibbons is anti-German in his attitude, but he marshals his facts with fairness. For example, he makes clear a point on which there is much confusion in the American mind when he concludes: "The violation of the neutrality of Belgium was not the cause, but the occasion, of Great Britain's entry into the war." He shows that both the diplomatic obligations of Great Britain and her future interests would have compelled her to take sides against Germany even if the Germans had not attacked France thru Belgium.

<sup>9</sup>The New Map of Europe, by H. A. Gibbon. New York: The Century Co. \$2.

## BEAUTY THRU GERMAN EYES

Early German painting, from the primitive School of Prague to the times of Albrecht Dürer and Hans Holbein the Younger, receives thoro study and conscientious exposition by Helen A. Dickinson in *German Masters of Art*. The book is the first adequate attempt at presentment in English of a complete and unified history of the development of German painting.

The ideal of the Italian painters of the Renaissance was beauty. Truth to nature was the goal sought and found by the master-painters of The Netherlands. The art produced by the Renaissance in Germany only in rare instances achieved either beauty or truth. But it did succeed in portraying the character of the German people in the fifteenth and sixteenth centuries. This is sufficient reason why German painting does not and never will make the appeal to widespread popular interest that is made by Italian and Dutch and Flemish painting. The keynote of the German character, Mrs. Dickinson says, is emotion, and the ideal of German art is, not beauty, but expression.

What the German apprehends as real is the *inner nature*—character and emotion—and this he expresses in art to the disregard of beauty of *external* form and feature. Hence one of the greatest superficial attractions is lacking, for the most part, in German art. Few German Virgins, for instance, can vie with the Italian Madonnas in formal beauty. Some of them are homely enough, large-boned and plain-featured, but they breathe such passion of mother-love and devotion! And the Child is no cherub; like as not he is a snub-nosed, flat-faced little chap. Well, what of that? He is not loved for his beauty! Thus is revealed the true essence of genuine motherhood. . . . *Gefühl ist alles* (feeling is everything), said Goethe, giving us in these few words the key to German character, German art and German music.

For the convenience of student and traveler alike Mrs. Dickinson classifies rather broadly the artists of whose work she treats, according to the geographical distribution of their centers of activity, in the three general divi-

HENRY FRANKLIN DEWING Prin., Monson, Mass.

### TENACRE

A Country School for Young Girls

**P**REPARATORY to Dana Hall. Fourteen miles from Boston. All sports and athletics supervised and adapted to the age of the pupil. The finest instruction, care and influence.

MISS HELEN TEMPLE COOKE  
Dana Hall, Wellesley, Mass.

sions of the dreamy and lyric School of Cologne, the narrative and illustrative School of Swabia, and the virile, impassioned and dramatic School of Nuremberg. The illustrations comprize four plates in colors and 110 in monochrome.

*German Masters of Art*, by Helen A. Dickinson, Ph.D. New York: Frederick A. Stokes Co. \$5.

#### TO READ LATIN AT SIGHT

The first volume of a series of "Mount Hope Classics," *Pericla Navarchi Magonis*, has been arranged by Mr. Prentice to cultivate better methods of teaching Latin by reading at sight. The title, translated, is "Perils of Captain Mago," but the original is in French, and this Latin version is by Arcalio Avellanus. Just as Fenelon wrote *Telemaque* in imitation of the Odyssey, so Leo Cohun's French story imitates the Voyage of Hanno. Mago is a Phenician sea-master supposed to have been a friend of King Hiram of Tyre; and he gives the story of his adventures from Gibraltar to Abyssinia and the Euphrates. He visits King David and later the Queen of Sheba, after the death of David. It is hoped that some scholarly boys will read the story for the adventures' sake. We suggest that quite as lively reading can be found in the Colloquies of Erasmus, among which we suggest *Apotheosis Caprionis* and *Diversoria*, from which Charles Reade drew color for the description of German inns in his *Cloister and Hearth*.

*Pericla Navarchi Magonis*, edited by E. P. Prentice, 37 Wall St., N. Y. \$5.

#### A HIGH OUTLOOK

The reflections and discourses on moral problems and inspirational themes in *The Open Door* are conceived in Hugh Black's best vein. They are full of good counsel and high optimism.

Revell. \$1.

#### RABELAIS REDIVIVUS

The brief amusing comedy which Anatole France has made on the Rabelaisian plot of *The Man Who Married a Dumb Wife* and to which Granville Barker has given an artistic setting on the New York stage is now translated by Curtis Hidden Page.

Lane. 75 cents.

#### FORWARD TO THE LAND

"Get land, and get it now!" is the advice which C. C. Bowsfield offers to city men in *Wealth from the Soil*. He gives practical advice on how, where and when to locate and finance the small farm. A companion book, *Making the Farm Pay*, has been one of the six most popular non-fiction books in the New York Public Library. This volume should have as great a call.

Chicago: Forbes. \$1.

#### A MODERN CIRCE

There is no worthier exponent of the degeneracy of one branch of the naturalist school than Wedekind, and no better example of its products than *Earth-Spirit*, one of his dual plays, with the infamous Lulu as heroine, which has just been issued in a new English translation by Samuel A. Eliot, Jr. Altho produced in 1898 it has never been adapted to any but the strong nerves of Germans, for whom it represents much the same idea as Kipling's "Vampire."

New York: Boni. \$1.

#### THE STRUGGLE OF WILL AND HEREDITY

Owen Johnson has covered quite a stretch of the literary road since he wrote *Arrows of the Almighty*, now in a new edition. In drawing the "Varmint" and the

"Salamander" he has left behind a tendency to be studied—to be homilectic and a bit elaborate. The glimpse of Yale in '55, the friendship of "Johnnie Glum" and the merry scapegrace of his class, give a foretaste of *Stover at Yale*. For the rest, the story would find more lenient criticism did it not have to stand the test of Owen Johnson's present reputation.

Macmillan. \$1.25.

#### THE TRIDENT OF NEPTUNE

While not endorsing fully Admiral Mahan's theory that sea power dominates the land, *The Navy and Sea Power*, by David Hannay, gives a concise analysis of the development of maritime warfare from the days of the Phoenicians and Athenians down to the later empires of Venice, Spain, Portugal, Holland and Britain. The mistakes and the lessons of policy and strategy drawn from their past wars give an excellent clue to much in the present struggle.

Holt. 50 cents.

#### LYRICS FROM THE YIDDISH

Revolt at the grinding horror of mechanical toil and the dull hopelessness which makes its misery all the more poignant are the main themes of *Songs of Labor*, by Morris Rosenfeld, which has found in Rose Pastor Stokes and Helena Frank translators of sympathetic understanding. They have retained the original meter of the poems and have given us in the English that wistful sadness and patient visioning so characteristic of the Jewish temperament.

Badger. 75 cents.

#### BUILT WITH ONE BRICK

The best thing said of histories of our Civil War is that they are—if so they be—impartial. It is time that something more were looked for, even in the minor works. In *A History of the Civil War in the United States*, by Vernon Blythe, there is impartiality, but it is a compilation to which no point of novelty, of studious research, of historical departure, has been added. It is a text-book suited, by its covering of already well-trodden ground, to the needs of younger students.

Neale. \$2.

#### INTERPRETERS OF SHAKESPEARE

Not since the Variorum Shakespeare has there been a work comparable in volume or scholarship dealing with the acting history of the plays embodied in William Vinter's *Shakespeare on the Stage*. Not only do these studies of Twelfth Night, Romeo and Juliet, As You Like It, King Lear, The Taming of the Shrew, and Julius Caesar, disclose the closest intimacy with dramatic bibliography, but what gives them an especial charm is the author's own association with many of the great actors who have played these immortal roles.

Moffat, Yard. \$3.

#### THE STORY OF A HARDY RACE

Three hundred years ago the north of Ireland was first settled by Scotch Protestants, the second generation of which started the Scotch-Irish immigration to America. Henry Jones Ford, Professor of Politics at Princeton, tells in *The Scotch-Irish in America* of the pouring into the new continent's melting pot of all the virile ruggedness of that Gaelic blend. The influence of the Scotch-Irish in politics, religion, industry, and upon citizenship as a whole, is analyzed and appraised by one unbiased by personal sympathies.

Princeton University Press. \$2.

#### THE CHURCH AT WORK

Three small volumes designed to aid churches in social work are issued in the Library of Christian Progress. *The Church a Community Force*, by Worth M. Tippy, deals with the problems of social service undertaken by a church in the city of Cleveland, while *The Church at the Center*, by Warren H. Wilson, and *The Making of a Country Parish*, by Harlow S. Mills, are devoted to the present difficult problems of the country parish. All three books are suggestive and valuable additions to the literature on these subjects.

New York: Missionary Education Movement. 50 cents each.

A. N. CONNETT, JR., Secretary

## THE MARKET PLACE

### THE WAR ORDER MARKET

A week of sustained activity on the New York Stock Exchange, with rising prices, closed one of the most remarkable months in the history of the securities market. We must go back five years to find a month showing the sale of so many shares (20,007,188) and there had been no April like it since 1906. The average for the three months immediately preceding had been about 5,600,000. Growth was shown in bonds as well as in stock. Bond sales, \$189,934,000, were the largest since December, 1909. The average for the four months preceding was doubled. This part of the month's business, together with some notably successful railroad financing, indicated an investment demand which was regarded with much satisfaction.

Thruout the month the effect of orders for war supplies exerted a dominating influence, and the great gains in price were made by the shares of industrial companies to which such orders have been given. For example, Bethlehem Steel rose from 83¼ to 155; Westinghouse from 72¼ to 108; New York Air Brake from 68¼ to 100; and American Locomotive from 28½ to 68.

Nearly all the price changes of last week, when 4,744,165 shares were sold, were advances. Altho the price of copper, the metal, rose from eighteen to nineteen cents, there were slight losses for the mining companies' stocks, probably due to the taking of profits. But the war order shares continued their upward march. Among the gains were the following: Westinghouse, 16%; Studebaker, 11%; General Chemical, 12½; Pressed Steel Car, 7%; New York Air Brake, 8%; Lackawanna Steel, 6%; Baldwin Locomotive, 5¼; American Car and Foundry, 2.

It was understood that the Westinghouse Manufacturing Company had received an order for \$27,500,000 worth of rifles, and that the total would be increased to about \$60,000,000 by orders for parts of shells. Russia, it was said, was to pay the Pressed Steel Car Company \$35,000,000, and a prominent trade journal asserted at the end of the week that the American Locomotive Company had undertaken to make \$66,250,000 worth of shrapnel for the British Government. In three days the price of Westinghouse shares, which had been 64 in February, advanced from 85 to 108. Nearly 600,000 shares were sold during the week.

The New York Central, thru the agency of a syndicate led by J. P. Morgan & Co., sold \$100,000,000 of twenty-year six per cent convertible bonds, and they were quoted at 103½ on the Exchange, where the sales on one day were \$7,500,000. Kuhn, Loeb & Co. and Speyer & Co. took \$40,000,000 Balti-

more & Ohio two-year and three-year notes. Other transactions of this kind are expected.

From the Lake Superior copper district come reports of the draining of old shafts and exploration for extensions. The new prices are drawing into the field mines where the cost of production is so high that they have been idle. The Anaconda's report for last year, published a few days ago, shows how great the recent improvement has been. From the beginning of the war until the end of the year the Anaconda's plant was operated at only fifty per cent of its capacity, and its net profits for the year showed a reduction of \$2,000,000.

### THE NATIONAL DEFICIT

At the end of last week the Treasury deficit, at Washington, for the fiscal year to date, was \$102,216,551. A few days earlier it had passed the \$100,000,000 mark, and in April alone it had been increased by nearly \$14,000,000. The question whether a bond issue can be avoided is one that excites much interest at the capital. Income and corporation taxes will be paid in June. Some expect these will amount to \$80,000,000; others predict that they will not exceed \$65,000,000. Upon them the Government relies for the aid it will need. These receipts, it is thought, will be sufficient until Congress, in December, can decide whether there shall be new taxes. It may be that they will not be enough. But the political effect of a bond issue upon the party controlling the Government would be highly unfavorable, and nothing but imperative necessity will cause one to be made.

The deficit is due in part to a decline of customs receipts, which are less by \$73,000,000 thus far than those of the corresponding portion of the last fiscal year. But the internal revenue has been increased by \$14,000,000, so that the net loss has been only \$59,000,000.

### STEEL CORPORATION REPORT

Quarterly reports of the Steel Corporation usually indicate the condition of the great iron and steel industry. The report for the quarter ending with March, which was published last week, showed that the net profits had been only \$12,457,809. After the payment of interest and other fixed charges this left only \$915,000 for the dividend (\$6,304,419) on the preferred stock. Therefore nearly all of this dividend was drawn from the surplus. In other words, there was a deficit of \$5,389,000 for the quarter. And in the immediately preceding quarter there was a deficit of about the same amount.

But the report showed that the net was growing rapidly at the end of the quarter, having advanced from \$1,607,000 in January to \$3,638,000 in Febru-

## What Girls Want

Is your daughter "a puzzle"? Has she needs—ideas—and opinions you don't quite understand? If so, you'll find help in the new book—"Sebago-Wohelo Camp Fire Girls." It tells of the new life of girls or—the life of "the new girl." To read it is fascinating delight for any girl or mother of girls. It is romance, adventure and an exquisitely delightful story woven together in serious fabric. It shows how one woman, working as a mother, is carrying the spirit of home and mother-love into a great, national, community movement in which girls develop all their finest qualities and become strong, splendid, capable women. It is the first story of Mrs. Gulick's camp, where Camp Fire Girls started. Over 250 pages with more than 50 fascinating pictures, showing how girls learn to swim, dive, cook, weave, make their own clothes, manage canoes, go on "hikes," hold "council fires," and do many other useful and beautiful things. And—it's pure fun and delight. Can you imagine it? Send for the book. It makes a most admirable gift for any girl or mother. Price only \$1.25 *postpaid*. Your regular bookseller or—mail your order and remittance direct to—

GOOD HEALTH PUBLISHING CO.  
305 W. Main St., Battle Creek, Mich.

## MANUSCRIPT

Suitable for CLOTH BOUND BOOK issue; any field, 25,000 words and upwards, carefully read and considered WITHOUT charge. Published under our imprint and management, in A-1 style, if accepted. Copy must be forwarded COMPLETE to warrant examination. Roxburgh Pub. Co., Inc., Boston, Mass.

## Makes Things Hum on Washday!

This is the 1900 Motor Washer that is revolutionizing washday. It runs by motor power at a cost of 2 cents a week. Does the washing and wringing so swiftly and well that housewives can scarcely believe their eyes when they see the clean clothes out on the line hours ahead of the old way! It washes a tubful of dirtiest clothes in Six Minutes—or even less! Wrings the clothes with equal rapidity and better than by hand! It's more like play than work to use this wonderful washer.

### 1900 Motor WASHER

Sent on Free Trial!

No trouble to keep servants when you have this Motor Washer. They delight to use it. It is the finest washing machine in the world. The trial will prove its supremacy. We gladly send the complete outfit, including wringer—at our expense—to any responsible party for four weeks' severest test in the laundry. Try it on heavy blankets, rugs, dainty laces—everything! Study its design and construction; unlike any other washer. We take it back at our expense if you decide you can do without it. Terms, cash or small monthly payments.

**Electric or Water Power—Take Your Choice**  
If your house is wired for electricity, you can use the Electric Motor Washer, which attaches instantly to an ordinary electric light fixture. If you have running water, of sufficient power, you can use the Water Motor Washer. Each style does perfect work.

**Write for Fascinating FREE Books**  
Read the amazing story of the 1900 Motor Washer. Then send for one on trial and see the wonders it performs. Address 1900 WASHER CO., 6184 Court St., Birmingham, N. Y. If you live in Canada, address Canadian 1900 Washer Co., 355 Yonge St., Toronto, Canada.

Patented U. S. and in foreign countries.

ary and \$7,132,081 in March. That is to say, in March the profits were at a quarterly rate of \$21,000,000, instead of \$12,457,000. And there is reason to believe that this rate has since been maintained. This is the bright side of the report, and it prevented any decline of share prices on the Exchange, where there was a small net gain for the week. For some time before the war began, the company's quarterly net profits had exceeded \$20,000,000.

Unlike the Bethlehem Company, the Corporation has had no great war orders, so far as can be learned. The appointment of Mr. Morgan to be Great Britain's fiscal agent here was recently criticized in Parliament by a member, who said that Mr. Morgan would give orders to companies in which he was interested or with the management of which he was associated. But if this had been his policy, the Steel Corporation would have been favored. It does not appear that he has procured any orders for the Corporation or given any to it.

### THE PAN-AMERICAN CONFERENCE

All except two—Brazil and Hayti—of the South American and Central American countries have accepted our Government's invitation to take part in the Pan-American Financial Conference which is to be held in Washington on May 24. Twelve of the countries have appointed their delegates. They include finance ministers, leading bankers and other prominent men. With them will be associated the ambassadors and ministers residing in Washington. Assurance has been given that Brazil and Hayti will be represented. It is proposed that after the close of the conference the delegates, in a special train, shall visit the leading financial and industrial cities of this country.

It is much to be desired that our financial and trade relations with the countries south of us should be improved. South America has looked to Europe for capital to develop resources. European countries have promoted the commercial and financial relations which we have neglected. The war has tended to make the association much less intimate, and several of the southern countries have recently turned to us for the aid formerly given in London, Paris and Berlin. At the same time we are beginning to establish branches of our great banks in South American cities. The situation invites such a conference as is to be held, and it may reasonably be expected that the results of it will be important and beneficial to all the nations directly concerned.

A trade commissioner, Mr. Quinn, sent to this country by the Australian Government, reports that there is a very attractive market for Australian products on the Atlantic side of the United States. He believes that Philadelphia would welcome direct steamship connection with Australia because of the consumption of wool in her factories. He suggests that Australia should send raw products and food supplies to the Mississippi Valley by way of New Orleans.

The following dividend is announced:

J. G. White & Co., preferred, quarterly, 1½ per cent, payable June 1.

## For Sprains Lame Muscles

Absorbine, Jr., brings quick relief. Keep a bottle of Absorbine, Jr., always at hand ready for instant use—you will find it a big help whenever anyone gets hurt.

Athletes use Absorbine, Jr., for the muscle that has been strained, for the cut or laceration that runs a chance of infection; for the abrasion that pains and the limbs that are stiff and lame from over-exertion.

### Absorbine, Jr. THE ANTISEPTIC LINIMENT

When applied to cuts, bruises and sores, it kills the germs, makes the wounds aseptically clean and promotes rapid, healthy healing. It allays pain and inflammation promptly. Swollen glands, painful varicose veins, wens and bursal enlargements yield readily to the application of Absorbine, Jr.

Absorbine, Jr., is made of herbs and is non-poisonous—safe to use anywhere even by the smallest member of the family.

### It Combines Efficiency With Safety

Only a few drops of Absorbine, Jr., are required at each application, which makes it an economical liniment to use. One ounce of Absorbine, Jr., added to a quart of water or witch-hazel makes an antiseptic general liniment of more than ordinary efficacy.

Absorbine, Jr., is sold by leading druggists at \$1.00 and \$2.00 a bottle or sent direct *postpaid*

### A Liberal Trial Bottle

will be mailed to your address upon receipt of 10c in stamps. Send for trial bottle or procure regular size from your druggist today.

W. F. YOUNG, P.D.F.

283 Temple St., Springfield, Mass.

## SAFETY FIRST

### MUNICIPAL BONDS

The Municipal Bonds we offer are the same that the U. S. Government accepts as security for its Postal Savings Deposits, and yield from

**5% TO 6%**

These Bonds are supported by taxes levied against thrifty, growing towns and communities, and are prior in lien to all voluntary debts, such as Mortgages, Judgments, etc. Free from Government Income Tax; no Certificate of Ownership required. We have sold these securities from the Atlantic to the Pacific, and from the Canadian border to the Canal Zone to the shrewdest and most intelligent investors in the Country, and WHY not to you? Denomination \$500.00 and \$1,000.00. WRITE OR CALL FOR LIST No. 15.

### ASSESSMENT RESERVES

A ruling recently promulgated by the Attorney-General of North Dakota is to the effect that assessment life insurance companies are qualified to transact business in that state provided they maintain reserves calculated on the Actuaries' Table with four per cent interest. It is to be presumed that the restriction applies uniformly to all organizations doing a life business under the assessment system whether they be called companies, associations or fraternals. Of course, the object of the rule is to safeguard the policy or certificate holder and its observance is equally essential to all regardless of the form of the organization issuing the contract.

In the case under consideration the result will be to exclude assessment life insurance almost entirely from the state for there are few concerns practicing that system which maintain reserves.

We not infrequently receive inquiries from readers requesting particulars relating to insurance in assessment organizations. We cannot recommend it. The scheme has been proven fundamentally wrong and it will remain so until it includes provision for proper reserves.

### A QUEER VIEW

We have the assurance of the *Pacific Mutual News* that the following incident, which in the interest of space economy we condense, is genuine:

A life insurance agent had address a number of persuasive and argumentative letters to a clergyman residing at Orenco, Oregon, before his persistency was rewarded with an answer, which finally arrived prefaced by warm commendations of the agent's perseverance and the confession that the communications had been deliberately ignored under the belief that such treatment would discourage the writer. The clergyman then proceeds to inform his correspondent that he needs no life insurance other than that he is then carrying, which is illimitable as to amount and benefits and is in a company the president of which is "the Lord of the universe" and the agent, "Jesus Christ, who is such a kind and loving agent that he paid the premium for every one who wishes to take out a policy in his company by allowing himself to be killed on the cross."

A normal, rational man reading this statement would express the wish that he could believe in the absolute sincerity of the soul from which it emanates. But that becomes difficult if we are to assume that the owner of the soul is

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578.109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## 1850 THE 1915 UNITED STATES LIFE INSURANCE CO.

In the City of New York Issues Guaranteed Contracts

JOHN P. MUNN, M.D., President

FINANCE COMMITTEE

CLARENCE H. KELSEY

Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

FREDERICK LANE, Lewistown, Pa.

endowed with average intelligence, common sense, experience in life and the ordinary responsibilities natural to every adult human being. Pursuing the life insurance figure, this gentleman says that the extent of his coverage consists of: "Salvation from sin and the greatest possible blessing and happiness here on earth, and the promise of never-ending life afterwards." The premium, he adds, is his "heart cash down" which he gave the agent, "with a daily remittance of love, praise and service."

It will be noticed that this insured, knowing he will live forever, has a preference for the endowment form of life insurance. He has bought something for his own exclusive benefit. He is doubtless doing everything in his power to induce his wife (if he has one) and his children (if he has any) to emulate his example and get endowments for themselves before it is too late to pass the requisite examinations, but that he himself is not investing cash either of the heart or hand variety for them in the purchase of life insurance protection of any kind. In short, he is exclusively engaged in the business of saving his own precious soul.

We have a fairly good sample of that large but constantly decreasing class of men who tell you they have carefully gone over the whole life insurance proposition, figured both sides of it and have concluded there would be more profit in carrying their own risks. They seem to take immense satisfaction in the announcement: "I am carrying my own risk." It connotes self-confidence and an ability only just short of omnipotence. But, of course, they are mistaken if there is just one person dependent on them. Most of these confident gentlemen have large families—large enough in fact to carry the risk which they fancy they are balancing so cleverly on their own shoulders.

W. D. O., Brookings, S. D.—The company inquired about is twenty-eight years old, has enjoyed a steady growth, is well managed and has a very substantial surplus. The great bulk of its business is on the deferred dividend plan and such policies as have matured are reported to have yielded large returns. If this is true, then we may conclude that the money came from equities forfeited by those policyholders who lapsed or died. In life insurance one policyholder can profit only at the expense of a number of his associates. The deferred dividend system is irredeemably iniquitous. Either of the three other companies is to be preferred, particularly the two older ones.

R. J. G., Concord, N. H.—You can doubtless secure the list you ask for by writing Arthur B. Bisbee, M.D., medical examiner. National Life Insurance Company, Montpelier, Vt.

E. H. C., Ridgway, Colo.—Cannot recommend assessment life insurance. A policy on the ordinary life plan will cost you more in the beginning and less in the end, but will be permanent protection.

Up to April 3, the British industrial life companies had paid £375,767 death claims on 19,300 soldiers and sailors killed in the war. The companies writing ordinary policies had paid on officers killed £1,615,000. The total is £1,990,767 or about \$9,900,000.

A bill in the Connecticut legislature seeks to impose a tax of 1½ per cent on the market value of the stock of Connecticut insurance companies.

## 12,283 Men Joined This Cigar Club

For forty years I've been smoking a cigar made from a tobacco I buy in the Vuelta district in Cuba. I've never found its equal.

My friends and their friends have insisted on my supplying them from my private stock.

So now there are over 12,000 of them ordering together. We keep one man busy selecting only the choicest leaves.

## Co-operative Plan Means Mutual Saving

This Co-operative Club buys over 2,000,000 cigars a year. So they secure quantity prices. We have no dealers nor salesmen. Here again is a saving.

We can sell about 100,000 of our present supply. We've put the price at \$5.00 per hundred, \$2.60 for 50—which is about what they cost us. If they could be purchased at a store they would cost twice as much.

## FIRST FIVE FREE!

We're perfectly willing to have you try a few to decide for yourself that they can't be matched anywhere. We are sure you'll enjoy their rare, mild flavor and delightful aroma.

Merely send us 10c for packing, revenue and postage and try your five free. If they please you, we'll be glad to have you join our club. Don't delay. Write today for trial cigars, but please use your business letter head or enclose your business card.

WHITE PASS & YUKON ROUTE

## CAMP CHAMPLAIN

An Ideal Summer Camp for Boys on Lake Champlain. Twenty-second year. Every convenience for safety and comfort. Waterproof tents with floors. All land and water sports. Leaders carefully chosen college men. Best of food. Camp physician. No mosquitoes or malaria. Long-distance phone. Number limited. Booklet upon application. Address Wm. H. Brown, 270 W. 72d St., N. Y.

## CAMP WAKE ROBIN

Catskill Mts. Woodland N. Y.

YOUNGER BOYS EXCLUSIVELY

Eleventh season. Tuition \$125. Real mountain life with woodcraft, nature study, instruction in manual training, athletics, swimming, by experienced men.

Thoroughly equipped with tents and buildings. For photographs and full information, write

H. I. LITTLE, Lincoln High School, Jersey City, N. J.

# A DEBATE

## THE DEATH PENALTY

RESOLVED: That capital punishment should be abolished

**C**APITAL punishment has been enforced among all nations from the earliest times. The agitation against it, which began in the eighteenth century and continued thru the nineteenth, led to its abolition in many European countries and in several states in the United States. It has been abolished in certain states as follows: Michigan, 1846; \*Rhode Island, 1852; Wisconsin, 1853; Maine, 1887; Kansas, 1907; Minnesota, 1911; Philippine Islands, 1911; Washington, 1913; Oregon, 1914; North Dakota, 1915; South Dakota, 1915; \*\*Tennessee, 1915. During 1914 and 1915 attempts to abolish capital punishment failed in Arizona, Connecticut, New Jersey and New York. The question is here confined to capital punishment as the penalty for murder. This debate was prepared by Mary Prescott Parsons.

### ARGUMENT FOR THE AFFIRMATIVE

- I. Capital punishment is unjust to the criminal.
  - A. He has no chance to reform.
  - B. It is unfair to his family; it disgraces them and robs them of the means of support.
  - C. It makes no allowance for varying degrees of guilt.
  - D. It is irrevocable.
- II. It is wrong in principle.
  - A. The state has no right to take life.
  1. It has not given life.
  2. Killing by a group of people is no more right than killing by one person.
  3. Criminal tendencies are due largely to conditions for which the state, rather than the individual, is responsible.
  4. The state does not need to take life in self-defense.
  5. Tho sanctioned by the letter of Old Testament law, capital punishment is contrary to its interpretation in the light of Christianity.
  - B. The death penalty is not in accord with the modern theory of penology.
  1. It does not reform the criminal.
  2. It does not protect society.
  3. It is based on revenge.
- III. It is dangerous to society.
  - A. It brutalizes human nature.
  - B. Legal executions increase murders.
  1. Heroes are made of criminals.
  2. Respect for human life is lessened.
  3. The spirit of lawlessness is developed in the criminally inclined and in individuals of low mentality.
  4. Executions by the state are taken as justification for lynchings.
  5. Experience has shown that executions are followed by increased homicide.
- IV. It is unwise economically.
  - A. The cost of apprehending and prosecuting murderers is too great in proportion to the number of convictions.
  - B. Lives are destroyed which would be economically valuable to the state.
- V. Capital punishment is unnecessary.
  - A. It is not effective as a deterrent.
  1. Many murderers are not deterred by any punishment.
  2. Many criminals know that infliction

of the death penalty is extremely unlikely.

3. The arguments for capital punishment were formerly advanced for torture.

4. Statistics show that murders have decreased in countries and states which have abolished capital punishment.

B. Life imprisonment is better.

1. It is more effective as a deterrent. Conviction is more certain, and it is the certainty rather than the nature of punishment which deters. Its duration makes it a more severe punishment.

2. It offers adequate protection to society. It prevents murderers from committing new crimes. It reforms the prisoner. It offers opportunities to study the prisoners in order to determine the causes of crime.

3. It makes the prisoner's life valuable to the state. He will support himself. He will provide for his family. His labor can be used in carrying on important public works.

### ARGUMENT FOR THE NEGATIVE

- I. Capital punishment is just to the criminal.
  - A. By taking life he forfeits his own.
  - B. Capital punishment is less cruel than life imprisonment.
  - C. Capital punishment allows a chance for repentance.
  - D. The death penalty is fairer to the criminal's family than life imprisonment since the disgrace is soon forgotten.
  - E. The danger of mistaken conviction is extremely slight.
- II. Capital punishment is right in principle.
  - A. It is based on reason and on absolute justice.
  - B. It is taught by the Bible.
  - C. It is a prerogative of the state.
  1. Citizens must be protected by any necessary method.
  2. The death penalty is the only punishment which really protects society.
  - D. It accords with modern penology.
  1. It is humane.
  2. It protects society.
- III. It is not harmful to society.
  - A. The danger now lies not in the executions but in the morbid publicity attending them.
  - B. Publication of details about executions can be prevented.
  - C. It is not capital punishment, but its abolition, which causes lynching.
  1. The feeling of revenge is deep in human nature.
  2. This feeling will be satisfied only by the infliction of the death penalty.
  3. Lynchings are most numerous where capital punishment is not in force.
- IV. It is wise economically.
  - A. It is unfair to tax law-abiding citizens for the support of criminals.
  - B. Prison labor fails to solve the problem.
  1. A prisoner's earnings are too small to support himself and give adequate support to his family.
  2. Prison labor deprives free citizens of work which they need.
- V. It is necessary to protect society.
  - A. Of all punishments it is the most deterrent.
  1. Most people consider it the severest penalty.
  2. It prevents murderers from committing new crimes.
  3. It prevents the association of others with the most hardened criminals.
  4. Several countries and states have had to re-enact capital punishment because murder increased after its abolition.

B. Life imprisonment, the substitute proposed, is not a satisfactory method of dealing with murder.

1. It is not a deterrent. Most criminals do not fear it. Others count on being pardoned after a few years.

2. It is dangerous to society. It increases the number of murders, since their penalty is no greater than the punishment for some other crimes. The pardoning power may be misused.

3. It stupefies or embitters prisoners instead of reforming them.

C. Capital punishment meets conditions as they are and can be abolished only when society becomes more perfect.

J U S T A W O R D

"An employer who is in need of help and a wage earner who is in need of a job may now look to the Government of the United States for aid in filling their respective wants," says Honorable William B. Wilson, Secretary of Labor in President Wilson's Cabinet, in an article which is to appear shortly in The Independent, entitled "The Job and the Worker." This new step in the development of the Federal Employment Bureau is one that involves very far-reaching consequences and Mr. Wilson's article discusses the question in detail.

Thirteen years ago there appeared in The Independent an article entitled "The Next Step: A Benevolent Feudalism." It was written by W. J. Ghent, and excited as much comment as any article printed in The Independent for many years. This article was afterward amplified and published in book form by the Macmillans under the title "Our Benevolent Feudalism," which instantly raised Mr. Ghent to one of the foremost publicists of the radical school in the United States. We are pleased to announce that after thirteen years Mr. Ghent has prepared another article entitled "Feudalism and Democracy," which will shortly appear in The Independent. Mr. Ghent's original thesis was that there was a steady growth of a state within a state—the collective power of the magnates of industry; the increasing dependence and subordination of the other classes, and the failure of democracy, even tho it maintained and even extended its forms, to establish any effective control over the power of combination. Mr. Ghent's conclusion in his present article is that if "the development of the tendencies then described indicated a regime of overlord and underling, that indication is a hundred times stronger in 1915 than it was in 1902."

PEBBLES

"The convict who escaped was one of the most polite men in the prison."  
"Yes; even when he knocked the guard down, he said, "Excuse the liberty I'm taking."—*Baltimore American*.  
The city youth secured a job with Farmer Jones. The morning after his arrival, promptly at four o'clock, the farmer rapped on his door and told him to get up. The youth protested.  
"What for?" he asked, rubbing his eyes.  
"Why, we're going to cut oats," replied the farmer.  
"Are they wild oats," queried the youth, "that you've got to sneak up on 'em in the dark?"—*Circle and Success*.  
A Massachusetts farmer and his chum came into Boston one evening to see an all-star-cast production of "Othello." When the play was over neither of the men made any comment of consequence until they reached the South Station, where they were to take their train for home. While waiting for the train to come in, one of the countrymen turned to his companion and remarked, "Nathan, that nigger held his end up about as well as any of 'em."—*Harper's*.  
A farmer in the country last autumn gave a job to a seedy-looking individual who had applied to him, and who assured him that he never got tired. When the employer went to the field where he had put the tramp to work he found the latter lolling on his back under a tree.  
"What does this mean?" asked the employer. "I thought you were a man who never got tired?"  
"I don't," calmly replied the tramp. "This doesn't tire me."—*Sacred Heart Review*.  
From a banquet of ministers *Tit-Bits* picks up this story told by a clergyman:  
"One of the members of my church has instilled into his family the belief that the collection is a vitally important part of the service. Consequently his little boy Thomas never comes to church without his contribution.  
"One Sunday, as the elders began to take up the collection at the morning service, Thomas looked along the pew to see if the various members of the family were provided with a contribution. Noticing a guest of his sister's empty-handed, he whispered: "Where is your money?"  
"I have none," was the reply.  
"Time was short and the necessity great. In a flash the little fellow met the emergency by saying:  
"Here, take mine. That'll pay for you, and I'll get under the seat."—*Current Opinion*.  
There is a certain veteran hotel clerk of a certain small hotel up in the Maine woods who is noted for two things—his peculiar choice of words and the fact that every day for thirty-odd years he has inscribed on the top lines of his register the principal items of current news in the village.  
Not long ago a New York editor, who chanced to be stopping at the hotel, so *The Saturday Evening Post* says, borrowed the register long enough to copy down the following entries:  
"Monday, October 12. Yesterday, while percolating round the milldam, George Bates fell into the water; and, owing to his wife's failing to make him change his wet clothes, he is now threatened with pneumonia."  
"Tuesday, October 13. George Bates is rapidly becoming no better."  
"Last night his wife sent for Doctor Linden, who looked him over, collected two dollars, and departed, looking very unsatisfactory."  
"Wednesday, October 14. George's symptoms are rapidly eventuating into fatalities."  
"Thursday, October 15. At seven-thirty this morning our fellow townsman, George Bates, went to his Maker, entirely uncalled for."—*Current Opinion*.

# Some Spring Books

## Of Little, Brown & Company

### FICTION

*The Newest Oppenheim*  
**The Double Traitor**  
 By E. Phillips Oppenheim

An amazing story of the diplomatic events leading up to the European War even better than "Mr. Grex of Monte Carlo." *With frontispiece.* \$1.35 net.

**A Girl of the Blue Ridge**  
 By Payne Erskine  
 Author of "The Mountain Girl."

A North Carolina Romance.  
 "The author has succeeded in showing what life in the mountains is, and has written a story that holds attention to the end."—*New York Sun.* \$1.35 net.

**The Flying U's Last Stand**  
 By B. M. Bower

The ever-enlarging audience that delights in vigorous, breezy stories of ranch life in the Far West by Miss Bower, will revel indeed in her latest.—*Philadelphia Ledger.* \$1.30 net.

**The Second Blooming**  
 By W. L. George  
 (7th printing.)

A searching analysis of married life. "Perhaps the biggest piece of fiction that the present season has known."—Frederic Taber Cooper (Bookman). \$1.35 net.

**The Taming of Amorette**  
 By Anne Warner

The comedy moves along rapidly and every move is attended by humorous circumstances . . . truly one of the most blithesome stories of the season.—*Philadelphia Record.*  
 Pictures by Clarence Underwood. \$1.00 net.

*By The Author of Big Tremaine*  
**Mary Moreland**  
 By Marie Van Vorst

A story of present-day New York life involving a girl who meets a great temptation. By the author of "Big Tremaine." \$1.35 net.

**The Rim of the Desert**  
 By Ada Woodruff Anderson  
 (4th printing.)

A story of the great Northwest.  
 It is a many sided romance of original features, and many strong well-drawn characters.—*Boston Transcript.*  
 By the author of "The Heart of the Red Firs." \$1.35 net.

**Amarilly of Clothes-Line Alley**  
 By Belle K. Maniates  
 (8th printing.)

This cheery story of a little girl of the slums is "as crisp and sweet as a Scotch oatcake, to say nothing of sparkling with native humor."—*Chicago Herald.* \$1.00 net.

**A Siren of the Snows**  
 By Stanley Shaw  
 (3rd printing.)

In ingenuity of incident, plot-construction and continuous interest Mr. Shaw's first novel compares well with the work of E. Phillips Oppenheim.—*New York Times.* \$1.30 net.

**Homeburg Memories**  
 By George Fitch

Among the most genuinely humorous of contemporary American writers is George Fitch whose "Homeburg Memories" is a distinct contribution to local gaiety.—*Town and Country.* \$1.25 net.

### MISCELLANEOUS

**The Individual Delinquent**  
 By William Healy, M.D.

A text-book of diagnosis and prognosis for all concerned in understanding offenders. \$5.00 net.

**Limitations on the Treaty-Making Power**  
 By Henry St. George Tucker

Formerly president of the American Bar Association.  
 An exposition of the power of the U. S. in the making and ratifying of binding treaties. \$5.00 net.

**Table Service**  
 By Lucy G. Allen

A refreshingly new and practical household handbook . . . fills a long felt want.—*Boston Herald.* \$1.25 net.

**Mind and Health Series**

A Series of Medical handbooks written by eminent specialists; edited by H. Addington Bruce, and designed to present the results of recent research in a form for the lay public's reading:

Volumes ready: I. HUMAN MOTIVES, by James J. Putnam, M.D.; II. THE MEANING OF DREAMS, by Isador H. Coriat, M.D.; III. SLEEP AND SLEEPLESSNESS, by H. Addington Bruce. Each \$1.00 net.

**Napoleon's Russian Campaign of 1812**  
 By Edward Foord

The amplest and most authoritative account of Napoleon's disastrous Russian adventures. Illustrated. \$4.00 net.

### JUVENILES

**The Boy Scouts of Black Eagle Patrol**  
 By Leslie W. Quirk

There are several chapters devoted to athletics, ball games and the like, and toward the end the young reader will find a real "thriller" in the form of an exciting burglar story.—*Kansas City Star.* \$1.00 net.

**The Young Rival Inventors**  
 By Gardner Hunting

A story that will closely hold the attention of any boy that has a chance to read it.—*Springfield Republican.* \$1.00 net.

NUMBER 3467

## NATIONAL INDIGNATION AND NATIONAL SELF-CONTROL

**I**N the face of the tragedy of the "Lusitania" the heart of the American people burns with indignation. More than one hundred peaceable, unoffending American citizens, proceeding "upon their lawful occasions" are stricken with sudden death. They had offended against no rule of international law. They had violated no legitimate interest of any belligerent. By every principle and custom of what is, by a curious anomaly, known as civilized warfare, they had a right to be as immune from attack as tho they had remained quietly in their American homes. National indignation is inevitable; its expression is a national duty.

But an even higher duty rests upon the American people. We must practise the sternest self-control. In demanding justice we must weigh our every act and word and thought in the scales with even hand. It is easy to be quick to wrath. It is not so easy to be deliberate in counsel and wise in action.

The main line of our course is already charted. The world has full reason to know in what direction we are constrained to go. Especially have those upon whom rests the responsibility for the death of the American passengers of the "Lusitania" warrant for knowing what our view of their ruthless act will be. When Germany, in the early days of February, proclaimed a war zone about the British Isles, and warned neutral peoples that they sailed those waters at their peril, our protest was instant and unequivocal. In the note address by the American Government to the Imperial German Government on February 10, we said:

If the commanders of German vessels of war should act upon the presumption that the flag of the United States was not being used in good faith, and should destroy on the high seas an American vessel or *the lives of American citizens*, it would be difficult for the Government of the United States to view the act in any other light than as an indefensible violation of neutral rights, which it would be very hard indeed to reconcile with the friendly relations now happily subsisting between the two governments.

If such a deplorable situation should arise, the Imperial German Government can readily appreciate that the Government of the United States would be constrained to hold the Imperial German Government to a strict accountability for such acts of their naval authorities, and to take any

steps it might be necessary to take to safeguard American lives and property and to *secure to American citizens the full enjoyment of their acknowledged rights on the high seas.*

It is true that this warning was concerned more specifically with the German threat that American vessels might be sunk because of the use by British ships for purposes of subterfuge of the American flag. But the principle is precisely the same. American citizens have the same "acknowledged rights" of security and safety of life on merchant ships flying the flag of a belligerent that they have on an American ship.

The contingency foreshadowed in this note has actually arisen. It presents itself in spectacular form. The most famous passenger ship in the world is at the bottom of the Irish Sea. It was sunk without warning, by German torpedoes. It carried down with it more than a hundred American lives.

What we must do is clear. We must hold the Imperial German Government "to a strict accountability." We must consider, calmly, coolly, but with the utmost seriousness, what steps it may "be necessary to take to safeguard American lives and property and to secure to American citizens the full enjoyment of their acknowledged rights on the high seas."

How we shall do it is another matter. But on this point one thing also is clear. We must trust the President. In a statement issued from the White House he has struck the right keynote, "Of course, the President feels the distress and the gravity of the situation to the utmost and is considering very earnestly but very calmly the right course of action to pursue. He knows that the people of the country wish and expect him to act with deliberation as well as with firmness."

In the hands of the President of the United States the honor and integrity of the United States are secure. Every American, without distinction of party and with no thought of personal interest, should hold up the President's hands and in calmness of thought and carefulness of speech and with rigid self-restraint do his part to help him in the grave responsibility it is his to bear.

### A COURSE OF ACTION

**W**HAT shall we ask of Germany and what shall we do if Germany refuses our demand?

After temperately and calmly pointing out all the causes for complaint the following might be proposed to Germany:

1. Disavowal by the Imperial German Government of the proceedings which have resulted in the killing of American citizens and loss of an American ship, and full apology therefor.

2. Dismissal of the commanding officers who did these acts.

3. Agreement to indemnify all citizens who have been injured and the families of those who have been killed and to pay for American property destroyed.

4. Agreement that the United States may hold in pledge all German vessels now in United States ports until claims are adjusted and liquidated.

5. Agreement that United States vessels traversing the war zone shall not be molested, that display of the American flag shall be sufficient evidence of nationality if the right of search is not exercised, and that merchant vessels carrying American citizens under whatever flag shall not be sunk as was the "Lusitania."

In the event of the refusal of these demands we might proceed to:

1. Sever diplomatic relations with Germany.
2. Prohibit intercourse of every sort with Germany.

### JAPAN'S MONROE DOCTRINE

**W**AR between China and Japan is averted. Japan's ultimatum not only exacts less than China had already offered to concede, but even defers for the present all consideration of the demands which China charged would impair her sovereignty.

Japan's first four groups of demands are, in brief:

First, that Japan promises to return Kiao-chau to China while retaining commercial rights there.

Second, that Japan's rights in Manchuria and Mongolia be more specifically defined and in some instances extended.

Third, that nine specified mining areas in China be opened to the Japanese.

Fourth, that China agree not to cede or lease to a third power any harbor, bay, or islands along the coast of China.

The demands in group five, which are waived by Japan, include the employment of Japanese as political, financial and military advisers of China, the right of Japan jointly to police with China some of the important Chinese cities, the buying by China of half her ammunition from Japan, and certain loan privileges and railroad concessions.

The differences between China and Japan growing out of all these demands are discussed in detail in two important articles published elsewhere in this issue. But as they take diametrically opposite views we here-with briefly state our own position.

Japan has the same rights in Asia that we have in America under the Monroe Doctrine—that is, the right to maintain Asia for the Asiatics as we do America for the Americans. Not only has Japan this right to assume the political primacy of the Far East, but it is her duty to do so. Otherwise China may be dismembered and

Japan may be compelled to wage further wars against encroaching rivals. When China becomes Japan's equal in power, as she surely will in a very few years if left to herself, then she can share with Japan the responsibility of maintaining Asia against the White Peril.

On the other hand, Japan has no more right to impair China's sovereignty or exclusively exploit her commerce than we have that of Venezuela or Chile. Such a course would contravene all international ethics and bring down upon Japan the just condemnation of the world.

In other words, Japan must exercise the right of political dominance in Asia, but must claim no special economic privileges other than geographical proximity and ethnic and linguistic affiliations afford.

We believe that when the negotiations are finally concluded it will be found that Japan has claimed no more than what in her judgment will best maintain permanently the peace of the Far East. At all events we have Count Okuma's word in *The Independent* of April 12, that "Japan has no ulterior motive, no desire to secure more territory, no thought of depriving China or any other peoples of anything that they now possess." If we cannot trust Count Okuma, who is there in Japan whom we can trust?

We are glad that our State Department has not shared in the general alarm concerning Japan's designs on the mainland. Mr. Bryan says he has been kept fully informed by both the Chinese and Japanese governments of the progress of the negotiations and he sees nothing in them to jeopardize our treaty rights with China, "which our Government has no thought of surrendering."

The United States wants to see China free to maintain her republican government and develop herself without let or hindrance from other nations. Japan claims this is her purpose, too. Until there is some concrete evidence to the contrary let us give her the benefit of the doubt.

### AMERICA'S TOUCH OF WAR

**I**T was in Singapore. The Methodist Missionary Conference of Malaysia was in session, presided over by Bishop Eveland. At the opening session on Sunday the Governor of the Straits Settlements and the Federated Malay States, his wife, Lady Evelyn, and other British officials as also the American Consul General and a goodly number of American residents were present with the audience which overcrowded the Wesley Church. The Bishop spoke of the Hundred Years of Peace between Great Britain and the United States, and no one suspected that danger was near.

The conference was to continue thru the week. But during the session of Tuesday morning came the alarming report that an Indian regiment had mutinied and killed its officers, and was threatening the city, and that citizens and women had been killed. The order came to send all the women and children to a vessel in the harbor, and English and American men were invited to arm to defend the city.

The men of the conference immediately enlisted, Bishop and all, fifteen of them. They were given arms and had an hour's training under one of their number who had been a captain of militia. They were summoned to service and smelled powder, some of them,

while some served as patrols and guards over captured rebels. The mutineers were quelled within two or three days, and those who had incited them, thinking the departure of English troops a favorable opportunity for rebellion, were shot. When an English and a French war vessel had arrived the Methodist missionary soldiers, Americans all of them, were discharged from service and the conference resumed its work.

Was their soldiering in suppression of rebellion against the British Government in the Farther Indies a violation of President Wilson's direction to maintain strict neutrality during this war? Of course not.

### ANOTHER CLASS OF WAR BABIES

THE important question which the approaching arrival of some tens of thousands of "war babies" raises is not to be discovered in any list of the problems involved that we have seen in English, French, German or American newspapers.

Thousands of these babies will be legitimate—the offspring of marriages hastily contracted when their fathers were called to the colors. Other thousands will be illegitimate—many of them the offspring of those who did not take the precaution to marry, others of young and thoughtless village girls in the neighborhood of the military camps; yet other thousands will be born of fathers from the invading armies. Never since very ancient times has this phenomenon occurred on so large a scale as this year.

We have already discussed with our readers the question whether governments and churchmen have acted rightly or wrongly in encouraging hasty marriages, partly in order to prevent this threatened increase of illegitimacy. Now we have to consider the cases which this special legislation has failed to forestall.

This is not the time to take up for searching examination the question whether all legal discriminations against illegitimate children should be wiped off the statute-books of civilized states. If by any legislative action the war babies born out of wedlock are to be legitimated it is certain that the measure will be an extraordinary one, to meet an exceptional occasion. What should be done "on general principles" need not be, and will not be, determined now.

Not less premature is discussion of the probable quality of the war baby contingent as an element in future population. Whether it will be on the whole a "good stock," eugenically desirable, or on the whole a "bad stock," perpetuating undesirable traits, remains to be seen. The amateur eugenists, who are rushing into print on this topic, are simply exhibiting their lack of scientific qualifications.

But there is a question that cannot be shirked. It must be answered now, and in a strictly practical way. In what spirit is the emergency to be met? Shall it not be met sincerely and frankly? Above all, shall it not be met with a determination, whatever happens, to treat the mothers considerately, gently, adequately? To achieve this will demand tact, discretion and infinite patience, but surely the achievement should be attempted.

And all this should be done without committing any institution, church, state or philanthropic organization, or any individual to theory, hypothesis or "reform"—feminist, utilitarian, political or other. The one present

duty is to help, cheer, encourage and sustain. Let obvious duty for once be done in a way to demonstrate that civilized people believe in the civilization and in the religions that they profess.

### CORRECTING AN ERROR

SEVERAL errors, which excited much criticism at the time, were made a year ago by the Organization Committee—Secretary McAdoo, Comptroller Williams and Secretary Houston—in marking out the twelve districts of the Federal reserve bank system. One of these was the assignment of the banks of northern New Jersey to the district of which Philadelphia, with its reserve bank, is the center.

It was well known, of course, that these banks, and especially those in Newark, Jersey City, Hoboken and other towns on or very near the Hudson River, were naturally tributary, in a financial sense, to New York. The part of the state in which they are situated is, financially, a suburb, almost a borough, of the great city. They had been doing business with the leading banks of New York. To compel a transfer of a considerable part of their business to Philadelphia was to subject them to inconvenience and loss.

No one was more familiar with this association of the banks with New York and with the causes of it, than Secretary McAdoo, who, in his notable tunnel project, had very distinctly promoted and facilitated communication between New York and the towns on the other side of the Hudson. It was not easy to account for his approval of the committee's work. Some believed that Mr. McAdoo and Mr. Williams were moved by prejudice against New York's great banks, or by a desire to diminish the financial importance of the city. But the New Jersey banks, and not those of New York, suffered on account of the action taken by the committee against their exprest wishes.

The error has now been corrected. By unanimous vote the Federal Reserve Board, of which both Secretary McAdoo and Comptroller Williams are members, has taken 123 banks in the northern half of New Jersey from the Philadelphia district and attached them, with their \$32,000,000 of capital and \$161,000,000 of deposits, to the district of which New York is the financial center. Thus is recognized that "normal trend of banking business" which the committee was bound by its own rules to follow.

At the same time the action of the committee in two other cases was reversed. There are additional changes which should be made. In the board's unanimous vote for the relief of the New Jersey banks may be seen an indication that the arrangement of the districts will be greatly improved.

### THE REVIVAL OF THE PAMPHLET

ONE of the noticeable effects of the war upon literature is the reappearance of the pamphlet as the medium of controversy. Probably we should have to go back two centuries, to the days of Swift, Defoe and Pope, to find a year in which so many pamphlets were published as are appearing in England. It was the rise of the magazine a hundred years ago that put an end to the era of pamphleteering, for the subscriber to a periodical could secure a steady supply of comment and

criticism without the trouble and expense of buying the articles separately. The pamphlet survived chiefly in the religious form, the tract, and these could not be called popular. The American and British Tract Societies, endowed for this purpose, have of late found it advisable to put forth much of their literature in the form of periodicals and books.

But the necessity of quickly informing the English people about the issues of the war and inducing two millions to volunteer brought the pamphlet again into service. From Oxford comes the series of fortnightly "Papers for War Time," not dealing like the famous ninety "Tracts for the Times" with the revival of Catholicism, but with what men and women should think and do in these days of trial. The Germans and French in Europe bombard America with arguments and accusations in pamphlet form, but in this country the propaganda is carried on, in accordance with our cus-

tom, thru press bureau items supplied to the newspapers and magazines and thru special periodicals like *The Fatherland*, *Free Poland* and *The Day*, founded for the purpose.

The reason for our failure to make use of the pamphlet lies in our defective methods of book distribution. In Europe and especially on the continent it is easy for anybody who has something to say or thinks he has to get out a booklet and it will find its readers if there are any in the country. But in America it costs about as much to publish and sell a small book as a large one. In compensation it may be said our periodical service is unequaled in extent and variety and that anything worth printing can find a place somewhere. Still a writer who wants to influence current opinion cannot always get the space to put his ideas out just as he wants to and at just the right time as he could in a privately printed pamphlet.

## THE VERDICT OF PUBLIC OPINION

**Theodore Roosevelt:** When the German decree establishing the war zone was issued and of course plainly threatened exactly the type of tragedy which has occurred our Government notified Germany that in the event of any such wrongdoing at the expense of our citizens we would hold the German Government to a strict accountability. The use of this phrase "strict accountability" of course must mean and can only mean that action will be taken by the United States without an hour's "unnecessary delay." It was eminently proper to use the exact phrase that was used; and having used it our self-respect demands that we forthwith abide by it.

**George W. Wickersham, former Attorney-General of the United States:** A very clear course, it seems to me, is open for us to pursue: We should cancel all diplomatic relations with a country which has declared war upon civilization, recall our Ambassador from Berlin, and hand Count Bernstorff his passports. Congress should be summoned in extra session, and an appropriation of at least \$250,000,000 asked to put us in a condition to protect our rights as a neutral civilized power. At the same time we should invite all neutral nations of the world to join us in a council of civilization to agree upon the steps to be taken to protect the interests of all neutral powers and their citizens from such wanton acts of destruction of life and property as those which Germany has been committing.

**New York Times:** She [Germany] has forfeited all sympathy, all confidence, by this premeditated barbarism, and the nations not engaged in the war are now united by the feeling and conviction that, at whatever cost and by whatever

effort, even tho all have to join in the work, she must be stripped of the power and of the will to defy the laws of God and man by such atrocious deeds.

**Philadelphia Public Ledger:** As it stands the horror is almost inconceivable. There has been nothing like it before. One of the consequences of this war ought to be that nothing like it can ever happen again. Unless civilization is to relapse into barbarism, helpless non-combatants must not be exposed in such a fashion to the worst calamities of war.

**Baltimore Sun:** We cannot allow American lives to be endangered in a species of warfare without precedent among civilized nations, and which is a distinct return to the most brutal practices of barbarism. Our Government will know how to deal with this case, and it will not need any urging from the press to do its full duty. We can safely leave it in the hands of a President who fears God but does not fear man, and who will preserve the peace as long as it is humanly possible to do so.

**New York Evening Post:** In a word, our Government is face to face with a definite practical question, of the most immediate importance. It must either admit the rightfulness of what the Germans have done in sinking the "Lusitania" and killing six score American citizens, or it must take steps to protect American citizens from a repetition of the outrage. . . . The nation is willing, even anxious, that the Government take due time to arrive at a just and-wise conclusion. In the meanwhile, let us have no confusion of counsel.

**Louisville Courier-Journal:** We must not act either in haste or pas-

sion. This catastrophe is too real, the flashlight it throws upon the methods and purposes of Germany is too appalling, to leave us in any doubt what awaits us as the bloody and brutal work goes on. Civilization should abjure its neutrality. It should rise as one mighty, god-like force and as far as its moral influence and physical appliance can be made to prevail forbid the riot of hate and debauch of blood that, like a madman, is running amuck among the innocent and unprotected.

**Richmond (Va.) Post-Dispatch:** Germany surely must have gone mad. The torpedoing and sinking of the "Lusitania," altho it was well known to German authorities that there were many Americans aboard the ill-fated Cunard liner, evince a reckless disregard of the opinions of the world in general and of this country in particular—a determination to win by any methods and at any cost—only compatible with the assumption that blood lust has toppled reason from its throne.

**Providence Journal:** If the right of the American people to life, liberty and the pursuit of happiness is anything more than a cheap clap-trap phrase, if our place in civilization as the foremost champion of human freedom and the rule of law is not a sham but a splendid reality, then must we protect our self-respect and our national dignity before all the world.

**Rochester Herald:** Had it been the purpose of Germany to array the sentiment and the effective action of the entire world against her, nothing that we can conceive of would have more certainly and swiftly accomplished it than the murder of hundreds of subjects of neutral States.

# THE STORY OF THE WEEK

The Sinking of the "Lusitania" The Cunard liner "Lusitania" was torpedoed by a German submarine about two o'clock on the afternoon of Friday, May 7, and sank in twenty minutes. She had sailed from New York on Saturday and was off Old Head of Kinsale, the most southerly point of Ireland, just west of Queenstown, when she was struck. The submarine gave no warning, but some of the passengers on deck caught a glimpse of her about a thousand yards away on the starboard side and watched the white trail of the first torpedo thru the water. This exploded in the forward boiler room and was quickly followed by a second, which penetrated the engine room and there exploded. This disabled the engines so that, altho the vessel was at once turned toward the Irish coast only ten miles away, she made no progress.

On account of the list to starboard only half of the lifeboats were available and of these but few could be launched in time. The first class passengers were below at lunch and a larger proportion of them perished than of the other classes. Some of the boats which were first launched, filled with women and children, capsized or were smashed in being lowered from the davits. The stewards endeavored to calm the passengers by telling them that there was no danger, but some took this too literally and failed even to put on life preservers. Captain Turner, who was on the bridge, went down with the ship, but having on a life belt was picked up from the water by one of the many boats which came from all directions to the rescue.

The total number of persons on board the "Lusitania" was 1917 and of these 1152 lost their lives, a disaster surpassed only by the "Ti-

tanic" when 1503 were drowned. The number of passengers was 1250, of whom 290 were first cabin, 599 second cabin and 351 steerage. The number of Americans on board was 179, of whom 114 perished. Among them were many persons of prominence: Charles Frohman, the New York theatrical producer; Charles Klein, the dramatist, author of *The Music Master*; Alfred Gwynne Vanderbilt, capitalist; Justus Miles Forman, novelist, and Mr. and Mrs. Elbert Hubbard of East Aurora, New York.

About forty babies and twice as many older children were drowned. Some of the passengers and crew were killed or wounded by the explosions. Others, including many women, perished from shock or exposure while floating in the sea before the fishing boats arrived. Forty-seven are in the hospital at Queenstown.

The "Gulflight" and the "Lusitania" The sinking within a single week of the

American steamer "Gulflight" and the British steamer "Lusitania" with many American passengers has profoundly stirred the American people, and from many quarters a demand is heard for action by the United States Government. The case of the "Gulflight" concerns the United States more directly, altho the loss of life was comparatively small. The "Gulflight," which was carrying gasoline to Havre, was not sunk and need not have cost any lives, but a seaman and the wireless operator jumped overboard and drowned and the captain died of heart failure sixteen hours later. The tanker was displaying a large American flag, altho she was under convoy of a British patrol and was torpedoed without warning in broad daylight, and so it appears to come within the scope of the President's warning to Germany.

The case of the "Lusitania," tho having a more powerful influence upon popular feeling in America, is somewhat different from a legal standpoint. She was a British vessel and since President Wilson's warning to Great Britain against using the American flag she has sailed under her own colors. As she was attacked within a few miles of the British coast, where ample warning had been given that an attempt

### GERMAN PROCLAMATION OF WAR ZONE

The waters around Great Britain, including the whole of the English Channel, are declared hereby to be included within the zone of war, and after the 18th inst. all enemy merchant vessels encountered in these waters will be destroyed, even if it may not be possible always to save their crews and passengers.

Within this war zone neutral vessels are exposed to danger, since, in view of the misuse of neutral flags ordered by the Government of Great Britain on the 31st ult., and of the hazards of naval warfare, neutral vessels cannot always be prevented from suffering from the attacks intended for enemy ships.

February 4, 1915

### WARNING ISSUED BY GERMAN GOVERNMENT NOTICE!

Travelers intending to embark on the Atlantic voyage are reminded that a state of war exists between Germany and her allies and Great Britain and her allies; that the zone of war includes the waters adjacent to the British Isles; that, in accordance with formal notice given by the Imperial German Government, vessels flying the flag of Great Britain, or of any of her allies, are liable to destruction in those waters and that travelers sailing in the war zone on ships of Great Britain or her allies do so at their own risk.

*Imperial German Embassy,  
Washington, D. C., April 2,  
1915*

would be made to sink her, the British Admiralty is blamed by many of the English papers for not sending out a convoy of destroyers to protect her.

The German organs, while deploring the loss of life, defend the action as legitimate on the ground that the "Lusitania" was an auxiliary cruiser of the British navy under the command of a British naval officer, was armed with guns for defense against the enemy, and was carrying not merely contraband but ammunition. It appears from her manifest that the "Lusitania" had on board 5471 cases of cartridges, 189 cases of military goods, 260,000 pounds of brass and 60,000 pounds of copper. The British Admiralty and the officials of the New York Custom House deny that the "Lusitania" carried any mounted guns.

On February 4, the German Government issued a notification that after February 18 the waters surrounding the United Kingdom would be considered as a war zone and dangerous to commerce. Since the date specified the German torpedoes

or mines have sunk ninety-one ships of various nationalities and sizes, from fishing craft to the "Lusitania," and in all more than 1450 persons have lost their lives. Just before the "Lusitania" sailed the German embassy took the unprecedented step of publishing in the leading American papers a warning that those embarking upon British vessels going to the war zone did so at their own risk. The passengers, however, laughed at the warning as a piece of German bluff. We give on this page documents bearing on the case.

The British expedition which landed at Constantinople at daybreak, April 25, on the Gallipoli peninsula has been steadily advancing during the week and now occupies the hills a few miles back of Kilid Bahr and the other Turkish forts along the narrowest part of the Dardanelles. As the Australian and New Zealand troops, closely packed in small boats and towed by pinnaces, neared the shore they were met by a storm of rifle and shrapnel fire which inflicted many casualties. Without waiting for the boats to reach the land or even to charge their magazines, the Australians jumped into the water, almost up to their necks, and, wading ashore, charged the Turkish trenches with bare bayonets. In this way they carried three successive ridges occupied by the Ottoman troops. As one enthusiastic Australian put it, "We lifted the Turks on the end of our bayonets and hurled them over our heads." Before night 29,000 troops had been landed on Gallipoli. These were later rein-

General Sir Ian Hamilton, commander of the British land forces along the Bosphorus

### THE RIGHT TO SINK ENEMY MERCHANTMEN

According to the Règlement of the Institute of International Law, adopted at Turin in 1882, a prize may be burned or sunk in five cases: (1) When, because of the bad condition of the vessel and the state of the weather, she can not be kept afloat; (2) when she can not keep up with the man-of-war and may easily be retaken by the enemy; (3) when the approach of a superior enemy force creates fear of recapture; (4) when the captor can not put aboard a prize crew without dangerously depleting his own; (5) when the nearest port to which the vessel may possibly be taken is very remote. *In any case the captor must remove the persons on board and as much as possible of the cargo. . . .*

*John Bassett Boore, International Law Digest*

### ENEMY MERCHANT SHIPS MUST BE WARNED

If hailing is impossible, or if the suspected vessel takes no notice of it, the chasing cruiser may signal her to bring to by using blank cartridge, and then, if necessary, sending a shot across her bows. . . . Any other signal likely to be understood is equally lawful, but *some unmistakable summons is necessary. Not till it has been given and disregarded is the use of force allowed. . . .* A commanding officer who cannot spare a prize crew may order an enemy merchantman to haul down her flag and follow him on pain of being sunk by gun fire or torpedo.

*T. J. Lawrence, The Principles of International Law*

forced by the French troops, withdrawn from the Asiatic side of the Dardanelles, where they had at first landed.

According to the Turkish reports the British and French troops have lost heavily and made little progress. It is at any rate evident that the approach of Constantinople by land is not an easy task in spite of the aid of the warships, which are able to shower with shrapnel any part of the peninsula. The towns of Maidos and Gallipoli have been set on fire by the ignition shells. A bridge on the railroad connecting Smyrna with the capital was blown up by a bomb dropt from a British aeroplane. Troops have been landed near the site of ancient Ephesus, thirty-five miles south of Smyrna, for a land attack on that city. The bombardment of Smyrna by the British fleet, which has been carried on intermittently for several months, has apparently had little effect. The Russian fleet is shelling the Bosphorus forts and a Russian aviator is reported to have dropt several bombs in the city of Constantinople.

### German Victory in Galicia

From the German point of view this has been the most successful week of the war, since it has brought victories in four widely separated quarters. In Belgium, Hill 60, which was the chief gain made by the British since the war began, has been recaptured by the troops of the Kaiser. They have invaded the Baltic provinces and taken Libau. They have inflicted a severe defeat upon the Russians on the northern slope of the Carpathians. And they have struck a hard blow at England's sea power by destroying within ten miles of the British coast the "Lusitania," which was deemed invulnerable by reason of her speed.

It is impossible at present to determine the extent of the Russian reverse, but it is apparent that the Austro-Germans have made gains that more than compensate for all they have lost since the fall of Przemyśl. According to the official Berlin report, the total number of prisoners taken in the Galician arena during May is about 70,000. The Russians have also lost thirty-eight cannon, including nine big guns. They have been obliged to relinquish all of the Carpathian passes except Lupkow, and they have been forced to fall back from Cracow a distance of over thirty miles. The Russian Foreign Office, however, asserts "most emphatically" that the reports of an Austro-German victory are "absolutely unfounded" and that there is no reason "whatever to talk even of a partial success of our enemies." Which of these contradictory statements is true remains to be seen, but, in view of the notorious unreliability of the announcements from Petrograd and the accuracy and comparative frankness of those from Berlin, we will here follow tentatively the German version.

It appears from this that as soon as the Russians were well embarked on the invasion of Hungary and a considerable body of troops was already on the south side of the Carpathians, a joint force of Germans and Austrians attacked the Russian right on the north side of the range. This took the Russians by surprise because they had believed themselves safe in their strongly fortified positions on the hills along the Dunajec River. But the Austro-German artillery was employed so effectively as to force them to evacuate line after line of trenches until their retreat became almost a rout and guns and supplies were left behind. Three rivers in succession were bridged by pontoons and crossed by the Teutonic forces, the

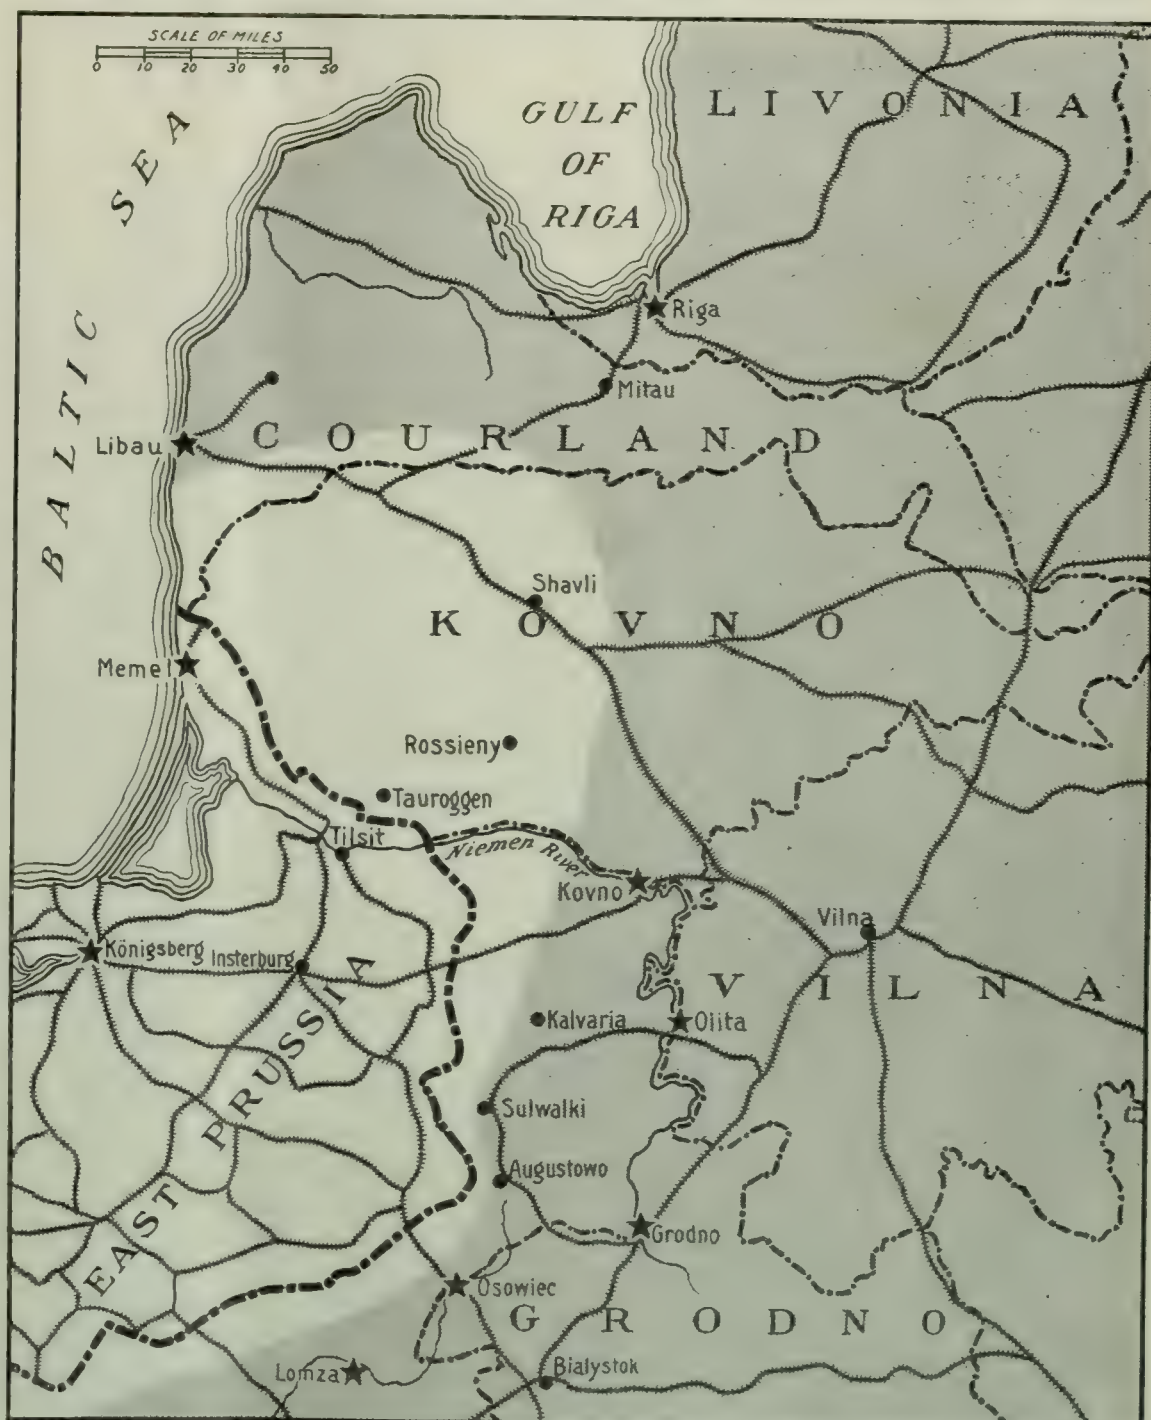

Dunajec, the Biala and the Wisloka. North of the Vistula the Russians were also driven back from the Nida River. The line of battle extends in a great curve from the Vistula across Galicia along the crest of the Carpathians and around to Stryi, a distance of 150 miles. This eastward movement forced the Russians to withdraw from Dukla Pass and Bartfield, the only Hungarian town they had yet possessed, and has compelled them to evacuate Hungary altogether.

### The Capture of Libau

Hindenburg's invasion of the Baltic provinces derided by the Russians as an aimless cavalry raid, turns out to be one of the most remarkable of his spectacular movements. At the time when it was assumed that he would find it difficult to hold with his depleted forces the five hundred mile line stretching from the Baltic Sea to the Carpathian Mountains he has

suddenly extended the line to the north by almost a hundred miles more. Crossing the Niemen River, which runs along the northern boundary of East Prussia, he struck thru the heart of ancient Lithuania in the direction of Riga. His previous successes have been obtained by means of the railroads with which the German frontier is well provided, but in the region into which he has now penetrated there were no railroads until Shavli was reached.

Possession of this point cut the railroad line leading to the Baltic port of Libau, which fell into the hands of the Germans on May 7. Libau is a fortified city and a naval station. It has about 70,000 inhabitants and serves as the outlet for the Russian wheat belt since it is the only ice-free port which Russia possesses on the Baltic. The Germans captured in the town sixteen hundred prisoners, eighteen cannon and four machine guns. At Shavli 3200 prisoners and eight cannon were taken.

THE GERMAN INVASION OF THE BALTIC PROVINCES

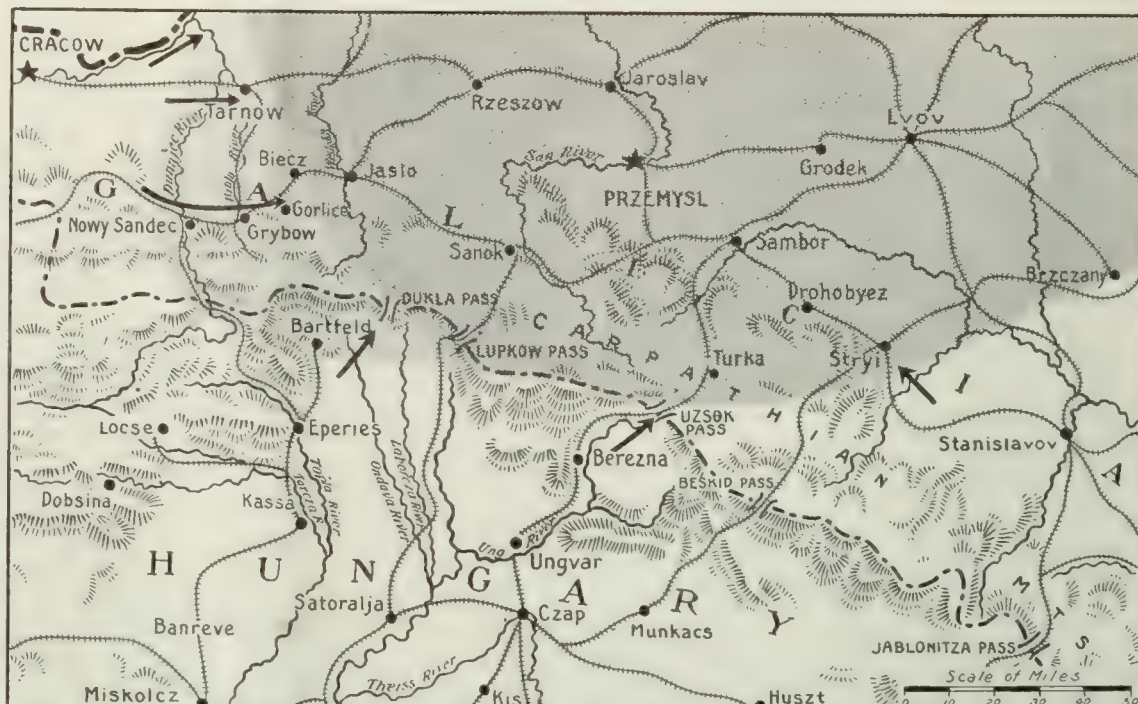

A raid from East Prussia into Russian territory by one of Hindenburg's armies has resulted in the capture of the important Russian seaport and naval base, Libau, and threatened Riga. The shaded area is that held by the Russians

The head of the German column is now reported near Mitau with Riga as its apparent objective. The fleet is coöperating with the army and German destroyers have already appeared in the Gulf of Riga. Success here would give them possession of Courland (Kurland) and the territory known as the "German provinces" because the Germans, tho a minority of the population, have for two hundred years dominated the region and have made it the most prosperous part of the Russian empire.

**The Japanese Ultimatum** On the afternoon of Friday, May 7, the Japanese Minister at Peking presented to the Chinese Foreign Office an ultimatum declaring that unless China accepted without qualification the Japanese demands within forty-eight hours war would be declared. At the same time the plan of campaign was given to the press. This involved the invasion of northern and southern China. For this purpose forty warships were assembled at the naval base of Sasebo, and all Japanese steamers of over a thousand tons were to be requisitioned as transports. The northern expedition was to occupy Tientsin and advance along the railroad to Peking. The Chinese shipping would all be swept from the coast and the railroad centers seized. The Japanese living in China were ordered out by their Government and have been leaving by the thousand for the treaty ports on the coast.

On receiving the ultimatum Yuan Shih Kai made a final appeal to the powers, but receiving no hope of support from any quarter and realizing

#### THE EXPULSION OF THE RUSSIANS FROM HUNGARY

The state of affairs in the Carpathians has been suddenly altered by the attack of the Austro-German forces on the Russian right. The Russians have been driven in rapid succession from their entrenched positions along the Duwajec, Biala and Wisloka Rivers and have been forced to withdraw from Hungary. The region evacuated is indicated by light shading; that still held by the Russians in darker shading. The arrows show the chief points of attack

the hopelessness of defense, the President conceded the Japanese demands in full shortly before the ultimatum expired at six p. m. Sunday. It is not known just what stipulations were contained in the final agreement, for the original twenty-one articles handed to President Yuan on January 18 have been thru a process of oriental bargaining ever since. It is, however, understood that Japan agreed to suspend Group V for later discussion and also offered to return to China the German concession of Kiaochow taken by Japanese arms. Group V contained the clauses to which the Chinese most strongly objected on the ground that they virtually involved the subjection of the republic

to the Emperor of Japan. In these clauses it was stipulated that influential Japanese should be appointed as advisers in political, financial and military affairs; that Japanese should take part in the policing of important cities in China; that China should purchase half her munitions of war from Japan; that the Japanese should construct railroads and work mines in Fukien province and the Yang-tse valley, and that the Japanese should be free to propagate Buddhism and establish schools in China.

**Mr. Wilson and the Philippines** There have been published at Washington, in the monthly magazine issued by Manuel L. Zuegon, Resident Commissioner from the Philippines, messages sent to Governor-General Harrison at Manila by President Wilson and Secretary Garrison a day or two after the adjournment. They relate to the Philippine Government bill, which was passed in the House but not taken up in the Senate. Of this bill Mr. Wilson said:

It was constantly prest by the Administration, loyally supported by the full force of the party, and will be prest to passage when the next Congress meets in December. It failed only because blocked by the rules of the Senate as employed by the Republican leaders who were opposed to the legislation and who would yield only if we withdrew the assurance of ultimate independence contained in the preamble. That we would not do. The bill will have my support until it passes, and I have no doubt of its passage at the next session of Congress. Please express to the people of the Philippine Islands my deep and abiding interest in their welfare and my purpose to serve them in every possible way. In this I am expressing the spirit and purpose of the

Press Illustrating Company

THE AUSTRIAN BIG GUNS HAVE DONE DEADLY SERVICE AGAINST THE RUSSIANS IN GALICIA

majority of the Congress and of the whole Government of the United States.

The bill is one that would enlarge the share of the people in the local government. It empowers them to elect the upper house or Senate, which is now a commission of appointed members, and the preamble carries a promise of ultimate independence.

The President congratulated Mr. Harrison on the success of his administration. The people, he added, had already proved their quality, and had done this by the patience and self-control they had shown in "waiting for the fulfilment of our promises."

**Mexican Quarrels** While General Obregon is moving northward in his campaign against Villa, the capital is under the control of Zapata. Gen. Roque Gonzales Garza, the convention's provisional president, is in the city. Some time ago he offended Zapata by denouncing his methods to the convention, which still exists in name, if not in fact. Immediately afterward he disappeared. It was said that Zapata had kidnapped and assassinated him. Several weeks later it became known that he was alive. When Zapata and Villa regained possession of the capital, Garza resumed his office, but he was required to place several followers of Zapata in his Cabinet. One of these was General Palafox. Zapata has remained in the state of Morelos.

A quarrel about Palafox has nearly cost Garza his life. Palafox was recently ousted from the Cabinet. Whereupon Zapata demanded by telegraph that he should immediately be reinstated. Then Zapata's friends began to attack the associates of Garza. The latter's chief of staff, General Estrada, was killed on the 7th by General Barona, one of Zapata's men. There was a quarrel in a dance hall, and many took part in the fighting. The riot spread to a hotel where Garza was living. Here Barona shot General Banderas, another Zapatist officer, and about fifty men were killed. On the following day, it is reported, Barona, with a considerable following, attempted to assassinate President Garza, but the attacking force was driven back by Garza's guard. Barona's brother, General Zapatelas, was killed. The quarrel between Zapata and Garza makes an ugly situation in the capital. Villa is Zapata's ally, but he is far away in the north, striving to defend himself against the attacks of Obregon.

At the end of last week the great and decisive battle between Villa and

THE NEWEST CLASS OF FRENCH RECRUITS DEPART FOR THE FRONT

Obregon had not taken place. Villa claimed to have been victorious in two or three skirmishes. He remarked, however, that he would remain at Aguascalientes for ten days, and if Obregon should not come up and attack him there before the expiration of that time, he would go south. It is reported that Zapata men, coming up from the capital, have made a successful attack upon the rear of Obregon's army; also, that Obregon has succeeded in driving Zapata back.

**Labor Cases** John R. Lawson, strike leader and a member of the international executive board of the United Mine Workers, has been found guilty, at Denver, of murder in the first degree. The charge was that he killed a deputy sheriff in the strike battle at Ludlow, October 25, 1913. It was decided by the jury that his punishment should be imprisonment for life. On the first ballot all but one of the jurors voted that he should be hanged. The twelfth juror convinced

his eleven associates that Lawson's life should be spared. There are other similar indictments against him, and several hundred union strikers are under indictment for murder. "They may get me," said Lawson after his conviction, "but they cannot defeat the cause of labor." It is said that if the verdict is sustained on appeal, there will be a general strike in Colorado. A meeting of the State Federation of Labor is soon to be held in order that formal protest against the conviction may be made. Vice-President Hayes, of the national union, said in Indianapolis last week that if Lawson were not vindicated another strike

would be called in Colorado, "as a protest against the tyrannical conditions that prevail in that state."

John D. Rockefeller, Jr., is to testify again next week before the Commission on Industrial Relations. Among the others who will appear is W. L. McKenzie King, who was selected by the elder Rockefeller to conduct an inquiry concerning workmen and employers. President Wilson declines to give to the commission certain letters concerning the Colorado labor war which were sent to him by Governor Ammons. Chairman Walsh asserts that the letters were written by persons employed by Mr. Rockefeller.

The deck officers of 318 ships under the American flag have demanded an increase of wages, ranging from twenty-five to forty per cent. Six companies have complied, one of them being the Standard Oil Company. On the ships of several other companies officers have withdrawn from the service when the desired increase was withheld.

Building operations in Pittsburgh have been checked by a strike of bricklayers and other workmen for higher pay. Seven cotton mills in Fall River are idle on account of a strike of weavers against work in hours not included in the union schedule.

# WHAT IS JAPAN DOING TO CHINA?

BY GILBERT REID

**T**HE war in Europe will change the map of Europe or alter the relative standing of the great powers. The war as thrust most unjustly and inconsiderately into China, will affect the whole Far East. China will be the loser, unless nations have a "change of heart," and Japan will find her day of opportunity and reap great gain.

The Japanese diplomat ranks high not only in tactics, but in strategy. Moreover, the strategy of the party in power is more than minor strategy, which early lays itself open to the light of day, but is grand strategy, waiting for years to be effected, and known in detail only to those possessing the plan.

Now what is the purpose of Japan's grand strategy, so far as outsiders can surmise? It is no other than her domination of Eastern Asia, whether by absorption, by some form of suzerainty, by a confederation with Japan as leader, or by a mild guardianship and a new application of the Monroe Doctrine. The actual form of domination will depend on circumstances. The total elimination of the will of Western powers or partial elimination by making them all inferior factors is the racial aspect of the colossal propositions.

## IF JAPAN'S "GRAND STRATEGY" FAILS

Should this strategy be doomed to failure, it would be bad strategy to "try it on" just now. There would then come in a minor strategy, namely, the domination of all China thru some one of the same four forms suggested for all Eastern Asia.

Should this, in turn, be doomed to immediate failure, then it, too, would become bad strategy just at present, but would not altogether be laid aside as an ultimate impossibility.

Under such conditions, Japan would make use of a still more minor strategy, namely, a resuscitation of "spheres of influence" with her much-trusted allies, Great Britain, France and Russia, while China would be under the thumb of all four, and especially of Japan herself.

These three plans of strategy are locked up in the "strong house" at Tokio, but more than once have their main contents been divulged, either thru official utterances of the Government or of the Opposition, thru the press as a "feeler," or thru events which now form a part of history. Japan as a whole has not as yet given support to any one strategic plan; many Japanese even oppose one or all of these ambitious designs.

We will begin with the last strat-

*This week the dispute between China and Japan has reached a critical point and in accordance with the custom of The Independent, we present both sides of the case. As spokesman for China, we have the Rev. Dr. Gilbert Reid, Director-in-chief of the International Institute of China, which is carrying on educational work among the higher classes. Dr. Reid was graduated from Union Theological Seminary in 1882 and went immediately to China as a missionary, where he has lived ever since. He is the author of "Glances at China," "The Anti-Foreign Disturbances of China" and six books in Chinese. Few foreigners have as intimate a knowledge of Chinese affairs as he has gained thru his long residence and close association with the leading men of the country in times of peace and war.—THE EDITOR.*

egy and work back to the grand strategy which is first mentioned.

Japan wants to dominate as much of China, as good fortune will permit. By making of Korea a province of the Mikado's domains, she pushed back Russia and got a foothold on the continent according to "geographical gravitation." By taking from China Taels 30,000,000 for retrocession of Liaotung, and by taking from Russia the dominating influence in much more than Liaotung, as far as north of Mukden in Manchuria, she pushed back Russia still farther, got a grip on the strongest fortress along the China coast, and placed herself in easy reach of Peking, should China prove recalcitrant, or should a mutiny disturb "the peace of the Far East."

By the war which Japan waged on China in 1894-5, the island of Formosa became a Japanese possession. A few years later, when spheres of influence were drawn on the map but were never realized in practise, least of all the British sphere, Japan colored for herself the province of Fukien, of which Formosa was a part.

Now by the fortuitous events of another war, Japan, which was already an ally of Great Britain, France and Russia, found it opportune to join with her allies in warring against Germany. Her various tactical moves clearly show that her strategy was not to capture Kiaochow in war, and be done with it, or even to spite Germany, but to become a dominating influence in Shantung. Mr. Putnam Weale, writing a few years back, correctly diagnosed her policy when he said:

It is also a fact surely worthy of special note, that wherever Japan sets her foot—no matter how she may have placed it there, and no matter what promises she may have given regarding evacuation—there she remains for good, making her tenure indisputable under specious forms such as the great Napoleon delighted in devising.

## JAPAN'S ACTION TOWARD GERMANY

The various commendable objects which Japan—that is, the present Government—announced as the moving power, must all be taken as parts of a splendid strategy. She said she was solicitous for "the peace of the Far East" and "the integrity and independence of China." Why did she not effect peace by peaceful measures. And why did she not leave China independent and untrammelled in direct negotiations with the European warring nations to prevent war in China and China seas, thru some form of neutralization both of Tsingtao and the near China waters? She affirmed her mildness of spirit by advising Germany as to what she ought to do, but why did she not give advice that could be accepted? Why did she not as a neutral country, "friendly to all nations," advise that both British and German ships of war alike intern, and that neither Tsingtao nor Hongkong attach each other? Or, should this be faithless to the Alliance, why did she not actually threaten Germany thus: "If you do not agree to intern your ships, now in China seas, and also agree to make no use of your fortifications for attack on any one of my Allies, our Imperial Government will at once declare war against you?" Or, *why did not Japan demand that Tsingtao and the railway be handed over to China for administration*, till the war in Europe should come to an end? The reason why Japan did none of these things was because the advice stood a chance of being accepted for the peace of all and the joy of China. Japan was bound not to lose her own chance for testing her strategy.

Was it even Japan's main purpose to attack Tsingtao, until a surrender should be made? The facts belie this suggestion. Merely to get Tsingtao might place her in an awkward position of being morally obligated to return it eventually to China. That would spoil all of her plans. The attack on Tsingtao, as the events of the last four months show, was only a strategic move *to get into Shantung* as she is now in South Manchuria. To claim that military necessity required her to march across eastern Shantung only proves

the incapacity of Japanese militarism in overcoming the small German garrison. To claim that the occupation of the railway westward to Tsinanfu, and of all the mines worked by Germans, was a military necessity, even after Tsingtao had been completely invested and the hinterland north to Lungkou had been occupied only suggests credulity and gullibility on the part of superficial spectators. The part of the strategy that has "gang agley" has been the unkind intermeddling of her dear ally in taking charge of the northern section of the Tientsin-Pukow railway, and checkmating the wider expansion of Japan's diplomatic strategy.

#### WHY SHOULD WE BE SUSPICIOUS?

"But," it may be said, "it is very wrong to be suspicious." Quite so, but it is not wrong to study and analyze a strategy, either in war or diplomacy. To put a spoke in the wheel after the chariot has reached its destination is of no use. To close one's eyes and hide one's head, like an ostrich in a coming storm, may be politic, but is neither patriotic, courageous nor even wise. More than once the suggestion has been thrown out in Japanese newspapers that Kiaochow was to be returned to China, only on the condition that Germany accepted the ultimatum. Genial manners, friendly overtures and soft words are to be expected of diplomacy such as Japan excels in, but it is hardly to be expected that Japan will readily spoil her strategic advantage by withdrawing from what she now has, unless something more than a *quid pro quo* is offered her or suggested by her. Should she succeed in inducing China to grant her some form of domination—perhaps called helpful brotherliness—over the whole of China, then she might agree to an International Settlement in Tsingtao, with her own predominance well secured, just as in the International Settlement of Shanghai, under British

predominance. She might also agree to relinquish the railway and mines of Shantung, if the compensation due Germany by China is paid over to Japan. Some other form of leniency, appearing in striking contrast to the German "mailed fist," might be devised, if so be that a hold on the whole of China might be secured either by open or by secret agreement. In this case, the smaller strategy would pass smoothly into the

large strategy, even as one section of a huge gun slides into another.

#### COUNT OKUMA'S PEACE POLICY

This part of our discussion may well close with a quotation from the Premier, Count Okuma, spoken with his usual reserve and moderation, October 28th:

The war will bring about changes in all things and in all countries, and it behooves all Japanese, great and small, to unite in striving that these changes shall prove to the advantage of Japan. . . . Japan now has continental possessions, and it is felt that China is powerless herself to maintain the integrity of her territory—a weakness which brings the influence of the powers to operate in China, with consequences which may bring about a diplomatic crisis at any moment. . . . Japan is now a continental as well as an insular country, and requires a strong navy to ensure connection between the different parts of the Empire as well as a defensive army.

This is the sober peace policy of the president of the Japanese Peace Society! The emphasis placed by Count Okuma on Japan's position as not only insular, but continental; on the duty of Japan to reap advantage thru the inevitable changes produced by the present war; on the weakness of China and so her inability to defend herself; on the danger of a diplomatic crisis in China; and on the need of a stronger Japanese army and navy, to meet any possible emergency arising in China—forms a way of transition from the minor strategy of dominating Shantung to the greater, but still minor, strategy of dominating the whole of China.

It is clear that Japan is convinced of the necessity for greater military preparation, first, for her own defense; second, over complications in China; and third, against some one or more foreign powers. Which power does Japan have in mind, as trying to restrict Japanese action in China? It is not at all likely that she fears anything from China; in fact military opposition from China would only facilitate Ja-

© Underwood & Underwood

YUAN SHIH KAI, THE PRESIDENT OF CHINA

pan's aggressive operations. The United States is not the country in mind, for that country, while offended by Japanese occupation of islands in the South Seas, is not keen on interfering by force to the relief of China. Germany, too, even as victor, will not be in a position to try military measures against Japan in China. As to Russia, she and Japan have, most noticeably, been drawing nearer to each other since the war began. If there is any restraint placed upon Japan sufficiently great to be called a "diplomatic crisis," it will come from her ally, Great Britain. Already several incidents have arisen which show that Japan is not altogether pleased with the character of British friendship.

#### JAPANESE DOMINANCE OF CHINA

A diplomatic crisis necessitating increased military preparation on the part of Japan, does not mean any attempt on the part of the Allies or of Great Britain alone to oust Japan from what she already has in Shantung. The struggle which Japan sees before her *concerns the Japanese mastery in China, not Shantung.*

It is, however, only in a political and military sense that Japan seeks to dominate China. In commercial and financial matters she only expects at the best to win for herself predominance, with no one power totally eliminated. Thus while Japan may be aiming at territorial aggression and political control, she can still maintain that she supports the theory of "equal opportunity," as this concerns the commercial expansion of other nations as well as Japan.

This larger strategy does not necessarily imply that military aggression is to be made the means to reach the end. Rather, military control is to be the end, while diplomacy is to be the means. Still less would Japan have it thought that she is to force herself upon China. She prefers to pose as a friend, and to secure a position in the whole of China by friendly and diplomatic negotiation. She is to help China in warding off the advance of European powers.

Since the fall of Tsintao, it has again been urged in the Japanese press that Japan should seize her opportunity to get control of the administrative and military functions of the Chinese Government thru diplomatic agreement, and, in case the Peking Government should persist in rejecting the friendly overtures of Japan, the Japanese Government should turn to China's revolutionary faction, and, when disturbances should begin, Japan should then make use of her military power to restore order and exercise authority.

Force is to be applied only when diplomacy has proved futile.

#### JAPAN WANTS TERRITORY

This strategy does not mean the annexation at once of China. The present move is to secure wider control, or, perhaps a better term, *recognized leadership*. There have been Japanese thinkers who have succeeded in assuaging American fears, by saying that the policy of Japan in Asia is the same as the Monroe doctrine on the American continent. The only difference is that while the United States will resent European territorial acquisition on the American continent, and desires no more territory for herself, Japan, for more reasons than one, and plausible reasons, desires more territory on the continent of Asia.

That Japan has much reason on her side, so far as foreign countries may view the matter, must be acknowledged. She certainly has as much right to leadership as Great Britain, Germany or Russia. It is from the Chinese point of view, that the reason is against these ambitious schemes of their island neighbor, unless China wants to lose her identity as Korea was compelled to do. If China can withstand the blandishments of Japanese diplomacy and the aggressiveness of Japanese militarism, her future is secured and the contentment of her people will remain. Everything depends on the President as to how much to yield and when to oppose.

Mr. J. O. P. Bland correctly says: "By virtue of geographical propinquity, common literature and close commercial relations, Japan claims (not unnaturally) to be the friend, philosopher, and guide of China in process of regeneration." To use agreeable phraseology, Japan desires, and thinks it her right to be the guardian of China, to ward off incompatible associations on the part of Western or Caucasian nations. The only wise thing for China to do, it is claimed, is to put herself under the leadership of Japan in reform and regeneration. Then the peace of the Far East will be guaranteed.

#### JAPAN THE LEADER OF ASIA

With this higher strategy appearing more and more as a possibility, thru the clashings, animosities and wars of European powers, there comes before the eye of faith and the glow of Japanese genius the consummation of what we have called the grand strategy—namely, Japan the leader and predominant force in eastern Asia. This high aim not only refers to the nations of Mongolian stock, but to the Malays, the Fili-

pinos, and even the people of India. If a clash should once come with Great Britain over provocative and ungrateful British checkmating in China, this wider strategy would at once come into play. By presenting the idea as a confederation of identical interests and of peoples of the same race, or by raising the cry "Asia for the Asiatics," and "The Orient against the Occident," there are many even in Western lands who recognize the reasonableness of the movement. When it is claimed that the desire is for the peace and independence of the Far East, peace advocates and religious thinkers, especially in America, come forward as advocates of Japan against all criticism. There are men in all these lands of East Asia, as well as in Japan, who have openly espoused this new cause. Religiously and racially, as well as politically, some such combination seems a reasonable one.

The present Japanese Premier, Count Okuma, "The Sage of Waseda," has long been known to favor some such theory, as being intimately connected with the cause of worldwide peace, of which he is a leader.

In this grand strategy there is no thought of annexation by Japan, but of Japan as leader, much as Prussia is leader in the Empire of Germany. The combination is for mutual protection, as opposed to Occidental aggression and tyranny. The purpose is for Japan, not China, still less any European power, to be predominant in eastern Asia.

Preliminary to the execution of this grand strategy in East Asia, there must come the consummation of the minor strategy in China, and before that, of the minor strategy in Shantung. This last is already an accomplished fact, largely thru Japan's entrance into the war at Great Britain's special request. Should the war in Europe continue two or three years, and all the powers at war, including the British Empire, be greatly weakened, it may be expected that a sufficient number of energetic spirits in Japan will insist on seizing the opportunity for greater control in the whole of China, and, with this accomplished, the grand strategy will be a matter of only a few more years for practical realization.

All these diplomatic strategies concern China more than any other power. The problem pressing upon her is whether she has the ability to withstand Japanese ambitions and defend and dominate her own country, Shantung included, and whether Japan can be induced to follow a friendly and peaceful policy to the mutual advantage of all.

*Peking, China*

# WHAT CAN JAPAN DO FOR CHINA?

BY K. K. KAWAKAMI

AMERICA'S interest in China is twofold. In the first place, we are anxious to maintain her territorial integrity. In the second place, our interest lies in the promotion of our commercial opportunity in China. In the minds of most Americans the first is more important than the second.

In presenting her proposal to Peking, Japan has repeatedly assured the powers that she has no intention of infringing upon China's integrity. Indeed she seems to be acting upon the belief that China's integrity cannot be preserved without her assistance and guidance. To understand Japan's policy we must place ourselves in Japan's position. From Suez to Singapore there is not a single nation which has not been stripped of its last vestige of sovereignty. In northern Asia Russia has swept everything before her and has made herself the mistress of the maritime province which was once China's. Facing the brunt of the Western advance China has more than once been on the verge of disintegration.

Under such circumstances is it not natural that Japan should feel restive and strive to stay the tide of European aggression in China? Placed in a similar position how would the American people feel? Suppose that the whole continent of South America had passed under the European yoke, that Mexico had repeatedly been invaded by European forces, that Canada was occupied by a hostile power, and that the United States, with an area not larger than the single state of California, was the only nation which had, by dint of constant vigilance, managed to escape the fate of her unfortunate neighbors. In such a position the United States would go a step further than the proclamation of the Monroe Doctrine, and tighten her grip upon Mexico.

Here, however, we are chiefly concerned with Japanese influence upon American trade in the Orient. Notwithstanding all manner of unsympathetic criticisms, Japan's

*The demands which Japan is now pressing upon China have aroused great anxiety among Americans who have feared for the safety of the infant republic of China. But the discussion has been carried on in the dark because of the uncertainty as to what the Japanese demands really involve. Now, however, their nature is sufficiently understood and we have in the following article an explanation of just what Japan wants and why. Mr. Kawakami is a recognized authority on the international relations of Japan, and his books, "Asia at the Door" and "American-Japanese Relations," have had a great influence over American thought. He came to this country in 1901 and took graduate work in political science at the universities of Iowa and Wisconsin.—THE EDITOR.*

methods of commercial competition are fair and honorable. In Korea, for instance, American trade began to

forge ahead as soon as Japan established a protectorate over the peninsula. In 1903 American export to Korea totaled only \$199,188, while the figures for the preceding years were much smaller. With Japan the mistress of the country in 1904 American export to Korea suddenly increased to \$906,557. Since 1904 the progress of American trade to Korea has been both steady and rapid, until in 1913 it amounted to the handsome sum of \$3,925,000. In other words, American export to Korea has increased almost twenty times in the ten years following the establishment of the Japanese protectorate.

Apart from her export trade the United States has a considerable interest in Korea, as a number of Americans are engaged in mining and other enterprises there, while American missionaries exercise potent influence among the natives. As a Japanese I do not feel at liberty to speak in laudatory terms of what

Japan has done for the benefit of such foreigners. I shall let foreign observers speak for me. "We are thankful," says Dr. James S. Gale, who went to Korea as the representative of the Toronto University Y. M. C. A., "for a good government, a fair government, a government that has treated the missionary and the church with marked courtesy, a government that is wise and far-seeing, a government that not only protects from epidemics of typhus and plague infection, but a government that is determined to rid the land of the spirit of lawlessness, which if it be in the church cannot but work its ruin."

A correspondent of the Boston *Christian Science Monitor*, writing from Seoul, tells us that when Japanese rule was established in Korea the traders and contractors who had special interests protested and grumbled and were both ready and willing to pay in order that their protests might be heard abroad. It was easy to play upon the string of the sentiment that always finds pity for the under dog to sound the false note that brings a

© Underwood & Underwood

COUNT OKUMA, PREMIER OF JAPAN

ready response from the unwary sentimentalist. Yet, when the correspondent says, "under new conditions of hopeful, one might truthfully say, benign administration, the Korean is finding existence better worth while; there is hope for the people, and the millions in this new generation are building up Korea for the Koreans, protected by new laws, taught in new schools, free to come and free to go, free to labor and free to learn." As for foreigners, "the mining laws have been made equitable for all and now English, French, Germans, Americans and Japanese are digging minerals in ever increasing quantities and at ever increasing profit."

#### JAPAN'S BENEFICENT ACTIVITIES

The Japanese Administration extended to all mining concerns, irrespective of nationality, the privilege of importing free of duty all machinery and materials to be used for mining purposes. It added copper to the list of minerals exempt from export duty—an immunity which had previously been applied only to gold and silver. In addition to such legislation, foreign concerns operating various mines in Korea have been materially benefited by the extension to their mining districts of postal and telegraph facilities, and the installation of police stations necessary to maintain order among mining laborers—facilities which under the old régime no foreigner could even so much as dream of enjoying.

In Manchuria Japan's activities have proved equally beneficial. In describing the business methods of various nations in Manchuria, Mr. Robert Porter, author of *The Full Recognition of Japan*, says: "The Japanese methods are distinctly modern, up-to-date, and pushing; the Russian cumbersome and bureaucratic; the Chinese conservative and easy-going." It must be admitted that the influence of Japan's economic policy in that territory is more distinctly noticeable than that of any other country. "The management of railways, the establishment of steamship lines, harbor construction, mining, factory building, the establishment of technical and other schools, of experimental stations, laboratories and of hospitals are all hopeful signs."

Much has been said of Japanese discrimination against foreign commercial interests in Manchuria. And yet a British merchant in Changchun, Manchuria, writing in Mr. Porter's book, assures us that "Japan has fulfilled all her obligations and continues to do so in the development of Manchuria." "Wo betide the day,"

he exclaims, "if the country comes under Russian influence or if it is handed back to the control of the Chinese."

The fact that American trade in Manchuria has decreased since the establishment of Japanese influence is no indication that Japan has been resorting to inequitable means. Foreign merchants in Manchuria who are open-minded enough to see the situation in the true light freely admit that Japan's rapid commercial advance in that country is in no sense due to any favoritism on the part of the railways or of the government, but has been attained, as Mr. Porter tells us, "by a steady, careful nursing of the country on the part of the Japanese." For one thing, Japanese firms hold large stocks of goods at all the principal commercial centers and are able to supply the wants of the community at short notice.

It must be remembered that European and American merchants have been greatly handicapped in that they have been trying to sell goods for cash, the one thing the natives are short on. On the other hand much of Japanese trade in that country has been of the nature of barter, exchanging their merchandise with beans, bean-cake and bean-oil, which constitute the premier product of Manchuria. Indeed the Japanese control of the soya bean is the key to Japanese commercial supremacy in Manchuria. Mr. George Bronson Rea, editor of the *Far Eastern Review* (Shanghai, China), touches the crux of the question when he says: "It is a far cry from high diplomacy to the humble soya beans, yet we hold to the belief that the past and present commercial situation and ultimate solution of the vexatious Manchurian question is bound up in the control of this one product."

#### THE SOYA BEAN

Here is a country where there is no manufacturing industry and whose agricultural products can be enumerated upon five fingers. Beans and their byproducts, bean-cake and bean-oil, constitute its only important produce. The annual crops of beans is approximately 1,000,000 tons, which has a value of \$25,000,000. How is Manchuria to dispose of this enormous quantity? Manchurians themselves do not want them, for their staple food and their animal feed are millet. Europe and America do not know or at any rate have not known how to utilize them. Japan gaining the control of the beans naturally succeeded in establishing her commercial supremacy in Manchuria. As Mr. Rea justly says:

"Under these conditions the foreign merchants and their agents in the interior were placed at a disadvantage from the outset. As they could not penetrate into the interior and purchase beans by an exchange of commodities, they were reduced to selling their wares for cash—the one commodity universally scarce. The decadence of American and European imports followed as a natural consequence. This, in short, is the real reason for Japan's success in Manchuria."

#### JAPAN AND AMERICA SHOULD WORK TOGETHER

It is unfortunate that America and Japan cannot act harmoniously in regard to China. On the one hand, America is loath to admit that Japan's steps in China are taken not to satisfy territorial ambition but for the purpose of self-defense for both China and herself. On the other, Japan interprets the American occupation of the Philippines and other American activities in the Far East as a part of the empire scheme upon which she thinks this country has embarked.

Back of this discord in the Far East is the immigration question, or more accurately, California's attitude toward the Japanese. Before the California situation loomed upon the diplomatic horizon, Japan was most considerate and courteous in dealing with America in the Orient, but the unhappy condition developing on the Pacific coast inevitably cooled her friendly feeling toward this country. Not that she insists upon sending her emigrants to these shores, but because her conciliatory attitude on the immigration question seems to receive no appreciable response from America. Worse still, certain forces in this country have been conspiring to create the ghost of Japanese invasion of Mexico, from what motives no one knows.

Japan never had any vital interest in the emigration of her subjects to this country. She knows that her destiny lies in the Orient. She has already made many important concessions to America on the immigration question. She will no doubt adhere to the "gentlemen's agreement" for many years to come. Just because Japan is ready to meet America half way in the matter of immigration, it is imperative that America should show a greater spirit of generosity in dealing with the Japanese. With the judicious treatment of the Japanese in America fully guaranteed, there is no reason why Japan would not receive with open arms Americans and American enterprise in all parts of the Orient.

# THE WORLD OVER

## Salvage by Magnetism

Sunken treasure? Electricity will take care of that. A new device designed by a Californian explores the bed of the sea, locates wrecked vessels and brings them to the surface. Briefly, the outfit consists of a tender-ship carrying a number of pontoons and a diving bell equipped with propellers, searchlights, a telephone to the tender, four powerful magnets and a motor and steel drill.

The operation is as follows: The location of a wreck being known approximately, the diving bell is lowered from the tender as near the spot as possible. The eight-foot sphere of steel carries two men who are able to direct the operator of the hoisting device on the tender. By means of propellers the device can describe wide circles near the bottom of the sea, or rise or descend, so that if the wreck is not found immediately it may be thoroly searched for. The powerful lights can be turned in every direction and lookout can be kept thru the panes of heavy glass.

When the wreck is sighted, the operators signal to be drawn to the surface and then return to the wreck with a pontoon attached to the bell. The pontoon is a corrugated metal cylinder, ten feet by thirty, equipped with two powerful magnets like those of the bell, and containing a motor and pump. When the pontoon is lowered with the bell it is filled with water and the pump is designed to empty it of its contents after being attached to the hulk. Power is supplied by cable from the tender.

When the bell descends to the side of the wreck the pontoon is set against its steel plates and at a signal from the men in the bell the magnets of the pontoon are energized so that it clings to the side of the sunken vessel. Part of the equipment of the pontoon consists of a series of heavy chains with pontoon hooks, and by means of floats they are kept vertical in the water.

The electrical and magnetic devices of the diving bell are now brought into action. Taking a position just above the pontoon the bell rests its four powerful magnets against the side of the wreck and when they are energized by turning on the electric current, each has a pull of four tons. The electric drill is then brought against the steel side of the wreck, a hole is drilled and a pontoon hook inserted by means of a steel arm which holds the hook by magnetic force. This operation is repeated until all of the hooks have been set into the side of

the vessel, the hooks all being connected to the pontoon by chains. The bell then ascends to bring down another pontoon, attaching as many as may be required all around the hulk. When this is done the bell is withdrawn to a safe distance and the signal is given for the engineer on the tender-ship to throw on the switches that operate the motors and pumps in the pontoons. Gradually the water is pumped out of these metal cylinders and they begin to rise and pull against their chains, drawing the wreck slowly upward as they become more and more buoyant.

The unique device is the invention of William D. Sisson, of Los Angeles, California.

## Life-Guards on Motorcycles

A side car in the form of an ambulance and life-saving equipment has been installed at Redondo Beach, California, where it is operated by the life-saving crew. The machine carries two men, a long box containing a pulmotor, medicines, bandages and a blanket, while the top of the six-foot box is in the form of a stretcher for conveying a victim of the sea to the emergency hospital. In addition, the motorcycle carries a reel of steel clad cable No. 9, which is so light and fine that 1500 feet of it are readily handled on a small reel. To the life line are attached a belt and a buoyant metal cylinder.

The long stretch of sand extending along the coast from Redondo is thinly settled, but telephones are found in most of the houses along the beach. When a swimmer is seen struggling in the surf, a telephone call to the bath house will bring out the motorcycle. The life-saver attaches the life line and buoy by means of the belt and swims out into the surf, and as soon as he reaches the victim the assistant begins reeling in the line. The buoy keeps both afloat, and, unless the pulmotor and other first aid is required on the beach, the half drowned man is wrapt in a blanket, laid on the stretcher, and whirled to the hospital at a seventy-five mile clip.

## Social Service in School

How can high school pupils develop the social service spirit? The William Penn High School for Girls, Philadelphia, with over three thousand pupils, meets the problem in this way.

It was proposed by one of the girls three years ago to form a Students' Aid Club to be carried on by the girls for the benefit of each other. Girls who, on account of illness or trouble are absent for more than a few days, receive letters from their classmates telling them they are missed, expressing sympathy, offering to send them their lessons and to help them upon their return to catch up with the class again. In special cases, flowers or fruit is sent,

or a book, or, perhaps, some little gift made by the girls themselves. There are no dues. Such a club could be carried on without money if no remembrances were sent to the girls in hospitals or to those kept at home by long illness. But the small sum necessary for these purposes and also for postage is contributed each term by the Students' Association, which considers the money well spent.

Girls entering the school are sought out, invited to the club meetings, and made to feel at home in the great school. Freshmen are "hazed" by kindness, helped to find their classrooms in the labyrinth of the big building, and initiated into the mysteries of the lunch room, where a thousand girls are served at a time. In a hundred ways the girls are made to feel that they, themselves, as individuals really count, that their personal welfare and happiness is really a matter of concern to their comrades.

At Christmas time this spirit grows too large to be kept within bounds. The Students' Association sees to it that twelve hundred dolls are

THE DIVING BELL WITH ITS FOUR GREAT MAGNETS

A LOAD OF FALSE WITNESSES

dress and twelve hundred stockings filled for the poor kindergartens in the city. Besides this, the Students' Aid Club collects annually nearly a thousand toys for children in the day nurseries and hospitals.

The Social Workers' Club is another organization of kindred kind. It is composed of earnest girls who want to extend the spirit of social service out into the city. Little groups of girls go each week with a teacher to certain hospitals, homes for the aged, orphanages and settlement houses to do what they can. Several of the girls have little sewing classes among the children, classes in basket work, etc. They teach the children to play games, write letters for the old folks or sing to them. In the course of a year, hundreds of girls thus get a glimpse of the meaning of social service.

In such ways the girls of a great school are helped not only to retain their own individuality but to develop it and to cultivate that which will be of more real value to them than learning—a helpful personality.

### San Francisco Demands Full Weight

Sometimes public officials find it necessary to resort to spectacular measures to bring their work to the attention of the people. This has recently been done at San Francisco, where, under the direction of the Bureau of Weights and Measures, thousands of condemned weighing scales, measuring devices and short-weight cans and bottles were destroyed amidst elaborate ceremonies.

For days prior to the destruction of the confiscated material it lay heaped in a huge pile on the grounds of the City Hall, where it attracted large crowds. The great quantity of milk cans and bottles and the thousands of expensive scales destined for the scrap heap, was a graphic object lesson both to the dealers who might be tempted to cheat and to the public whose interests were safeguarded by the work of the bureau.

A large part of the loot consisted of

brand-new scales of an expensive type which had been condemned by the sealer of weights and measures, and the manufacturer of which had refused to make the changes necessary to bring them up to lawful specifications.

In order to render the articles useless, all of the measuring utensils were perforated, the bottles broken at the necks, and the scales destroyed. More than fifty wagons were required to haul the condemned material to the ocean-going barge that conveyed it to the burial ground, and the procession of vehicles thru the principal streets was led by the municipal band. Mayor Rolph made a speech and numerous other public officials participated in the ceremony.

Work of this kind which so intimately affects the interests of the people should receive the fullest commendation, and the vast quantity of spoils displayed by San Francisco's Bureau of Weights and Measures shows that it demands full weight and honest measure.

### A Record Campaign

Canned goods of all varieties have been often considered rather a specialty of the United States. But Japan in the use of "canned" campaign speeches has introduced a time-saving—and also a candidate-saving—device that even our enterprising politicians have neglected. In Count Okuma's last election campaign the gramophone repeated the Premier's speeches all over the empire. The crowds paid deference to the machine as if it had been a live man, cheering and howling and

even talking back to the record. In some cases the gramophone speech was debated by an opposition candidate, who thus obtained the advantage of being able to shut off his opponent at will.

### Jitneys and Trolley Lines

The rapid growth of the jitney bus industry and traffic is highly vexatious to the trolley car companies. We have some official reports which show the effect of the jitney upon trolley receipts in the Canadian Northwest. Vancouver has been receiving about \$70,000 a year as the municipality's percentage of the local trolley company's gross revenue. In the first quarter of this year only half the customary amount was paid into the treasury. The number of trolley passengers has decreased by forty-one per cent, and the city may get only \$30,000 or \$35,000 this year. All this is due to the activity of 350 jitneys. In Winnipeg the trolley company has been forced by the competition of 572 jitneys to use a smaller number of cars and discharge many employees.

Connecticut towns are full of the new carriers. The trolley loss is said to be \$1000 a day in Hartford, more than that in New Haven, and \$500 in Waterbury. Appeals have been made to the public by the companies in behalf of the employees who have lost their places, and proposed expenditures for new trolley cars have been countermanded. The new omnibuses are not confined to the towns, but they seek interurban traffic, and are active in service between the factory villages. It is estimated that the average driver, if he owns his automobile, makes a profit of from \$12 to \$15 a day. Municipal regulations appear to be most severe in our southern states. At a council hearing in Kansas City a few days ago concerning a proposed ordinance hostile to jitneys, several women, appearing for their husbands, urged that it be rejected. These men, they said, being out of work, had mortgaged their homes to buy second-hand cars, and were now doing well. More than 300 drivers in Kansas City own their jitneys.

THE "LUSITANIA," SUNK WITHOUT WARNING ON

## WHY WAS THE

BY PA

THE INDEPE

**E**VER since the North Atlantic has been free from German cruisers, the vessels of the Cunard Line have made their regular trips. On Saturday, May 1, the "Lusitania" left New York for Liverpool with nearly 2000 passengers. On the day before the German Embassy published a formal warning calling attention to the invisible blockade of the English coast and notifying all who took passage in ships traversing the danger zone of the risk involved. A number of anonymous letters were received by passengers asserting that the "Lusitania" would be blown up. On May 7 the ship was about ten miles off the Old Head of Kinsale, on the south coast of Ireland, at which point the course to Liverpool is changed to the northward. Double lookouts had been stationed to watch for submarines, and boats had been got ready for lowering in case of disaster. The "Lusitania's" speed, normally about twenty-five knots per hour, appears at this time to have been reduced to about eighteen knots. The weather was fine and the sea smooth. At two o'clock in the afternoon several persons on the "Lusitania's" deck sighted the conning tower of a submarine distant about 1000 yards, and immediately afterward saw the track of a torpedo coming toward the ship. An explosion ensued, followed quickly by another. The ship sank in a quarter of an hour. Over 1100 people were killed, including over a hundred American citizens.

The German Government admits that this was done by

a German submarine, and gives as the reason that "Lusitania" "was armed with guns, as most of the English mercantile steamers are; moreover, it is well known here she carried large quantities of munitions and war materials in her cargo." The British Admiralty denies that the "Lusitania" was armed.

The military status of the vessel is therefore first question. If by reason of armament and employment was a warship, an enemy had a clear right to destroy without warning and by any available means, no matter who was on board. If not, entirely different conditions hereafter noted, prevail.

There are two quasi-official publications which give the lists and characteristics of British war vessels. One of these (the *Naval Pocket Book for 1914*), the "Lusitania" and "Mauretania" are placed under the heading "Royal Naval Reserve Merchant Cruisers"—and as having in war time each an armament of twelve 6-inch guns. It is added: "There are of course many other ships which could be used as armed cruisers, but only these two

OFF THE IRISH COAST BY A GERMAN SUBMARINE

## LUSITANIA" SUNK?

BENJAMIN

NAVAL EXPERT

subject to any special arrangement." In the general classification of ships of the fleet, the "Lusitania" and "Mauretania" (and these only) are set down as "armed merchantmen." For the sake of comparison it may be noted that the German liner "Kronprinz Wilhelm," now interned at Norfolk, is embraced in the same classification but styled an "auxiliary cruiser, subventioned for use when required." Jane's *Fighting Ships for 1914* publishes the silhouettes of the "Lusitania" and "Kronprinz Wilhelm" following those of the regular naval ships. Such silhouettes are intended for use at sea in identifying the vessels at distances too great to permit details to be recognized.

It is well known that the British Government aided financially in the building of the "Lusitania" and pays the Cunard Company a large annual subsidy in return for the carriage of mail and the right to take the ship for war purposes. The "Aquitania" and the "Mauretania" of the same line have already been appropriated for army use.

The Cunard and other British steamers have been the chief means of transporting to England the large quantities of war material bought by the Allies in this country. Heavy guns have been sent by the Cunarders "Orduna" and "Transylvania." Reserve soldiers, some of whom it is said were on the "Lusitania," have also been carried, besides a long list of goods proscribed as contraband. The "Lusitania's" captain is an honorary commander in the British Naval Reserve, and up to the beginning of the war she flew the blue ensign of that branch of the British navy. Some months ago she attempted to deceive the submarines by hoisting the American flag, which elicited a protest from the President. The manifest of her present voyage shows that her cargo was valued at \$735,579 and included copper and brass worth \$108,826 and military goods and ammunition worth \$266,248, or, disregarding other contraband material, about fifty per cent of it was either directly or indirectly war material for the benefit of the Allies.

Shortly after hostilities began the question of the war status of the supposedly armed British liners was raised, and it was insisted that we should deal with them as warships and subject to the same disabilities of internment or quick departure, but our Government decided that they were not armed or otherwise equipped so as to bring them within the restrictive rules. On the other hand, it should not be overlooked that a light armament

which might not bring a vessel into any category of offensive warships would be very formidable to a submarine on the surface, and that the *London Times* recently remarked that "the idea that trading vessels should be armed with light guns has received very general support."

Now here was an enemy's vessel, carrying a cargo over fifty per cent of the value of which was represented by war material, which was commanded by an officer of a branch of the British navy, which was subsidized by the British Government for war availability, and which had been published for years before the war as a naval auxiliary cruiser. As to the right of the Germans to capture that vessel wherever they could find her and whether in the "war zone" or out of it, there can be no reasonable dispute. That right existed, however, because she was an enemy's vessel. It was not enhanced because she was subsidized or carried war munitions—this simply made the Germans more anxious to get her. The attempt was something to be expected by her owners as a matter of course, and by everybody who might choose to take passage on her—provided the Germans had anything on the ocean whereby the capture could be made. The owners took a long chance in letting the ship make the voyage, and the passengers were equally reckless of consequences.

But their right to destroy her is an entirely different matter. The foregoing statement of facts lacks the one most vital to that right, namely, that the "Lusitania" was a *regularly commissioned* warship. There is where she is unlike the interned "Eitel Friedrich" or "Kronprinz Wilhelm," or her sister, the "Caronia," which has been cruising off our own shores since last summer. They wear the warship pennant, they are officered and manned by the regular navy, they attack any enemy within their strength. In brief, they are fighting ships. The "Lusitania" was not one. The "Caronia" because a regularly commissioned cruiser could be rightfully destroyed and all her crew killed by a submarine without warning of any kind. The "Lusitania" not being a regularly commissioned cruiser, but a privately owned merchant vessel, could not be lawfully destroyed until all persons on board of her were safely removed and her papers secured. The offending of the Germans in her case, therefore, does not primarily reside in killing neutrals or non-combatants but in killing anybody. It is not altered or palliated in the least by the character of the cargo or by reason of the ship being within their paper

"war zone"—for she was good prize in any ocean the world over. They had no more right to kill people aboard of her because she was found off the Irish coast than if she had been found in the Mozambique Channel. Prohibition of that sort of killing is not founded on man-made law, international or otherwise. It rests squarely on the commandment "thou shalt do no murder."

What uses of the submarine will hereafter be countenanced by people professing Christianity is likely to become a serious question. Submarines were unknown when present conventions were agreed upon. They are unlike all other vessels. They are merely submerged self-propelled guns whereof the torpedo is the projectile. They cannot fight other submarines; they cannot overtake modern fast steamers on the surface; they cannot board arrested ships to search for contraband goods, nor provide a prize crew nor convoy a prize into port. They cannot even remain on the surface in proximity to a prize without great risk that their prey will open fire on them or ram them. Their success in attack depends almost entirely upon ambush and sudden onslaught. To have searched the vast recesses of the "Lusitania" would have taken days; to have remained by her in full crew with her wireless shouting for help and a harbor full of ships within a few miles would have been suicidal. For the German submarine there was seemingly no middle course, between what was done and doing nothing. There is therefore no way of preventing recurrence of similar horrors, short of a world agreement (similar to that which condemns poisoning of wells), which is obviously impossible during the present war.

Nor is there reason to assume that afterward, progress in lethal weapons can be checked by conventions. Ever since people began fighting with teeth and nails, every item of the advance from club to chlorine has been denounced as barbarous—and even chlorine looks mild beside the possibilities of amyl-nitrite or arsine.

Meanwhile, with the submarine active, the immediate question is what sort of defense is possible to vessels like the "Lusitania." So far as is now known the most effective safeguards are high speed, avoidance of shores having bays or shelters wherein or behind which submarines may hide, a surrounding screen of light fast vessels, selection of a route, if alternatives exist, in favor of the one furthest from the enemy's submarine base, and for ships at sea,

constant communication with their port of destination so that they may be instantly advised how to change their course to escape submarines, if the latter be reported near their proposed track. There is no doubt that the lost passengers of the "Lusitania" fully believed that every possible safeguard would be utilized. Certainly they, as well as every one else, knew that the "Lusitania" had been threatened before, and that of all British liners she was the particular one most liable to attack. And yet, as a matter of fact, no precautions at all, saving doubled look-outs, appear to have been taken. Why was her speed reduced to eighteen knots, that is, to not more and even in some instances, to less than that of the German submarines? Why did she approach the shore of all others where a submarine might be expected to await her and where such lofty headlands as Kinsale provide almost ideal hiding places? Why instead of taking the safe route around the north of Ireland, which is the one furthest from the German bases and practically outside of submarine endurance range, and which would have secured for her the protection of the great dreadnought fleet, did she choose the one nearest to the bases and easily accessible to the submarines.

And as for protection, here the negligence and incapacity of the British Admiralty—so often and disastrously shown during the present war—becomes appalling. With over 250 destroyers available, many of them faster than the "Lusitania," will it be believed that not one was sent to assist her? There was nothing, except stupidity and lack of foresight, to have prevented a screen of a dozen destroyers being established around the ship and kept there until port was reached. If passengers on her decks could recognize submarine turrets distant a thousand yards before the torpedo was delivered, conceive the instant detection of such an object by gunners trained to see any disturbance of the surface, and watching with every sense alert and fingers on the firing buttons of the quick-fire or machine guns. There would have been a smothering hail of steel and a furious rush to ram by boats which can leap from rest to their tremendous speed of nearly forty miles an hour in a small fraction of the time which it takes the slow and cumbersome submarine to dive or turn. Why were they not at hand? Why was the "Lusitania" not warned that since she left New York twenty-one vessels had been sunk by submarines in the war zone, and given some indi-

cation of a course to avoid the localities where most of these disasters had happened? These and like questions demand stern and searching inquiry.

As a naval exploit, the German submarine has repeated that of the Austrian boat which sank the French cruiser "Leon Gambetta" in the Straits of Otranto a few days ago. There was the same lying in wait and the same sudden attack which sent the great ship and 578 men to instant destruction. Of course, the German had full knowledge of the "Lusitania's" track and selected his position. Knowing her great speed, he also knew the difficulty of laying his boat so as to make the course of his torpedo intersect that of his victim at the proper point to ensure a hit. For that reason and because he could see that she was unprotected he took the chances of staying on the surface and so keeping the "Lusitania" in full view, until she was within 1000 yards of him. Her reduced speed helped his aim and he made assurance doubly sure by firing a second projectile.

The object of the attack was of course to secure valuable military results. What, then, have the Germans gained for which they were willing to kill 1400 peaceful people, largely women and little children? They have deprived Great Britain of one out of her thirty-seven thousand merchant ships. They have prevented her receipt of a quarter of a million dollars' worth of military supplies—which is not embarrassing to a nation whose current war expense is ten million dollars a day. That is all.

Suppose a company of German soldiers appearing as civilians had taken passage on the "Lusitania"; suppose, when that ship had arrived at the head of Kinsale, they had scuttled the vessel and massacred all on board, and then had left her in the ship's boats and safely reached German territory? How, if at all, would this proceeding have differed in substance from that which actually occurred?

### A Giant Wind Motor

The old Dutch windmill refuses to dry up and blow away; instead of that it has just adapted itself to modern conditions. At Harlingen, Friesland, they are building the largest wind motor in the world and making it of steel. The steel sails have a reach of fifty feet. This giant will drain 1850 acres of swamp reclaimed from the ocean by dykes and is expected to pump 70,000 cubic feet of water per hour—no small capacity.

A FAIRY sandwich—a rich, creamy filling of delicate sweetness between two layers of fragile crispness—flavored as exquisitely as a rose petal.

## NABISCO

### Sugar Wafers

are the perfect dessert sweets. Their popularity is nation-wide—their appropriateness universal. Serve with all desserts—with ices, creams, parfaits, frozen puddings, fruits or beverages.

In ten-cent tins and twenty-five-cent tins.

FESTINO—Dessert sweets in the guise of an almond, with almond-flavored cream filling.

**NATIONAL BISCUIT COMPANY**

## The Speed of the Daily

is closely approached by The Independent, with the fine printing of the Weekly and a National reach and influence not provided by the Daily Newspaper. Swift National service for the Advertiser with a Big New Story to tell.

## Interlaken— a school on a farm

where boys learn by doing. Actual contact, under competent instructors, with growing of crops and care of live stock on a 670 acre farm. Shops, work with tools and animals, deep woods, beautiful lake, boating, bathing, skating, healthful sports, right associates.

High standards of scholarship—under experienced instructors who know life and modern educational methods. Preparation for American and European universities. An exceptional school plant—gives opportunity for imitative and executive work. Only the sons of American business and professional men of good moral character admitted; the number is limited. Send today for catalogue.

Rolling Prairie, Indiana

## "Standard" BUILT-IN BATH

"Standard" Built-in Baths ("Conred" pattern shown above) are superior to baths on feet, yet their cost is so reasonable when you consider their advantages, that you can afford a "Standard" Built-in Bath.

Each is made complete in one piece, enameled inside and out, combining the beauty of china with the strength of iron.

They are made for building into either corner, in a recess or wall at back only, and are five inches lower than the ordinary type of bath on feet.

Look for the "Standard" Green and Gold Guarantee Label.

Ask your Architect or Plumber about "Standard" Built-in Baths or see all patterns in the "Standard" Showrooms. Our books "Standard" "Built-in Baths" and "Modern Bathrooms" sent free upon request to persons interested.

## HOW WE SOLVED THE SERVANT PROBLEM

BY THE PROFESSOR'S WIFE

THE Professor and I were distinctly unhappy in our home. Our actual home was very much the castle in the air that we had built with no little enthusiasm during a necessarily prolonged engagement. Yet in spite of this, at the end of four years the Professor and I were disappointed. For the castle in the air was anchored fast to the ground at one point—the kitchen. Here dwelt the Spirit of Discontent and that spirit leaked thru the dining-room into the library and upstairs.

Yet we had endeavored to forestall all these difficulties. Catching the Professor in one of his rare practical moods, I had confided to him how we were to manage our household so that there should be no "servant problem." I spoke with no little confidence, particularly as we had already engaged for the fall Lizzie, a pretty, strong-armed Irish girl, whose mistress was going to Europe for a Sabbatical year.

"The whole problem arises," I began, authoritatively, "from the fact that we still treat our maids like servants, which is very galling here in America to the working woman of today. It is this word which has helped to bring the stigma of shame upon housework as a livelihood. Listen to my code for Lizzie. This is her side of the bargain. She is to come to me as a general houseworker. She is to do my washing, ironing, cooking, waiting on the table and the door, the sweeping and cleaning of the apartment, and the polishing of the brass and silver, and for this work I am to give her \$20 monthly. I shall divide the work up as equally as possible, so that each day she will have her appointed tasks, and also have at least an hour during the day to sit down in the rocking-chair which I have already ordered for the kitchen. She shall have every Thursday afternoon out, every Sunday afternoon, and every evening after the dinner dishes are washed, and either all day Christmas or Thanksgiving, while if she stays a year with us she shall have a two weeks' vacation with full wages. Added to this, I will even pay her extra when there is a guest in the house for a week, or have the washing done for her, whichever she prefers."

"But, my dear, is this the general custom?" demanded the Professor.

"Of course it isn't! That's just the point," I cried, triumphantly. "Don't you see that I am trying to give her just as much time to herself as if she worked in a factory or a store, and trying to make her work as definite and arranged as systematically?"

"I see Lizzie drest in the latest style, continually vanishing out the front door, and you spoiling your disposition and burning your fingers trying to cook my Thursday dinners," retorted my listener.

"Nonsense; but I haven't finished," I continued. "Now I am going to tell you what I offer her over and above the same conditions that she would en-

joy in a factory or shop. I'll be brief. Here they are. I supply her free with:

"1. A bedroom, prettily furnished, small, but light and airy.

"2. All the best food that she wants to eat.

"3. Cambric dresses, black shirt-waists, aprons and caps which she wears while working.

"4. A good sized kitchen, well appointed, to work in and where she may receive her friends.

"Now, really, doesn't that sound fair?" I ended, eagerly.

"Fair, my dear! Why, it sounds like a chapter out of Plato's *Republic*."

My first disappointment came when I talked with Lizzie, who apparently accepted all the above conditions as hers by right, and who merely replied that she would come and try it, and would I buy pink dresses, as she never wore blue ones.

She tried it for five months. I found she knew how to do her work, and as she was fairly conscientious about it, I left her much to herself. So harmoniously did we work together that I had even boasted a little to the Professor that all that had been necessary was to look at the problem from the economic view. I believe it was that very evening that Lizzie, as the Professor termed it, "handed in her resignation."

It was Monday afternoon, and a dear old lady friend of my mother had come to see me in my new home. I had never insisted on Lizzie's serving tea to every caller, but as the little old lady looked very much fatigued from climbing my three flights of stairs, I slipt into the kitchen and asked Lizzie if she would bring in a pot of tea and a few wafers. Lizzie did not look up from the potatoes she was paring, nor did she respond. But soon I heard the kettle being placed very audibly on the stove, and a little later a very untidy tray was brought into the parlor by a very untidy maid. After dinner I went to the kitchen to talk it over, but Lizzie did not give me a chance. "I'll be going tomorrow," she flung at me over her shoulder. "I have never before been asked to serve tea on a wash-day."

It was during the interregnum that a socialist friend of mine called, and in the course of conversation, as is usual with American housewives, we swung around to the servant question and I confided to her my recent humiliating experience. My friend could scarcely wait for me to finish, so eager was she to explain to me wherein my error lay. It seems that I had gone at my problem all wrong. I should not have emphasized the business side so much. A domestic was entirely different from a shop-girl. The maid in your kitchen came into much more intimate contact with her employers than did the factory worker or salesgirl. Therefore we should make of her a friend. It was not enough to give our orders for the day and then close the kitchen door behind us. Did I know Lizzie's

friends and where she went evenings? Did I tell her funny stories on Monday morning to disperse the blue devils that hovered over the washtubs, etc., etc.?

Lizzie's successor was a colored maid from Virginia and she came while the words of my socialist friend were still ringing in my ears. I began at once by trying to make her feel at home and soon had learned not only her family history but that of all her friends, for Mamie was willing to meet me half way in all my advances. I did not offer to pay her extra when guests came, but on Mondays or particularly hard days I made it a point to set the table for lunch, or to dry the dishes for her at night. On the whole the friendly basis seemed more natural and more satisfactory. Mamie's stay with us lasted into the second year and several months after the baby came.

Then my nurse fell ill and it devolved upon me to carry the twenty-pound baby up and down the three flights of stairs for his two daily outings; to push him about for two-hour stretches, besides preparing his modified milk and attending to his constant needs as I was accustomed to doing. At the end of three days I found I must turn somewhere for a little help. "Mamie," I said, "can you help me out for a week by doing the daily baby wash? It won't take you more than half an hour a day." Surely this was not much to ask of a friend! I remember very well the reply Mamie made and the tone in which it was given had in it no note of affection.

"I didn't come here to take care of babies, Mrs. P——. I can't do no washing 'cept Mondays. You all must talk business with me."

So it seems after all it was not a friendly basis that she wanted.

I suppose it was my utter desperation, after two years more of struggling with the problem, that made the idea of trying a Japanese student for a general houseworker float to the surface of my subconsciousness. Picking up a newspaper I ran my eye down a column which had attracted my attention. "Situations Wanted—Male," and discovered to my surprise some ten Japanese were advertising for situations to do cooking, valeting, or general housework. Among them were two students, one of whom was in charge of my kitchen two days later. It was entirely experimental on our part. I remember the Professor and I took counsel together with many misgivings over the subject of wages. Would he be insulted if we offered him the same amount that we had paid Lizzie, Annie or Mamie, and which was all the family budget could possibly sustain? But when we came to make arrangements with him we found that wages were of little object provided he could have from two to four every afternoon to attend his school. Of course he couldn't do the washing and ironing, but even with a maid I had found it necessary now to have a laundress come in one day a week and keep our three babies sweet and clean.

So Yama, a little, short, stocky fel-

**Not one, but SCORES of Experts—**

So vast are the problems that must be solved in the quest of the better light for your home that no one man, no one mind alone, can ever cope successfully with the task. And so MAZDA Service has enlisted scores of experts in many fields of science, in its deep-delving research and study of the world's developments in lighting.

Already this many-minded effort has borne fruit in the MAZDA Lamps we know today, lamps that make a dollar's worth of electricity go many times as far as in the old-style carbon lamps. And as the search goes on, better and better lamps will come—but all with that Mark of MAZDA.

For as the Research Laboratories set the stamp of approval on each new development, it is at once transmitted to the Company's lamp works at Harrison and at Cleveland, and to certain other manufacturers who are entitled to receive this Service.

And your assurance that the lamps you buy are as good as science knows how to make them is the Mark of this Service—that word MAZDA—etched upon the bulb.

low with bright eyes, came to be our houseman, and from the moment he entered our home the tense atmosphere which had hung over the kitchen cleared and an era of harmony and good will set in. Yama stayed with us two years, until he took his diploma at the business college and went to take a business position in New York, *i.e.*, two years excepting summers. With the greatest tact and courtesy he explained to me that during the summer he must work in a larger family so as to earn enough money to pay his tuition for the coming term in college. Thru my landlady I learned that he took a place as chef at a large watering place, where he received sixty dollars a month. He was too polite to tell me himself. Chef he could easily call himself, for he was a culinary artist. In fact, all the work went like clockwork. It was done well, promptly, and pleasantly. Nor did Yama hesitate to help in many other ways, such as carrying the babies up and down stairs, pressing the Professor's Sunday trousers or paying my provision bills. He not only did more than the average maid, but had plenty of time to do his school work besides. I can remember now how queer it sounded hearing him practising on his typewriter in the kitchen every morning from eleven to twelve.

It did not seem possible that we could ever duplicate Yama and I do not believe we ever have from the standpoint of pure efficiency, but as I look back now over the ten years since we have had Japanese students in our home I cannot remember one discourteous word, one suggestion of complaint, or one act of disloyalty.

I remember especially one rather young boy unusually eager to learn who agreed to come to us if the Professor and I would each give him one half-hour a week in which to question us concerning America. With shoes nicely polished, creased trousers, immaculate linen, and no vestige left of the cook, he would come to the library door in the evening, often bringing with him a list of written questions. Oftentimes it was merely a question of English grammar that puzzled him; again he would wish to discuss co-education, woman suffrage, or the artificial feeding of infants.

Altho they differ greatly in efficiency, most Japanese boys are quick to learn, and with one exception we have found them neat and clean. The exception was Naka, a poet and playwright, a dreamer among dreamers.

I have never known such reckless confusion as reigned among his pots and kettles, yet he was the soul of kindness and most zealous to do his work well, altho he could not keep his thoughts on it. One day while serving lunch he suddenly placed the macaroni on the table and stood spellbound, looking at the baby in his high chair. Finally he turned to the Professor.

"Excuse. Where is heaven?"

The Professor hesitated a moment, but Naka did not wait for his reply.

"I think here," he said simply, pointing to the baby, and then went on serv-

ing the lunch. Naka had to go, and after him we had Shinto, an art student, who used to decorate our table in winter with a bouquet of twigs whose beauty of line we had never before noticed; Nakamura, a young medical student; Okiguchi, studying architecture, and countless others.

So, like many other American families today, we have solved the servant problem by not keeping servants, *but* we do not do the work ourselves. These ambitious boys from Japan are seeking just what the average housework girl utterly ignores, namely, a comfortable home. They are keen enough to appreciate the value of saving the expense of room and board, and having from their wages ample pocket money for incidentals during the academic year. They are intelligent enough to know how to dovetail housework and school-work so that neither suffers, and seem to enjoy the opportunity of observing American customs.

The Professor's mother, out in Ohio, would not be convinced but that it cost us more to keep a man than a maid servant.

"What more can I write to her?" I asked the Professor in dismay, when, utterly disregarding my careful figuring she still insisted that we were out of pocket. "Because," I began, doubtfully, "it may be that we are, for of course I have to pay a little more to the laundress than when Mamie helped with the ironing."

The Professor was halfway down the walk. He always escaped when the balancing of accounts came up. "Well, for my part," he called back, "if we are throwing money away I had rather throw it into brains than bonnets."

And as usual I agreed with the Professor.

### Color Music

BY G. W. HARRIS

"Prometheus—A Poem of Fire," by Alexander Nikolaevich Scriabin, had its first complete performance at the last concert of the Russian Symphony Orchestra, in Carnegie Hall, New York, a few weeks ago, and is scheduled for performance in several other cities in the United States and Canada to be visited by this orchestra on its spring tour. This composition is the newest and to date the greatest and most amazing of tonal curiosities, not alone because it is the most audacious departure from all recognized methods and styles in music, but also because this Russian composer seeks to combine colors with sounds and so to operate on the two senses of sight and hearing at the same instant.

It has long been known that some few persons have asserted their ability to see color in music. And in recent years several eminent musicians and scientists have busied themselves on the new art of mobile color, or "color music." That a psychological affinity between sound and color is felt by sensitive artists and musicians at least is indicated by the use of such common

# New England The Vacation Land

## Vacation Books

Essential to your wise summer planning.

The practical facts you need to make the best arrangements for your vacation.

Containing lists of summer hotels, boarding-houses and camps, in over 1000 places, WITH RATES, capacity and other useful information.

The White Mountains, the Maine, New Hampshire and Vermont Lakes and Woods, Berkshire Hills, Cape Cod, Martha's Vineyard, Nantucket, Mt. Desert, Penobscot Bay, Casco Bay and the ocean coast of five states are covered.

terms of expression as the painter's "note of color" and the musician's "tone picture." But hitherto no such ambitious combination of sounds and colors as Scriabin's "Poem of Fire" has been attempted. Scriabin adopts an arbitrary color scale, in which each tint is made to represent a certain definite musical note. The following table lists the colors he uses in this curious arrangement, in the order of the chromatic scale of a middle octave, with the frequency of sound waves for each tone of the scale:

Key.	Vibrations per Second	Scriabin's Color Scale
C (middle) . . . . .	256	Red
C sharp . . . . .	277	Violet
D . . . . .	298	Yellow
D sharp . . . . .	319	Steel
E . . . . .	341	Pearl White
F . . . . .	362	Deep Red
F sharp . . . . .	383	Blue
G . . . . .	405	Orange
G sharp . . . . .	426	Purple
A . . . . .	447	Green
A sharp . . . . .	469	Steel (repeated)
B . . . . .	490	Pearl Blue

In the performance at Carnegie Hall these colors, singly and in all sorts of combinations as conditioned by double note and chord mixtures, were shown on a screen made of gauze strips which was placed at the back of the platform. The hall was darkened, and to the accompaniment of weird and unprecedented surging and explosions of tone from an orchestra of a hundred players this screen was animated by flowing and blending colors, all the colors of the rainbow and many others not in the spectrum, ranging from bluish white to dark olive green and somber purples. The effect was that of a miniature *aurora borealis*, only that the lights did not appear to form arcs or rays but were nebulous and without shape.

These colors were "played" by means of a keyboard with fifteen keys, following Scriabin's written "score." In operation each key when prest closes an electric circuit which lights an incandescent lamp of the desired color, and the color is diffused in the gauze screen. The instrument has also two pedals which control a rheostat, thus varying at will the intensity of the colors. The instrument is the invention of Preston S. Millar, who is general manager of the Electrical Testing Laboratories, and who calls his color organ a "chromola."

Probably, as Mr. Millar says, the restricted scale on which the color effects had to be produced prevented anything like an adequate realization of the composer's intention. Undoubtedly for such realization the whole auditorium should be flooded with color, as it is filled with sound, and the orchestra with its fire-fly dark lamps on music racks should be completely hidden from sight. Also, it must be said that the emotional effect on present-day spectator-auditors would be one of greater artistic pleasure if this "color music" were linked with tonal music which did not set at naught the old major and minor scales and all their derivative harmonies. Yet the attempt at a combination of sound and color to form a new art is a most interesting experiment and whither it may lead no man can say.

## EFFICIENCY QUESTION BOX

CONDUCTED BY  
EDWARD EARLE PURINTON  
DIRECTOR OF THE  
INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

74. Mr. W. C. H., Florida. "Please advise me thru the Question Box if one can possibly be too optimistic. It is to my mind apparent that much of the so-called 'New Thought' is fake—and extremely illogical."

There is such a thing as being an unmitigated optimist—blind, rash, flippant, weak and selfish, unable to cope with the stern grind of things and feebly taking refuge in a good-luck formula. Optimism without common sense is a balloon without ballast—only its descent is quicker than its ascent. Optimism without forethought is an engine off the track and still running; optimism without sympathy is a boat with one oar; optimism without any needful human trait is a dangerous instrument of progress. We forget how slowly nature works—it may be years before today's thought assumes visible shape. But if we picture Happiness clearly enough, and frame it with strong, coherent action, our lives will gradually change of themselves till the colors all blend with our dream and desire. Optimism is not talking, or even smiling—but knowing, doing, waiting.

75. Mr. F. M., Tennessee. "Do you believe the ideas advocated by Mr. Fletcher to be sound? I have been studying the matter for years, but am very much puzzled. Ought one to reject the coarse matter in food or swallow it?"

Horace Fletcher has probably done as much for the American stomach as any other man living. We are the "quick-lunch" nation of the world, which means the quick-dyspepsia nation. His doctrine, briefly stated, is as follows: "Eat little; enjoy much; masticate thoroly; have small variety but unlimited choice of edibles; let hunger be your only guide; leave drugs unmolested; heal yourself; and above all, cheer up!" A mighty sensible philosophy and plan of life—but one that may be carried to unwise extremes. A man can't cheer up with his gaze glued on his insides—they aren't pretty.

The chronic Fletcherite thinks too much about his stomach—he is as over-anxious as the customary eater is under-informed. Trepidation at meal-time is a veritable psychic vinegar. And the modern hygienist uses vinegar sparingly. Moreover, the tendency of Fletcherism is to coddle the stomach; a robust appetite gets more good out of corned beef and cabbage than a weak one does out of eggs and milk. The stomach is a muscle, and the way to keep a muscle strong is to exercise it. During the hours when your body or brain is working, cut down your food-supply to the last possible notch; but when the need for concentration is over and you have time for rest, eat a good dinner and be thoroly satisfied before you leave the table. If necessary, take a short fast and restore normal hunger; but don't try to eat with the idea of starving in the back of your head.

The "coarse matter" in natural food was

put there to be used. If you swallow nothing but what has been reduced to liquid, the peristaltic and intestinal activities of digestion won't have the proper stimulus, and won't do the proper work. Yet all starches, sweets and fats must be liquefied thru mastication—and here Fletcherism is right. Make this discrimination: Whatever is soluble, chew till it swallows itself; whatever is insoluble, chew fine and swallow according to your instinct. If you like the peel of oranges or apples, a little of it is probably just what you need. And certainly the fiber of corn, oats and wheat is beneficial to the average digestion.

Special ailments preclude all rough elements from the alimentary tract. So that if you are troubled with gastritis, intestinal catarrh, or any other local difficulty producing extreme sensitiveness, it would be well to omit coarse foods temporarily.

Fletcherism is good, as a means of rediscovering your natural tastes and desires. But every ism must be ruled by the I. Let us thank Mr. Fletcher with all our heart—then pass on to individual supremacy.

76. A Western Clergyman. "How do you regard the efficacy of a religious campaign waged on the lines of a 'Billy' Sunday type of evangelist? Are its results permanent? When several ministers favor it, and the minority in a city opposes it, how shall the question be settled? Can efficiency in religion be measured by ordinary standards?"

Mr. Sunday is a theological mustard plaster and he has both the virtues and the vices of that noble institution. We fail to discern spiritual balm in him. But, not knowing his heart, we cannot judge him. His mission, however, seems to be not so much to save men from being lost as to save ministers from being lukewarm. He is injecting brilliancy, bravery and energy into the church; this alone justifies almost any extreme and precipitate method.

Why not ask the clergymen who have joined the Sunday crusade in other cities how far the church, the community and the "converts" have been helped; what permanent spiritual gain has been achieved; and whether they are now glad or sorry they supported the Sunday revival? The statistical department of Mr. Sunday's own organization should be able to furnish all the data you require.

77. Mr. W. H. W., New York. "I am asked to take charge of a telephone exchange in a section serving about 5000 people. Thru inefficient management the business is in very bad shape. I have had ten years' experience as a civil engineer, but no experience in telephone management. Will you please suggest books or articles on Telephone Efficiency?"

A trade journal called *Telephony* is, we understand, published in Chicago. Another is *The Telephone Engineer*, also in Chicago. Get copies and study them for possible ideas or methods. Are you not somewhat rash in attempting to manage a business with which you are unfamiliar? Books that may show you the complexity of your task, while giving general information, are Casson's *History of the Telephone*, Kempster's *American Telephone Practice*, and Abbott's *Telephony* (six volumes). Any large bookseller should obtain them for you.

78. Mrs. G. B. M., Illinois. "Can one, and how, prevent loss of memory with advancing years?"

Loss of memory is loss of superficiality. It would be a mercy if we could not remember a hundredth part of the things we do. That which leaves an impress on the soul can never be forgotten. You can teach your brain to recall things—if you can spare the time. But your soul remembers only that which helps your development. And the number of things you forget shows how many things were useless.

Names may fade away—but names are only words. Dates and figures may grow confused—but dates and figures halt the Eternal, circumscribe the Limitless. Even the faces of dear friends may stir no sign of recognition—but what of their life's message graven on the heart? When recalling ceases, realizing begins. The passing of the form of things may denote the coming of the spirit. When love is universal, memory will be immortal. For when love is

## The New Domestic Science

Do you know how to cater to a finicky appetite? Do you know how to feed people who need to be careful what they eat? Do you understand feeding a family for efficiency? Are you familiar with the "balanced ration"? If not, you may learn all of these things from "The New Cookery" by Miss Lenna Frances Cooper—Chief Dietitian of the Battle Creek Sanitarium, where scientific diet has been developed to the highest point. In her book, Miss Cooper tells you how to cater to finicky appetites—how to feed people who have to be careful what they eat—how to feed a family for efficiency—and all about the "balanced ration." The book also includes complete invalid diets—delicate dishes, tempting yet harmless.

Over 300 pages, including numerous illustrations, with 700 recipes for soups, relishes, entrees, roasts, stews, salads, vegetables, pies, cakes, breads, pastries, preserves, sauces, ices, and other dainty and substantial dishes. The regular price of this book in board covers is \$1.50, but to give her work wide distribution, Miss Cooper permits a library paper edition to sell for only \$1.00. Order today. You take no risk because, if you are not entirely satisfied, the book may be returned for prompt refund. Order from—

## WELLS FARGO TRAVELERS CHECKS

Guide-books to both Expositions on application to  
FINANCIAL DEPARTMENT 51 BROADWAY NEW YORK

### APARTMENT FURNISHED—

Will sub-let a splendid, well furnished apartment in beautiful Flatbush during June, July, August and September. Address Box F, care of The Independent, New York.

### JUST ONE-HALF THE PRICE

will buy an organ and bench seat in perfect condition; has 32 stops and inner player; can be played with or without music rolls; occupies the space of a large upright piano. Only reason for selling is I am unable to enjoy it. 100 rolls of music, mostly standard selections, free to the purchaser. Can be seen and heard at 536 Monroe St., Brooklyn, near Lewis Ave. H. N. D., care of The Independent, New York.

universal, we shall value only the thing we feel. And that we always remember.

Why do you look backward, and strain for a dim sight of the past? Are you filling the present with eager, strong, purposeful activity? Are you building steadily for the future—yours, or that of your dear ones? Do you faithfully cherish a many-sided interest in life, adding your utmost to the weal of your community? Let the past go. It is gone. Make your marching orders "Right about face!" Then swing into step with the youthful battalions of those who chant not their years but their hopes.

79. Mrs. W. M. K., Kansas. "My husband and I have been country school teachers. Began farming on borrowed capital three years ago, prospered in spite of short crops; hope to have our farm well equipped and paid for in another three years, thus insuring small income. But farming is distasteful to us both, as it allows small opportunity for personal development. Can you suggest some other occupation for which my husband might be preparing, at home, in the next three years?"

Do you understand scientific farming? Do you know that in the United States the average number of bushels per acre is sixteen of wheat and ninety-two of potatoes, while in Germany it is twenty-eight of wheat and two hundred of potatoes? If you could learn to double your crops, and devote the extra income to self-improvement, would not farm life be more interesting? Write the Department of Agriculture at Washington for all available information on intensive, extensive, scientific farming.

The most desirable new work for your husband would seem to be that of teacher in some state agricultural college, or supervisor and lecturer for an agricultural experiment station, or official in one of the granges recently becoming so popular among farmers. Write for catalogs of all the state universities and colleges in the West, find which have agricultural departments, and study possibilities from this new angle. If you can make of your land an ideal demonstration farm, in the next three years, by correspondence study or otherwise, your husband should easily find a position as teacher or demonstrator of scientific farming. We understand that such positions are in excess of trained men to fill them.

80. Mrs. A. L., New York. "What is the best manual of ethical and moral instruction for children?"

The Bible. A list of more modern books might, however, be obtained from the secretary of the Ethical Culture Society, Central Park West, New York.

81. Mr. J. E. D., New Hampshire. "Do you know of any reliable person or institution conducting a correspondence course that can teach the individual how to increase bodily efficiency by making proper use of such agencies as fresh air, diet, exercise, bathing, and other drugless means to improve health? Is it possible to correct unhealthy conditions of the various organs and functions, blood and nerves, by such means of advice by mail?"

Officially, we do not guarantee the reliability of any institution or individual. Personally, I know of many cases where the health has been improved, even chronic disease apparently cured, by correspondence methods of instruction and advice. Among the noted specialists in this field are Alois P. Swoboda, Aeolian Hall, New York; Dr. Charles E. Page, Tremont street, Boston; Eugene Christian, F. S. D., 213 West Seventy-ninth street, New York; Dr. J. H. Tilden, Denver, Colorado; Dr. J. Lambert Disney, president International Health Institute, Philadelphia. A health course for women is offered by Susanna Cocroft, Michigan boulevard, Chicago.

In acute disorders of the vital organs, it is our opinion that nothing can take the place of a personal diagnosis by a competent physician. Even in such cases, however, a good course of lessons in right habits of living should be of great value. Where the condition is purely functional, such as nervousness, emaciation or obesity, sleeplessness, mild indigestion, constipation or rheumatism, a satisfactory cure might reasonably be had thru instructions by mail from the right specialist.

## INFORMATION!

The Independent invites inquiries from its readers, and will gladly answer all questions pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. ### POCONO MANOR COTTAGE

Pocono Manor :: Pennsylvania  
(Pocono Summit Station, D., L. & W. R. R.)

Spring in the mountains with a wealth of laurel, arbutus and rhododendron is well nigh ideal.

Add to this, glorious days of motor-ing, golfing and trout fishing, with cozy evenings by a hospitable fireside. Comfort without extravagance, with Quaker hospitality—this is Pocono Manor.

M. L. DENGLE, Pocono Manor, Pa.

# THE NEW BOOKS

## THE SCIENTIFIC BASIS FOR EDUCATION

While many philosophical dissertations manufactured in our universities continue to cater to purely academic interests, those produced in the schools of education are intended to serve technology just as truly as the investigations made by engineers. Some of the "Contributions to Education" from Columbia University are undoubtedly to be placed in this class. Thus, a study of improvability in various mental processes thru practise<sup>1</sup> shows the inadequacy of certain methods that have been used for measuring individual differences, applied during short time periods. Dr. Chapman finds a close correlation between high initial efficiency and rapid improvement only in the comparatively complex mental operations; and there is a tendency for high efficiency (that is, speed) to be accompanied by a high degree of accuracy in mathematical work. With the increasing attention to the individual on the part of the schools, studies of this kind ought to be of great value.

The relation of intelligence to delinquency was studied by Dr. Augusta F. Bronner<sup>2</sup> by applying a number of psychological tests to groups of delinquent girls, evening school students, college students and domestic servants. Comparing the first group with the last, she found on the whole close similarities in intellectual capacity, and concludes that delinquency depends upon other factors than intellectual status, altho this may play an important rôle.

The praiseworthy efforts made by many to base educational and social policy frankly on the fact that sex differences involve differences in mental and physical capacity and endurance, receive a smart rap from the studies of Mrs. Leta S. Hollingworth.<sup>3</sup> By recording results of physical and mental tests made daily over a long period, together with notes on exercise, state of health, etc., for a number of men and women, she was brought to the conclusion that there is no influence upon mental or physical work exerted by the periodic physiological disturbances in normal women. These conclusions are in such marked contrast to the views prevailing even among skilled observers, that they will probably induce other investigators to make more extended studies of the subject. The relation of the problem to educational policy is of the utmost importance.

We all know that the "marking" of school work by teachers shows a wide range of standards and of judgment. Attempts to formulate standards for the purpose of scoring school work have been critically examined<sup>4</sup> and found to be of very unequal value. The Thorndike drawing scale, for example, reduces the variation in teachers' marks, while his handwriting scale seems to

## THE NEWEST BOOKS

*Makers of New France*, by Charles Dearborn. Seventeen studies of the leaders—generals, statesmen, scientists, writers—of that splendid, steady, silent France that the world today watches in admiration.

James Pott. \$2.50.

*Practical Programs for Women's Clubs*, by Alice Hazen Cass. A handy, suggestive compilation of programs on many practical topics, home economics, civics, education, natural waste, as well as the arts and travel, with list of reference books for each topic.

McClurg. 75 cents.

*The Fight for Peace*, by Sidney L. Gulick, is a constructive study of the possibility of concerted effort looking toward world peace by the Christian churches. It is a call to the "new crusade."

Revell. 50 cents.

*The Primrose Ring*, by Ruth Sawyer, is a pretty, happy little tale, a hospital romance, with a charming touch of Celtic fairy lore and plenty of humor along with the pathos.

Harpers. \$1.

*Miranda*, by G. L. H. Lutz, recalls "Pemaquid" and the doughty Keshiah beloved of the last generation, but *Miranda*, besides having its own charm is illustrated by E. L. Henry's quaint pictures.

Lippincott. \$1.25.

be neither better nor worse than the ordinary judgment of teachers. The Hillegas composition scale, on the other hand, would appear to be really worse than useless.

A matter that is apparently of theoretical interest only is the doctrine of "recapitulation"—the idea that the individual recapitulates in his development the history of his ancestry. A study of the thought on this subject<sup>5</sup> by Dr. Davidson brings out a great deal of confusion as to the implications of "parallelism," as well as a gradual clearing up of the essentials. The author's own discussion of the meaning of infancy is by far the most valuable as well as the most interesting part of the book.

<sup>1</sup>*Individual Differences in Ability and Improvement and Their Correlations*, by J. Crosby Chapman. 75 cents.

<sup>2</sup>*A Comparative Study of the Intelligence of Delinquent Girls*, by Augusta F. Bronner. \$1.

<sup>3</sup>*Functional Periodicity; an Experimental Study of the Mental and Motor Abilities of Women During Menstruation*, by Leta Stetter Hollingworth. \$1.

<sup>4</sup>*Teacher's Marks; Their Variability and Standardization*, by Frederick James Kelly. \$1.50.

<sup>5</sup>*The Recapitulation Theory and Human Infancy*, by Percy E. Davidson. \$1.

All published by Teachers College, New York.

## FOREIGN SERVICE

In the first band of American missionaries to the pagan world was Gordon Hall, a graduate of Williams College in 1808, the first of the men who have kept continuous the connection be-

tween Williams College and Foreign Missions. It was to send him and five of his companions at Andover Seminary as missionaries to the heathen that the American Board was established. That was the beginning in 1812 of American foreign missions to which every denomination is now pledged. The American Board alone has in its missions 85,000 communicants, 615 missionaries, 20 colleges and 15 theological seminaries. It is now one hundred years since the East India Company gave permission to Gordon Hall to engage in his work in India, and during this time Williams College, the College of the Haystack, has sent 120 missionaries to the foreign field. This volume gives a biographical sketch of each of these, and in the reading of their stories one is easily convinced that their influence, like that of St. Paul, was greater in opening new spheres of influence abroad than it could have been in the crowded fields of the home land.

*Williams College and Foreign Missions*, by John H. Hewitt. Boston: Pilgrim Press. \$2.

## THE CHURCH MADE NEW

For more than a generation a silent but tremendously significant change has been going on in Christian thought and belief. Less spectacular but far deeper and more revolutionary than the Reformation in the sixteenth century has been this theological and religious movement necessitated by the breaking up of the old philosophic background which determined to a large extent Christian speculation from the age of Paul to that of Darwin. The advancements in biblical knowledge, historical investigation, scientific studies, sociology and psychology have prepared the way for a larger and more accurate view of Christianity as a world religion and a more definite apprehension of the meaning and application of the Gospel. After decades of controversy, almost numberless attempts at restatement, and not a few depressing heresy trials, the theological battle seems to have been practically won, and the most respected leaders of religious thought in all communities seem agreed that Christian formularies are bound to be brought into harmony with the newer world-views.

But as usual, custom, ceremonial, and methods of work linger behind intellectual conceptions. While here and there attempts have been made to bring church activities into harmony with accepted ideals, it has remained for Rev. Paul M. Strayer, of Rochester, to set forth a definite plan for *The Reconstruction of the Church* in accordance with the principles and demands inherent in the newer views of Christianity. This he has done in a volume which will have great value for those interested in planning church work suitable to the needs of the present hour. Mr. Strayer gives a careful resumé of the

revised message of Christianity which the church of today most sorely needs as its groundwork. The Social Gospel, having for its end the building up of the kingdom of God and for its methods and means, devotion and service to individuals and society, is to be the directing influence in church reorganization. On the basis of this gospel the author discusses the purpose of the church, the failures of the past, and the methods by which the great tasks which lie before it may be accomplished. He rightly divines that to make the church efficient in its proposed work there is need of reorganizing the church services and the methods of propaganda as well as laying emphasis upon community service and united effort. The volume can be unreservedly recommended to that growing circle of readers who are looking for guidance in the real tasks of a Christianity regenerated thru the Gospel of Jesus expressed in the social concepts of today.

*The Reconstruction of the Church With Regard to Its Message and Program*, by Paul Moore Strayer. New York: The Macmillan Co. \$1.50.

#### WHAT IS PAN-AMERICANISM?

Professor Roland G. Usher, of Washington University, has written a book on *Pan-Americanism*, with all of the scholarly but exasperating impartiality which puzzled the readers of his previous study of *Pan-Germanism*. Many persons are still disputing whether his earlier book was a masterly attack upon German diplomatic ideals, or an enthusiastic appreciation of them. It is probable that half of those who read the present work will conclude that the author intended to prove the futility of the Monroe Doctrine and to urge its abandonment, while the other half will die in the belief that his plea is for an immediate increase in the army and navy to protect the new world from the colonial adventures which will follow the present war whichever side is victorious. As a matter of fact, Professor Usher is but the judge who sums up for both militarist and pacifist, while leaving the conclusion to the only suitable jury, the American people.

The author concludes that the United States "has the unique distinction among nations of owing its independence and its safety to its geographical situation, and to the arts of peace." The development of modern methods of transportation has somewhat diminished this safety, but it is still improbable that any nation would attempt the conquest of the United States. The objection to disarmament is that it would mean the abandonment of the defense of our outlying possessions, including the Panama Canal, the termination of the Monroe Doctrine, and the loss of power to enforce our policies or ideals in the councils of the world. But if the Monroe Doctrine implies any common link between the Americas it rests on a fallacious basis. The most important parts of Latin America are far removed from us geographically and, what the author regards as of far greater importance, have closer bonds of travel and trade with Europe than with us.

## SCRIBNER BOOKS

### John Galsworthy

in *THE LITTLE MAN AND OTHER SATIRES* includes most penetrating studies of types of all sorts and conditions. *The Outlook* says: "Mr. Galsworthy writes with distinction. He continues the tradition of dignity and sound form in English fiction, and he is always interesting." \$1.30 net.

### F. Hopkinson Smith

in *OUTDOOR SKETCHING* has written and illustrated a book overflowing with suggestion and which really covers a much wider field than that indicated by the title. *The Boston Globe* says: "There is a thrill in it which any person who has ever touched a brush to paper or canvas will feel at once." \$1.00 net.

### James Huneker

in *NEW COSMOPOLIS* has written intimate studies of New York as it strikes the artist and critic. *The Outlook* says: "It is a work of an experienced cosmopolite who knows not only how to interpret all of the peculiar interest which make of New York a genuine cosmopolis, but who can and does also make suggestive comparisons with the other cities which he also describes." \$1.50 net.

### Richard Harding Davis

is the author of *WITH THE ALLIES*, which is now in its Fifth Edition. For two weeks in April it has led the list of non-fiction most in demand at the New York Public Library. It is profusely illustrated. \$1.00 net.

### Oswald G. Villard

is the author of *GERMANY EMBATTLED*, of which the *North American Review* says: "The book is high-minded; it is truthful; it is worthy of America. . . . His treatise may well stand before the world as perhaps the clearest and most succinct expression of the American attitude." \$1.00 net.

### Gouverneur Morris

in *THE SEVEN DARLINGS* writes of a family left of a sudden penniless with but one asset—a luxurious Adirondack camp. *The New York Tribune* says it is "a charming comedy of youth and high spirits." It is very attractively illustrated by Howard Chandler Christy. \$1.35 net.

**Charles Scribner's Sons**  
Fifth Avenue at 48th St., New York

"I waste every dollar's worth of time I put into pencil-marks in a note-book."

Your stenographer could truthfully write that in her note-book every day you continue to stick to the old, expensive, inefficient way of writing your letters twice—once in shorthand and once on the typewriter.

Let your stenographer earn her salary!

Let her do what you pay her for doing—produce finished typewriting—let her do it all day!

Let her write your letters once—on the typewriter.

You talk about "overhead"! Well, here's one big item of operating expense you can cut out—and get some of that real *efficiency* you have always wanted.

Reach for your telephone and call up the Dictaphone. Arrange for a demonstration in your own office on your own work. If you don't find that name in the book, write to the

### ANDIRONS

MARBLE, STONE and WOOD  
MANTELS

**Wm. H. Jackson Company**  
2 West 47th Street New York City

There is no bond of common sentiment to replace the lack of common material interests. On the contrary, the average American of the north despises the Latin American, and the latter repays him by a deep-seated resentment and distrust. At present, says the author, South and Central America have far more fear of the imperial ambitions of the United States than of any European power and would gladly see the whole policy of Monroe abandoned. Yet the danger, if it is a danger, of European expansion in South America exists, particularly if Germany should be victorious and yet not sufficiently so as to seize the British colonies in India and the east, because there is "nothing on the globe that would cost the Allies so little without threatening them at all" as giving Germany a chance to develop South America. So far as war with a major European power is concerned "we are already disarmed," since our army and navy, however costly, are inadequate to the purposes for which they are maintained. The question before the American people is whether our present policy shall be continued or our army and navy shall be reorganized, and there is no better summary of the case for each of these policies than Professor Usher's.

*Pan-Americanism*, by Roland G. Usher. New York: The Century Co. \$2.

#### AN AMERICAN POET

It is good to find such sincere and beautiful work as is in the two volumes of *Collected Plays and Poems* that gather together the earlier small books by Cale Young Rice. Here is a writer content to write of what seems to him worthy and with no wish to purchase fame at the price of eccentricity of form or subject. He lives up to his theory that the path of American literature lies not in distinctively local lines but will be more and more cosmopolitan since America is built of all civilizations. Indeed, with his skill in the dramatic lyric one regrets that he uses it so entirely on the peoples whom we visit and not oftener on those who come to us. But his songs run around the world from "The Monsoon Breaks," a terrible picture of the Indian drouth, to the lovely lines on "The Winter's End," as it comes in western lands. "David," the drama of the shepherd king's career, is intensely interesting and vivid; more living tho not more picturesque than the Renaissance plays. In a collection one may trace the gain in workmanship as between "Charles di Tosca" and "Porzia" for instance, but for sustained power, compression and tragic meaning "The Night in Avignon" is as yet Mr. Rice's finest work.

*Collected Plays and Poems*, by Cale Young Rice, 2 vols. Garden City, N. Y.: Doubleday, Page & Co. \$3.

#### AN ECHO OF MARK TWAIN

A veritable contagion of laughter that catches from the first page to the last is Harry Leon Wilson's autobiographical history of *Ruggles of Red Gap*, from the fateful game of "draw poker" which transferred his service from one of England's "best" families to one of the "best" of Red Gap, and his subsequent rise there to social dictatorship. His naïveté, his instructive com-

parisons of English and American customs, his own transition from an English servant's aloftness and superiority to an appreciation of American equality and independence, for the drollness of their telling carry one back to an earlier Innocents Abroad.

Doubleday, Page. \$1.25.

## BETTER THAN IT SOUNDS

To write a truly entertaining book as William Farquar Payson has done is no small kindness to the public. There is nothing lurid in the *Love Letters of a Divorced Couple* save the title page. The others are filled with human nature and humor, and if Sybil strikes one as a bit selfish even to the end, doubtless she is none the less fascinating for that.

Doubleday, Page. \$1.

## THE PRESIDENT OF FRANCE

While all eyes have been centered on General Joffre, no less responsible for the guidance of France in her crisis and about whom almost as little is known to Americans, is *Raymond Poincaré*, president of the republic, who is the subject of a rather perfunctory but informing biographical sketch recently issued in England. Particularly interesting is the attachment in their student days together of Poincaré with Millerand, Hanotaux and C. Bernard.

London: Duckworths. \$1.25.

## THE BEGINNINGS OF AMERICA

Altho late, the universities—notably Columbia under Professor Dunning and the University of California—are becoming interested in the researches of early state history. A noteworthy example of such work is the painstaking 500-page *History of Indiana*, which despite numerous handicaps in the collection of material, has been prepared by Logan Esarey, instructor in Western History at the State University. For every true Hoosier it should prove invaluable.

Indianapolis: W. K. Stewart Co.

## FOLK WHO WRITE

There is a story dear to the heart of the reformer of spelling, of Dr. Crothers' meeting one of the Putnams at an Oxford lawn party. The two simplified Americans compared their invitations, address respectively to Carrouthers and Puttenham, which inclines one to believe without waiting to understand, that Phtholagnyrh is a spelling of Turner entirely defensible by existing rules.

That dear lady who found Dr. Johnson's dictionary good reading but too frequent in change of topic has a descendant in De Amicis, who finds even that objection a virtue. He began at A and read on with increasing zest till he had devoured several hundred pages. "We meditate, laugh, dream, learn language, historical, morals, poetry, science, sports. . . . How can one deny there is magic in this book?" Indeed he almost persuades us to forsake the best seller and open Webster!

The coming to light of a record of "Mr. Ben Jonson and Mr. William Shakespeare being merry at a tavern" recalls the London afternoon when beneath the Rolls Chapel, surrounded by ancient records, on great parchment leaves and actual rolls, we ran across Mr. and Mrs. C. W. Wallace. Their discovery of the Shakespeare signature was still recent and Mrs. Wallace looking up from the crabbed sixteenth century writing said, "We found it the day news came of the North Pole, but we felt no envy of Peary!"

The American Tract Society is offering prizes of \$250 and \$100 for book manuscripts submitted before October. In the host of publications one loses sight of the work of the Tract Society, but this month at the Grolier Club exhibit of American wood engraving it has come into its own and many have paused with pleased recognition before the pages from the forgotten child's papers of their Sunday school days, surprised to see what beautiful work went into those modest little sheets sent out by the Tract Society.

# The Market Place

## A FALLING STOCK MARKET

At the beginning of last week the securities market was in a highly speculative and vulnerable condition. There had been a month of remarkable activity, with prices rising day after day, mainly on account of large and profitable orders for war supplies. Great advances were shown by the shares of many manufacturing corporations to which the orders had been given. Many buyers of stocks in a speculative way had failed to take their profits, and the margins deposited with their brokers were not large enough to withstand a severe decline. In the long upward movement there had been no substantial reaction.

The market turned on Monday. Unfavorable war news—the torpedo attack upon the American ship "Gulflight," reverses for the Allies on both battle fronts, and the menacing controversy of Japan with China—brought a host of selling orders from abroad as well as from our own country. There were sharp declines. On Tuesday recovery was promoted by the Studebaker Company's declaration of its first dividend on its common stock and by an increase of the Calumet and Hecla Copper Company's quarterly dividend. But on Wednesday additional reports of German successes and of Japan's demands caused another downward movement.

And then, on Friday, came the news about the sinking of the "Lusitania." There had been a slow recovery when, at one o'clock in the afternoon, the report was received. It caused demoralization and confusion, even before the loss of life was known. In the last hour of the market more than 600,000 shares were sold. War order stocks suffered sensational declines. Bethlehem Steel lost 29 points, but recovered some of them before the close. A highly favorable crop report was published, but no attention was given to it. When the market opened on Saturday the conditions were like those of a panic, and great additional losses were prevented only by the support of powerful financial interests. The downward movement was restrained, if not checked, by very large buying orders.

When the record of the week was completed, it was in sharp contrast with that of the preceding week, and of the entire month of April. The price of copper, the metal, was still 19 cents a pound, but the shares of the mining companies had lost from 3 to 8 points.

Telephone 2453 Riverside

Camp Address, Winthrop, Maine  
Telephone 132-12 Winthrop

**CAMP BIG PINE** FAIRLEE LAKE, VT. P. O., South Fairlee, Vt., R.R. Station, Ely, Vt. Ideal home summer camp for girls, aged twelve to sixteen years. All camp sports (under competent supervision), classes in art, metal work, basketry, folk dancing, etc. Special outing trips to White Mountain points. All under personal care of Rev. and Mrs. H. J. Wyckoff, Norwich, Conn. Write to Norwich, Conn., for illustrated booklet.

## CHINQUEKA CAMP FOR GIRLS

AMONG THE LITCHFIELD HILLS  
Beautifully situated on Bantam Lake, Conn. Cottage and Camp. New Equipment. Send for Booklet. David Layton, 669 Dawson St., N. Y. C.

**PINE TREE CAMP FOR GIRLS**, on beautiful Nanticoke Lake, 2,000 feet above sea in pine-laden air of Pocono Mountains. Midway between New York and Philadelphia. Bungalows and tents on sunny hill. Experienced counselors. Hockey, basketball, canoeing—all outdoor sports. Tutoring if desired. Endorsed by mothers and girls. Miss Blanche D. Price, 905 South 47th street, Philadelphia, Pa.

**CAMP PENN.** Valcour Island Lake Champlain. A real camp for real boys, from nine to sixteen years inclusive. Our system is unusual. It not only gives the boy a bully good time but brings out the best that is in him. Eight years freedom from sickness and accident speaks for our individual oversight. Experienced staff. Resident physician. 500 acres. Main-line station. Our booklet will interest you. CHAS. K. TAYLOR, M.A., Mgr., W. Mermaid Lane, St. Martin's, Philadelphia, Pa.

## CAMP HANOUF FOR GIRLS

On Breezy Thetford Hill, Vermont  
WHAT WE DO—Ride horseback, swim, canoe on lake and river, "gypsy" through the White and Green Mountains, make baskets, pottery, jewelry and simple gowns, learn the trees, birds and stars, dance and sing and give a festival. Illustrated book. Mr. and Mrs. CHARLES HUBERT FARNSWORTH, Box I, Teachers' College, Columbia University, New York City.

Railroad share losses ranged from 3 to 9 points. But the greatest changes were to be seen in the prices of war order companies' stocks. The character of the week's movement can best be shown by the following list of net losses: Westinghouse, 15 7/8; American Locomotive, 13; Pressed Steel Car, 12 3/8; Baldwin Locomotive, 12 1/4; Studebaker, 12 1/8; American Car and Foundry, 11; National Lead, 10 1/2; New York Air Brake, 10 1/8. Bond prices were affected, of course, but losses in the bond list were small. In the prices of high grade bonds there had been, since February, a gain of from 2 to 4 points, and the greater part of this was retained.

## A GREAT CROP OF WHEAT

When the Government's report as to the condition of the growing winter wheat on April 1 was issued, a little more than a month ago, the Department of Agriculture could foresee a crop of only 619,000,000 bushels. It is true that this quantity exceeds by 100,000,000 bushels any preceding yield of winter-sown wheat, last year's excepted, but in 1914 there were 684,990,000 bushels. For this year's crop the acreage had been increased, but the condition of the growing plants was low, 88.8, as against 95.6 just one year earlier.

In the thirty days following, however, there was great improvement, and now we have promise of a wheat crop that will exceed even last year's, 891,000,000, which broke all records.

Because of the higher condition and enlarged area, the Government's estimate now of the winter wheat crop is 693,000,000 bushels, instead of 619,000,000. If this estimate is confirmed at harvest time, only 198,000,000 bushels of spring wheat will be needed to make a crop equal to last year's record-breaker. But last year's spring wheat crop of 206,000,000 was far below the average. This year the spring acreage has been increased. Conditions in the spring wheat states are favorable. Spring plowing and planting are much in advance of the average for this time of the year. Altho there has been no official report about spring wheat, it is reasonable to predict that the first report will indicate a yield exceeding 250,000,000 bushels.

Therefore we have a fair prospect of harvesting a wheat crop of at least 900,000,000 bushels, and there may be 950,000,000. It was not expected that last year's 891,000,000 would ever be surpassed, but this year we may have 50,000,000 bushels more.

There will be a good market for all we do not need, and prices will be high, altho they may not remain at the present figures.

The following dividends are announced:

American Cotton Oil Company, preferred, semi-annual, 3 per cent, payable June 1.

International Silver Company, Coupons No. 33, First Mortgage Bonds, payable on and after June 1.

Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable June 1.

United Cigar Stores Company of America, preferred, quarterly, 1 1/4 per cent, payable June 1.

Niles-Bement-Pond Company, preferred, quarterly, 1 1/2 per cent, payable May 15.

## Your Hands Can't Earn the Money You Need

You'll have to work for low wages all your life if you depend upon your hands to make your living.

To earn more money you must have the *special training* that will enable you to get and hold a better job.

The International Correspondence Schools will give you this necessary training in your own home, in your spare time. They will fit you for a *better position*, where you can earn more money.

If you want to advance in your present occupation, the I. C. S. will give you the *training* that will entitle you to promotion. If your present work is not congenial, the I. C. S. will qualify you for a good position in the work that you like.

## Mark the Coupon

What occupation attracts you or what position do you want? Mark it and mail the coupon now, and learn how the I. C. S. can help *you* to earn the money you need.

## INTERNATIONAL CORRESPONDENCE SCHOOLS

Box 1024 SCRANTON, PA.

1915  
**Atlantic Mutual Insurance Co.**

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

**GET THE SAVING HABIT**

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

**HOME LIFE INSURANCE COMPANY**

GEO. E. IDE, President.

Conducted by

W. E. UNDERWOOD

**STORY OF A STOCK DIVIDEND**

Seven years ago the directors of the Union Central Life Insurance Company of Cincinnati declared a stock dividend of \$400,000, thus bringing its paid-up capital to \$500,000. Until that action was taken few of even those best informed on life insurance matters knew that the company's articles of incorporation provided for an authorized capital stock in excess of the \$100,000 under which it had successfully operated for forty-one years, with the result that many were amazed at the move.

On January 1, 1908, the year in which this dividend was declared, the company had: total assets of \$62,242,454; total surplus \$10,900,983; total insurance in force, \$256,564,666. During the preceding year it had received for premiums \$9,466,664 and its total income was \$12,923,476; it paid policyholders \$4,553,213 and its total disbursements were \$6,558,173.

These figures are quoted to show the flourishing condition of the company at that time and the absence of all necessity for the use of additional capital of any kind. It is a fact well known, even among men of business outside that of life insurance, that a going, prosperous life insurance company needs no capital whatever.

The state of Ohio questioned the validity of the transaction and went into the courts in an effort to defeat it, but failed. Later on a policyholder at Cleveland brought suit for an accounting of the company's surplus fund and to recover the \$400,000 dividend alleged to have been wrongfully paid to the stockholders. The lower court held against him, the Circuit Court remanded the case for re-trial. This finding was appealed by the company to the Supreme Court, which reversed it by a divided vote—three to three, the Chief Justice not participating. Counsel for the plaintiff instituted proceedings before the Supreme Court for a rehearing, and in March last, some changes having taken place in the personnel of the Court meanwhile, that tribunal reversed itself and sent the case back to the Common Pleas Court for a new trial. That is the present status of the matter.

Briefly stated, the contention of the company is that its stockholders are entitled to all the profits made under non-participating policies. This fact is admitted by its adversaries. Under an article of the by-laws stockholders are entitled to a semi-annual dividend of five per cent on the paid-up capital and also to "the profits derived from policies issued without profits to the policyholders." But the contestants raised two

## DUTCH BULBS

From  
Now  
Until  
July 1st  
—Not  
Later

Hyacinths, Tulips, Narcissi, Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden, from earliest spring until the middle of May. Bulbs are grown almost exclusively in Holland, in enormous

quantities, and sold at very low prices. Usually they cost double before reaching you.

By ordering from us now instead of waiting until Fall, you make a large saving, get a superior quality of Bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import Bulbs to order only. They need not be paid for until after delivery, nor taken if not satisfactory. (References required from new customers.) For prices on smaller quantities see our import price list, the most comprehensive catalogue of Bulbs published, may be had for the asking.

A FEW PRICES	Per 100	Per 500
Fine Mixed Hyacinths	\$2 90	\$14 00
Fine Mixed Tulips	70	3 25
Narcissus Poeticus Ornatus	75	3 50
Double Daffodils	1 90	8 75

Secretary - A. H. Conger

important points against this: one, to the effect that there had been no profits under the non-participating policies; that, on the contrary, there had been a loss, which was borne by the surplus funds of participating policyholders; and, second, that if there were profits, the history of the company warranted the belief that the stockholders never intended to claim them. In support of this view it was shown that during forty years no claim for such profits was made, that no account was kept of the results under non-participating policies, and that, therefore, the management of the company did not know whether that business had been conducted at a profit or a loss.

As the result of testimony taken in 1906 before a committee of the Wisconsin Legislature that committee reported that the non-participating business of the company from 1892 to 1905 showed a loss of \$95,000. Answering this, the company alleged that the profits from that class of policies up to 1892 was \$209,000 and that from organization to 1907 there was an aggregate profit of \$779,788. It is out of this sum that the \$400,000 dividend was paid under the authority of the by-law cited.

Another ground of opposition to the dividend presented by the company's critics was founded on a by-law providing that the amount of the capital stock, authorized at the sum of \$500,000, should be limited to \$100,000 until otherwise determined by the vote of the holders of a majority of the stock. The holders of the majority stock did vote to increase the capital to \$500,000, but it is contended by the company's critics that as the best interests of the company required no such action and it was solely in the interests of the stockholders, it was indefensible. This view of the matter is incontrovertible. Without cost to themselves, the value of the stockholders' capital interests was instantly multiplied five-fold, with a corresponding increase in their annual dividend earnings.

To conclude, if the stockholders are justly and equitably entitled to the \$400,000 dividend, it were better they took it in cash rather than leave it to draw interest at ten per cent a year, in view of the fact that the company's best interests require no capital whatever.

W. W. E., Afton, Okla.—Your inquiry number one relates to a corporation of which I have no knowledge. Replying to your second question, the life company you name is good for the contracts it makes in its policies. There are companies which produce better results for policyholders.

I. H. W., Scranton, Pa.—It would be impracticable to print the insurance laws of any state here. Massachusetts justly deserves the prestige it enjoys in the connection cited because its insurance regulations are based on a scientific knowledge of the business and no effort is spared to make its insurance code as efficient an instrumentality in the interests of policyholders as possible. The companies, while held to strict accountability, are protected and encouraged, full recognition being given the principle that the interests of the companies and their policyholders are mutual. These conditions exist only approximately in most western and southern states.

Stained with Cabot's Creosote Stains, George Nuno's, architect, N. Y.

## Stain Your Shingles

## Cabot's Creosote Stains

The colors are soft, rich and transparent, and bring out the beauty of the grain instead of covering it up with a "painty" coating. The stains cost less than half as much as paint, and the labor cost of putting them on is also one-half less. They are made of the strongest and most lasting colors, and Creosote, "the best wood preservative known," which protects your woodwork from decay.

You can get Cabot's Stains all over the country. Send for stained wood samples and name of nearest agent.

**WANTED** Men to get members and establish lodges on commission basis for the OWLS, SOUTH BEND, INDIANA.

Autograph of Celebrities Bought and Sold. Send for price lists. Walter R. Benjamin, 225 5th Av., N.Y. ESTABLISHED 1887. Pub. "THE COLLECTOR," \$1 a year.

**GRAY MOTORS AND BOATS** 50 Leading Boat Builders have joined with the Gray Motor Company in issuing a catalog showing the specialties of each, which includes fishing launches complete from \$125 upward to mahogany finished express launches with Self-starting 6-Cylinder 4-Cycle Gray Motors for \$2500. Cruisers from \$450 up. This book helps you select just the model of boat you have been looking for and tells you where to buy it and what it will cost. Send for this big Boat Catalog today. Free. Also Gray Marine Engine Catalog showing full line of 2 and 4 cycle marine motors from \$50 upwards, one to six cylinders. Gray Motor Co., 356 Gray Motor Bldg., Detroit, Mich

# THE MOVING WORLD

## A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

### THE DARK CONTINENT ILLUMINED

We have had within the last three years many fine films of wild life in Africa, yet the supply of good material seems inexhaustible. The latest series, *Thru Central Africa*, presents but little that we have seen before and adds much of novel interest. In particular, it devotes more attention to the natives than previous African films, and the voyage down the Aruwimi River shows some remarkable feats of canoeing in the rapids. The native dances, the wrestling, the sham fights, the killing of a lion by spearsmen, the yawning of a twenty-six foot crocodile, the gathering of zebras, giraffes, wart-hogs, antelopes and baboons at the water holes and the prairie fire stampeding the game are some of the striking and instructive scenes. Nor are the insects neglected, for we have a close view of the safari, or caravan ants, with officers directing their march and superintending the removal of obstructions and the building of bridges.

The expedition was in charge of James Barnes and Cherry Keanton and under the auspices of the American Museum of Natural History in New York. During the year 1913-14 they traveled nearly 4000 miles, crossing the continent from Mombasa to Boma. The views have a timely interest just now, for the expedition passed thru the heart of the Belgian Kongo, which is one of the great prizes in the Great War.

### THE MIRACLE

This is a filmed version of a very old medieval legend. It tells the story of a nun who kept the keys of a convent. Forgetting her vows of poverty, chastity and obedience, she wanders forth into the world and is more or less soiled by the contact. Long before she has reached the dregs of the cup of worldly pleasure, her heart is melted by repentance and she desires to return and atone for her sins. She succeeds in escaping from a castle, whose lord had been fascinated by her beauty. Aided by a faithful old man who had seen her remorse and who had been touched by it, she reaches the gates of the convent prepared to do penance and hoping for forgiveness. The doors are opened to her and she beholds holding the keys of the convent a sister, whose resemblance to herself startles her into speechless wonder. Presently the strange sister speaks. She tells the erring one that

she is the Virgin Mary and that she has kept the keys of the convent faithfully and that no one has noticed her act of faithlessness. There is a flash of brilliant light and the Virgin disappears, leaving the sister filled with unspeakable gratitude and happiness.

It is easy to understand that a legend of this kind with its supernatural incidents and its miraculous turns lends itself most readily to screen adaptation. The "double exposure" makes visions appear most natural on the screen, while exteriors of splendid Gothic churches and the interiors of well-known Catholic shrines make the medieval atmosphere complete and convincing. The most painstaking attention to details in costume, dignity and power in acting and clear photography may be classed among the peculiar merits in this legend in film. The same subject has been treated by the well-known theatrical Belasco of Germany, Professor Max Reinhardt, and enjoyed a long run at Covent Garden, London. (*Continental Art Film Company, New York.*)

### THE ETERNAL CITY

If you abstract from a Hall Caine novel his glowing verbiage what is left? Nothing but a rather thin and melodramatic plot. But then if you put pictures in the place of words and present action instead of description you get something that has life again and will stand comparison with the original. We are particularly glad to see a Roman play that is not staged in Los Angeles. There's no faking the Coliseum or that stately ring of travertine columns which embraces the plaza of St. Peter's. The coöperation of the Bersaglieri and the Papal Guards add these picturesque features to the scenes. The London

views are also interesting. On the whole the admirers of Hall Caine will have no reason to be dissatisfied with the way his novel of revolutionary Rome has been filmed and they are numerous enough to keep any theater full. (*Famous Players Film Co.*)

### SOUTH AMERICAN GEOGRAPHY

Now that the attention of the tourist is being directed south we are glad to see that a complete tour of South America from Panama to Patagonia is to be given by the Paramount Pictures. There are few parts of the world that would provide material more picturesque or less known than Latin America and these films should do the double service of inciting Americans to travel there and of compensating those who cannot.

### BIRD LIFE IN SCOTLAND

These pictures are beautifully colored and reveal to the astonished eye of the spectator a series of intimate scenes of domestic or nest life of game birds, birds of prey and some water fowl. No matter what it may have cost in time and patience to approach these wild birds and recording at close range the doings in their nests, the effort has been well repaid. All of the scenes are really touching. In one scene we see a Merlin (a species of hawk) feeding her young and then covering them with her wings. In another scene we see a peculiarly marked species of crow, standing on a rock in a swift flowing river and getting ready to fly. This scene in particular was taken at very close range and has singular charm. In another scene the shyest of game birds, the woodcock, walks right into the camera as if trained and busies itself with her eggs and her nest. One scene shows a very pretty and shy bird, the gray goose of North Scotland. The camera has caught this bird setting on her nest, examining her eggs with comic solemnity and waddling away into the bulrushes after she has convinced herself that everything is in good order. (*Pathé, New York.*)

BEHEMAS WHO GRIN FOR THE MOVIES IN "THRU CENTRAL AFRICA"

The University of Kansas has established a motion picture exchange by which films of educational value are sent to school principals in all parts of the state with no expense to them except for express charges. They are exhibited to pupils and public either in the school or the local theater. Among the films are demonstrations of industrial processes and new methods of agriculture.

## CANADIANS ARE ALSO AMERICANS

Readers of The Independent will be greatly interested in the following leading editorial, which appeared in the *Globe* of Toronto on the 1st of May. The *Globe* is, perhaps, the leading daily newspaper in Canada, and its editor, Mr. J. A. Macdonald, is widely known in this country, both for his writings and thru his impressive public utterances:

"We, too, are Americans!" exclaimed the Hon. George Brown at a great anti-slavery demonstration in Toronto on March 24, 1852. It was in protest against the Fugitive Slave Law. He had made a terrific arraignment of the despotism and the degradation of slavery, and of Canada's concern, tho a neutral, in its destruction. Here are a few of his sentences:

"What have we in Canada to do with American slavery? We have everything to do with it. It is a question of humanity. It is a question of Christianity. It is a barrier to the spread of liberal principles. We are alongside this great evil. Our people are affected by it. We are in the habit of calling the people of the United States 'the Americans'; but we, too, are Americans. On us as well as on them lies the duty of preserving the honor of the continent. On us as on them rests the noble trust of shielding free institutions from the reproach of modern tyrants."

This week The Independent comes to hand from New York with an editorial on "Canada Saved the Day." It tells last Sunday's story of "the greatest battle of the war raging in Flanders," and how the Canadians turned defeat into victory, and adds:

"Every American heart beat faster when the news was flashed across the ocean. The United States is neutral. But the United States will ever applaud the valor of men who are not afraid to die. And beyond all, the United States must applaud the heroism of Canada. Canada is our kith and kin. Canada is our neighbor. For a hundred years neither cannon nor fort has frowned over the 3,000 miles of frontier between us. We have shown the world the way of peace and disarmament. In this supreme and solemn hour of victory, when the blood of her sons reddens like the maple leaf the clay of Belgium, we realize more than ever that Canada's heritage and civilization are ours also. Canadians are Americans."

George Brown in the *Globe* in 1852 and Hamilton Holt in The Independent in 1915 held the great North American idea of internationalism, and rejoiced in the imperishable Anglo-American heritage, not for America alone, but for all the world. Then as now the bonds of spiritual affinity in the cause of civilization and freedom were seen in the lurid light of a war in which one was belligerent and the other neutral. But in the conflict of ideas there can be no neutrality.

"We, too, are Americans," exclaimed the Canadian publicist. "Canadians are Americans" answers the New York editor.

## CRUMBS SWEPT UP

On the first day of "clean-up week" in Kansas City more than five hundred wagon-loads of rubbish, in addition to the usual quantity, were taken to the public dumps.

One of the first acts of the newly created office of Budget Commissioner of Ohio was to recommend shorter sessions of the Legislature, saying that it costs the state \$269 for each law made, a sum exceeded in only New York and Illinois.

The Western Union Telegraph Company has offered to install instruments in Sing Sing and teach telegraphy to prisoners, with a view to giving them employment as their terms expire.

Authority has been granted to the Memphis Railway, Bridge and Terminal Company to issue \$7,500,000 of five per cent bonds for the building of a bridge across the Mississippi River at Memphis.

The Kansas Legislature has set apart the school day nearest to September 28 (Frances E. Willard's birthday) of each year for teaching public school children the history of and benefits derived from the prohibitory liquor laws of the state.

A report recently issued by the State Board of Agriculture shows that Kansas farm products amount to more than \$300,000,000 a year, with only a little more than one-third of the state's area under cultivation.

At the public auction sales of school lands in South Dakota prices are running unexpectedly high. In the eight counties from which we have had reports the average price was nearly \$70 an acre.

It is feared that, unless a special session of the West Virginia Legislature is called and makes necessary appropriations, the militia of the state will have to be disbanded.

An organized swindle which has been costing Pennsylvania from \$50,000 to \$75,000 a year has been discovered by the State Game Commission. The swindlers have been turning in to country justices in several counties common ratskins, representing them as weazelskins, and collecting the \$2 state bounty on each.

In the University of Illinois, which enrolls 6004 students, the proportion of men to women is 3.5 to 1. The leading three departments in numbers of students registered are: Liberal arts and sciences, 1854; engineering, 1213; agriculture, 1171.

The Wisconsin Legislature has passed the anti-tipping bill over the Governor's veto. It prohibits the offering of a gratuity by any patron of hotel, restaurant, barber shop, or public service corporation.

Four Massachusetts manufacturing companies are filling a Russian Government order for 4,000,000 pairs of army boots and shoes at the rate of 15,000 pairs a day. This order is giving employment to more than 2000 workers. The contract price of the product will be \$14,340,000.

Governor Henderson of Alabama has named the first Monday in June "Illiteracy Day," and asks that every lettered person in the state lay aside private affairs and devote the entire day to "the stupendous task" of removing illiteracy from the South.

Dr. Joseph Y. Porter, State Health Officer of Florida, estimates that there are 20,000 persons in that state suffering from tuberculosis. A determined effort is making to eradicate the disease.

A New York pear grower lost his entire crop one year thru the ravages of insects. That fall he hung suet in the trees, and winter birds, mostly nut-hatches, thus attracted, made their nests there. The next year he gathered an extraordinarily large crop, with scarcely a worm-hole in the fruit.

On "Mothers' Day" the Baltimore & Ohio Railroad Company, in accordance with its annual custom, furnished each of its 60,000 employees and every passenger on its 5000 miles of line with a white carnation, to be worn as a tribute to mothers.

# The Greatest Health Resort in the World

---

PEOPLE who travel frequently in Europe, visiting all its spas and watering places and thus coming to know all the famous health resorts of the world say that the most complete equipment in existence for locating human ills and relieving them is in Battle Creek, Michigan.

Days, weeks or months are not enough for the selection of scientific apparatus and equipment for finding the cause of human suffering and ministering to its relief.

Such selection requires years—years of experience—years of experimenting—years of actual practice. Every method—every instrument—every formula—every process—needs to be carefully tested and tried out and the results produced must be carefully watched and compared before the treatment is safe to be included as effective in any remedial system.

The Battle Creek Sanitarium was founded nearly fifty years ago. For almost half a century, a staff of physicians and laboratory experts have been studying, observing, experimenting, discovering, selecting, applying and testing out methods. The result is, that gathered together in this one place, under one thoroughly well organized control is the most complete and effective, modern, scientific equipment in existence for locating the causes of human suffering and relieving it. Nowhere else in the world can you find assembled in one place all the equipment, apparatus and facilities which are to be found at the Battle Creek Sanitarium.

The staff of specially educated physicians (nearly forty in number and many of them specialists of world-wide note) and their scientifically trained assistants—dietitians, masseurs, nurses and others—include in their capabilities nearly every demonstratedly successful method of getting at the causes of physical and nervous irregularities and applying to them correct scientific remedial agencies.

People suffering with ailments requiring a special diet for their arrest and relief, find in effect here methods of selecting foods which will enable them to eat heartily, satisfyingly and enjoyably without danger of discomfort afterward.

People who are suffering from overtaxed strength, worry, exhaustion or other forms of nervous or physical breakdown, find here the atmosphere, conditions, facilities, and surroundings which en-

able them to regain strength and vigor in the shortest possible time and with least possible effort because methods employed to relieve such cases are thoroughly scientific.

The plant of the Battle Creek Sanitarium includes over thirty buildings. Accommodations for guests and patients range from those of the most modern and up-to-date hotel to the quiet of a homelike cottage.

The grounds include many acres of gardens, lawns and shrubbery. Serious and surgical cases are cared for in our up-to-date Hospital well removed from all other buildings of the Sanitarium.

The delightful social life of the place may be indulged in if desired, but those seeking only rest and quiet find themselves carefully guarded from all disturbance.

Guests may live here very luxuriously or very modestly, whichever they prefer.

Excellent accommodations are well within reach of the limited pocket-book.

Full particulars, with rates for accommodations, may be secured by writing to 504 Administration Building, Battle Creek Sanitarium, Battle Creek, Mich.

A large, fully illustrated book of the Sanitarium is sent FREE upon request.

## *Easily Reached.*

Battle Creek is a regular stop for all through express trains between New York and Chicago over the Michigan Central route of the New York Central Lines and for all trains between Chicago and Detroit over the Michigan Central and Grand Trunk routes.

You may leave New York City at five o'clock in the afternoon on the "Wolverine" (one of the finest trains out of Grand Central Station) arriving in Battle Creek the next morning at ten o'clock—just after breakfast.

You may leave Detroit at almost any hour of the day and arrive in Battle Creek in from two and a half to three hours, depending upon the speed of the train.

You may leave Chicago at intervals of about every two hours, arriving in Battle Creek within four hours afterward.

Arriving in Battle Creek, you are met at the station by a luxurious limousine which takes you directly to the Sanitarium in a few minutes.

SPOKESMAN, LEADER, COMMANDER-IN-CHIEF

## AMERICAN RIGHTS ON THE HIGH SEAS

**I**N the note to Germany the voice of the American nation is heard in no uncertain tones. The note, in accordance with diplomatic custom, is signed with the name of the Secretary of State; it is no secret that it was composed by the President himself. But in its clear and vigorous pronouncements, it is neither the one official nor the other that speaks—it is the American people.

We print the note in full on another page. For it must become an historical document. It is the first formal attempt to place in true perspective the rights of neutral travelers upon the high seas under the new conditions of maritime warfare established by the invention and development of the sea-going submarine.

The note is clear: nothing but wilfulness could misunderstand its meaning. It is courteous: no less so because its courtesy has a razor edge. It is irresistible in its logic: the case is proved to the hilt. It is restrained: it breathes no threat, imputes no motive. It is firm: there is no room for question that the will and the power of the American nation reënforce its determination.

The case which the note sets forth is, in briefest form, and largely in the language of the note itself, this:

American citizens act within their indisputable rights in taking their ships, and in traveling, wherever their legitimate business calls them upon the high seas.

The lives of non-combatants, whether they be of neutral citizenship or citizens of one of the nations at war, cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unarmed merchantman of any nationality.

It has been shown by the events of the past few weeks that it is a practical impossibility to employ submarines in the destruction of commerce without disregarding these fundamental principles.

The officers of a submarine cannot practically visit a merchantman at sea and examine her papers and cargo.

The submarine cannot practically make a prize of her and take or send her into port.

It cannot sink her without leaving her crew and all on board of her to the mercy of the sea in her small boats.

Because of the limitations of the submarine, therefore, it is manifestly impossible to use it against merchantmen without an inevitable violation of many sacred principles of justice and humanity.

For these reasons, the American Government confi-

dently expects that the Imperial German Government will disavow the acts of its naval authorities in the case of the "Falaba," the "Cushing," the "Gulflight" and the "Lusitania," will make reparation, so far as reparation is possible for injuries which are without measure, and will take immediate steps to prevent the recurrence of similar acts subversive of the accepted principles of warfare.

There is no escape for Germany from the conclusions of the American note. Because the capital ships of its navy are kept in harbor by the menace of the Allied fleets Germany has found it impossible to war against the merchant shipping of her enemies except with submarines. Because of the limitations of the submarine—its vulnerability, the narrowness of its accommodations and the smallness of its crew—it has been found impracticable for it to deal with a merchant ship in conformity with the universally accepted rules of maritime warfare. Therefore Germany has taken it upon itself to change the rules. By so doing it has assumed the prerogative of violating at will the indisputable rights of neutral citizens.

Germany now knows that the American nation, the greatest of the neutral powers, will not countenance or submit to such ruthless violations of the rights of its citizens. It is now for Germany to choose. The President of the United States has behind him the unanimous approval of a united nation. With calmness and deliberation, without haste or heat, he has pointed out to the German nation the way that it must go if it is still desirous of preserving the relations of perfect harmony and undoubted friendship so long maintained with the American people. Germany must forsake its illegal and unrighteous warfare upon non-combatants upon the high seas, must return to an honorable observance of the rules of maritime warfare unquestioned among civilized peoples. Only "prompt and enlightened action in this vital matter" will satisfy the Government and people of the United States.

This nation is not prepared "to omit any word or any act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens, and of safeguarding their free exercise and enjoyment."

Secure in the justice of its cause, confident in the righteousness of its demands, the American people awaits with high hope but with unflinching determination the word and the deed of Germany.

## A TASK FOR THE THIRTY-FIVE NEUTRALS

**T**HE sinking of the "Lusitania" is militarism at its worst. It simply means that in war all laws, even moral ones, are abrogated, or as Livy express it, *Inter arma leges silent*. To the American people it should be the final and conclusive demonstration of what war inevitably leads to.

The question at issue between Germany and the United States does not involve our national honor. Even if it does we ought never go to war for national honor alone, any more than we should kill a man who insults us on the street.

The fundamental question is this: Has Germany the

right to change the common law of nations without the consent of the rest? If she has then one nation can exercise supreme legislative authority over the rest of the world—a pretension which no sovereign nation will for a moment tolerate. That raises the most serious question that has confronted the American people since the Civil War. In view of this President Wilson should forthwith call a conference of the thirty-five neutral nations at Washington, to sit in continuous session until the war is over.

It is of supreme importance that the conference be called immediately, and if possible before Germany re-

plies to our note. Of course, if Germany accedes to our demands that one situation is cleared up. The conference can then take up the larger questions arising out of the war, such as the rights and duties of neutrals, the terms of peace and the basis of a lasting peace. The Independent made this suggestion the week the war broke out and it is essentially the same plan as proposed by the Chicago Peace Conference of last February, and of the International Woman's Congress held at The Hague the end of April.

If Germany refuses, however, to make reparation for the loss of lives and property destroyed on the high seas in contravention of international law and morality, and to give pledges against the recurrence of these outrages, then there is likely to be a white hot demand from various influential sections of the American people for war. Just how great that will be nobody of course can predict. If then the conference of the neutrals has been called, the United States Government can refuse to precipitate its action until the whole matter is laid before the neutrals for consideration and joint action.

This will accomplish two great purposes.

First. It will give time for reason to reassert itself. Certainly the American people should never resort to war to combat the evils of militarism unless in absolute calmness and as a last resort.

Second. It will raise the issue from a personal quarrel between two nations to the plane of international law and morality.

Assuming the conference will consider the issue, it would then either come to some agreement as to the course of action to be pursued or not. If not then the case would be just where it was before. But time would have elapsed, and whatever action the United States then found it necessary to take would be taken in the light of reason and only because all else had failed.

It is more than likely, however, that the conference would come to a substantial agreement as to what course to take. And if in the meantime Germany had not come to her senses or made some acceptable counter-proposals, the neutral nations would doubtless not find insuperable difficulties in agreeing to put economic pressure upon her and that would injure her far more than the use of force.

For if Germany was made an outlaw nation and the neutrals ceased all intercourse with her, that would put a ring around her that would very nearly strangle her. Even if Germany should declare war on all the neutrals in retaliation, it would make no especial difference.

If the United States, however, does not call such a conference of the neutrals and attempts to settle her dispute with Germany alone, we may be at war with her before we know it. It is not impossible that such an eventuality would be not entirely distasteful to Germany. For we could not do her the slightest harm in a military sense for six months, and in the meantime we would be raising and equipping an army of one million or more soldiers, who would require the product of all our ammunition factories for their equipment and supply. The cutting off of the export of ammunition to the Allies at this moment might weaken them much more now than the support of a United States army would aid them later.

There can never be objection to exerting economic or physical force to uphold international law agreed upon by nations in convention assembled. But for one nation

to use force against another unless first attacked, or until after diplomacy, mediation, commissions of inquiry, arbitration and economic pressure have failed is generally unjust and frequently tyrannous, for a litigant is seldom the best judge of the justice of its own contentions.

Let President Wilson, then, call immediately all the thirty-five neutral nations together. It is worth noting that should they act in concert they would hold the balance of power in men and warships between the two groups of belligerents. If we wait until the United States becomes involved it may then be too late.

## THE BRYCE REPORT ON GERMAN OUTRAGES

NOTHING quite like the "Report of the Committee on Alleged German Outrages Appointed by His Britannic Majesty's Government and Presided Over by the Right Hon. Viscount Bryce, O. M., Formerly British Ambassador at Washington," has been given to the public in any generation.

The Assyrians, if we may believe their own record of "frightfulness," were guilty of wickedness as unspeakable as the cruelties that have been reported upon in Belgian, French and English official papers. But perhaps none of the nations that suffered at the hands of Assyria took the trouble to make an official inquiry upon specific instances of atrocity; and since Assyria was put out of business by the growing power of civilized peoples that did not find it necessary to terrify the world by skinning non-combatants alive, there have been no facts to report comparable to the hideous array now passed upon by the as judicially minded and otherwise intellectually competent board of inquiry as could have been picked for such a task from the English-speaking people of the world.

Address in fact to the neutral nations, as in form to the first Lord of His Majesty's Treasury, this report will have its widest circulation and its profoundest influence in America. Viscount Bryce, Sir Frederick Pollock and Mr. H. A. L. Fisher are known here personally to a wide circle of our most thoughtful citizens, and generally thru printed works that have had an almost unexampled circulation. The other members of the commission—Sir Edward Clarke, Sir Alfred Hopkinson and Mr. Harold Cox—are gentlemen in all ways qualified to share with Viscount Bryce and Sir Frederick Pollock in so responsible a task. Their findings will be accepted by the open-minded as the closest approximation to the truth of history that is humanly possible. No one who values his own reputation for intellectual integrity and moral sobriety will henceforth deny that the charge of wanton inhumanity—monstrous, ingenious, unsparing—has been proven against the ravagers of Belgium and the invaders of France. In village after village non-combatants by hundreds, without discrimination of age or sex, have been put to death, often with fiendish torture, without so much as the shadow of evidence of any guilt to condemn them; little children and the aged have been butchered like cattle in shambles; women of every age from young girlhood up have been ravished.

In all centuries outrages have been an incident of war, and no nation has been guiltless. This humiliating fact admitted has no bearing upon the present case against the German Government. For, as Viscount Bryce

rightly insists, the overshadowing fact among all the data here presented is the amazing evidence that the atrocities reviewed have been committed in pursuance of a deliberate policy planned and executed by the German Government. It has not been a case of soldiers "getting out of hand." The deeds of which they are convicted have been committed under orders, direction and supervision. This is the crowning infamy.

The impression that this report will leave upon the minds of men will not be a phenomenon of a day, or of a generation. It will sink deep and deeper as years go by. Things occur in human history that never are, never can be, effaced. Ages from now, the bitterness of conflict will be forgotten and forgiveness will have healed the minds of the warring nations. But never, so long as language is used, can Germany obliterate the branding cipher that she has written into her own great name. So long as words are spoken, "German" will awaken the emotions of abhorrence and of infinite regret that are awakened by "Assyrian" and "Hun."

#### AN UNFORTUNATE LETTER

SECRETARY BRYAN has been in conference with Sex-Governor Fort and our Minister to Hayti about the failure of the Fort Commission to convince Hayti's President that his country's interests would be served by the establishment of such a fiscal protectorate as has existed for several years, by treaty agreement, in Santo Domingo. That failure was unfortunate and even deplorable. If the proposed agreement had been reached, the United States would have had a naval base at the port of Mole St. Nicholas, near the path of four-fifths of the Panama Canal traffic, and Hayti, with her customs receipts under guard, might have escaped the torment of chronic revolution. Her immediate necessities would have been satisfied by a New York loan, and eventually her debts would have been paid.

But her Government turned away from the Fort Commission and sought the aid of France. This was promptly given, with a loan and that formal recognition of the new President which the Government at Washington had withheld. Germany and Italy hastened to join France in the expression of international courtesy which gave European powers a dominating influence in the republic.

Has it ever occurred to Mr. Bryan that this rejection of our Government's proposition may have been due to the memorable letter which he sent to Mr. Vick, the American Receiver of Customs in Santo Domingo, and to the character of our recent diplomatic representation in the adjoining republic of Santo Domingo? We quote once more a part of that letter, which was published during the investigation of charges against Minister Sullivan:

Can you let me know what positions you have at your disposal with which to reward deserving Democrats? Whenever you desire a suggestion from me, in regard to a man for any place there, call on me. You have had enough experience in politics to know how valuable workers are when the campaign is on, and how difficult it is to find suitable rewards for all the deserving.

Mr. Vick removed none of his fourteen faithful and competent American subordinates—whose salaries were paid by the Dominican Government—but after his resignation several of them were displaced by men from Mr. Bryan's state.

Is it not conceivable that disgust and hostility excited by this indication of our State Department's policy concerning the administration of fiscal protectorates led Hayti's President to turn his back to the Fort Commission and look for help elsewhere?

#### THE WAR PARTY IN AUSTRALIA

THE victory of the Laborites in the recent elections in the state of South Australia shows a political alignment which seems strange to those of other lands. In the United States and England the labor unions have been decidedly anti-militaristic. In France they had before the war become so pacifistic as to advocate a general strike and mutiny on the outbreak of hostilities, tho when the time came they abandoned these ideals and rallied to the support of the Government.

But in Australia the Labor party is regarded as the military party because it has been most urgent in advocating the creation of an Australian army and navy. It was a Labor Government that in 1911 put into effect the defense scheme drawn up by Lord Kitchener and imposed a system of compulsory military training upon all of the boys and young men of the commonwealth from the age of thirteen to the age of twenty-six. When the war broke out last August an electoral campaign was in progress, and it seemed likely that the Liberal party would be returned to power in the federal parliament. But the war changed the aspect of affairs. The people felt that this was no time to entrust the government to a party suspected of lukewarmness in the national defense, or at least of a reluctance to spend money for that purpose, so the election went strongly Labor, and now Mr. Fisher as Premier and Mr. Pearce as Minister of Defense are in charge of the Commonwealth Government and the forces trained under the system they established four years ago are being employed in the attack on Constantinople. The Liberal party is now quite as patriotic as the Labor, and Australians of all classes and politics have rallied enthusiastically to the defense of the Empire.

#### OUR BARGAIN IN ALASKA

UNCLE SAM has enough Yankee blood in him to be shrewd at a bargain, but he never made a better one than in 1867, when he bought Alaska for \$7,200,000. But how the people laughed at "Seward's Folly." How Congress scolded at the waste of public money in the purchase of icebergs. The price was at that time generally regarded as so excessive that it has since been surmised that it was intended partly as a recompense for the visit of the Russian fleet to Boston just at the moment when England seemed likely to espouse the cause of the Confederacy.

But Alaska has paid for itself seventy times over. It has given to the world more than half a billion dollars' worth of natural products and its stores are by no means exhausted. The timid suggestion that Alaskan streams had been reported to show "color" was made the target of some of the brightest wits on the floor of Congress. But we have taken out of Alaska since then \$250,000,000 worth of gold besides some other items worth mentioning, such as, fish, \$183,000,000; seal skins, \$65,000,000, and copper, \$20,000,000.

President Roosevelt was doubtless oversanguine when

he prophesied that Alaska would in a few years from this time have a population equal to Norway. The population is in fact not increasing, but the 65,000 people who live there, natives and whites, taken together, buy more goods from the United States than the 336,000,000 of China. So even tho we should be shut out of Chinese

markets by our commercial rivals we have some "home markets" of our own which we can develop in Alaska, the Philippines and the West Indies. The experience of Uncle Sam confirms the common saying that real estate anywhere—except town lots—is a safe investment in the long run.

## THE FULL TEXT OF THE NOTE TO GERMANY

In view of the recent acts of the German authorities in violation of American rights on the high seas, which culminated in the torpedoing and sinking of the British steamship "Lusitania" on May 7, 1915, by which over one hundred American citizens lost their lives, it is clearly wise and desirable that the Government of the United States and the Imperial German Government should come to a clear and full understanding as to the grave situation which has resulted.

The sinking of the British passenger steamer "Falaba" by a German submarine on March 28, thru which Leon C. Thrasher, an American citizen, was drowned; the attack on April 28 on the American vessel "Cushing" by a German aeroplane; the torpedoing on May 1 of the American vessel "Gulflight" by a German submarine, as a result of which two or more American citizens met their death, and, finally, the torpedoing and sinking of the steamship "Lusitania," constitute a series of events which the Government of the United States has observed with growing concern, distress and amazement.

Recalling the humane and enlightened attitude hitherto assumed by the Imperial German Government in matters of international right, and particularly with regard to the freedom of the seas; having learned to recognize the German views and the German influence in the field of international obligation as always engaged upon the side of justice and humanity; and having understood the instructions of the Imperial German Government to its naval commanders to be upon the same plane of humane action prescribed by the naval codes of other nations, the Government of the United States was loath to believe—it cannot now bring itself to believe—that these acts, so absolutely contrary to the rules, the practises and the spirit of modern warfare, could have the countenance or sanction of that great Government. It feels it to be its duty, therefore, to address the Imperial German Government concerning them with utmost frankness and in the earnest hope that it may not be mistaken in expecting action on the part of the Imperial German Government which will correct the unfortunate impressions which have been created and vindicate once more the position of that Government with regard to the sacred freedom of the seas.

The Government of the United States has been apprised that the Imperial German Government considered themselves to be obliged by the extraordinary circumstances of the present war and the measures adopted by their adversaries in seeking to cut Germany off from all commerce, to adopt methods of retaliation which go much beyond the ordinary methods of warfare at sea, in the proclamation of a war zone from which they have warned neutral ships to keep away. This Government has already taken occasion to inform the Imperial German Government that it cannot admit the adoption of such measures or such a warning of danger to operate as in any degree an abbreviation of the rights of Amer-

ican shipmasters or American citizens bound on lawful errands as passengers on merchant ships of belligerent nations; and that it must hold the Imperial German Government to a strict accountability for any infringement of those rights, intentional or accidental. It does not understand the Imperial German Government to question those rights. It assumes, on the contrary, that the Imperial German Government accept, as of course, the rule that the lives of non-combatants, whether they be of neutral citizenship or citizens of one of the nations at war, cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unarmed merchantman, and recognize also, as all other nations do, the obligation to take the usual precaution of visit and search to ascertain whether a suspected merchantman is in fact of belligerent nationality or is in fact carrying contraband of war under a neutral flag.

The Government of the United States, therefore, desires to call the attention of the Imperial German Government with the utmost earnestness to the fact that the objection to their present method of attack against trade of their enemies lies in the practical impossibility of employing submarines in the destruction of commerce without disregarding those rules of fairness, reason, justice and humanity which all modern opinion regards as imperative. It is practically impossible for the officers of a submarine to visit a merchantman at sea and examine her papers and cargo. It is practically impossible for them to make a prize of her; they cannot sink her without leaving her crew and all on board of her to the mercy of the sea in her small boats. These facts, it is understood, the Imperial German Government admit. We are informed that in the instances of which we have spoken time enough for even that poor measure of safety was not given, and in at least two of the cases cited not so much as a warning was received. Manifestly the submarine cannot be used against merchantmen, as the last few weeks have shown, without an inevitable violation of many sacred principles of justice and humanity.

American citizens act within their indisputable rights in taking their ships and in traveling wherever their legitimate business calls them upon the high seas, and exercise those rights in what should be the well-justified confidence that their lives will not be endangered by acts done in clear violation of universally acknowledged international obligations, and certainly in the confidence that their own Government will sustain them in the exercise of their rights.

There was recently published in the newspapers of the United States, I regret to inform the Imperial German Government, a formal warning, purporting to come from the Imperial German Embassy at Washington, addressed to the people of the United States, and stating, in effect, that any citizen of the United States who exercised his right of free travel upon the seas would do so at his peril if his journey should take him within the zone waters within which the Impe-

rial German Navy was using submarines against the commerce of Great Britain and France, notwithstanding the respectful but very earnest protest of his government, the Government of the United States. I do not refer to this for the purpose of calling the attention of the Imperial German Government at this time to the surprising irregularity of a communication from the Imperial German Embassy at Washington addressed to the people of the United States thru the newspapers, but only for the purpose of pointing out that no warning that an unlawful and inhumane act will be committed can possibly be accepted as an excuse or palliation for that act or as an abatement of the responsibility for its commission.

Long acquainted as this Government has been with the character of the Imperial Government and with the high principles of equity by which they have in the past been actuated and guided, the Government of the United States cannot believe that the commanders of the vessels which committed these acts of lawlessness did so except under a misapprehension of the orders issued by the Imperial German naval authorities. It takes it for granted that, at least within the practical possibilities of every such case, the commanders even of submarines were expected to do nothing that would involve the lives of non-combatants or the safety of neutral ships, even at the cost of failing of their object of capture or destruction. It confidently expects, therefore, that the Imperial German Government will disavow the acts of which the Government of the United States complains, that they will make reparation, so far as reparation is possible for injuries which are without measure, and that they will take immediate steps to prevent the recurrence of anything so obviously subversive of the principles of warfare for which the Imperial German Government have in the past so wisely and so firmly contended.

The Government and people of the United States look to the Imperial German Government for just, prompt and enlightened action in this vital matter with the greater confidence because the United States and Germany are bound together not only by special ties of friendship, but also by the explicit stipulations of the Treaty of 1828 between the United States and the Kingdom of Prussia.

Expressions of regret and offers of reparation in the case of the destruction of neutral ships sunk by mistake, while they may satisfy international obligations, if no loss of life results, cannot justify or excuse a practise the natural and necessary effect of which is to subject the neutral nations and neutral persons to new and immeasurable risks.

The Imperial German Government will not expect the Government of the United States to omit any word or any act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and of safeguarding their free exercise and enjoyment.

(Signed) BRYAN.

May 13, 1915.

# THE STORY OF THE WEEK

## The "Lusitania" Case

The note of President Wilson, which we publish in full, is received both in this country and in England with general satisfaction and is regarded as an able diplomatic document. The *Westminster Gazette*, for instance, says that the American note to Germany is "the greatest event of this war from all humane and moral points of view. Nothing can be as before when the most powerful of neutrals has definitely taken its stand . . . on the common law of nations which requires that the life of non-combatants, whether neutral or belligerent, shall be respected in sea warfare."

On May 10 the German Government sent thru Count Bernstorff a message expressing "the deepest sympathy for the loss of lives," but maintaining that responsibility rested upon the British Government since Germany had offered to stop submarine warfare in case England abandoned her plan of starving the civilian population of Germany. The message concludes:

A recent declaration made to the British Parliament by the Parliamentary Secretary in answer to a question by Lord Charles Beresford said that at the present practically all British merchant vessels were armed and provided with hand grenades. . . . On the present voyage the "Lusitania" carried 5400 cases of ammunition, while the rest of her cargo also consisted chiefly of contraband.

If England, after repeated official and unofficial warnings, considered herself able to declare that that boat ran no risk and thus light-heartedly assumed responsibility for the human life on board a steamer which, owing to its armament and cargo was liable to destruction, the German Government, in spite of its heartfelt sympathy for the loss of American lives, cannot but regret that Americans felt more inclined to trust to English promises rather than to pay attention to the warnings from the German side.

The coroner's jury held at Kinsale, Ireland, rendered a verdict containing the following sentences:

We find that the appalling crime was committed contrary to international law and the conventions of all civilized nations.

We also charge the officers of said submarine and the Emperor and the Government of Germany, under whose orders they acted, with the crime of wholesale murder before the tribunal of the civilized world.

In his statement to the House of Commons Mr. Churchill, First Lord of the Admiralty, said that warnings as to the danger from submarines and directions as to her course had been conveyed to the "Lusi-

tania" by wireless from the Admiralty, and he added:

The shocking exception of the "Lusitania" should not divert the House of Commons and the country from the fact that Great Britain's entire seaport trade has been carried on without appreciable loss. The general principle regarding the providing an escort is that merchant traffic must look after itself, subject to the general arrangements of the Admiralty, and there is no reason to suppose that this principle is not entirely successful.

The captain of the German submarine which struck the "Lusitania" reported to Berlin that he fired only one torpedo at the ship. The second explosion reported by the survivors is laid to the large amount of ammunition carried by the liner.

## Russians Lose Jaroslav

The offensive of General von Mackensen in Galicia is meeting with amazing success. The Russians have been driven back from the Dunajec River to the San, a distance of a hundred miles. They have been altogether expelled from Hungary and the Carpathian Mountains. The Germans claim to have captured 143,500 Russian prisoners between May 2 and May 12, besides a hundred cannon, 350 machine

guns and immense quantities of supplies. Jaroslav, a fortified city on the San, north of Przemyśl, which the Russians took September 23, has been regained by the Austro-German forces. On the Polish side of the Vistula the Russians have been dislodged from their position back of the Nida River, where they had long been firmly entrenched.

It is no wonder that the Kaiser has bestowed upon General von Mackensen the Star and Cross of a Grand Commander of the Imperial House and Order of Hohenzollern. The campaign on the eastern side has been full of surprises but none more spectacular than this sudden reversal of fortunes in Galicia, which came just in the nick of time, for the Hungarians were alarmed over the invasion of their own land and the Rumanians and Italians were preparing to join the Allies.

The attention of the Russian leaders seems to have been absorbed in their struggle to gain the Carpathian passes and they failed to realize that the great mass of the Austro-German forces were not before them on the Hungarian plain but had been secretly concentrated on the Russian right before Cracow. Here

by the first of May must have been assembled over two hundred thousand men with a thousand guns and the wagons necessary for a rapid advance thru the mountainous region. The long range howitzers from the Austrian Skoda and the German Krupp works were placed in position close to the front and pontoons for bridges hidden in the marshes on the river bank. Most of these elaborate preparations must have been made by night, but that they were not observed proves that the Russian aeroplane service must be poor and that their intelligence department is not what we might expect in a land where there are so many fellow Slavs.

When everything was ready the eastward rush began and swept irresistibly forward between the Carpathian Mountains on the right and the Vistula River on the left. The capture of Sanok, Lisko and Jaroslav give the Teutonic allies the command of the right bank of the San River above Przemyśl, and the left bank below, so they are in a position to lay siege to that fortress. It remains to be seen whether the Russians have had time or taken the precautions to

## VISCOUNT BRYCE

The fact that James Bryce (whom Americans yet find it hard to speak or think of as Lord Bryce) stands at the head of the British Commission which has just made its astounding report upon German methods of war gives the report a peculiar stamp of authority for Americans

place the fortifications in a state of defense and provision it for another siege.

As a partial compensation for the ground they have lost in western Galicia the Russians have gained in eastern Galicia. The Austrians here have been driven back across the Dniester and the Pruth with heavy losses. The Russians also claim to have checked the German advance into the Baltic provinces.

#### French Gains Near Arras

Evidently the efforts of the Allies to break thru the German line are to be directed mainly against the part that lies between Arras in France and Ypres in Belgium. Success in this quarter would amount to outflanking the German right and would compel the invaders to fall back for a considerable distance in order to preserve their lines of communication with the fatherland. The northern part of this section is held by the British and the southern by the French. The British have delivered two blows at the German entrenchments. The first at Neuve Chapelle, north of La Bassée, where they gained a couple of miles tho at heavy cost. The second was at Hill 60, south of Ypres, which they were not able to hold. They have renewed the attack near Neuve Chapelle and carried the outer trenches for more than two miles.

Now the French have begun their advance in this quarter by an attack just north of Arras and about fifteen miles south of Neuve Chapelle, the British point of attack. By May 10 they had gained two and at some points three lines of German trenches for a stretch of over four miles. This includes the village of Carency, now of course in ruins, and some wooded hills to the north of it. During the winter the Germans had strengthened their position here until it resembled a fortress, and they defended it as stoutly as possible, literally "to the last man" at some points. In the wood of Hill 125 the French found the bodies of three companies of Germans annihilated by the artillery fire preceding the charge. Four thousand prisoners, many cannon and a large amount of ammunition fell into the hands of the French by the capture of Carency.

### CONCLUSIONS OF THE BRYCE COMMISSION

It is proved:

First—That there were in many parts of Belgium deliberate and systematically organized massacres of the civil population, accompanied by many isolated murders and other outrages.

Second—That in the conduct of the war generally innocent civilians, both men and women, were murdered in large numbers, women violated, and children murdered.

Third—That looting, house burning and the wanton destruction of property were ordered and countenanced by the officers of the German army; that elaborate provision had been made for systematic incendiarism at the very outbreak of the war, and that the burnings and destruction were frequent where no military necessity could be alleged, being indeed part of a system of general terrorization.

Fourth—That the rules and usages of war were frequently broken, particularly by the using of civilians, including women and children, as a shield for advancing forces exposed to fire, to a less degree by killing the wounded and prisoners, and in the frequent abuse of the Red Cross and the white flag.

We are, etc.,

BRYCE, F. POLLOCK, EDWARD  
CLARKE, KENELM E. DIG-  
BY, ALFRED HOPKINSON,  
H. A. L. FISHER, HAROLD  
COX.

Bryce report will be found on  
another page.*

#### The Attitude of Italy

The question whether Italy will remain neutral or enter the war on the side of the Allies still remains in doubt. Altho the air is filled with rumors pro and con, little information of significance is allowed to transpire. It appears that negotiations of some sort are still going on with Austria thru the intermediary of Prince von Bülow, former German Chancellor and now resident in Rome for that purpose. The only concession which the Emperor of Austria

appears willing to make is the lower part of the Trentino, and this is by no means sufficient to satisfy the Italians who demand the Tyrol as far north as Brenner Pass and also the Austrian ports of Trieste and Pola and the Hungarian port of Fiume.

The chief opponent to Italy's participation in the war is Giovanni Giolitti, former Premier and the most powerful politician in the kingdom. Altho he resigned the government two years ago he has been thought to have at his command a parliamentary majority and his refusal last week to support the war policy of the Premier forced the resignation of the Salandra ministry.

But as soon as Premier Salandra's resignation was announced riots broke out all over Italy. In Milan and in Rome crowds of 50,000 men and women gathered to demand war on Austria. Shouts of "Death to Giolitti!" were mingled with "Death to Francis Joseph!" and "Death to Kaiser Wilhelm!" The King asked Giuseppe Marcora, president of the Chamber of Deputies, to form a ministry, but he declined, as did also Paolo Carcano, former Minister of the Treasury. The popular demonstrations began to assume a revolutionary form and it was openly proclaimed on the streets that if the King did not reappoint the war minister the monarchy would be overthrown and a republic established to make war on Austria. Dante Garibaldi, who has been fighting in the French army, declared that the Garibaldi family would lead the people to the barricades if the government refused to go to war. In deference to this popular clamor Signor Salandra is to retain office at least until the meeting of Parliament on May 20.

The policy of Premier Salandra has been to get everything in readiness and then wait a favorable time to attack Austria. Twice recently the time seemed to have come and intervention was imminent, but before action was taken a change in the tide of war made it inopportune. Once was when the Russians occupied Bukovina as far as the Rumanian border and expected soon to cross the Carpathians into Hungary. But the Austrians drove the Russians out of Bukovina and have so far kept

#### BETWEEN RAIDS

This unusual photograph shows a German submarine of the type of that which sent the "Lusitania" to the bottom. They are the largest in the world, and might easily be mistaken, while on the surface, for torpedo boat destroyers. The submarine's tender, which serves as its base of operations, is just astern

them from entering Hungary in force. Rumania then postponed her project of invading Hungary and will probably not attempt it so long as it is uncertain whether Bulgaria on her other border will remain neutral or join the German side.

Then, again, when it was thought that the Allies would be in Constantinople "before Easter" the Italian Government became uneasy lest the Turkish Empire should be disrupted without regard to her interests. But the warships of the Allies have made slower progress up the Dardanelles than they anticipated, and there was no necessity for precipitate action on the part of Italy.

In the meantime preparations for a conflict are being completed on both sides of the frontier. The Trentino has been put under martial law and heavy guns placed in the batteries commanding the valleys thru which the Italians must pass on their way into the Austrian Tyrol. Trees and houses in the line of fire have been cleared away. On the other side of the boundary Italian troops have been lodged in the villages and farmhouses. The Italian fleet, headed by its five dreadnoughts, has been assembled in some unknown place under the command of the Duke of the Abruzzi. General Zupelli, the Italian Minister of War, authorizes the statement that he has 1,200,000 first line soldiers between twenty and twenty-six years of age now under arms and fully prepared for immediate action.

**A Portuguese Revolt** A serious insurrection has broken out in Portugal which seems likely to overthrow the Government. Both the causes and the course of events are obscure, but it seems that President Ariaga was suspected of conspiring to destroy the republic of which he is the head. He had permitted to return to the country and even restored to command Captain Couceiro, the Royalist leader, who has several times attempted an invasion of the country from Spain to restore the King. When King Manoel was deposed by the revolution he took refuge in England, where he has been treated with royal honors. The exiled King is desirous that Portu-

International News Service

#### SUBMARINES, TAKE NOTICE!

An American merchantman with the American flag painted on her side for the information of inquiring German submarines

gal should actively take part in the war on the side of the Allies and the recall of the Royalist officers was intended to lead to that. The Portuguese Government at the outset of the war confirmed its alliance with Great Britain, but on account of the opposition of the people, has confined its fighting to the defense of Angola against the Germans.

The present revolt, "for the restoration of a real republic," is supposed to have been instigated by Dr. Costa, who is said to have been assassinated. As in the former insurrection the navy is the most active agent and Lisbon has been bombarded by the warships on the Tagus as long as their ammunition lasted.

#### Anti-German Riots in Great Britain

The popular indignation at the sinking of the "Lusitania" excited attacks against Germans in various parts of the United Kingdom and of the British Empire. Beginning in Liverpool the disorder spread to London and other cities and wherever German names were visible the shops were looted or burned. The shops of German butchers and bakers in some quarters were visited by mobs of men and women

who carried away all the food and wrecked the buildings. The police force had been so much reduced as to be incapable of maintaining order, but the rioters who were arrested were given heavy sentences by the courts. Among the victims of the indiscriminate wrath of the populace are some men of German birth or ancestry who have long been British subjects and have sons fighting in the British army. All sorts of rumors are current and widely credited, for instance, that the Germans in England were starting fires, poisoning wells and spreading disease germs.

In Canada and other British dominions similar outbreaks are reported, the most serious being in Johannesburg, where warehouses filled with goods were set on fire and allowed to burn down. It is estimated that the value of property destroyed in South Africa by the anti-German mobs amounts to several million dollars.

In response to the popular demand that all alien enemies, male or female, be interned, the Government has decided to intern at least all males of military age, that is, between seventeen and fifty-five. This will mean that the number now in the internment camps, 19,000, will be doubled.

#### For a World Court

Many notable addresses were made at the World Court Congress, which was in session for three days at Cleveland last week. The aim of this congress is to cause the establishment of an international court of justice by agreement of the nations and thus to prevent war, or, at least, as the chairman, John Hays Hammond, said, to minimize the possibilities of it. Ex-President Taft explained the plan. There should be an arbitral court with jurisdiction over all disputes of a justiciable character, and a committee of conciliation to consider non-justiciable controversies. Occasional conferences should lead to agreements for additions to the provisions of international law. If one of the signatory nations should make war against another without first having submitted the grievance to the court or to the committee of conciliation, all the other parties to the court agreement should be bound to defend

International News Service

JACK ENJOYS A CLOSE PLAY AT THE POLO GROUNDS

forcibly the nation thus attacked. He regarded the project as a practical and feasible one, and found reasons for this opinion in the recent history of arbitration treaties. At the end of the present war the exhausted belligerents would be glad to consider a plan designed to prevent such conflicts in the future.

Judge Alton B. Parker urged that the American people should be led to make known their will as to the formation of such a league after the war. Bainbridge Colby said neutral nations should be asked now to make such an association. If only one should join the United States, there would be a good beginning. The merits of the plan were set forth by several other speakers. Among these were Henry Lane Wilson, Henry Clews—who, a Republican, warmly commended President Wilson for his efforts in behalf of peace—William Dudley Foulke, and Judge Woodmansee, who said that if such a league and court had existed a year ago, Austria would not have made her demands upon Serbia, and there would have been no Great War.

Chairman Hammond, who said many pledges of support had been received from influential men and organizations during the session, announced the appointment of the following committee to draw up a definite plan for a world court of justice: James Brown Scott, the Washington jurist; Theodore Marburg, formerly Minister to Belgium; Henry Lane Wilson, formerly Ambassador to Mexico; Bainbridge Colby; Judge Woodmansee, of Cincinnati; Prof. Jeremiah W. Jenks, and Mr. Hammond. A resolution was adopted, continuing the committee of one hundred which planned the congress, and which will strive to procure action by our Government in support of the project for a world court.

**Orders for War Supplies** Many reports about new orders for war supplies have been published. Russia, which made contracts for railroad material some time ago, has now ordered 2000 freight cars from the Canadian company which received her order for \$83,000,000 worth of shrapnel, and 2000 more from another company, with \$750,000 worth of car axles from the Cambria Steel Works. Russia is also negotiating for rails and bridge steel. Her railroads have suffered on account of the war, and extensive improvements on the Trans-Siberian line have been planned. Supplies of many kinds procured in this country, heavy guns included, are carried to the Russian battle front by way of this line and Vladivostock. Russia is about to close a contract with three manufacturers in Massachusetts for 2,000,000 pairs of boots.

Orders for 5,000,000 shrapnel shells, for which nearly \$70,000,000 will be paid, have been given by Great Britain and France to the American Locomotive Company, the Westinghouse Manufacturing Company and the New York Air Brake Company. The second of these corporations has acquired the

#### NOT ALL THE WORLD IS AT WAR

On May day quite a crowd visited the Zone at the Panama-Pacific Exposition in quest of entertainment. The Zone is a worthy successor to the Midway, the Trail, the War Path, the Pay Streak and the Pike of the earlier expositions

plants of two arms companies, situated near Springfield, Mass., for the manufacture of rifles, at least 1,000,000 of which it has undertaken to make for one of the belligerents. Costly preparations for the production of powder and guncotton are being made. Press reports say that the Du Pont Powder Company has 2000 men at work on a plant at Hopewell, Virginia, where \$6,000,000 will be expended and 6000 persons employed. Lewis Nixon is erecting several large buildings on a tract near New Brunswick, New Jersey, for the manufacture of guncotton. It is said that he has contracts which will keep 2000 men busy for three years. A company at Watervliet, New York, is at work on orders for 150,000 tents. An order for 2,000,000 bayonets was recently rejected by a manufacturer because other orders had given him all he could do. We read of orders for picric acid and sulphuric acid amounting to \$7,000,000.

Very large purchases of sugar have recently been made. France has bought 34,000,000 pounds and Great Britain 45,000,000. The British Government has placed in Chicago a new order for 10,000,000 pounds of canned meat. Horses for the Allies have been going out at the rate of 35,000 a month. It is estimated that 250,000 have been sold for export. Last week France ordered \$450,000 worth of brick-making machines. Arms and ammunition, but not in large quantities, have recently been sent by sea to Australia from New York. Profits on war orders for automobiles and auto trucks have enabled the Studebaker Company to declare the first dividend on its common stock. A report that the Steel Corporation has recently received war orders, or has sought them, is officially denied.

John H. Trumbull, president of a manufacturing company in Plainville, Conn., lost his brother on the "Lusitania." In the past his company has refused to make shrapnel and rifle parts for the Allies. It has now changed its policy and will make them. The complaint of Samuel Pearson, formerly a Boer General, by which he attempted to prevent manufacture of shrapnel shells by the Allis-Chalmers Company in Milwaukee, may come to nothing. The court has ordered him to show cause why it should not be dismissed. At the recent annual meeting of New York's Grand Lodge of Freemasons, Grand Master Freifeld in his address urged all Freemasons to oppose the sale of arms and ammunition by neutrals to belligerents.

Final arguments in the Trust Cases suit of the Government, under the Sherman act, for dissolution of the Eastman Kodak Company, were made last week. The Government holds that suppression of competition and the use of monopolistic methods, with great profits resulting, have been proved. In the suit of the Government against the Association of Bill Posters of the United States and Canada, also under the Anti-Trust law, the presiding judge, in Chicago, has refused to refer the case to the new Federal Trade Commission, for the reason that all the evidence has not yet been submitted. The Government's suit against Penick & Ford, manufacturers of molasses and syrups in New Orleans, for violation of the Sherman act, has been dismissed, as the defendants have complied with all of the Government's demands.

In New York, nearly four years ago, thirteen poultry dealers were convict-

ed, under a state law, of conspiring to monopolize the trade in poultry, and were sentenced to be imprisoned for three months. Each was also to pay a fine of \$500. A final settlement of this Poultry Trust case has been delayed, but the sentences were confirmed last week, by the state's highest court, and the defendants, who are men of considerable fortune, must go to jail. In Missouri, Swift & Co., the well known dealers in beef, who were convicted under the state's Anti-Trust law, have made a settlement. They pay the fine imposed and are permitted to continue in business under regulations made by the Attorney General.

At hearings before the Federal Trade Commission in New York and Boston, manufacturers are to have an opportunity to express their opinions concerning the formation of export combinations, designed to promote foreign trade by meeting competition abroad. It is said that the commission is inclined to favor such combinations.

It has been decided  
**Railroad Decisions** by the Interstate Commerce Commission that the Pennsylvania, New York Central, Erie, Lehigh Valley and several other railroad companies must give up the steamboat lines on the Great Lakes which they own or control. This decision is made under provisions of a part of the Panama Canal act, the purpose of which was to separate railroad companies from steamboat companies doing business on lines parallel with the rail service. "Congress has decreed," the commission says, "that there shall be a restoration of conditions which prevailed when railroads had no interest in and exercised no control over the boat lines plying the country's water routes." The commission holds that competition on the lakes has been stifled, the water rates having been determined by the Trunk Line Association. Lake steamship lines, it says, were used by the railroad companies at first as a sword, to drive away independent boats, and later as a shield, to prevent new competition. Under present conditions, it asserts, the business is not conducted in the interest of the public, and by a continuance of them competition will be excluded. The railroad companies must dispose of the boats on or before December 1.

There are about sixty steamships in the lines affected. In their application for permission to retain control of them the railroad companies said that separation and sale would cause great loss, possibly as much as \$100,000,000, because there would be no market for the boats and it would be necessary to sell them as junk. The commission held that if the boat lines were free they would make traffic agreements, to the advantage of the public, with the barge canal from the lakes to New York.

Many railroad officers have believed that the Cummins amendment to the interstate commerce law, enacted at the recent session of Congress, authorized a rate increase of 10 per cent. It prohibits any limitation of carrier's li-

bility to the shipper, and it goes into effect on June 3. At the present time the rate tariffs filed with and approved by the commission, provide for one rate for the customary limited liability, and for an addition of 10 per cent when the shipper insists upon liability for full value. But the commission decided last week that the Cummins amendment permitted no increase of charges. If experience shows, however, and the roads prove at a hearing, that the present rates are not high enough for unlimited liability, there may be a further consideration of the question.

In Pennsylvania, the Senate has followed the House in voting to repeal the state's full crew law and to em-

power the Public Service Commission to decide how many employees shall serve on each train. Repeal was opposed by the labor unions. The railroad companies made an open campaign for it thruout the state and in the Legislature. The taking of testimony in the application of forty-one Western railroads for permission to increase rates has at last been completed, and arguments will be made on June 22.

#### Gunmen's Crimes in New York

The confession of Benjamin Fein, a leader of criminal gunmen in New York, commonly known as Dopey Benny, has enabled the authorities to place before a grand jury evidence upon which thirty-four indictments have been found, eight of them for murder. When Fein was arrested in September for extortion he had been for four years the leader of a "gang," selling their services to labor union officers on the East Side by means of contracts or agreements drawn with legal precision. He kept a complete record of these transactions, and, when his followers failed to raise the money required for his bail, he gave this record to the District Attorney.

Of the thirty-four persons indicted, twenty-three are officers or prominent members of unions in the cloak and suit making industries. Among them are Morris Siegman, general secretary of the Garment Workers' Union; Solomon Metz, member of the joint board of the Cloak and Suit Makers' Unions, and M. Shipnicker, of the Cloak Makers' Union. Metz has recently been made president of the United Hebrew Trades. These three, with five other members of the joint board, are accused of murdering Herman Liebenitz, a union man who broke the union rules. The remaining eleven of the indicted group are members of Fein's "gang." He could command the services of from 15 to 100 persons, several of them women. His income was \$10,000 a year. There was a schedule of prices. A murder cost \$5000. The gang would cripple a man for \$500. For a shot in the leg or the lopping off of one ear, from \$60 to \$600 was paid. Wrecking a manufacturer's shop cost from \$150 to \$600, and an assault that disabled a man could be had for \$200. Fein's confession gives the history of many such crimes. They were not approved by a majority of the members of the unions, but were procured by a few leaders, who sometimes used the thugs against union men whom they disliked. As a rule, however, the foul work was done in the course of strikes, and the victims were non-union workmen or hostile employers.

It is said that there may be fifty more indictments. The authorities hope to end such "gang" work as was done by Fein and his followers, and to bring to justice those who are guilty of several murders which have thus far defied inquiry. One of these was the killing of a poultry dealer named Baff by a party of gunmen, who escaped in an automobile. The lawyers who drew Fein's contracts may be disbarred.

#### WAR TAKES ITS TOLL OF SPORT

Anthony F. Wilding, the Australian tennis champion who won many friends in America during the international games for the Davis cup last year, has been killed in battle

# OUR OWN NAVY

AS SEEN BY ONE OF THE HALF MILLION

**A** DEMOCRACY possesses the Missourian temperament. It has to be shown. Therein lies the value of an occasional display of the American navy as we have now in New York harbor. Of the half million of us who daily stroll along Riverside Park to look at the line of warships that extends for five miles up the Hudson not many are competent to give any useful opinion of the efficiency of the fleet. We cannot know whether a ship is well planned, whether the man behind the gun has had sufficient firing practice to be able to shoot straight, or whether there are enough shells in the magazine to last an hour's engagement. But every one in that curious crowd, even if his knowledge of naval affairs does not extend beyond the ability to distinguish a superdreadnought from a submarine, knows at least that the United States has a

navy, and every one of us is glad of it, and every one—except perhaps a few incorrigible pacifists—wishes it were bigger. For darting thru the crowd are the newsboys shouting "War Extra!" and each paper they sell is an argument—nay, a demonstration—of the need of a navy if a nation is not to confine its generous impulses to idle tears at the slaughter of its own people and the wrongs of others. To be peaceable from principle is noble, but to be peaceable from powerlessness is humiliating.

The public is always inclined to take more interest in the navy than the army. Even one who has never smelt salt spray prefers to read of warfare on the sea rather than on the land. Perhaps this is because it is easier to understand. A naval engagement is short, sharp and decisive. The first twenty minutes is apt to settle it nowadays. There is no

doubt in the mind of the newspaper reader that the Germans were victorious on the western side of South America November 1 and were beaten on the eastern side December 8, but after nine months of reading the daily reports of successes and reverses in France he does not know yet which side has the advantage. The names of Ypres, Arras and Soissons recur many times, but there are no repetitions of a naval fight. On the sea it is a duel to the death.

He who fights and runs away  
May live to fight another day

is a saying of the soldier, not of the sailor. For on the water speed is one of the factors of success, for it means the power of choosing the battlefield and the range. What would happen if the newest and biggest ship in the British navy, the "Queen Elizabeth," with a speed of twenty-eight knots an hour and 15-inch

© Underwood & Underwood

FOUR OF THE BIGGEST DREADNOUGHT'S FOURTEEN INCHERS

*Underwood & Underwood*

**JACK**

guns, should encounter the newest and biggest ship in the American navy, the "Arizona," with a speed of twenty-one and a half knots an hour and 14-inch guns is not pleasant to contemplate, so it is fortunate that we need not consider the contingency.

To naval warfare the other rimed adage is especially applicable:

Thrice is he armed who hath his quarrel just,  
And four times he who gets his blow in fust.

For a sea fight is as much a matter of seconds as a boxing match. A single blow may decide the matter. And one of our superdreadnoughts can put an 870-pound shell into a sixty-foot target at a distance of eight miles every five seconds. The "Léon Gambetta" was sent to the bottom by one torpedo; the "Audacious" by one mine; the "Good Hope" by one shell. But it is different on land. A 42-centimeter shell from the new Krupp howitzer cannot destroy a whole army corps, and if it could another might be recruited and trained within a few months, while it would take as many years to build a new battleship.

That is why preparedness is imperative in naval affairs and why efficiency has become the constant study. What is now called "scientific management," that is, the economy of motion, was worked out in our gun turrets long before it was considered seriously in our shops. As woodsmen compete for a prize in the chopping down of a tree, miners in the drilling of a rock and cowboys in the roping of a steer, so the bluejackets contest for the record of speed in the coal or of economy in the use of lubricating oil, as well as of accuracy in the firing of guns. The modern seaman is no more like the old than a chauffeur is like a coachman. He is no longer called upon to board a boat with pistols in his hands and a cutlass in his teeth, nor to lay out on a yardarm holding on by his eyelashes. He is nowadays a mechanic, managing the big machine, or rather part of it, fitted like a cogwheel in a tight steel

box. And the captain no longer stands on the bridge shouting orders to the crew and taunts to the enemy thru a trumpet. He also is cooped up somewhere below pressing buttons, turning switches and solving problems in trigonometry by means of a mechanical calculator.

But the sailorman shows his true lineage in many little ways. His trousers still have a tendency to flare at the base like the 1915 skirts. His free neck is the envy of every colored man about, including his own officers. Upon his arm may yet be seen the tattooed totem of his craft. Even when he marches up Fifth avenue with his trousers laced up in leggings and a rifle on his shoulder, still he does not look like a military man. There is an easy, careless swing to his gait that is easily distinguishable from the ramrod rigidity of the overdrilled soldier.

Very young these seamen look, much like college boys, as in fact they virtually are under the new educational régime. They are going in for competitive athletics even more commonly than collegians. Besides their swimming and boat racing, baseball, football and track meets take place whenever they are within reach of land. Their clean-shaven faces are bronzed with the Guantamo sunshine now as we see them strolling along Riverside Drive. That they are exceptionally well built and healthy looking is not altogether due to their training, for they are picked men in the first place, for out of every four applicants only one is accepted on the average. That we do not have more of them is due to the limitation put upon the number by Congress, for there is no difficulty in keeping the ranks full.

The ribbon upon their caps is taken by the public as an introduction and it must be embarrassing to a Yankee on board the "Oklahoma" when an exiled lady from that state greets him warmly as a compatriot. But this system of state names does much to make the people realize that the navy belongs to all of them and not merely to the seacoast states. All the school children know their ship, for they have paid their nickels and dimes to provide the grape juice punch bowl.

When President Roosevelt made his speaking tour of the country there were some who thought that his secretary had mixt up his speeches. When he was in the mountain states he talked of nothing but the need of a bigger navy, and when he visited the coast cities he lectured them on the necessity of irrigation in the arid region. This was a direct violation of precedent, for it had been the custom of candidates to talk to each locality about its own affairs and what it could get out of the Government. But one result of it was the awakening of a general interest in the question of national defense, and now the arid states of Arizona and Wyoming take great pride in being represented on the ocean by the biggest of the battleships.

THE ADMIRAL OF THE FLEET

© International News Service

## SHIPS

The crowds that throng the Hudson shores display their proprietary interest in ways that must be exasperating to the naval martinet. They go down to the water's edge to pat the nose of a submarine as tho it were a pet watchdog. They swarm over the superdreadnought with no regard to the etiquet of the quarterdeck. They ask the most embarrassing questions, political, strategical or technical. They snapshot anything or anybody they come across. The motion picture man, having in view the desire of the hundred million shareholders to see their fleet, orders admirals around as tho they were supers and makes stump speeches to the bluejackets so they will register patriotic enthusiasm while he turns the crank.

The superdreadnought is built in defiance of the old adage "Don't put all your eggs in one basket." It is a very strong basket, to be sure, but not invulnerable, and the contents are so complicated as to seem as breakable as eggshells. When we see the tangle of tubes and wires which run along the narrow passageways; when we think of the train of machinery thru which the power of the engines and dynamos is applied to its varied uses; when we realize that the most powerful and sensitive compounds invented by the chemist must be stored and exploded on board by the hundreds of tons, we wonder how such a structure can safely navigate the seas, to say nothing of being able to withstand the most violent shocks that the violence of man has been able to devise. It costs some ten million dollars to build one of these modern leviathans and a million dollars a year to run it for the ten years of its natural life, and yet it may be sunk with all its thousand men in fifteen minutes by one of those infernal machines which used to be referred to as a "sardine can."

Shortly before the war Sir Percy Scott, one of the foremost of British ordnance experts, warned the world that the day of the submarine had come and that the only thing for the battleship was to run and hide. Now we are witnessing the first experimental test of three new inventions, the dreadnought, the submarine and the aeroplane, on a larger scale than any one had hoped or feared. For the most part the larger battleships have thought it wise to follow Sir Percy Scott's advice and have kept out of the way of the submarine. Where they have not they have sometimes regretted it. Certainly the course of the war so far has been to prove that the torpedo boat has the power to destroy any ship afloat, whether it be dreadnought or liner. It is, as Kipling called it long ago, the modern Valkyr:

The strength of twice three thousand horse  
That serve the one command;  
The hand that heaves the headlong force,  
The hate that backs the hand;  
The doom-bolt in the darkness freed,  
The mine that splits the main;  
The white-hot wake, the 'wildering speed—  
The Choosers of the Slain!

International News Service

LINE

wonder at the courage of men who can embark in the vessel, driving blindly under the water, with a supply of air and a big supply of explosives. But we remember that the battleship is also submarine for most part, and as the fate of the "Goliath" and the "Mississippi" prove, that there is but little chance of escape once the vessel is struck. It is appalling to think

LIGHTS

of the multiple dangers with which the modern battleship is packed. The limit of the endurance of one British admiral was reached when it was decided to use steam on the fleet. He was willing, he declared in his resignation, to be shot or drowned in defense of his country, but he would be eternally condemned if he would be scalded to death. But the Great War has shown that Death even in his new and most frightful guises has not the power to daunt the courage of mankind.

One of the many newspaper men who have been called from their preferred field of dramatic criticism or sporting news to serve as military or naval authorities during the war begins his article on the naval strategy with the statement: "Warships are more mobile than forts, but also more liable to unforeseen submersion." This observation is doubtless original with the author, or at least the expression of it is. Assuming that it is true, as indeed it seems to me, altho I cannot profess any expert knowledge of nautical affairs, it may serve to illustrate one of the peculiarities of naval life which most strikes a layman, its uncertainty. The naval officer never knows when or where he may be called to perform the duty for which he has been trained. Indeed, he does not even know that he will be ever called upon for it. It is the expectation, or certainly the hope, of those who employ him, that he will not be needed. He is the minute man of modern times. His profession is perpetual preparedness. He is to spend years in learning how to save seconds on something that he may never have to do. It is as tho a fireman were to spend his whole life listening for an alarm which never struck. But even if that were so, we could not dispense with firemen—nor yet with navies.

And besides the potential protection that he affords, the naval man may take pride in the creation and control of the most powerful mechanism that the world has so far seen. Within these steel gray walls are concentrated dormant energies of unprecedented potency ready to be released at an instant's notice. A volley of the 14-inch guns of the "New York" throws ten projectiles, weighing altogether 14,000 pounds. Besides these there are twenty-one 5-inch guns and four 21-inch torpedo tubes. The population of the ship equals that of a small town. More than a thousand men are housed here with food and water and every necessity of life enough to last them weeks tho they were isolated from the world like the conglomerate population of Noah's ark. It is the completeness, the perfection, the self-sufficiency of the thing, that strikes the lay imagination.

And here before us is not one ship but sixty, combined into a greater unity, practised in team play on the open sea, bound together by the ether waves despite darkness, fog or distance; all obedient to the commands of a single man, tho executing the will of a hundred millions. It is at night that one best appreciates all this. For in the day they lie so strangely still upon the river, shifting only at the turn of the tide, their outlines hazy in the distance, since they blend into the neutral tint of the air above and water underneath. The only bright spots visible are the starry flag at the fore, the stars and

stripes at the stern and the white caps of the jackies as they line up on the deck. Some of the crowd are disappointed at their first sight of the warships; they are so unpretentious, inconspicuous. "They look for all the world," said a notable housewife to me, "like a row of Mrs. Potts' detachable flat irons standing on the range."

But when night falls the fleet comes out in a blaze of glory. It flashes into sight so suddenly that our emotion can only find expression in the most primitive of ejaculations, and a chorus of "Oh!" and "Ah!" rolls up the Hudson and is echoed by

the Palisades. The hull, the turrets, the ladder, the smokestacks and the two steel masts of spiral basketry are outlined in electric globes. Soon the searchlights begin their ethereal dance, shifting suddenly back and forth like the comet's tail as it nears the sun, interlacing their luminous fingers lovingly about the dome of Grant's tomb. Then, on the appointed instant the lights vanish and the fleet reassumes its magic cloak of invisibility. But we cannot forget that it is still there and we go to our beds with the sturdy confidence that it will be found ready when needed, be it late or soon.

## THE WAR IN EUROPE

(ABDALLAH OF CAIRO SPEAKS)

BY EDNA DEAN PROCTOR

By the Prophet! If these be Christians where shall we find the Heathen?  
If this is their gospel of Love where shall we look for Hate?  
With the lilies of Peace their Jesus in temple and shrine is wreathen,  
But they raven like wolves in the fold when the moon is late.

And for *what*? For the market; for greed of gold and dominion;  
To rule to the uttermost sea and the shores no foot has trod;  
Their impious fleets cleave the sky, but never a pinion  
Bears the beleaguered spirit to regions above the clod.

A blast of the desert were we in our fervor, our valor,  
From Khalid to bold Alp Arslan, and Timour who shook the world!  
Alike in the flush of triumph, the death angel's pallor,  
We were soldiers of God and our banners were only in Paradise furled!

*These* carry their Goddess with them—the Virgin they dare bedizen  
With jewels and robe of silver or fret of gold to her feet:  
Blessed, thrice blessed be Allah! the soul that to Him has risen  
Nor images needs, nor temples, the merciful Lord to greet!

Pleasant the cool of the mosque, the fountain, the soaring column;  
Dear the call of the muezzin to prayer at the day's decline;  
But the wind of the waste can summon in tones more tenderly solemn,  
For the East and the West are Allah's—the wilderness-ways a shrine.

So, if this infidel host at the Moslem gates should thunder,  
We know that beneath the tumult will be Allah's eternal calm;  
Aye, if to prove our faith the walls should be rent asunder,  
He will build them again more grandly for the glory of Islam!

By the Prophet! If these be Christians where shall we find the Heathen?  
If this is their gospel of Love where shall we look for Hate?  
With the lilies of Peace their Jesus in temple and shrine is wreathen,  
But they raven like wolves in the fold when the moon is late.

Hark to the roar of battle! the wail for the dead and the dying!  
Prating of light these Christians have shrouded the earth in gloom;  
Each unto God or Goddess for conquest and gain is crying—  
I will repeat the Fatiha\* and leave them to their doom!

\*The opening chapter of the Koran and the Lord's Prayer of the Moslems.

## AN AMERICAN OPPORTUNITY IN CHINA

BY HENRY B. GRAYBILL

President of Canton Christian College

Americans are not getting their share of China's foreign trade. Of her 1913 total of \$710,000,000 worth of imports and exports the United States claimed only \$53,000,000, or about seven and a half per cent. This was against Great Britain's \$82,000,000 (not including Hongkong) and Japan's \$142,000,000.

When 400,000,000 people begin to produce or consume anything of economic value, however small an article it may be, it is full time the commercial people were giving attention. China is full of tremendous opportunities for American business. But we Americans are loth to use the time and patience necessary to win over such unwieldy markets. We do not fancy living so far from Broadway, and balk at counting *yat, yi, sam, sz, ng*.

The Chinese like to trade with us. Many leading Cantonese merchants have been in business in America. One who had learned the trade in America, opened a big department store in Canton under the name of Seen See Co. This name has no relation to matters of vision, but is the Chinese approximation to Sincere Co., which in turn is a concession to the Chinese custom of naming a company for some noble virtue. But this half ancient half modern store struck the populace just right, and they made such a run upon it that after some months of trial it was found necessary to close the doors and charge admission, and then sell tickets to the elevator.

European manufacturers are establishing and endowing and equipping free of charge schools and colleges to facilitate the introduction of their goods. A German agent reported back home, "We should give up our existing prejudices against the missions. It is a serious mistake that we have so far coöperated so little with them." That is why these European colleges, non-religious in character, are growing up rapidly under the auspices of foreign governments and business men. That is why such a close watch is kept upon an American institution like the undenominational Canton Christian College.

These American colleges, stretching in two lines across the country, form a great cross resting on all the political and commercial strategic centers of China. The tips of the cross are at Peking, the capital and conservative center of the North, at Canton, the progressive pole in the South, at Shanghai, the great port on the east coast, and at Chentu, the heart of China's enormous inland empire in the west. These colleges, altho they far outnumber and outclass the European schools, are not being used by American business enterprises, nor are they as yet being financially assisted by such. Yet the latter are destined to reap rich harvests where those struggling colleges are sowing the seed of civilization. Here is an open door in China.

## A scientific food for health and long life

It is now possible for the people of this country to make daily use, in agreeable tablet form, of the very same food principles that are partly responsible for the health and remarkably long lives of the Bulgarians—who frequently live to be 125 years old. To the world of science it has long been known that the active principles contained in the famous Bulgarian sour milk ferments are of exceptional value to the health of humankind. Only recently, however, has the correct and practical use of these principles been discovered and made possible to the general public. This has at last been done in

## Intesti-Fermin Tablets

Many years ago it was demonstrated that premature old age is caused partly by poisons and malignant bacteria arising from indigestion and originating in the lower digestive tract and attacking every organ of the body. The inability to properly digest simple food results in headache, biliousness, nerve and stomach disorders, and general indications of weakened vitality.

Intesti-Fermin contains pure cultures of both the *Bacillus Bulgaricus* and the *Glyco-Bakter*, a sustaining element, discovered by the scientists of the Pasteur Institute, Paris. It is perfectly harmless and may be used with entire freedom. Physicians will tell you of its value as an efficient treatment for intestinal poisoning, and the ailments that accompany premature old age.

Intesti-Fermin is not a drug. It is a daily and cumulative food guard of peculiar efficiency. Get it at your druggist today, or direct by mail for \$1.00 the bottle from

A SOUND BODY AND THE EFFICIENT LIFE

BY EDWARD EARLE PURINTON

MAN is a blend of animal and angel. The proportions may vary—a prize-fighter is mostly animal, a missionary mostly angel; but the animal and the angel are both in every man. The problem is, not to avoid either, but to improve the quality of each.

One of the strange perversenesses of man's brain has been to despise the animal in him. We have so far lost contact with, and knowledge of, Nature and her laws, that when a natural man recently walked down Broadway, clad in the natural garb of Greek robe and sandals, he was ridiculed by the newspapers, mobbed by the American small boy, and forced to leave the country on pain of arrest!

The clothing, from shoes to hat, of nearly every man who jeered at this apostle of Return to Nature was unhygienic and unscientific. But we, the many foolish, mocked the one wise.

The trouble with us all is not that we are animals, but that we are poor animals. Every year we waste millions of dollars in the search for health, and also billions of foot-pounds of action-producing energy, because we have wandered from the paths of Nature and become enmired in the quicksands of a spurious intellectuality. Vitality is the mainstay of both mentality and spirituality.

Health should be taught systematically, thoroly and attractively in every home, school and church of the

*This is the seventh article of the series on Efficiency and Life, written by Mr. Edward Earle Purinton, Director of The Independent Efficiency Service. The other Efficiency articles have appeared in The Independent as follows: "What Is Efficiency?" November 30, 1914; "Work and Efficiency," December 28, 1914; "Play and Efficiency," January 25, 1915; "Home and Efficiency," February 22, 1915; "The Road to Efficiency," March 22, 1915; "Food and Efficiency," April 26, 1915. Further articles in the series will appear during the coming months. — THE EDITOR.*

world. And as men at large have lost their health-giving instincts, we should have to study the rules of hygiene from animals in the forest.

Is there any reason why we should build "model institutions" for the housing of the unfit, rather than learn how to prevent the occurrence of the unfit? As the world progresses, should new diseases (or at least new names for diseases) be multiplying with startling rapidity?

We have got this health matter wrong-end-to. We spend \$100 in trying to regain health where we should spend \$1 in learning to maintain health. We wake up only when we break down. Consequently we pay about \$1,500,000,000 each year for this folly, which amount would be saved if we cared enough to prevent

the unnecessary loss from disease and death in this country.

Probably the worst, certainly the most widespread, malady in America is *humanitis*, or a feverish desire to be supercivilized. The honest health in the shaggy, rough, crude elements of life has been replaced by a sickly assortment of hot-house refinements that avail for nothing but a social pride or indolence. The richer a man becomes, the less he does for himself; and for a man to be ill, some part of him must have been idle. We need to be saved from our servants and freed from our luxuries.

Consider the unhygienic day of the average "successful" man.

He has slept in a room overheated and underventilated. He rises late—and his whole day is immediately marked "Rush." He takes a perfunctory bath, neither hot enough to lubricate the bodily machine, nor cold enough to wake up the mind for the day.

His breakfast, swallowed hastily and unhungrily, chiefly consists of a creamed cereal with an acid fruit—a dietetic combination almost sure to start rebellion in the stomach.

He hurries for his street car, train or limousine, grabs a morning paper on the way, and while his vehicle jolts him downtown, he disturbs his vision, digestion and emotion by filling his mind with tragedies and trifles from all over the world, that have no bearing whatsoever on his

HEALTH EFFICIENCY GAUGE

(FOR GENERAL DETERMINATION OF THE HEALTH PROBABILITIES OF A NORMAL INDIVIDUAL)

DIRECTIONS. Where the following items have been made a part of your health equipment, place the numeral 5 in blank space opposite. Add numerals for your health efficiency grade.

- 1. Freedom from pain, weakness, and all fear of disease.....
- 2. Vigorous belief that it is vastly better to prevent disease than to wait to cure it.....
- 3. Choice, amount and time of meals based on hunger alone .....
- 4. Average bedtime ten o'clock, and fifty-six hours of sleep a week.....
- 5. Daily exercise in open air, and enjoyment of same.....
- 6. Thoro perspiration at least once a week.....
- 7. Morning bath, with brisk rub following.....
- 8. Summer vacation where swimming, boating, tramping, etc., available.....
- 9. Cultivation of a garden, if only in a backyard.....
- 10. All clothing made loose and comfortable, hygienic before stylish.....

- 18. Independence of all health fads or cults.....
- 19. Refusal to worry over anything.....
- 20. Absorbing interest in your work.....

NOTE. This Gauge does not include the mention of particular symptoms, because their discovery and treatment belong in the realm of the physician. Total equals general percentage of your health status. It should be 80, tho the average is probably not over 35.

Copyright, 1915, by Edward Earle Purinton

usefulness for the day. Reaching the office with stomach and brain both peevish and protesting, he starts the day's work in no fit condition for enduring the strain on eye, ear, brain and nerves that a modern day's work requires of a successful man. If he feels "out of sorts" he sends to the drug store for a headache powder—and commits further ruin of his stomach.

He works in foolish, inefficient clothes—from tight-fitting shoes to stiff, high collar. Never having learned the science of relaxation, he speeds or, explosively, clear to the moment of going out for his one o'clock luncheon. He arrives at the restaurant deeply embedded in problems and cares, thru which the gastric juices cannot percolate. More often than not, he talks up a "business deal" over coffee and cigars—a custom that, on scientific analysis, appears physiologically and psychologically unsound.

After his day of close confinement he hurries uptown, dresses in even more absurd clothes, eats a heavy dinner, then propels himself to an evening function that destroys the best sleeping hours—from ten to twelve—and finally drops into bed with a horrible sense of having to do the same thing over tomorrow, and tomorrow's tomorrow, and all the countless tomorrows of the rest of the days of his life.

What is wrong with this man? He simply does not know the meaning and purpose of civilization, he has made an end of the means to an end. The object of civilization is to develop the human brain, which it does to a nicety by the friction, competition, compulsion and routine of American life in the twentieth century. But while civilization strengthens our brain, civilization weakens our body. The endless train of chronic diseases was produced, and is perpetuated, by civilization. Only as a man uncivilizes, or decivilizes, himself during a certain portion of his time can he hope to attain great longevity coupled with great productivity.

We are now in the third stage of race unfoldment. In the babyhood of the race we were animals; in the childhood of the race we were beings of romance, adorers of myths, fables, dogmas, superstitions; in the manhood of the race we are mental or industrial machines; in the super-manhood of the race we shall be liberated spirits, having brains, hearts and bodies fully developed, but using and commanding them as conscious owners of them. The third, or mind stage, is the least healthy of them all; since it lacks the enduring strength of the body stage, the vitalizing faith of the heart stage, or the renewing poise of the soul stage.

Let us now regard the superior wisdom of animals, in habits, customs and instincts pertaining to health. Nature is the true guide to health; and in the multiplicity of modern cures, cults, pathies, ologies and isms, our safety lies in recourse to Nature. While medicine, psychology and surgery may be needed in acute cases of specific diseases, a purely natural mode of living is the best health preservative. We can

AIR
WATER

## Nature's Great Cleansers

Air and water are natural cleansers. Modern engineering has brought them to the assistance of the housewife to lighten her service and enable her to do her work better. We present guaranteed electrical devices for washing with air—the vacuum cleaner—and for washing with water—the electric washing machine—both made with the skill and high quality which characterize the many household devices bearing the name

### Western Electric Vacuum Cleaner

This is a new model, small and light, but powerful. The experience of 30 years of motor and suction-fan making, is embodied in every part. The rigid frame, different from the usual "broom-handle" design, makes handling easy. The price, \$32.50, includes an extension nozzle for cleaning under furniture.

### Washer and Wringer

This newest, safest and most thorough laundry outfit is sold and guaranteed by the world's largest distributors of electrical supplies. Cleanses perfectly all fabrics without injury to most delicate textures. The driving mechanism is entirely enclosed. The wringer is reversible.

Both of these labor-saving cleansers can be used in any home where there is electric light. Write for descriptive booklets, "The Home Sanitary" and "Sunny Monday," mentioning the name of your dealer. Ask for Booklets No. 421-BJ.

## WESTERN ELECTRIC COMPANY

Manufacturers of the 8,500,000 "Bell" Telephones

EQUIPMENT FOR EVERY ELECTRICAL NEED

## 1915 Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation. Risk and Will Issue Policies  
Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578.109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period.....	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	83,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# Resinol Soap

makes healthy skins  
and clear complexions

**T**HERE are three excellent reasons why Resinol Soap appeals so strongly to the woman who wishes to preserve or restore the fresh, youthful charm of her complexion, or to protect her baby's delicate skin—

It gives a free, creamy and unusually cleansing lather, in either hard or soft water.

Its ingredients are pure and utterly wholesome; with no trace of free alkali—that harsh, drying chemical which many soap-makers find too difficult and expensive to remove.

And best of all, it contains the soothing Resinol medication that physicians have prescribed for years, in Resinol Ointment, for skin affections—just enough of it to keep the skin soft, the complexion clear, and to make baby's bath an insurance against annoying chafings and eruptions.

If the skin already is in bad condition through neglect, or the complexion injured by the unwise use of cosmetics, a little Resinol Ointment should at first be used to help the Resinol Soap restore their natural health and beauty. Resinol Soap is sold by all druggists and dealers in toilet goods. For guest-room size trial cake, write to Dept. 37-G, Resinol, Baltimore, Md.

## YOUR FRIENDS AND OURS

When we require the services of a trained physician, or need legal counsel, most of us inquire of friends for the name of a specialist or leader in these professions. This is a safe rule to follow when first entering the investment field. Ask a friend who has wide experience and in whom you have confidence to suggest a dependable agency. HEINEMANN FIRST MORTGAGES, marketed since 1870, have been sold largely through the medium of "one friend to another." Heinemann business is building for the years to come. Any number of investing clients have been ours exclusively for more than a third of a century. If we have a single dissatisfied customer, it is beyond our knowledge.

Write today for current list of special offerings.

learn this from the animals, in the following respects:

1. *Natural Food.*—The animals eat only when hungry, of the simplest articles, for the sole purpose of satisfying hunger. Myriads of human beings eat three meals a day—and are never hungry. To be hungry, you must feel your mouth water at the very thought of a slice of plain whole wheat bread and butter. If, as we are told, nine-tenths of all our ailments proceed from bad digestion, we may well say that disease was born halfway between the cook stove and the menu card. For most of the foods that need to be cooked need more to be corrected, and the deadliness of dinners lies in their variety. Who of us would make a slab of raw meat the piece de resistance at a banquet? Hosts of common disorders may be ascribed largely to the modern vogue of mixing all kinds of food stuffs, first in the cook stove, then on the menu card.

An ideal lunch, containing the elements to support life and satisfy hunger, is a piece of graham bread and butter, a poached egg, a glass of pure milk, and a baked apple. How many people, entertaining at luncheon, would dare to order a meal like that? Six leading dishes are enough for any meal. Yet some of our noblest statesmen, being feted and banqueted, have to go to bed with an old-fashioned stomach ache due to the "hospitality" of their popularity. Real hospitality means filling the hearts, minds and souls of our friends—not their stomachs. And I look forward to the time when the only eatable offered to a passing guest will be a delicious, refreshing beverage—hot in winter, cold in summer, and more respectful of his digestion than of our pride.

2. *Natural Sleep.*—The animals sleep while the world is dark, wake when their sleep is out, and perfectly relax during the process. We men and women turn night into day and lose three or four hours at the beginning of our night's rest; consequently we depend on the alarm clock to rouse us when we should be sleeping, and we sleep under a usual nervous tension, brought on by home or business cares, midnight pleasures, or beds and bed clothes and bedrooms that have no bearing at all on the matter of sleep. For most people in American civilization, the healthful hours of sleep are from ten p. m. to six or seven a. m. Once or twice a week it is permissible, and I think psychologically desirable, to postpone bedtime an hour or so; and occasionally, to vary the monotony of things, one may even stay up all night. But a fixed and wholesome retiring hour is one of the imperative needs of our life. Incomplete and insufficient sleep is a large factor in the host of nervous troubles now afflicting Americans.

The bed is the most important piece of furniture in the house. One of the bad habits of American life is the prevalence of the narrow single bed, which violates the principle of the necessity of motion obtaining even in rest. No man can sleep right on a couch three feet wide. Unconsciously, we change our

posture during sleep—it is no more natural to hold the same position during eight hours of slumber than during eight hours of waking consciousness. The bed should be wide enough and long enough to allow full stretching, in comfort, on all sides. A thick, sanitary mattress, warranted to stay smooth; a set of unbreakable springs, affording the utmost buoyance; an outfit of coverlets extra long to tuck in well at the bottom; a thin pillow, and a porous night garment everywhere loose, particularly around the neck;—these are a few essentials of natural sleep. The great principle is to keep the feet warm and head cool, as the depth of slumber is proportional to the departure of blood from the head. The pillow should be less than six inches thru, and as hard as may be comfortable. Soft, thick pillows are made for soft, thick heads.

3. *Natural Exercise.*—The animals are forced to exercise, in order to obtain food; but their play consists of exercise, which is to them not irksome but enjoyable. The opposite holds among men. The higher a man gets, the more he sits. Nothing can ever take the place of outdoor physical exercise, which is the automatic regulator of digestion, respiration, circulation, elimination. Every brainworker, to keep "fit" mentally as well as physically, should have an hour in the open every day, occupying himself with a brisk walk, a horseback ride, an athletic game, or some other physiological tonic in the form of muscular movement.

4. *Natural Baths.*—The animals are given a constant process of hardening and health—ensured by having their bodies exposed to the weather. Likewise, the human body was made to be rained upon—see how quickly the small boy hastens out, umbrella-less and unbeknownst, into the midst of a summer shower. A primary sign of health is that you enjoy a bath, whatever the season of the year. But a cold bath should never meet a cold body; and, unless one has a great store of reserve energy, the morning ablution should be tempered sufficiently to avoid shock. It is said that water may be used in a thousand different ways, for the preservation or recovery of health. Every man, woman and child should know on principle and by experience the kind and number and variation of the baths, weekly or daily, best suited to the temperament, nature and need of the individual.

5. *Natural Air.*—The animals continually bathe their lungs in oxygen, they do not fear "drafts," they let the refreshing, invigorating breezes play on their bodies day and night, summer and winter, the whole year thru. But in our cities, where human animals are supposed to be most efficient, there are thousands of shops, factories, tenements and flats whose inhabitants never get pure air till hot weather makes them open the windows. Airing a house once a day is not enough—every window should be kept always open, if only an inch at the top. There are patent ventilators which deflect the cold currents of outside air and gradually diffuse the

EVINRUDE + ROWBOAT = MOTORBOAT

# EVINRUDE

## DETACHABLE ROWBOAT & CANOE MOTORS

Clamp an Evinrude to the stern of any rowboat and you have a speedy motorboat. Think of it! This wonderful little marine motor enables you to instantly convert any kind of craft—rowboat, sailboat, houseboat or canoe—into a power boat. It drives a rowboat at the rate of 7 to 8 miles an hour—a canoe 10 to 12 miles an hour—and runs four hours on less than a gallon of gasoline.

So light that you can carry it with you anywhere. So strong that it is practically unbreakable. So simple that women and children have no difficulty in operating it the first time they try. It starts by giving the flywheel a quarter-turn and is stopped by pressing a push-button. Make up your mind now to take an Evinrude with you on your vacation this summer and enjoy all the pleasures of motorboating—without the expense.

The 1915 model has Waterproof Magneto built into the flywheel (no separate battery required)—Automatic Reverse, enabling you to "back water" instantly by merely giving the tiller-handle a twist—and Maxim Silencer, making the Evinrude almost noiseless in operation.

Illustrated catalog and name of Evinrude dealer in your town on request. Just say: "Mail me a copy of your catalog and tell me where I can see an Evinrude."

## 80,000 VACATIONS

are being planned for and by the Readers  
of The Independent. Advertise your Hotel,  
Resort, Railroad, Tour, Summer Camp in the

### LITTLE TRAVELS NUMBER

of June 7, 1915. Eight all-in-America trips will  
be described in detail, with pictures, com-  
plete itineraries and exact cost of daily  
program.

oxygen thru the room. A most health-  
ful habit is to take an air-bath just be-  
fore going to bed, wearing simply bath-  
robe and sandals and moving briskly  
about for ten or fifteen minutes, all  
windows being wide open. We do not  
fear exposure to the elements, we fear  
exposure of our fear of the elements.  
Anybody who has outgrown the fear of  
pure air sufficiently to try a sleeping  
porch for a few months will tell you  
how impossible it is for a really healthy  
person to sleep in the four great walls  
and one little window that we call a  
bedroom.

6. *Sunshine*.—The animals are vital-  
ized, disinfected and aseptized by sun-  
shine, which is the greatest germicide,  
cleanser and tonic known to science. If  
a way could be invented to bottle sun-  
light, and sell it to sick folks at an ex-  
orbitant price, the inventor would be a  
billionaire in no time at all. We need  
more windows in our houses, for not  
one house in fifty has enough. A house  
should be regarded merely as a frame  
for sunlight. Every man who builds a  
home should plan a sun parlor for it;  
a sun parlor is much more hygienic  
than a society parlor. I would not, in  
fact, recommend that much light be ad-  
mitted to an ordinary parlor; this, be-  
ing a stuckup kind of room, would melt  
if the sun fell on it. In every disease  
there is a broad streak of artificial-  
ity.

Let us flood our homes and hearts  
with light; let us tear away the heavy  
curtains from our windows and our  
minds; let us realize that health is only  
truth made over into life. And to have  
truth direct we must seek God and Na-  
ture. God is healer of the soul, Nature  
is healer of the body; when we have  
learned and applied this fact, we shall  
mightily increase the length and the  
strength of our lives. For the way to  
be well is not to swallow something, but  
to learn something—then live it!

### MID-MAY

Hand clamped to desk.  
And eyes on task undone.  
I see a meadow pool.  
With shaken willows silvering.  
O, gods that trouble me,  
Wherefore, wherefore?—  
Pan is at the door.

An arabesque  
Of sifted sun  
And forest star-grass, cool  
With shadows tunnelling:  
Witch-work that tauntingly  
Webs my bare floor:  
Ah, Pan is at the door.

I'm civilized.  
And in my veins  
The mountain brook is still  
As water in a jar;  
But oh, the heart hill-born.  
It paineth sore.  
For Pan is at the door.

Ye sacrificed  
Of earth, what rains  
Have wept their will  
And drowned your rebel star,  
That you should sit forlorn,  
Telling Greed's score.  
When Pan is at the door?

—From *Path Flower and Other  
Verses*, by Olive Dargan (Scribner).

## PEBBLES

"We're 'Piscopaliums. What are you?"  
"I forget what it's called, but it's the latest thing."—*Life*.

Healy's Restaurant, at Broadway and 145th street, has an "exquisite floor for Dancing, suitable for Weddings, Beef-steaks."—*New York Tribune*.

Miss Coy—Oh, what beautiful flowers! There's still a little dew on them.

His Nibs (absent-mindedly)—I know; but I'll pay it tomorrow.—*Judge*.

Hazel—What is that scraping noise out front?

Dawn—Must be the chorus girls filing off the stage.—*Williams Purple Cow*.

Speaking of blood thirst—as who is not?—the Orpheum Theater program, Denver, carries this ad: "Don't Kill Your Wife. Let the Western Columbia Laundry Do the Work."—*New York Tribune*.

Judge—This is the tenth time you have come before me, Kelly!

Prisoner—I'm sorry, judge; but the cops don't seem to care how much work they make you.—*Puck*.

Art Editor—I'm afraid your work is too comic for general illustrating.

Artist—I suppose that means I will have to spend the rest of my life doing comic supplements.

"Not necessarily. You might design women's fashions."—*Life*.

"What is the hardest part of your work as a lecturer?" asked the man designated as toastmaster.

"As a rule," replied Mr. Speekins, "the hardest part of my work is waking the audience up after the man who introduces me has concluded his remarks."—*Washington Star*.

"Dot boy of mine is going to make a good business man," said Mr. Beckstein. "Yesterday I told him I was going to leave all my property to him ven I died, and vot you s'pose he say to dot?"

"I don't know, Mr. Beckstein."

"Vell, he says he will throw off five per cent for prompt cash."—*Tid-Bits*.

## "EVERY CLOUD—"

A youngster in Germantown, Philadelphia, received two presents at the same time—one a diary, which for a while he kept very carefully, and the other a pea-shooting pop-gun, which he fired indiscriminately on all occasions.

One day his mother found the following terse record in his diary:

"Monday, cold and sloppy. Tuesday, cold and sloppy. Wednesday, cold and sloppy—shot grandma."—*Harper's*.

A Boston school teacher had read Whittier's "Maud Muller" to her pupils, and at the close of her reading spoke of the sorrowful significance of the words "It might have been." She asked the boys and girls if they could think of any four sadder words. One alert youngster of a dozen years held up his hand and said:

"I know two sadder words."

"What are they?" asked the teacher.

"Please remit."—*Evening Post Magazine*.

In an Eastern city there was a young man who was not very ambitious. The kind of work that he was willing to do was not forthcoming, and the result was a regular attendance at the cigar store.

"Hello, Jim!" solicitously remarked a friend, meeting the young man on the street one afternoon. "Have you got that position yet?"

"No," responded the youth, with an appropriate sigh. "Positions seem to be very scarce just now."

"Still, I wouldn't give up, old boy," kindly encouraged the friend. "If you can't get a position, why don't you look around for a job?"—*Philadelphia Telegraph*.

## New Doran Books of First Rank

<b>J. D. Beresford</b>	<b>THE INVISIBLE EVENT</b> George H. ## Constipation

### How to Fight It

The scientific way to control and permanently relieve Constipation is through steady attention to daily habits, diet and exercise. This is the easiest way—the only safe way. How to get rid of Constipation is told in a new book by Dr. John Harvey Kellogg, who gives you results of his observations and treatment of thousands of cases during the nearly forty years he has been Superintendent of the great Battle Creek Sanitarium. Dr. Kellogg is the great authority on this subject. He is a world leader in "Preventive Medicine," an eminent surgeon, a profound scholar and most convincing writer. He teaches you how to avoid sickness and keep well. Dr. Kellogg's book on Constipation is intensely interesting and easily understood. If you follow its teachings, you may be permanently rid of Constipation. The book is not large—only a little over 125 pages—but its contents are worth many times the price. In board covers, the price is \$1.50 but, to give the work widespread distribution, Dr. Kellogg permits an edition bound in library paper to sell at only \$1.00 postpaid. Order at once. If you are not entirely satisfied, you may return the book for prompt refund. Order today. Get relief from Constipation. Address—GOOD HEALTH PUBLISHING Co., 305 W. Main St., Battle Creek, Mich.

Also Gray Marine Engine Catalog showing full line of 2 and 4 cycle marine motors from \$50 upwards, one to six cylinders. Gray Motor Co., 356 Gray Motor Bldg., Detroit, Mich.

## Why is a Waste Basket Bigger than a Letter Basket?

Answer—Because most letters go into the waste basket—because most men don't think or care enough to make their letters look important and interesting.

Where do *your* letters go—those sales letters and other important letters on which you and your office force put thousands of hours and thousands of dollars a year? Isn't it worth a little more thought to keep them out of the waste basket, to insure their being read?

To send out letters that will side-step the waste basket is not necessarily expensive. A little careful thinking will solve the problem for you. Hundreds of the most important concerns in America have gone to the bottom of this problem—with an eye on expense. You will find them using dignified, impressive stationery produced on

## Construction Bond

They use Construction Bond because it is a high class paper—and so known—marketed in a manner which holds down the price. It goes *direct* to the most substantial printers and lithographers in the two hundred principal cities of the United States. And it goes in big quantities—500 pounds or more at a time. This cuts out the expense of doing a small lot business—saves losses on irresponsible accounts—and gives you substantial, impressive business stationery at a usable price—obtainable through a nearby printer or lithographer who is invariably competent and responsible.

Write us for our portfolio of twenty-five handsome specimen letter-heads. You may find a suggestion which will help you improve your own stationery. You will also see the various colors, finishes and thicknesses, in which you may obtain Construction Bond with envelopes to match.

Write us now and you will be making the first move to keep your letters out of the waste basket—to save some of the business you have been losing by neglecting this important detail.

### WITH AND WITHOUT RESERVES

Sometimes a few words mean more and carry further than a carefully prepared argument. From time to time as occasion permitted, I have cautioned insurants against the fallacies of assessment life insurance. At the beginning it is seductive, promising so much for so little. Millions have followed its lure, the uphill grade increasing with age. Here is the copy of a letter written to the Pacific Mutual Life Insurance Company by one of its policyholders, who is also—or was—a member of the Ancient Order of United Workmen, a fraternal assessment order:

"Am much pleased with the company. When I took out this policy [1881] the A. O. U. W. considered I was being swindled, as I paid \$46.70 a year, while my assessment in the A. O. U. W. was \$12 a year. Now the P. M. premium is \$21.80 a year and the A. O. U. W. \$97.20. Some difference."

This is all the information we have respecting the transaction, but as a comparison is made between the premiums we may fairly assume that the A. O. U. W. certificate was equal in amount with the policy of the life insurance company. The premium of the latter indicates that the life policy was either a long term endowment for \$1000 or an ordinary life policy for \$2000, more probably the latter.

The insurance has been in force thirty-four years. Thirty-four premiums of \$46.70 each would be \$1587.80, gross, paid to the life insurance company. It is impossible to state the amount paid the assessment order, for it has been steadily growing each year from \$12 to \$97. Let us average it at \$30 a year. At that rate the insured has paid the order a total of \$1020. He has received dividends from the life company, how much we do not know, but we do know that in the thirty-fourth year the rebate was sufficient to reduce the \$46.70 premium to \$21.80. We will be conservative and place the dividend earnings at fifteen per cent of the premiums paid. This yields the sum of \$238.17 which, deducted from the gross premiums paid, leaves the net premiums \$1349.63, as against \$1020 paid the assessment order.

But the life policy has a cash surrender value in the shape of a reserve. In the absence of all the essential facts an estimate of the reserve is impossible, but experience prompts a guess that it is something between \$500 and \$600. If it is the smaller amount then the reserve, plus the dividends, reduces the cost to \$849.63. So we have, under a conservative set of estimates, a net investment by the insured of \$1020 in

**D**URING the past thirty-seven years, THE TEACHERS MAGAZINE has been a leader among educational magazines. It is better and richer than ever and many of its departments contain the quality of work not to be had elsewhere. Among these are the departments of Drawing, Penmanship, Primary Work, Making, Music and Shorthand. Not the least important feature is the Personal Service Department by means of which our subscribers are helped in numerous ways, without charge.

**HAMMOCK & COMPANY,**

31 East 27th Street, New York

the assessment order, which has yielded him not a cent of earned equity, leaves him thirty-four years older and with an annual premium cost close to \$100 and steadily increasing as against a net investment of \$1350 in the life company that is worth \$500 or \$600 in cash or \$1000 to \$1200 in paid up insurance—and, if not surrendered, at a constantly dwindling premium cost.

It is not contended that this comparison is more than illustrative of the condition in which an assured will find himself after carrying assessment insurance for a number of years. In truth, I am convinced that a survey of the actual facts involved in these two transactions will result in a wider divergence of results than here shown under the two systems; that it will show a heavier net expenditure under the assessment certificate and a lighter net expenditure and greater earned equities under the old line reserve policy. Assessment insurance could be reliable if it chose. It matters not when a premium is paid—once a year or once a month—if only it is adequate and its constituent elements, expense, mortality and reserve, are properly distributed and invested.

According to the annual report of the State Fire Insurance Commission of Texas, the fire companies collected a total of \$10,648,433 in premiums there in 1914 and paid total losses of \$8,698,901—a loss ratio of 81.6 per cent. Add forty per cent for expenses and we find that the companies lost about \$2,000,000 on the transaction.

J. C. K., Altoona, Pa.—Yes, the company maintains adequate reserves and complies with all the laws of its home state governing the conduct of old line companies. The company is financially sound and has a small surplus. I am of the opinion that the net cost of insurance in it will in, say, ten or fifteen years, slightly exceed the net cost in some fifteen or twenty other companies that might be named.

R. G. D., Lafayette, Ind.—One of the better class assessment associations. It maintains a reserve based on the American Table of Mortality and 3½ per cent yearly renewable term, plus certain guarantee deposits. Of course there is no certainty at any time as to what a premium may be, the association possessing the right to levy assessments. Cannot recommend to any one wanting to make a life contract.

M. O. P., Dover, Del.—There are no mathematical short-cuts that will neutralize the effects of increasing age nor nullify the exactions of the Mortality Table. Innumerable schemes by ingenious promoters have been formulated to obviate the use of reserves, thus reducing the amount of premium payable by policyholders, but none of them will stand a mathematical test. Assessment insurance as generally practised is a delusion fraught with bitter future consequences. The sooner you invest your premiums in an old line legal reserve policy, the better off will you be.

A Subscriber, Spokane, Wash.—Write the home office of the company, giving your full name, the approximate date of your policy, the amount of the policy and the premium and the place you resided at the time you received the policy. Put the whole case to them. This is good advice in relation to all questions concerning any insurance you carry. Consult your companies frankly and fully. You will have no trouble replacing the lost policy. Provision is made by all companies for accidents of that nature. Most policies issued now give the insured the right to change the beneficiary. That is a matter in connection with your policy that can be settled by consulting the company.

## SCHOOLS AND COLLEGES

## THE PAN-AMERICAN FINANCIAL CONFERENCE

BY JOHN BARRETT

DIRECTOR-GENERAL OF THE PAN-AMERICAN UNION AND FORMERLY UNITED STATES  
MINISTER TO ARGENTINA, PANAMA AND COLOMBIA

**T**HE Pan-American Financial Conference will assemble in Washington, Monday, May 24. Opening with an address of welcome by President Wilson, it is hoped that it will adjourn on Saturday, the 29th, with a record of real results achieved. Holding its sessions in the dignified Hall of Americas of the beautiful Pan-American Building, the Conference will have an environment which should inspire it to accomplish something tangible and practical. When President Wilson, acting upon the recommendation of Secretary McAdoo and authorized by Congress, invited the Latin-American governments to participate in this international gathering, he took a long step toward promoting the cause of true Pan-Americanism. That those governments, in turn, attached importance to the invitation is proved by the prominence, standing and ability of the men whom they have sent to the United States as delegates.

The one great thing that is wanted of this Conference, as far as popular sentiment in North and South America is concerned, is that it will not merely talk and discuss projects and plans for the improvement of the financial, commercial and economic relations between the United States and its sister American republics, but that it will decide upon such action as will be approved by the various governments, financiers, bankers and commercial leaders participating. If, in other words, the Conference is characterized by action rather than words, it may mark the beginning of a great new era in Pan-American commerce and comity.

The personnel of this international meeting is a striking one. To begin with, there will be approximately between fifty and sixty authorized delegates from eighteen Latin-American governments. The only countries not participating will be Mexico and Haiti, which, in view of peculiar political conditions, will not be represented. In addition to these, the Ambassadors and Ministers of the Latin-American countries in Washington have been specially invited by the Secretary of the Treasury. Then, as representing the banking, financial and commercial interests of the United States, about one hundred and twenty picked men from different parts of the country have been asked to take part. Aside from these, the Secretary has invited the members of the Cabinet, the assistant secretaries of the State and Treasury departments, the Comptroller of the Currency, members of the Federal Reserve Board, members of the Federal Trade Commission, the Federal Reserve Agents, Governors of Federal Reserve Banks, members of the Federal Advisory Council, and the Director General

of the Pan-American Union. For its secretary general, he has named Dr. L. S. Rowe, of the University of Pennsylvania, who will be assisted by John Sterett Gittings, Jr., of Baltimore.

Altho at this writing the actual program of subjects to be discussed has not been announced, it can be assumed, from the original statement of the Secretary of the Treasury when the Conference was called, that it will include, first, the improvement of banking, exchange, credit, discount and trade facilities in inter-American financial, commercial and trade transactions; second, the development of conditions favorable to the placing in the United States of governmental, provincial, municipal and responsible private loans of the Latin-American countries, which were formerly placed almost entirely in Europe; third, the betterment of first class passenger, mail and freight steamship service between the principal ports of the United States and those of some of the Latin-American countries; and, fourth, such other matters as may be intimately associated with the three just named or may be determined by the Secretary of the Treasury and the delegates.

While great progress has been made during the last few years in the development of Pan-American commerce and comity, largely as a result of the propaganda of the Pan-American Union, the international organization maintained by the twenty-one American republics in Washington, in the interest of commerce, friendship and peace among them, it required some great international event like the European war to awaken suddenly the powerful financial and commercial interests of both North and South America to an appreciation of the interdependence and common interests of the American republics. The European war shattered the extraordinary commercial machinery which had been built up between the principal countries of Latin-America and those of Europe, and immediately made necessary the reconstruction of a machinery which would bring all the countries of the Western Hemisphere into closer financial and commercial touch. Before the war nearly all of the banking, exchange and discount transactions of Latin-America, not only for its trade with Europe, but for that of the United States, was done thru European financial centers and agencies in European money. It has now become imperative that these transactions shall be done thru United States financial centers and agencies and in dollars rather than pounds sterling. Already notable action along this line has been taken by the National City Bank of New York in establishing branches in several of

May 13, 1915.

UNITED CIGAR STORES COMPANY  
OF AMERICA.

## PREFERRED STOCK DIVIDEND NO. 11.

A regular quarterly dividend of 1 3/4% has this  
day been declared upon each share of the Pre-  
ferred Stock issued and outstanding payable June  
15, 1915, to stockholders of record June 1, 1915.  
The Preferred Stock Transfer Books will be closed  
at the close of business on June 1, 1915, and will  
remain closed until the opening of business June  
16, 1915. GEORGE WATTLEY, Treasurer  
Dated, May 5, 1915.

the Latin-American capitals, while  
other powerful United States banks  
have commenced doing a considerable  
exchange business direct in dollars.  
What has been done, however, is only  
the beginning of the extension of this  
service to practically every important  
capital and commercial center of Latin-  
America. If the Conference can pave  
the way to this result, it will have jus-  
tified its being called together.

The European war also brought  
paralysis to Latin-American progress  
by cutting off the market for its bond  
issues and loans, which had always  
heretofore been negotiated in Europe  
to a far greater extent than in the  
United States. In order to develop new  
conditions favorable to the prosperity  
of Latin-America and its commerce  
with the United States, it will now be  
necessary for the banking, financial  
and commercial interests of this coun-  
try and their bond buying constituency  
to provide money for Latin-American  
loans. The Conference should be able to  
accomplish much along this line, for it  
appeals strongly to the governments  
and peoples of Central and South  
America.

Intimately allied to the financial and  
commercial relationship of the Ameri-  
can republics is high class steamship  
service. Prior to the war the greater  
portion of the commerce of Latin-  
America was carried in vessels flying  
the flags of European nations. The out-  
break of the war, therefore, produced  
almost a blockade of the principal ports  
of the eastern and western coasts of  
South America and had some effect  
upon the Latin-American ports of the  
Gulf of Mexico and the Caribbean Sea.  
In other words, the war demonstrated  
the absolute necessity of having a  
steamship service flying either the flag  
of the United States or of other Ameri-  
can republics, which would not be sub-  
ject to capture or destruction. The  
particular necessities and opportuni-  
ties at the present moment are for the  
establishment of new and adequate  
lines between the Atlantic and Gulf  
ports of the United States, on the one  
hand, and those of the eastern and  
western coasts of South America, on  
the other hand. The former should run  
as far south as Buenos Aires, and the  
latter thru the Panama Canal as far  
south as Valparaiso. There is also the  
lesser but still important need of new  
service between the eastern ports of  
the United States and the western  
coasts of Central America and Mexico,  
and, in turn, between the ports of the  
Pacific Coast of the United States and  
those of the Gulf, Caribbean and At-  
lantic coasts of Latin-America.

Within the brief space of an article  
of this kind it has been impossible to  
more than summarize the possible fea-  
tures of the Conference and the sub-  
jects which will come before it, but  
there is no question that it is deserv-  
ing of the sincere interest of all per-  
sons who are desirous of laying the  
foundation for Pan-American and in-  
ter-American relations which will prove  
lastingly beneficial not alone to the  
United States but to each of the Latin-  
American countries.

Your Hands Can't Earn  
the Money You Need

You'll have to work for low  
wages all your life if you de-  
pend upon your hands to  
make your living.

To earn more money you must have  
the *special training* that will enable  
you to get and hold a better job.

The International Correspondence  
Schools will give you this necessary  
training in your own home, in your  
spare time. They will fit you for  
a *better position*, where you can earn  
more money.

If you want to advance in your  
present occupation, the I. C. S.

If you are going away for the  
summer, you will want The  
Independent to follow you.  
Let us know your new ad-  
dress, if possible, three weeks  
ahead. Be sure to give us  
your old address also.

THE INDEPENDENT

## Dr. Charles E. Jefferson

Pastor of the Broadway Tabernacle,  
New York

expounds his theories for international peace, in one of the sanest, soundest and most logical works yet written upon the great European conflict. In

## Christianity and International Peace

Dr. Jefferson fearlessly suggests solutions which though perhaps radical are based upon real knowledge and careful thought. If you are interested in the greatest problem confronting the United States today, you will find it masterfully presented in this work—the "hows" as well as the "whys." You know Dr. Jefferson. You know that each of the books he has written has been full of common sense and logic. But "Christianity and International Peace" strikes even deeper. It is undoubtedly Dr. Jefferson's most vital effort. Get it today at any bookstore, \$1.25 net. If you prefer, add 12c for carriage and order direct.

## THE NEW BOOKS

### THE GREAT CORSICAN

It was flippantly said that there would be one good result of the present war did it end the constant stream of books on Napoleon. That was before the appearance of the five works recently issued! Of these the new edition of Fournier's *Napoleon* has the most general value. It is a vivid and a scholarly biography and within reasonable compass even now as enlarged by the author's study of the records that the twenty years since its first writing have made accessible. Since, ten years ago, Edward Foord began his study of *Napoleon's Russian Campaign of 1812* much new material has come to light in the war archives both of Paris and of Petrograd. No happy topic, the tragedy in Russia has had less attention than any period of Napoleon's career, and this thoro and straightforward account, with its maps and plans, is a history, not a compilation. Colonel Vachée's book also may be considered a real contribution, being a serious discussion of *Napoleon at Work*; that is, of the general actually in the field. The movements of 1806 leading up to Jena are taken as the example; his methods are followed in detail and his one man leadership is compared with the staff system as exhibited by the Germans in 1870. The first volume of Capt. A. L. Becke's *Napoleon and Waterloo* deals with the campaign leading to June 18th, while the second is devoted to that great day. By a student of tactics, this is a study of the last movement of the French Army from Napoleon's rather than the Allies' standpoint. Wayne Whipple's has compiled *The Story-Life of Napoleon* on the original plan of giving a complete biography by means of extracts from many writers. The passages chosen are interesting; give widely differing points of view; and deal

more fully with his early life and training than is usual in single volumes on Bonaparte. The matter is cleverly dovetailed, but some knowledge of Napoleon's career is needful in order to follow events recorded by these varied descriptions. W. H. Hudson writes quite from the English point of view, and does not in the least admire *The Man Napoleon*. He indeed feels so little the influence of the extraordinary personality, and dwells so slightly on Napoleon's fairly superhuman power for work, his gigantic conceptions, his marvelous victories, that, interested from first page to last tho the reader be, he lays down the book wondering what were the qualities, or even the achievements that made this man for a generation the terror of Europe, the idol of France, and the subject still of such constant study that Kircheisen's thick bibliography published in 1902 is now far behind the times.

*Napoleon I, A Biography*, by August Fournier. 2 vols. New York: Henry Holt. \$3.50. *Napoleon's Russian Campaign of 1812*, by Edward Foord. Boston: Little, Brown. \$4. *Napoleon at Work*, by Colonel Vachée. Macmillan. \$2. *Napoleon and Waterloo*, 2 vols., by A. F. Becke. London: Kegan Paul. \$8. *The Story-Life of Napoleon*, by Wayne Whipple. New York: The Century Co. \$2.40. *The Man Napoleon*, by W. H. Hudson. New York: T. Y. Crowell Co. \$1.50.

### FRUITS AND FLOWERS

The chapters in Mrs. King's *Well Considered Garden* have partly appeared in *The Garden Magazine* and elsewhere, and are here gathered with fifty illustrations and four plans for color effects. There are enough fine gardens now in the country, whose owners can afford to buy the new varieties to make such a book as this of use. The author has no mercy on discordant colors, and would have a new profession of color gardeners. Yet her many suggestions will be of use to those of us who cannot buy the new fancy bulbs by

### THE NEWEST BOOKS

*Alfred the Great*, by Beatrice A. Lee, aims to bring together the more recent results of study of England's hero king and to place him in connection with the medieval world of continental Europe. Putnam. \$2.50.

*General Joffre*, by Alexander Kahn. This short biography tells of the years in the East and in the French colonies which prepared this silent "man of the eyebrows" for the task of 1914. Stokes. 50 cents.

*Flags of the World*, by M. T. Gilon. A book for those who have pored over the flag pages in the dictionaries, and who has not? There are five hundred illustrations and explanations of yacht and signal and municipal flags as well as the national banners. Warner. \$2.25.

*Canterbury Chimes*, by F. Storr and H. Turner. Illustrated by cuts from the Ellesmere Mss., here is a new edition of the delightfully retold tale from Chaucer that children who read them thirty years ago have not forgotten. Kegan Paul. 75 cents.

*Modern Tennis*, by P. A. Vaille. Chapters on the court; grip on the racket; the various strokes; foot faults; by an expert, make this book of as much interest to the unskilled player as to one interested in the Davis cup. Funk & Wagnalls. \$2.

*Hollow Tree Stories*, by Albert Bigelow Paine, are just the kind of fascinating nonsense yarns that big brothers reel off and should be given to all little boys and girls lacking a big brother. Harpers

SEND FOR COPY OF

"WILLIAMSTOWN THE VILLAGE BEAUTIFUL"

the thousand and who depend on the old and common varieties of tulips and larkspurs and diamond phloxes.

*The American Fruit Farm* is not a compacted manual, but a well written series of discussions, and decidedly interesting and provocative of thought on the conditions that will secure success and profit in the cultivation of fruit, especially by one who puts acres into a single fruit. The author comes from the New York Lake belt, which extends into Pennsylvania, and his favorite fruit appears to be the grape; but apples, pears, peaches, plums, the prune, which he puts ahead of the plum, and the various berries also claim his attention. The reader will absorb enthusiasm and not a little knowledge as to the choice of fruit for his location, and the conditions for success.

Mr. Bricker's book, *Agricultural Education for Teachers*, deals mainly with teaching agriculture to rural children. School gardens in cities will be devoted almost necessarily to nature study, which is a different thing. The instruction is good, and ten thousand teachers now are feeling the need of it. Already the children in school are showing their fathers how they ought to farm for profit, and boys in the South as well as the North are raising enormous crops in their plots. An Oregon boy raised eleven and a half bushels of potatoes from one seed potato in one season and received the state prize. We commend the volume to teachers.

*The Well Considered Garden*, by Mrs. Francis King. Charles Scribner's Sons. \$2. *The American Fruit Farm*, by Francis Newton Thorpe. G. P. Putnam's Sons. \$2.50. *Agricultural Education for Teachers*, by Garland Armor Bricker. Am. Book Co. 80 cents.

### THE STORY OF A YEAR

The year 1914 will be one of the most memorable in the history of the world and every reader will realize the importance of having a complete record of it such as constitutes the *New International Year Book*. The article on "The War of Nations," by Professor Hayes of Columbia, occupies twenty-five pages besides photographs and maps and topics treated in the sections devoted to each country. But the war does not crowd out the usual record of peaceful progress of the world in science, art and literature, or curtail seriously the space devoted to American affairs which has always been a specialty of this annual.

Dodd, Mead. \$5.

### UP TO DATE

An American, of Belgian descent, caught by the Germans as he is about to enter the Belgian Army, sentenced to be shot, paroled by the commandant on condition that he try to rescue the general's ward from England, has about as many emotional experiences in the next few days as can be imagined. The ward is of course beautiful, and love, the secret service, war and adventure are commingled in *Who Goes There*, by Robert W. Chambers.

Appleton. \$1.35.

### THY KINGDOM COME

"Faith is not believing in the obviously impossible, but an energy from an inexhaustible source." Here is the sane keynote of Harold B. Shephard's short and vigorous essay, *Jesus and Politics*. Whether one's Christian Socialism carries one to the lengths of the political and social ideal here described, this clear, compelling discussion of its possibility, introduced by Vida D. Scudder, sets one thinking seriously, practically and hopefully of social conditions, as they are and as they should be.

Dutton. \$1.

### POCONO MANOR COTTAGE

Pocono Manor :: Pennsylvania  
(Pocono Summit Station, D., L. & W. R. R.)

Spring in the mountains with a wealth of laurel, arbutus and rhododendron is well nigh ideal.

Add to this, glorious days of motor-ing, golfing and trout fishing, with cozy evenings by a hospitable fireside. Comfort without extravagance, with Quaker hospitality—this is Pocono Manor.

M. L. DENGLE, Pocono Manor, Pa.

# A Number of Things by Edwin E. Slosson

My Uncle Aaron keeps a chicken ranch up in York state and I'm very glad he does. I receive every week a souvenir from him by parcel post that I value highly, altho I do not keep it long. They taste different from those laid in cold storage in the city. And then when I visit him summers and he shows me around it is as instructive as a university extension lecture and lots more interesting. He works the thing out scientifically, which I suppose is why the business is to him a source of income instead of an expensive luxury. He keeps to the nutritive ratio between carbohydrates and proteids of four to one as carefully as a cooking-school. He provides grit and green in the proper proportion and sees to it that oxygen is supplied and carbon-dioxid removed by day and night.

I pronounced the outfit perfect the first time I inspected it, but whenever I visit him he has some new notion in his head. The last time it seemed that he had not been hatching out anything new. But in the evening he sprang it upon me while he was indulging in his favorite recreation of phonographing. He had just taken off "The Trail of the Lonesome Pine" and substituted a Harry Lauder, changing the bamboo for hard steel, when he remarked:

"I'm going to set up the machine in the hen-house next."

"Why? You surely are not tired of it," I said.

"No, but I think it will do the hens good to have a little music. Cheer them up and they will lay better. Did you see those big signs alongside the railroad as you came up? 'Milk from contented cows.' That's the idea. I'll get some new labels printed, like this":

EGGS FROM HAPPY HENS

Then he explained his theory. He had passed beyond physiology into the realm of psychology. Like the superintendents of institutions for featherless bipeds he had found that it was not enough to provide for all the bodily wants. Hens have senses, if not souls, and music which has charms to soothe the savage breast cannot be without effect upon the domestic fowl.

I entered enthusiastically into the idea. For one thing I always like to have experiments tried—by other people. Then, too, I was particularly anx-

ious to stand in with Uncle on account of the parcel post. I would quarrel with any other of my wife's relations rather than with him. I remarked that a phonograph would be just the instrument because it transforms the human voice into something that sounds like a hoarse rooster or a guinea hen. But I saw Uncle Aaron looked dubious at this, for he prefers the phonograph to all other music, so I hastened to add that when I got back to town I would pick out some suitable records for him. Nothing elaborate, of course, some simple and heartfelt lay. Possibly selections from the incidental music of Rossini's "Chantecler"; or the barnyard symphony which the band uses too often as an encore; or that beautiful passage in Strauss' "Sinfonia Domestica" where they beat the eggs, shells and all; anyway it sounds like that. I also suggested songs and monologs, "The Lay of the Last Minstrel"; "Lay on, Macduff," etc., would not do on account of the broilers being present, but certainly

Old Grimes he had a lovelie hen,  
A lovelie hen was she.  
She used to lay two eggs a day,  
On Sundays she laid three.

to the tune of Auld Lang Syne.

I recalled the old story of the man who put an ostrich egg in the hen-house under the notice, "Look at this and do your best," and I suggested as an improvement getting one of the new 42-centimeter shells, made in Germany. If the horses of Elberfeld can read why not hens? Some well-selected mottoes, such as used to be worked in cross-stitch on perforated cardboard, might as well be here as in the house. For the benefit of the Leghorns we might put up

*È meglio aver oggi un uovo  
che domani una gallina*

Or in case their ancestors emigrated from Italy in the days of the empire the older form of the proverb might be used

*Ad præsens ova cras pullis sunt meliora*

For the small fry it might be necessary to add the English: "Better an egg today than a chicken tomorrow," which is particularly true when they are sixty cents a dozen. But a motto is always more impressive in a foreign tongue, especially one you don't know. So we should certainly have

*Nulla dies sine ovo*

To comfort the poulets when they are disposed to complain of the scanty fare we should put up

*Fette Hühner legen wenig Eier*

or its Scotch equivalent, "Fat hens are aye ill layers."

Perhaps it might be well to cut out the pictures of the champion egg-layers from the poultry journals and frame them in passementerie, or whatever they call it, for hanging them in the hen-house, so it would look like a college trophy room.

If there is any truth in the old theory that a thunderstorm will addle eggs, why should not the concord of sweet sounds improve the flavor? At any rate, something ought to be done out of pure

humanity to relieve the monotony of this over-regulated existence. These cloistered hens that never hear the strain of strutting chanticleer, as Shakespeare says, need something to cheer them up. And think, too, of the incubator orphans. Surely it is a mistake to think that a kerosene lamp and a thermostat can take the place of maternal love and care. The least we can do for them is to set up a clucking phonograph, and if we could get one that would worry over them so much the better.

In honor of the Alliance (*née Entente*) the French are doing their best to acquire a taste for the patriotic songs of the British music hall. But how can they when the Jingo jingle which in 1877 aroused the English to fight the Russians in defense of the Turks

We don't want to fight, but, by Jingo, if we do  
We've got the ships, we've got the men,  
we've got the money, too.

appears in its French reincarnation as

Par Jingo, s'il faut se battre nous avons  
les navires, nous avons les hommes et nous  
avons aussi l'argent.

And "Tipperary," after it has passed thru the English-Français dictionary turns out this way:

Il y a loin à marcher jusqu'à Tipperary.  
Il y a beaucoup de chemin à faire.  
Il y a loin à marcher jusqu'à Tipperary.  
Jusqu'à la douce amie que je connais.  
Au revoir Picadilly. Adieu Leicester square.  
Il y a loin à marcher jusqu'à Tipperary.  
Mais mon cœur est là tout entier.

The annual custom of enabling widows to pick up sixpences from an ancient tombstone in the little churchyard attached to the Church of St. Bartholomew the Great, Smithfield, was observed yesterday and attracted a considerable crowd. The ceremony was instituted by a now forgotten donor, with the object of presenting twenty-one deserving widows of the parish with hot-cross buns and new coins. When some years ago it was suggested that the custom should be discontinued, a Streatham gentleman invested a sum sufficient to provide the sixpences yearly. The widows who yesterday took part in the ceremony ranged in age from sixty-two to ninety-three.

I intended when I clipped this from the London Times to add some comment, but I am unable to think of anything which will make it any more amusing and pathetic than it is. Why people should collect in considerable crowds to watch poor and aged widows pick sixpences from a tombstone and pay money for the perpetuation of the degrading spectacle is something a native American cannot hope to comprehend.

The lecture system, a relic of the days when printing was unknown, is responsible for many a queer conception in the student mind, for the ear is less accurate than the eye. In Faber College a Freshman in pursuance of the reading requirements asked the librarian "Have you got Ibsen's Goats?" In the University of Atlantis a Sophomore answered the question "What is Albania?" by "A small country inhabited by people with pink eyes and white hair."

JUST A WORD

The following, from a subscriber in Missouri, has given us great satisfaction in that it describes from the reader's point of view, and with cordial appreciation, the responsibility which in this time of unexampled world disturbance rests upon those who conduct a national periodical like The Independent: "It seems to us that at no time since the Civil War has The Independent occupied a place of so grave responsibility as the present. Upon the clear vision, fair judgment and lofty principles set forth in your editorials, depends our intelligent attitude toward the nations now engaged in the Great War as well as our right understanding of duty as neutrals. It is to such magazines as The Independent that we owe our own high class Americanism of which we are so justly proud today. Long live The Independent and its staff of noble men!"

The Independent of next week will be the annual Little Travels Number, and will contain features of the greatest value to all readers who are making vacation plans for the summer. A fuller announcement appears on the third cover page of this issue.

Myron T. Herrick, ex-Governor of Ohio, and recent United States Ambassador to France, where he won such golden laurels in the first few months of the war, has written an article for The Independent on the question of "Rural and Farm Credits," which is one of the largest economic questions that will come before the next United States Congress. As Mr. Herrick is one of the three or four men most talked of as a possible candidate of the Republican party for President at the next election, his article will prove of special significance at this moment.

PEBBLES

"What are they going to call their baby?"  
"I don't know. They named it Reginald."  
—Michigan Gargoyle.

Wise Guy—Ever see a close race?  
Utter Nut—Sure! I spent three months in Scotland.—Columbia Jester.

Wedding Guest—The bride is of old Puritan stock, I understand?  
Second Wedding Guest—Puritan stock? Union Pacific.—Harvard Lampoon.

Employer—Have you any excuse to offer for such laziness?  
Hired Man—I haven't any that will work.—Judge.

Circus Manager (to applicant)—You say you want a job in the sideshow, eh? What are your qualifications as a freak?  
Applicant (proudly)—I am the only living author who has not written the inside story of the Great War.—Life.

"How many head o' live stock you got on the place?"  
"Live stock?" echoed the somewhat puzzled farmer. "What d'ye mean by live stock? I got four steam tractors and seven automobiles."—Judge.

"My dear, I've an idea," said old Mrs. Goodart to her caller. "You know we frequently read of the soldiers making sorties. Now why not make up a lot of those sorties and send them to the poor fellows at the front?"—Boston Transcript.

"Do you think your constituents will return you to Congress?"  
"I don't know. The boys out my way aren't very well pleased with Congress. Maybe they'll keep me home to punish Congress for the way it has been acting."—Washington Star.

A nervous young lawyer arose to make his first address in a crowded courtroom. He began: "Your honor, my unfortunate client—my unfortunate client—your—" "Go on, sir!" shouted the exasperated judge. "As far as you have proceeded the court entirely agrees with you."—Strauss.

Mrs. Finnegan kept a boarding house and one day young Johnson came to her with several complaints. She listened in silence for a few minutes, but as the young man waxed eloquent she lost her patience. "Don't I know every one of the tricks of your trade?" said Johnson, with considerable heat. "Do you think I have lived in boarding houses fifteen years for nothing?" "Well," replied Mrs. Finnegan, icily, "I shouldn't be at all surprized."—New York Times.

He was deeply in love with his wife, but awfully careless about money matters. He started away on a long business trip, leaving her short of money, and promising to send her a check—which he forgot to do. The rent came due and she telegraphed: "Dead broke. Landlord insistent. Wire me money." Her husband answered: "Am short myself. Will send check in few days. A thousand kisses." Exasperated, his wife replied: "Never mind money. I gave landlord one of the kisses. He was satisfied."—New York Times.

A Chicago matron of great beauty called one day upon a friend, bringing with her her ten-year-old daughter, who promises to be as handsome as her mother. The callers were shown into a room where the friend had been receiving a milliner and many hats were scattered about. During the conversation the ten-year-old amused herself by trying these on. She was particularly pleased by the effect of the last one. Turning to her mother she said: "Mother, I look just like you now, don't I?" "Sh!" cautioned the mother, with uplifted finger. "Don't be vain, dear."—New York Times.

## Golf Links and Tennis Courts are Ready

"Fore."

"Play."

At Battle Creek being happy is part of the business of getting well. All the good outdoor games are played there and played as they ought to be. The tennis courts are exceptional. The golf course is well laid out and admirably kept.

Play is recognized as one of the most important therapeutic agencies of this great health resort. Every provision is made for outdoor games at their best. Guests who are proficient in golf, tennis or swimming find links, courts and pools worthy of their skill.

The unique feature, however, of the outdoor sports at Battle Creek is that they are *not* only for the proficient and the athletic.

The men and women who need outdoor sports most are those who have never learned to play or who have forgotten how to do it.

It is difficult and awkward to learn a game requiring physical skill among ordinary surroundings. The country clubs and semi-public recreation grounds are available only for habitual players. At Battle Creek conditions are arranged to be helpful to beginners and to the poorly equipped. Skilled instructors start them right. Companions of their own degree of proficiency are numerous, and careful supervision of their doctor keeps them from over-exertion or discouragement.

The true spirit of play takes hold of them. They become ambitious to play more skillfully. Wholesome, determined exercise of physical effort makes them forget how they feel until some day, in taking stock of an improved swimming stroke or a swifter tennis service they find that, side by

side with proficiency and skill, they have achieved stronger muscles and the increased joy of living.

The climate of the Michigan peninsula is particularly favorable to outdoor sports. The air has crispness and life even in mid-summer. The picturesque lakes and streams afford splendid boating and other water sports. The roads are ideal for motoring or driving.

Guests are encouraged to walk and *walk properly*. There are daily cross country walking parties carefully adapted to the strength of the participants. Many people have forgotten what good fun walking can be. At Battle Creek it takes its place among the pleasurable outdoor sports.

Thousands of men and women are looking forward to the summer vacation as a source of definite physical benefit. They must not only have a good time, they must make the vacation show a profit in strength restored and health regained.

At Battle Creek they are assisted in this effort by physicians of wide experience in the use of the great physiologic means of health—exercise, diet and baths—and who have at their disposal the most perfect facilities in the world for this kind of treatment.

Write to 305 Administration Building, Battle Creek Sanitarium, Battle Creek, Michigan, for full information.

Battle Creek is easily reached from the East, West or South. All through express trains between Detroit and Chicago stop at Battle Creek. A limousine from the Sanitarium meets guests at the station.

NUMBER 3469

## ITALY ENTERS THE WAR

**J**UST at the moment when Austria is rejoicing at the prospect of clearing the Russians from her northern province another enemy arises on her southern frontier. A fresh army of a million or more and a new navy have been added to the forces of the Allies. The two central European powers are now completely surrounded by belligerent or antagonistic nations. The Balkan States, which separate them from their only outside ally, Turkey, are likely soon to join the ranks of their enemies. Rumania is said to be bound by a recent treaty to enter the war if Italy does, Greece will probably follow her example, and Bulgaria will find it difficult to remain neutral and dangerous to take sides against her three hostile neighbors, Serbia, Greece and Rumania.

The participation of Italy in the conflict has long been anticipated and often prematurely announced. It was not so much the weakness of the *Dreibund* as the strength of the *Entente Cordiale* that took Germany by surprise last August. The Germans appear to have expected that Italy would remain neutral but not that England would become a belligerent, and their anger was proportionate to their disappointment. At least no great animosity against Italy has been allowed to appear in the German press, tho now, when their former ally becomes their active enemy, the accusations of treachery are loud and bitter.

Since the text of that famous treaty which has for thirty-three years controlled European politics has never been published, it would be idle to discuss whether Austria's attack on Serbia without consulting Italy, or Italy's refusal to come to the aid of Austria when she asked her to, was a violation of it. As a matter of fact, the Triple Alliance was virtually abrogated ten years ago, and, altho it has been duly renewed and formally approved since then, the convention was unable to prevent Italy's increasing alienation from Austria and gradual approachment to France. Italy was persuaded by Bismarck to enter the Alliance for protection against

France, but for many years the fears, and consequently the animosity of Italy, have been directed toward Austria. In the Balkans the interests of Italy and Austria conflicted, and the Italians remaining under the Austrian flag have never ceased to call upon their countrymen to rescue them.

The Austrian rules with the arrogance of the Prussian, but without his efficiency. For fifty years Venetia was under Austrian administration, and how the Italians liked it may be seen by the tablet in the Doges' Palace, which records the vote of the people in 1866 on the question of annexation to Italy. The referendum showed 647,000 in favor of reuniting with Italy and 60 in favor of remaining with Austria. If a vote were taken of the inhabitants of Triest and the Trentino, as we hope there will be before their disposition is settled, the majority in favor of coming into the Italian Kingdom would very likely be as large.

In spite of our national neutrality we cannot avoid a certain sympathy with the ambitions of the Italian Irredentists, at least in so far as they concern territory inhabited chiefly by Italians. We also sympathize with their growing abhorrence of the German and Austrian methods of warfare, tho we cannot feel it so poignantly as they do from the contact with refugees from Belgium, France and Serbia. But, more than all, the hope of America is that the action of Italy may hasten the end of the war.

Whether it would have been better policy for Italy to have accepted what Austria offered rather than risk all in the attempt to grasp more remains for the future to determine. But, wise or unwise, it is the people's will. Here was no case of forced and hasty action under compulsion of an autocrat or of secret agreements. There has been ample time for deliberation and discussion. Parliament by an overwhelming majority supports the Government, and the people have supported Parliament by their demonstrations. The nation as a whole has accepted the responsibility for the grave decision.

## THE WATERLOO OF A BOSS

**M**R. BARNES of Albany may well find himself wishing that he had manifested in his own case the disinclination to libel suits characteristic of another famous political personage, Big Tim Sullivan, of Tammany Hall. Big Tim was urged by friends to sue an opponent for libel, and responded with conviction, "No, sir; don't ever do it. They'll only go and prove it on you."

Last July Mr. Roosevelt said in effect that there was

a corrupt political alliance between Mr. Barnes and Mr. Murphy, of Tammany Hall, and that Mr. Barnes worked thru a corrupt alliance between crooked business and crooked politics. Now he has "proved it on him." The jury at Syracuse has declared that in so saying Mr. Roosevelt did not libel Mr. Barnes.

The outcome of this famous case should have two important results.

It should drive William Barnes from political life. It

should deprive him of what influence and weight have been his in the councils of the Republican party. "The defendant," said Judge Andrews in charging the jury, "must prove to you that his charges were true." And the verdict of the jury declared that they were true.

What use should the Republican party have among its leadership for a man guilty of an improper and tainted alliance with a boss of an opposing party? What use should the people of the state of New York and of the nation have among their political leaders for a man guilty of an illicit and dishonest alliance between crooked business and crooked politics? In asking these questions, be it noted, we are using the language not of Mr. Roosevelt but of Mr. Justice Andrews. The Republican party must purge itself of a leadership that is unworthy and inimical to the public welfare.

The case should further demonstrate, to those who have doubted, that Theodore Roosevelt, whatever his shortcomings of manner or method, of temper or taste, however one may disagree with his policies and his political beliefs, is a politician untouched by corruption, a man whose public life has been devoted to what he believed to be the common good. In all the testimony adduced by the plaintiff to discredit him before the jury and the world there was no evidence of corrupt motive, no implication of dishonesty. It is true that it was shown that Mr. Roosevelt had often worked harmoniously with political bosses. But this fact should have been as well known before the trial as after. Mr. Roosevelt has never attempted either to deny or to conceal it.

There is a distinction, however, that should be kept in mind. It is one thing to work with a boss so long as he is willing to go your way, opposing and forsaking him the moment he substitutes personal ends and private gain for the common interest; it is quite another to join with a boss in selfish exploitation of the community in which he has political power. Mr. Roosevelt has worked with bosses, even with Mr. Barnes. There is always danger, of course, in such associations; for a man runs great risk of being misunderstood. But Mr. Roosevelt has not let bosses use him for evil purposes. No evidence in the trial just closed showed Mr. Roosevelt conspiring with any boss or politician against the public welfare. Much evidence showed him defending the general good against their selfish machinations.

This is Mr. Roosevelt's second spectacular victory in a libel suit. It will, of course, be intensely gratifying to all his friends, personal and political. It should also gratify those who hate bossism and the alliance for gain between politics and business.

## THE LEAGUE OF PEACE AT MOHONK

THE Annual Lake Mohonk Arbitration Conference was held last week on the beautiful mountain top where, for over a generation now, the friends of peace have annually foregathered. One would have thought from reading the daily papers that the most important issues discussed were those relating to national defense.

But from the opening address of John Basset Moore, generally considered the leading American international lawyer, to the final remarks of Mr. Smiley, the idea of the League of Peace seemed to grow in favor. It was made the dominant theme of the addresses of Mr. Theo-

dore Marburg, ex-Minister of Belgium; Prof. John B. Clark, of Columbia University; Henri La Fontaine, president of the Berne Peace Bureau; ex-President Eliot, of Harvard, and the editor of The Independent. Moreover, it formed the frontispiece of the platform finally adopted.

It has now been favored at all five of the peace congresses held since the war broke out; the Central Organization for Durable Peace, at The Hague, April 7-10; the International Conference of Women, at The Hague, April 28-30; the National Peace Congress, at Chicago, February 26-28; the World Court Congress, at Cleveland, May 13-14, and now the Mohonk Conference.

But most significant of all it is announced that a committee of one hundred, led by ex-President Taft and including such distinguished Americans as President Lowell, of Harvard, Alton B. Parker, Oscar S. Straus, Judge George Grey, and Jacob M. Dickinson, are hoping to call next month a conference at Independence Hall, Philadelphia, where the greatest League of Peace known to history was born, to see how the idea on an international scale can best be brought to the attention of the governments and peoples of the world.

The League of Peace is evidently to be the next great step in the peace movement. We purpose to discuss it fully in an early issue of The Independent.

## INTERNATIONAL LAW AND THE SUBMARINE

SUPPOSE that Germany refuses our demands, that all efforts of diplomacy fail, and that the conciliation and mediation which may be offered by outside nations are rejected.

If war is then declared, let us see just what we shall be fighting for.

We maintain that Germany has violated international law *as it now stands*. If this is so, the claim that the killing of the passengers of the "Lusitania" is criminal is unanswerable.

Germany contends, however, that the issue should not be settled on the basis of international law as it now stands, but as it *should stand* in view of the use of submarines.

If this view is accepted it is not yet clear that there would be any real change in the situation. For we are inclined to believe that, when international law comes to be revised, the best opinion of the nations will still forbid the killing of non-combatants on merchant ships.

But any such revision of international law must consider the following points:

(1) The Germans have a right to prevent contraband freight from reaching their enemies, provided that, in intercepting it, they violate no right that should take precedence of this one.

(2) The right of passengers to life does take precedence of the right to stop contraband cargoes.

(3) If it is known that a ship is likely to be destroyed and passengers have the option of going on another, their lives are not absolutely threatened, since a condition is offered by accepting which they will be safe.

(4) In this case the belligerent assumes the right to fix the condition under which the passengers may live, the condition, namely, that they go by other ships.

(5) Does the right of the passengers to sail on the threatened ship take precedence of the right of the bel-

ligerent to stop the contraband cargoes? If, as we have supposed, the German contention, as to what international law ought to be and probably will become, be accepted as a basis for deciding the pending case, the right of passengers to sail on the threatened ship may have to give way to that of the belligerent to stop contraband cargoes.

(6) It is uncertain what international law will become when full cognizance shall be taken of the effect of using submarines. It is not the prerogatives of either party in the war to decide this great issue by itself and act on the decision.

(7) There is immediate need of a conference of powers to determine what rule should be observed during the continuance of the present war.

(8) If such a conference should decide that passengers may properly be barred from ships carrying munitions of war, the right to kill the sailors and officers of merchant ships will come into question.

(9) The rescuing of the crews of ships with such contraband cargoes will be relatively easy and may be made obligatory, or

(10) It would be possible to confine the carrying of munitions of war to auxiliary naval ships, which should be fully armed for self defense.

The issues here stated will have to be settled by negotiation, even tho a war should precede the settlement. It is better, then, to settle them without war.

### STAND BY THE PROTOCOL

**T**HE Peace Protocol in the great garment trade in New York is unquestionably the most important attempt yet made in the United States to substitute law for war in industrial relations. It ranks as a measure of industrial peace with the compulsory arbitration law of New Zealand and the compulsory investigation law of Canada.

The protocol came into being after the great strike of 1910 and was the work largely of three men—Louis D. Brandeis, the eminent Boston lawyer; Julius Henry Cohen, long recognized as one of the ablest and most public-spirited of the younger New York attorneys, and Meyer London, now the only Socialist member of the House of Representatives.

The protocol has already been of inestimable benefit to both employers and employees. It has been the subject of numerous magazine articles and of a sympathetic investigation and report by the United States Government. It has been copied in other cities and trades. It has abolished the brutality of the lockout and the violence of the strike. It has established the preferential shop—a happy solution of the deadlock between the open and the closed shop idea. It has bettered the condition of the workers. It has improved the sanitary conditions in the shops. And above all it has raised the industry from a cut-throat business to a coöperative profession.

Yet it is now proposed by the manufacturers to abrogate it. Their contention is that the union is not living up to its provisions in good faith. Of course, neither the protocol nor any other scrap of paper executes itself. The most perfect constitution will not work without the proper spirit on the part of those who carry out its provisions and have to abide by them. No doubt the manu-

facturers have just grievances. But will they assert that they themselves have always carried out their part of the joint agreement with scrupulous regard for the rights of their employees?

The truth is, that there are no fundamental differences in the present controversy that cannot be settled by the employment of common sense and a little good humor, especially as the machinery of the protocol provides ready ways both for the amendment of the protocol and for the development of the industry as far and as fast as both sides can unanimously agree on ways and means.

Now is the time above all others to stand by the protocol. Otherwise this great industry will lapse into industrial warfare, with all the stupidity and cruelty that implies. Has Europe no lessons now for those who abandon reason for force in human relations?

### CHURCH, STATE AND MARRIAGE

**W**HAT is the authority that has the right to declare a marriage lawful or unlawful? Is it the church, or is it the state? There are quite diverse views on this subject, and exclusive and contradictory claims by the church and the state give occasion to very disagreeable consequences. There are many cases in this country in which parties legally married by the state are declared by the church to be living in sin and their children declared to be illegitimate.

Which power is it, then, the civil or the ecclesiastical, that has the real and final right to decide as to the validity of marriage?

Historically not necessarily either. In many nations capture has made marriage valid. Thus Briseis became the legal wife of Achilles, and Chryseis the wife of King Agamemnon. Thus in Bible story the remnant of Benjamin secured their wives, and so were the Sabine maidens wedded in Roman story. But the world over valid marriage has been contracted by the simple agreement of the parents of the boy and girl. In India to this day she may be married from infancy. Indeed, except under modern civilization and certain claims of the Christian Church, neither government nor religion has assumed any control of the matter beyond recognizing the validity of what others have done, the parents, or the parties themselves, or the captor of the maiden.

Under modern complex civilization all this free and easy way of marrying has to be reduced to order, and limited by the public welfare. Once polygamy was justifiable; it is so no longer in our civilization. On every other subject the decision as to what is for the general good is left to the law-power of the state. It is for the good of the people as a whole that there be an authority which shall settle what is best for the people as to who should marry and how and when, and what are the conditions that make a valid marriage. In a free government, in which the people rule, they are the ones to decide, by their chosen representatives, what is for their general interest. They represent the whole people, and not any class. Their right of decision is primary, and is superior to any other that can be named. No church can do it, for it represents only a fraction of the people; or it may be that it is not itself representative but is ruled by a class within itself.

Has the church, then, nothing to say as to the duties and conditions of marriage? Certainly it has. The state

defines and punishes manslaughter or theft in all their degrees; and the church also condemns these offenses, with penalties. Almost always the church will agree, and can hardly help agreeing with the state, and it will be the duty of the church to condemn what the state condemns. The state can better judge what is for the benefit of the people than can the church; it is its business to declare whether a man may marry his deceased wife's sister, or whether a belief in divorce nullifies marriage, or what shall be the law of divorce. For the laws and conditions of marriage are not matters of essential righteousness, but are governed by social conditions; while the behavior of the parties in marriage is of essential righteousness, and there the conscience of the parties is supreme, with which the voice of the church must express itself.

### GETTING RID OF THE RAILS

THE auto-locomotive was not born to rails. It took to them at the age of thirty because the roads were so rough and rubber tires had not been invented a hundred years ago. But late in the nineties it jumped the track and ever since has been running about the country like a wild colt, dashing up grassgrown lanes, waking up rural inns, climbing mountains, racing aside the surf, toting freight thru city streets, conveying gay parties of tourists into the unknown parts of their native land. This is the new freedom such as rejoices the aeroplane when it flies over mountain and stream and the telegraph message when it leaves the wires, which have kept it earth bound, and soars thru ethereal space.

It is the adaptability and convenience of the railless vehicle which has brought the automobile so quickly into favor. It is not confined to stated streets and fixed hours. It is obedient to the needs or whims of the owner and goes when and where he will. But few of us can afford automobiles, tho more of us own them. Those who could pay no more than five cents a ride have had to stick to the trolley cars which ran up the same old streets every day regardless of the convenience of any individual passenger.

But now we turn to a new page in the history of locomotion when convenience and economy come together for the first time.

There was a little man  
Had a wooden leg;  
Hadn't any money,  
Didn't want to beg.

So he took four spools,  
And an old tin can,  
Called it jitney  
And the blamed thing ran.

It's bound to run. Nothing can stop the jitney now, no corporation, no legislation. The era of extortion and of corruption is over. The cab service of our American cities has been the modern form of highway robbery. The tourist in Europe revels in the cheap carriage rides, but when he returns he is held up at the dock by an insolent cabman who charges all he dares, and then forces him to pay a compulsory "gratuity" as great as the European cab tolls.

The taxicab at first promised some relief. That was why its introduction was fought by the vested interests as now they are fighting the jitney. But the mechanical accountant proved to be almost as greedy and unreliable as its human predecessor, so the common people have

been confined to the street cars. The street car lines requiring exclusive privileges on the streets were quasi-municipal services. Sometimes the city ran the street cars. Sometimes the street cars ran the city.

But the jitney bus is independent because it demands no special favors. It tears up no pavement. It sets up no poles. It lays no third rail. It has the same right to the public street as the farmer's wagon or the one-horse buggy, or the limousine, and it asks for nothing more. It goes wherever people want to go even tho it be thru a pretty street instead of an ugly one. It requires but little capital because it does not need to build a power house or to buy the right of way or the town council. It only needs to be let alone. If our American habit of legislative antagonism toward every new thing can be held in abeyance for a few years the jitney may develop into a very useful institution.

### OUR OLDEST CONTRIBUTOR

THE oldest, and we may say the best loved, of the familiar writers for The Independent has been translated. He did not die as others die, an old man wasting away, tho he was well past four-score years, but in his full strength like Moses, for in his usual health he was sailing in a boat on his Florida lake when suddenly, without a struggle, he was taken away.

Edward Payson Powell, from a period before the birth of those who now chronicle his passing away, had been a constant and favorite contributor to our columns, writing both editorially and under his name. For little more than a dozen years he was the successful pastor of important churches, first in Adrian, Michigan, then in St. Louis, and then in Chicago; but from the beginning he was a writer for the press, and his love for agriculture, man's first and divinest way of gaining a livelihood, led him to choose early the life of a farmer in his own college town of Clinton, New York, where he could expend all his taste and his science in the creation of a modern Eden, richer in developed fruits and plants than Adam ever saw, yet reading and studying and growing ever nearer to nature and nearer to the heart of man and the soul of God. Here it was his pleasure and more than half his life to speak to a larger audience than any pulpit could offer.

It was because his heart was so near to nature that his readers loved him. And he loved humanity as he loved nature. He lifted his readers above the "getting and spending" that "lay waste our powers," and ever bade us see the beautiful and the good around us and in us. He was full of wisdom, not in fruits and trees and bees and birds alone, but in the training of boys and girls more than of vines and flowers, for education was a hobby of his, and he never lost the spirit of the preacher and the purpose, while he left behind him the tone with the garb. His text may have been Northern Spys or bluebirds, or the last bulletin from some agricultural station, but the lesson of it was ever beauty and wisdom and goodness, so easily, so sympathetically expressed, that we read and felt happier and nearer to the footsteps along the lilies of Galilee.

Up to the end his heart and his pen worked, and the latest—tho not, we are glad to say, the last—of his articles for The Independent appears in this issue.

# THE STORY OF THE WEEK

## Italian Parliament Votes for War

As parliament re-assembled on the 20th the galleries were filled with spectators who greeted with applause the arrival of the representatives of the Allied Powers and of the United States. The orator of the war party, the poet Gabriele d'Annunzio, who came too late to find room in the public tribune, was lifted up and passed over the heads of the crowd to the front row. When the deputies saw him they all rose and cheered for five minutes.

Premier Salandra opened the session by presenting a bill "to meet the eventual expenses of a national war" and grant full powers to the Government to deal with all public matters after the declaration of war. He explained the reasons which had led the Government to this action as follows:

Since the unification of Italy, Italy has striven by every means in her power to maintain peace by means of alliances and friendships. She has tolerated the insecurity of her own frontiers and laid in abeyance her national aspirations.

Despite Austria's efforts to crush out the undying Italian spirit in the "unredeemed provinces" we have stood by this policy. Now, however, when Austria has violated the Triple Alliance and provoked the European conflagration, Italy, after vainly striving to reach an agreement, has been compelled to denounce the Triple Alliance and, lest she be left isolated, has provided for the safeguarding of her own interests.

The ultimatum which the Austro-Hungarian Empire address last July to Serbia annulled at one blow the effects of a long sustained effort by violating the pact which bound us to that state, violated the pact in form, for it omitted to conclude a preliminary agreement with us or even give us notification, and violated it also in substance, for it sought to disturb, to our detriment, the delicate system of territorial possessions and spheres of influence which had been set up in the Balkan peninsula.

But more than any particular point, it was the whole spirit of the treaty which was wronged and even suppressed, for by unloosing in the world a most terrible war, in direct contravention of our interests and sentiments, the balance which the Triple Alliance should have helped to assure was destroyed and the problem of Italy's national integrity was virtually and irresistibly revived.

Foreign Minister Sonnino drew from his pocket and presented to the president of the Chamber the Italian Green Book containing an account of the pourparlers with Austria from September 9 to May 4, when he formally denounced the Triple Alliance.

After brief discussion in which no opposition was voiced the bill was passed in the Chamber by a vote of 407 to 74. In the Senate on the following day 262 votes were cast in favor and only two against. There were thirty-four Intransigent Socialists who not only voted against the war bill but retained their seats in silence when all the other deputies rose and cheered for Italy and the King. The rest of the opposition was made up of the followers of ex-Premier Giolitti, who has used his

utmost endeavors to maintain Italian neutrality, but in vain.

On May 23 the Duke of Avarna, Italian Ambassador at Vienna, presented to the Austrian Foreign Office a formal declaration of war as follows:

Declaration has been made, as from the fourth of this month, to the Imperial and Royal Government of the grave motives for which Italy, confident in her good right, proclaimed annulled and henceforth without effect her treaty of alliance with Austria-Hungary, which was violated by the Imperial and Royal Government, and resumed her liberty of action in this respect.

The Government of the King, firmly resolved to provide by all means at its disposal for safeguarding Italian rights and interests, cannot fail in its duty to take against every existing and future menace measures which events impose upon it for the fulfillment of national aspirations. His Majesty the King declares that he considers himself from tomorrow in a state of war with Austria-Hungary.

## Italian Preparations for War

On May 22 all of the provinces along the Austrian border were placed under martial law and all soldiers born between 1876 and 1895 were called to the colors. This would mean practically all of Italy's trained men, some 3,300,000, but it is not generally supposed that more than a million or a million and a half at the most will be put into the field at present. All the vehicles and draught animals in the country have been subject to government requisition for transport purposes. The army on the northern frontier has been placed in charge of Count Luigi Cadorna, Chief of Staff of the Italian army, with headquarters at Vicenza. He is of noble Piedmont family and now sixty-five years old.

The barracks at Rovereto in Austrian Tyrol were blown up, presumably by some Italian, as this is one of the towns chiefly inhabited by Italians and in the region which Italy has gone to war to obtain. All of the Italians of military age resident in Triest and other Austrian towns have been transported into the interior for internment. The Austrians on May 21 cut the telegraph and telephone lines at the frontiers and destroyed the bridges. Railway trains were halted and seized as they crossed the boundary line between the two countries.

The Austrian Government has asked that Ambassador Page take charge of the Austrians in Italy. The Italians in Austria and Germany will be watched over by the Swiss representatives in those countries.

The position of the Pope in case of war involves many delicate questions and it is not yet certain how they are to be adjusted. The Vatican is entitled on the ground of its extra-territoriality to maintain uninterrupted diplomatic intercourse with all foreign Powers, but the Italian Government, feeling that it would be dangerous to allow the Ambassador of Austria-Hungary and the Minister of Bavaria to remain in Rome during the war has suspended the clause in the law of guarantees which permits diplomatic representatives at the Vatican. Pope Benedict has recalled the representatives of the Vatican in Germany and Austria-Hungary on the ground that being Italians their position would be difficult. France is not represented at the Vatican since the separation of Church and State, but Great Britain, for the first time in centuries, has sent a representative to the Pope.

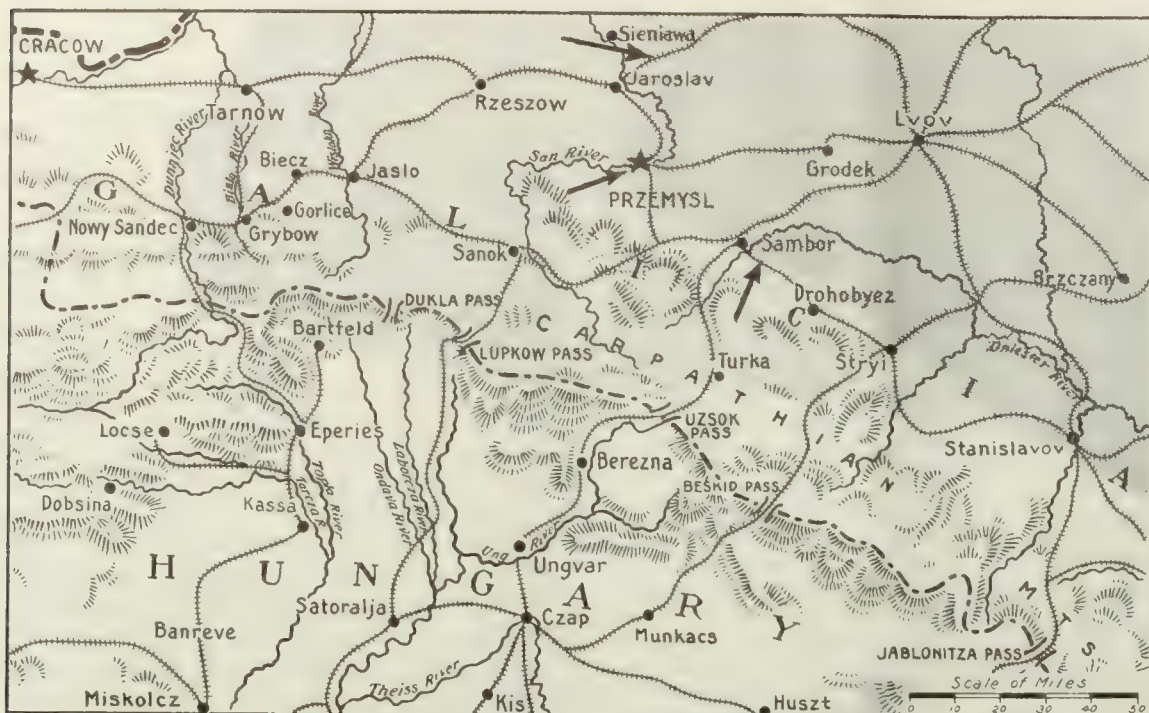

The first skirmish of the war took place in the region of Tonale Pass on the western side of Austrian Tyrol near the Swiss border. A small Austrian patrol crossed the frontier and was driven back by the Italian Alpine chas-seurs.

THE COMMANDER OF THE ITALIAN NAVY  
The Duke of the Abruzzi, explorer, sailor,  
popular favorite

RUSSIANS LOSING GALICIA

The extent of the Austro-German victory in Galicia is shown by the above map where the lightly shaded area represents the territory lost by the Russians during the month of May. General Mackensen's troops advancing from the vicinity of Cracow have crossed the San River, recaptured the fortified town of Jaroslaw and are within gunshot of the fortress of Przemyśl. In eastern Galicia the Russians claim successes, but since they mention fighting north of Drohobycz it is evident they have also lost ground on this side. On the whole, they are back where they were in September.

### The Capitol Comes to the Quirinal

In no country has there been such popular enthusiasm shown for the war as in Italy. On May 22, when King Vittorio Emanuele signed the bill giving the Salandra ministry full power to declare and conduct the war and the decree ordering the complete mobilization of the army, the people of Rome turned out in mass to demonstrate their approval in a dramatic manner. The City Council assembled in the Capitoline Palace where the chamber had been decorated for the occasion by historic tapestries, the Mayor, Prince Colonna, delivered an inspiring address in which he declared that the time had now come to complete the unification of Italy. The throng without joined in the national anthem and then fell in behind the Mayor, councilmen and the standard of the City of Rome, and marched to the Quirinal hill.

The square in front of the royal palace and the tributary streets were packed with people as close as they could stand. Their number is estimated at a quarter of a million. When the King and Queen appeared with their children on the balcony with the flag of Italy on one side and the flag of Rome on the other the crowd burst into cheers which increased as the King took the national banner in his hands and kissed it. As Prince Colonna in his address to the sovereign said "We are willing to shed our blood for the House of Savoy," the King interrupted him by the remark, "Say rather for the glory of Italy."

After this demonstration of loyalty to the King the crowd marched, with an American flag at the head, to the Palazzo del Drago, the residence of the American Ambassador, Thomas Nelson Page. Here they cheered the United States and denounced the sinking of the "Lusitania."

### Russians Lose All Along the Line

In Galicia, Russians have now lost all they had gained by their hard fighting of the last eight months except the fortress of Przemyśl, and this is partially invested and under bombardment by the Austro-German forces. As in September the opposing armies are lined up along the San River with the eastern half of Galicia in the possession of the Russians. The Austrians and Germans have crossed to the eastern side of the San, both above and below Przemyśl, for a distance of about twenty miles, but both to the north and the south of this section the Russians are holding their ground and claim to have repulsed the attack. If, however, the Teutonic forces should succeed in their drive at the center the Russians would be compelled to evacuate Galicia. The Austrians claim to have captured during the first half of May 174,000 Russian prisoners as well as 128 guns and 368 machine guns. What is more important they have regained the oil fields and copper mines of Galicia, which are their only source of these two essentials of modern warfare.

On the northern side of the Vistula in Poland a similar eastward movement is in progress. Here the Germans have driven the Russians back nearly fifty miles in the direction of Radom.

The German advance into the Baltic provinces of Russia which the Petrograd despatches at first alluded to contemptuously as a mere cavalry raid for the destruction of crops, is evidently intended as a permanent occupation. The Germans are constructing a fifty mile railroad along the coast from Memel, the most northerly of Prussian ports, to Libau, the Russian port which they have recently captured. This will make connection at Libau with railroad running to Mitau, most of which the Germans already hold, and will enable

them to bring their heavy guns to bear upon Riga, the Russian naval base and army quarters on the Baltic. The Russians are making desperate efforts to break the German line at Shavli, but so far without success.

For the first time since the war began the Petrograd despatches have a pessimistic tone, and it is evident that the defeats of the past month in almost every part of the eight hundred mile line from the Gulf of Riga to the Pruth River have seriously shaken their confidence. The Russian correspondent of the London *Daily Mail* telegraphs, "As a result of the latest German tactics all that has been accomplished by the Russians in the Carpathians has been undone and months have been added to the duration of the war." According to the *Frankfurter Zeitung* there are 1,386,000 prisoners of war held in Germany and Austria of whom about 1,000,000 are Russians, 250,000 French, 25,000 English, 50,000 Belgian and 50,000 Serbian. The total German loss in killed, wounded and missing is estimated by the London *Chronicle* at over two million men since the war began. The official lists given out in Berlin include 1,175,681 names up to February 14 and the German losses since then must at least have been proportionately heavy.

### Fighting Over Gallipoli

Constantinople had an opportunity of witnessing an unprecedented spectacle, a naval combat between ships on opposite sides of a range of hills. The Turkish cruiser "Sultan Selim," erstwhile the German "Goeben," has been several times reported sunk or disabled but is evidently still able to get about, for she came down thru the Sea of Marmora into the Dardanelles and took an active part in the defense of the Narrows against the British land forces, until the super-dreadnought "Queen Elizabeth" put a stop to it by shelling her from the

other side of the Gallipoli peninsula. The gunners of the "Queen Elizabeth" could not, of course, see the Turkish target, but their fire, guided by aeroplanes soaring aloft, was sufficiently accurate to compel the retreat of the "Goeben."

Two days later the "Goeben" tried the enemy on the other side by going up the Bosphorus and attacking the Russian fleet in the Black Sea. In this encounter she was worsted, according to Russian accounts, and had a hole put thru her hull.

The Australasian troops are making slow but steady progress up the peninsula in spite of the stubborn resistance. The Turks are said to have lost more than seven thousand men on the night of the 18th, while the British loss was not over five hundred. The British have gained the hills of Krithia about four miles from the tip of the peninsula.

The Allied fleet attempting to force the Dardanelles has suffered the loss of a fourth battleship. This time the victim is the "Goliath," which was torpedoed on the night of May 12 during an attack by Turkish destroyers while protecting the French flank just inside the strait. Twenty officers and 160 men were saved out of 680.

**Cabinet Crisis in England** In France and Belgium coalition cabinets with representatives of all parties were organized at the beginning of the war, but in England the Liberal Ministry has up to the present carried on the Government tho in close consultation with the Opposition. There have been no party divisions in Parliament and very little critical discussion. Now, however, some changes appear to be necessary in the Cabinet and the Opposition is to take part in the reorganization. By the parliament act of

1911 the maximum life of any parliament was reduced from seven to five years, and since the present Government came into power in December, 1910, it would be necessary to have another general election before the end of the year, but neither party wishes to enter upon a political campaign until the war is well over.

The immediate cause of the break-up of the Cabinet was the report of dissensions in both navy and army. Baron Fisher handed in his resignation as First Sea Lord of the Admiralty, presumably because of disagreement with Winston Churchill, who as First Lord of the Admiralty is his civilian chief. Mr. Churchill has been criticized by his enemies for having in disregard of expert counsel involved the navy in two serious blunders; one when he sent marines to Antwerp when it was too late to save the city and the other when the fleet undertook to force the Dardanelles without land support, a mistake which cost the Allies four battleships.

The trouble in the army seems to be a disagreement between Earl Kitchener, Secretary for War, and Field Marshal French, commanding the army in France. The reason why the British have not been able to follow up their advantage, tho they have twice broken thru the outer German line north of La Bassée, is alleged to be a shortage of ammunition due to Kitchener's failure to supply large explosive shells in quantity. The attacks on Lord Kitchener appeared in Lord Northcliffe's organs, the *Times*, the *Mail* and the *Evening News*, and have been generally deprecated by other papers of all parties as unfounded or unwise.

The new coalition cabinet is expected to include Arthur Balfour, Bonar Law, F. E. Smith, Austin Chamberlain and others of the Opposition.

**Portugal in Turmoil** The revolution in Portugal carried into power Joao Chagas, but as he journeyed from Porto to the capital to assume his office as Premier he was shot on the train by Senator Freitas. Altho he was hit by four revolver shots, one in the head, he is reported recovering. Senhor Freitas was killed on the spot by gendarmes. Jose de Castro is serving temporarily as Premier and the new Government is said to be securely established. The former Premier General Pimenta Castro and the members of his Cabinet are imprisoned. President Arriaga retains his office. To effect this change of administration cost over a hundred lives. More than two hundred are in the hospitals wounded by the street fighting. The new Government accuses the old of conspiring to restore the monarchy and of having failed to defend vigorously enough the African province of Angola against the German invasion.

**A Verdict for** In the suit of William Barnes, Jr., Colonel Roosevelt against ex-President Roosevelt for libel, the jury on the 22d returned a verdict for the defendant. Forty ballots had been taken, and the jury had been out forty-two and a half hours, but from the beginning there had practically been an agreement in favor of Colonel Roosevelt. On the first ballot nine had voted for him, and two of those who stood on the other side had taken this position temporarily to prevent a sudden decision and cause some deliberation. On the second ballot, and all succeeding ballots until the last, eleven men were for the defendant. The twelfth man, Edward Burns, insisted that the taxable costs should be divided. Probably he did not know that they amounted to only \$65. Such a verdict would have been an

illegal one. At last he joined his eleven associates and the unanimous verdict was announced. Seven of the jurymen were Republicans, three were Progressives and two were Democrats. Politics, the foreman said, had no weight in the jury's work. The main question was, in the jurymen's opinion, one as to the veracity of the complainant and the defendant, and their decision on this point was in favor of Colonel Roosevelt.

There was an interesting scene in the court room after the announcement of the verdict. Colonel Roosevelt, who said that it was one of the happiest moments of his life, address the jurymen in an adjoining room, expressing his appreciation of their action. The attitude of the people of the city, as they cheered and congratulated him while he was going from the court house to his hotel, showed that the verdict was heartily approved in Syracuse. Mr. Ivins, counsel for Mr. Barnes, says that an appeal to the higher court will be taken.

It is said that the cost of the trial to the two parties was not less than \$100,000. For the defendant thirty-three witnesses were called, and for the complainant seventy-one. There were 3738 pages and more than 900,000

words of testimony, exclusive of the numerous letters and extracts from newspapers, and it is estimated that the telegraphed press report was about 1,600,000 words.

It is expected that the five railroad companies affected by the Interstate Commerce Commission's recent decision requiring them to give up their steamboat lines on the great lakes will ask for a rehearing. The companies' investment in lake lines is said to be \$150,000,000, and it is asserted that if the property should be sold before December 1, the date named by the commission, there would be great loss, as there is no market for it. While three of the companies have rail lines to Chicago, with which the water lines might naturally compete, two of them, the Lackawanna and the Lehigh Valley, have no rail lines west of Buffalo, and therefore their boat lines may be regarded as extensions of their land

#### IS GERMANY STARVING?

These photographs, made within a few weeks, of scenes at German ports suggest that Germany is hardly yet on the verge of starvation. These eighty-two thousand barrels of herring from Norway—practically the entire season's catch; this beef from Denmark—one day's killing at the Municipal slaughter house at Luebeck; and the cargo of wheat from Argentine, here being unloaded, should keep the wolf away for a while

lines. For this reason, it is said, these companies should not be classed with the other three. It is asserted that if the boats should be operated as independent lines, they would not be profitable unless the present freight rates should be largely increased.

The commission has approved and sustained the increase of rates on iron ore from the mining districts of Michigan to ports in that state and Wisconsin. This increase was made two years ago by the Chicago & Northwestern and other roads. Shippers of ore opposed it.

Officers representing ninety per cent of the country's railroad mileage at a meeting last week expressed disapproval of the proposition made by the Post Office Department that the roads shall be paid by space, instead of by weight, for carrying the mails. They also ask that the mails shall be weighed once a year, instead of once in four years; that there shall be payment for carrying the mails between stations and to post offices, and that the Government shall also pay for the apartment post offices on trains. The roads claim that they are not justly paid for their mail service.

**Trust Cases** When the conviction of John H. Patterson, president of the National Cash Register Company, and more than twenty other officers of the corporation, for violating the criminal provisions of the Sherman act, was disapproved by the Circuit Court of Appeals, there was much rejoicing in Dayton, Ohio, where the company's factories are situated. There was a parade, and a mass meeting welcomed the men who had been saved from imprisonment. Mr. Patterson had endeared himself to the people and won a Red Cross medal by his charitable work at the time of the great floods. The Department of Justice has now appealed from the decision, and in its application to the Supreme Court it draws a dark picture of the company's offenses.

The conspiracy was clearly proved, the Government says, and it was shown by the testimony "that these men were steeped in deliberate guilt." They were "not merely technically guilty of a technical offense, but knowingly guilty of offenses that the man in the street would recognize as flagrantly and unmistakably wrong." By practically all known means of unfair competition they had ruined and forced out of business a great number of competing companies and acquired 95 per cent of the cash register trade of the United States. The peculiarly aggravated nature of their conduct had excited wide interest. Many have taken the reversal of the conviction to indicate, the Government adds, that the criminal provisions of the Anti-Trust law cannot be enforced, and general acceptance of this view would "have the gravest consequences." The case is characterized as one of the most important ever brought under the Sherman act.

Trial of the Government's suit for the dissolution of the Bill Posters' As-

sociation, which has 35,000 members, was begun in Chicago last week. The first witness was Charles Ringling, the well known circus proprietor, who spoke of the use of circus posters in old times on barns, fences and sheds.

**Mexico and Its Factions** There were conflicting reports last week about the contest between Villa and Obregon. Villa's Minister of Foreign Affairs, Diaz Lombardo, asserted in telegrams that Obregon's army had been routed by Villa, who had then captured Silao, eighteen miles north of Irapuato. Obregon's army, he added, was fleeing toward the capital. But Carranza telegraphed from Vera Cruz that Obregon, in a sixteen hours battle, had whipped Villa, who had lost 2000 men. There was a similar

International News Service

JOHN D. ROCKEFELLER, JR.

Mr. Rockefeller has been undergoing an examination on labor conditions in Colorado before the Federal Commission on Industrial Relations, the manner of which has done much to discredit the commission's chairman, Frank P. Walsh

disagreement in the reports about the occupation of Monterey by Carranza's soldiers. Villa's agents said that the town had been evacuated by his forces. Carranza claimed a victory, with the capture of fourteen troop trains and a Villa loss of 2000 killed and wounded. It is admitted that the Villa movement against Tampico has been abandoned and that the Villa leader of it, General Chao, has been dangerously wounded.

In a brawl at Chihuahua City, Villa's brother, Antonio, a general, was shot last week, and he died two days later. Seven men were killed in this quarrel. Villa came north to attend the funeral of his brother, and, incidentally, to order 5,000,000 cartridges. The American colonists living in the Yaqui Valley, not far from Guaymas, who were attacked by the Yaqui Indians, are now in a safe place. Two of our cruisers were sent to Guaymas after three of the colonists had been killed, but General Maytorena drove the Indians away. They had been a part of his army. Now they have declared war against all factions in Mexico.

Americans are leaving the capital, because bread riots are expected there. There is great scarcity of food. Many citizens have committed suicide. Horses are dying for want of fodder. There is much destitution in Tampico and in Vera Cruz, where Carranza lives in a fortified lighthouse. When Villa, on his journey northward last week, reached Torreon, he was met by a mob of hungry men who begged him to save them from starvation.

**The War Orders** Many new orders for war supplies have been reported. Russia has undertaken to buy 22,000 freight cars from six of our manufacturing companies, and has bought 25,000 tons of steel rails, in addition to the 25,000 purchased some time ago. The steamship "Kursk," carrying 10,000 tons of war material from New York, arrived at Archangel last week. The Bethlehem Steel Company has received an order from the British Government for 8000 cannon, and with it a check for \$16,000,000, part of which is to pay for products already delivered. British orders to this company amount, it is said, to more than \$100,000,000, and the company's recent output of shells has been 85,000 a day.

It is estimated that orders placed in Canada since the beginning of the war amount to \$425,000,000, of which \$234,000,000 is for shells. But it is known that, as in the case of Russia's \$83,000,000 order, a large part of the work is done on subcontracts in the United States. Italy is still buying American horses. Owing to the demand from the Allies, the price of horses for artillery service has advanced from \$160 to \$200. Among the new orders is one for 800,000 horseshoes. Italy has engaged 200,000 tons of coal. Purchases of sugar week before last by England and France amounted to \$9,000,000, and \$4,800,000 was added last week. Preparations for costly ex-

tensions of plant in several instances tend to confirm reports about large orders received, as to which no definite information is given to the public. At the docks in Brooklyn and Staten Island there are great quantities of war supplies awaiting shipment. Many steamships for such service have been chartered by France and Russia.

#### Mr. Wilson and the Fleet

President Wilson came to New York at the beginning of last week to review the fleet of sixty battleships and other naval vessels which were lying in the Hudson River. On the 17th he reviewed a parade of 6000 marines and sailors. A few hours later, on the yacht "Mayflower," he inspected the fleet, which was lying at anchor. In the evening he saw a boat race. On the 18th the fleet went out to sea, after a stay of ten days, and the President reviewed

it as the ships passed the "Mayflower." On the first day of his visit Mr. Wilson made a brief address at a luncheon given in his honor. Having expressed his gratitude for the "splendid reception" given to him, he said that Mr. Daniels, the Secretary of the Navy, had his unqualified support. The navy, he continued, was a body specially trusted with the ideals of America. Those quiet ships lying in the river had no suggestion of bluster or aggression. They were commanded by officers thoughtful of the duty of citizens as well as the duty of officers. America asked nothing for herself except what she had a right to ask for humanity. "We want no nation's property," said he; "we wish to question no nation's honor; we wish to stand selfishly in the way of the development of no nation." But we stood for and spoke for those things which all humanity must desire. When he thought of

the flag he seemed to see alternate strips of parchment upon which were written the rights of liberty and justice; and strips of blood spilt to vindicate those rights, and then, in the corner, a prediction of the blue serene into which every nation may swim which stands for these great things. "It is as startling as it is touching," said Mr. Wilson, "to see how whenever you touch a principle you touch the hearts of the people of the United States. When a crisis occurs, it is as if you put your hand on the pulse of a dynamo." And the spirit that moved the men of the navy was that no threat was lifted against any nation, but that there was "just a great solemn evidence that the force of America is the force of moral principle; that there is not anything else that she loves, and that there is not anything else for which she will contend."

THE PEOPLE OF NEW YORK WISH THE FLEET LUCK FROM THE BATTERY

# HUNTING STRAWBERRIES

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "HOW TO LIVE IN THE COUNTRY"

SEVENTY-FIVE years ago we crawled thru the grass and weeds after strawberries. They were then just the same little red-cheeked tempters that they are to-day. We had no names then for specific sorts; indeed, no sorts at all. We remember when a big brother sat perched in an apple tree, eating a Pumpkin Sweet, and scolding us for creeping thru the meadow grass. But for all that, those fellows of yesterday had to mow a great many places where their temper was ruffled by strawberry hunting. Many of the most beautiful clusters were half hid in the timothy, and how the orchard grass did laugh when it fanned the growth of a whole pan-full of plump, round strawberries.

Not a strawberry in one of our gardens then! But nowadays we are testing every summer not less than forty sorts. Bless the Lord, however, we were not without strawberries; and they were quite as good for pies, only the "picking over." We had our Sues and our Sallys in those days also; and they did not need half a century of evolution to make them beautiful. Girls were the only things that were made just right at the start. At any rate, we would not swap our recollections of the Anderson pastures, and the Root glens and other hunting grounds—no, not for our present garden of Dunlaps and Chesapeakes and Warfields, and forty other kinds that command the market and make poets of very common folk. It is a sign of degeneration that we are losing our passion for hunting strawberries in the dews with black-eyed Susans and grey-eyed Mollies.

Emerson blesses the morning, because it comes dew-laden, "facing the night as much as the noonday," and it was early morning that saw us in the fields. And in those days we had the delight of going barefoot. The world has wholly changed of late. Country boys do not go barefooted any more. Only city boys have the privilege of kicking around in the dirt. In those days we could not only run the streets as Nature made us, but we had the dew to wash the dirt off, and strawberries always knew enough to run along down by the little brook and grow cups full under the big dock leaves. Things fit together if left to Nature; and the fun of life is to discover the fittings that Nature does not complete.

Bare feet! dew in the clover! a brook bouncing helter-skelter thru the back pasture! Boys and girls

THE INDEPENDENT'S OLDEST CONTRIBUTOR

shouting and splashing, while their lips are well stained! Pails half full, and always with stems and leaves attached! This is not so in our gardens; and nowadays we must not have more than twenty to a quart. It is a grand thing, this evolution, which has taken hold of the berries as well as animals. We remember well when we first saw a Sharpless, the first monster among the berries. It lay in its couch of leaves, defiant; and it seemed a crime to pull it away. If we remember, however, it took forty of them to fill a quart, but now we have the Norwood and the Chesapeake and we do not know what else, and two bites to a single berry. Is not that right?

As for these wild strawberries, it is pure imagination that they were, or are, sweeter than the cultivated sorts. The strawberry has been growing better as it has grown bigger these fifty years. The Wilson, which was first to be grown in gardens, was sour as a pickle, and some of its ancestors are no better; but if you take the run of the new sorts, you will come on such appetizing glories as William Belt, and Jessie, and Sample, and I know not what else of evolutionary completeness.

The charm of strawberrying lay in the very simplicity of it. Half a dozen boys and girls down on their knees, and pulling open the tufts of grass; soaked with dew, but full of laughter and bragging of every success. Our Northern home is next to that of Senator Root's, the "Elihu" of our boy days; and our last hunting of

strawberries was in his preserves, where they look over the Oriskany Valley, and where half a dozen brooks jump thru the glens and hunt with us. There is no denying that he is as much a failure for a farmer as he is a success as a statesman. It is his father and mother that plan gardens thru him. At any rate we sometimes, even nowadays, hunt his berries, and bring home baskets full, as good as those of 1840. We would like to hunt strawberries once more with the same little crowd that we had then; but they have mostly gone on, and we do not know whether they are hunting strawberries or not.

If you have hunted strawberries in catalogs as we have, you have a whole lot of history in your garden. Our recollection goes back to the very first one that leaped out of the wild. The wonderful Jucunda came next, and we suppose that between those and Kitty Rice at least one hundred sorts were proclaimed "the best and the biggest." Our advice to you is not to undertake to plant the latest champions; but to find out from Crawford or Allen, or some other strawberry king, what he thinks about them. Then be sure to plant half a dozen sorts, to have the fun of comparison. It is really the charm of growing things—rows of different sorts side by side.

Down here in Florida strawberries must be planted in what we call bayheads, that is, runways thru the bluff places emptying into little lakes. Where the soil is black and generally moist you can grow wild strawberries, but we never saw a genuine field of runaway berries anywhere in our state. If you plant them in your garden they must be partly shaded, and replanted every year. Raspberries refuse positively the soil and the climate. Blackberries are the only one of the triplet to do well in Florida. If you select your sort wisely and if you give a little shade and do not have a drought, why then you will have your blackberries.

But why bother? The rose family belongs to the temperate zone, and instead of blackberries we have large trees, splendid for shade and loaded all thru April with mulberries as big as your thumb. It is the only fruit with seeds that one may indulge without limit. It refuses sugar, and is just as good eaten alone as it is in a pie, or a pudding, or a shortcake. Bless my soul! how compensative Nature is; we will at this moment leave our manuscript and go to eat a mulberry shortcake.

*From a photograph presented by His Majesty to  
the Society for Italian Immigrants in New York*

VITTORIO EMANUELE, KING OF ITALY

# ITALY DECLARES WAR

## THE TRIPLE ALLIANCE CONTRIBUTES TO MAKE THE QUADRUPLE ENTENTE

**T**HE street has won," is the way the Rome correspondent of the *Berliner Tageblatt* announced to his countrymen that Italy had joined the number of their enemies. Whatever may be said of it by the historian of the future, to whom all archives and diaries are open, this at least is the natural interpretation of appearances, for the Italian people have become possessors of the war spirit and it would be a rash government which would resist them. In the crowds that have assembled by the ten thousand in the piazzas of Italian cities shouts for the republic have mingled with the cries of "Down with Austria!" and Vittorio Emanuele would have to look to his crown if he longer refused to take up arms against his erstwhile allies. In view of this those who hold that wars are caused by kings alone and that universal democracy would mean perpetual peace may have to revise their philosophy of history.

Gabriele d'Annunzio telegraphs from Rome to Paris:

The battle is won. I have just harangued a feverish crowd from the Capitol. The tocsin has sounded and the cries are arising toward the world's most beautiful sky. I am drunk with joy. You are going to see an Italian miracle after the French miracle.

His battle is won. But to satisfy the warlike fervor he has aroused is the task of those who fight with the sword instead of the pen. It is a strange turn of fate which has brought back from his exile the poet of decadence and immoralism to serve as the spokesman of Italian patriotic enthusiasm. It was in D'Annunzio's poetical pageant *La Nave* that the imperialistic ambitions of Italy first found literary expression. The motto of this drama is "The ship is our fatherland" and the prolog is laid in Venice, A. D. 552, when the little group of people on the island were about to embark upon the career which made Venice the Queen of the Adriatic. The play closes with a symbolic and prophetic scene, the launching of the great ship "Totus Mundus."

At the time when D'Annunzio's drama *The Ship* was first produced The Independent called attention to its political significance, but of course we did not know then what all the world knows now, that

### WHAT ITALY DEMANDED OF AUSTRIA

1. Cession of the Austrian Tyrol as far north as the Brenner Pass.
2. Cession of the cities of Gradisca and Görz.
3. Trieste to be made an independent state.
4. Cession of seven islands off the eastern shore of the Adriatic.
5. Renunciation of Austrian interests in Albania and recognition of Italian sovereignty in Avlona.

### WHAT AUSTRIA WAS READY TO CONCEDE

1. Cession of that part of the Austrian Tyrol inhabited by Italians.
2. Cession of Gradisca, but not of Görz.
3. Trieste to be made a free imperial city, administered by Italian residents and with an Italian university.
4. Refused in full.
5. Conceded in full.

England and France had given Italy her long-sought opening in Tripoli as an inducement to withdraw from the Triple Alliance, and that accordingly Italy had to strike at once or forever lose her chance at an African empire. It was very difficult to bring the Italian people suddenly up to the pitch of patriotic feeling which would induce them to support heartily an expensive war of conquest entered upon without provocation or apparent reason. Under the circumstances it was natural that Italy's greatest author should be called upon

to revive the glories of Italy's greatest naval period. Whether D'Annunzio was given a hint by those in authority of what was in the wind, or whether he divined it by a poet's instinct, his drama was none the less timely and had a strong influence in stimulating the expansionist ambitions of the Italian people. Three years later Italy quadrupled its territory by annexing Tripolitania.

The Anglo-French agreement with Italy, which thwarted the hopes of Germany for African territory, must have been made in 1904, when France and England arranged for the partition of the Mediterranean countries. The secret clauses which gave Egypt to England and Morocco to France were published several years later, but the agreement with Italy has not yet been made public. The existence of such an agreement, however, is clearly affirmed by the Italian Foreign Minister, Signor Tittoni, in his speech to the Senate May 10, 1905, on the effect of the Anglo-French convention on Italy's Tripolitan policy:

If the necessary reserve incumbent upon the Government forbids me from speaking of the single acts by which all the interested powers have recognized Italy's prior rights on Tripoli as before those of any other nation, nothing prevents my saying that these rights have been assured in the most explicit and efficient manner.

I must only say that they [the French and English inroads on Tripoli] took place at a time when Italy thought she could follow a policy of her own, proceeding alone among other stronger and more powerful nations. Today we are no longer in those conditions; our alliances, our friendships, the special pacts which we have stipulated for the protection of our important interests, give us complete assurance and allow us to look with confidence to the future.

A public demonstration of this realignment of the powers was given in 1909, when the Czar of Russia paid a visit to the King of Italy at Racconigi, the summer residence of the King, near Turin. The international importance of this was explained at the time in the *Contemporary Review* by E. J. Dillon in an article entitled "Racconigi, the Tomb of the Triple Alliance and the Birthplace of the Quadruple Entente." In his journey to Italy the Czar took pains to go around Austria in order "to mark unequivocally Russia's friendship for Italy and lack of sympathy

THE NEW BATTLEFIELD

Any fighting between the land forces of Italy and Austria at present must take place on the boundary line here shown. The Austrian and German troops occupy strong and well fortified positions in the mountains of the Trentino, Carinthia and Carniola. There is no such barrier between Italy and the coveted cities of Görz (Goritz), Gradisca and Trieste, but if the Italian army invades the Küstenland it would be liable to a counter attack from the north thru the province of Venetia. The Austrian fleet is mostly congregated in the harbor of Pola.

with Italy's present ally and future of the adversary."

The action then foreshadowed and virtually decided upon has now taken place. On May 4 the Duke of Avarna, the Italian Ambassador at Vienna, notified the Austrian Minister of Foreign Affairs that Italy regarded Austria's declaration of war against Serbia as a violation of the Triple Alliance treaty and that Italy had decided to resume her complete liberty of action, both because the Austrian offers of compensation for Italian neutrality were totally inadequate and because Italy's situation had become intolerable.

The intent is plain tho the wording is curious. It might be queried why Italy did not discover last August that the attack on Serbia had shattered the Triple Alliance and why Italy's position is more intolerable now than it has been for the last nine months. The fact is that during this period of watchful waiting Italy has been busily engaged in bringing her army and navy to the apex of efficiency and in bargaining with Austria and the Allies to see which would offer the highest bid for her neutrality or aid.

It seems that the Allies must have put in the winning bid, tho what it was can only be surmised. We know, however, what Italy demanded of Austria as the price of her neutrality. According to the Italian Green Book the Italian demands as finally formulated by Baron Sonnino, the Minister of Foreign Affairs, on April 2 included the following points:

1. Immediate cession to Italy of the Austrian Tyrol as far north as Brenner Pass.
2. The Italian boundary at the head

of the Adriatic to be moved eastward a few miles to include the Austrian cities of Gradisca and Görz.

3. The port of Triest and the adjacent territory to be made an autonomous, independent state; Austria to renounce sovereignty and remove troops immediately.

4. Cession of seven islands of the Curzola group off the Dalmatian coast.

5. Austria to declare her complete disinterestedness in Albania and to recognize Italian sovereignty in Avlona and its environs.

The Austrian response to these demands agreed to the fifth, refused the fourth and offered a compromise on the others. On the Tyrol question Austria was willing to cede that part of the Trentino which is inhabited by Italians, that is, about half the territory demanded by Italy. On the boundary question Austria offered to surrender Gradisca, but not Görz. Triest the Austrians were willing to make a free city of the empire with an Italian university and "an administration which would insure the Italian character of the city."

It would seem to an unbiased observer that the discrepancy between Italy's demands and Austria's concessions is not so great as to be irreconcilable. Italy could hardly afford to go to war merely to gain a few more miles of mountain land, some small islands and the complete independence of Triest. But of course the decision is motivated by other considerations, both political and psychological. The Italian expansionists would not be satisfied with making the Adriatic "an Italian lake," with the annexation of the whole of "unredeemed Italy," and with their African territory. They are ambitious also to take part in the partition of Turkey and acquire posses-

sions in Asia Minor. Altho by the treaty of Lausanne in 1911 Italy agreed to restore to Turkey the dozen islands of the Ægean which she had taken during the Tripolitan war, she has so far delayed surrendering them. In case she enters the war the claims of Italy in this region would naturally be viewed with favor by the Allies and she might be rewarded by the possession not only of these islands but possibly also of some of the adjacent mainland between Smyrna and the Gulf of Adalia.

But while such considerations as these may influence the statesmen of Italy the populace are swayed more by feeling. The radicals and republicans of Italy have always hated the Austrian alliance and are now glad of a chance to repudiate it. In September, 1913, General Caneva declared in a speech at Vienna that "Irredentism in Italy is dead." But the movement in behalf of "Italia Irredenta" was never so much alive as at present, and General Caneva is about to lead the armies of Italy into Austria for the recovery of "Unredeemed Italy."

Another popular motive for war is the revulsion aroused by the brutal way the Germans and Austrians have conducted the campaign. Ever since August a stream of refugees has flowed into Italy from Belgium and France, each bringing a tale of women violated, of children mutilated and of men shot in cold blood. From the east came similar reports of atrocities, for the Serbs and Montenegrins had suffered even more by the Austrian invasion and it must be remembered that the Queen of Italy was a Princess of Montenegro and that her

father is King Nicholas and her sister is the Queen Zorka of Serbia. The sinking of the "Lusitania" added fuel to the flames and made longer delay impossible.

The entrance of Italy into the war will complete the circle of steel about the central European Powers and isolate them from the rest of the world. Since England has made a *mare clausum* of the North Sea nothing can be imported or exported thru The Netherlands without her approval. Switzerland is shut off from the sea by France and Italy. On the other side Rumania is inimical and Bulgaria, tho friendly to the Teutonic Powers, is helpless to aid them so long as an English fleet holds the Straits of the Dardanelles, Suez and Gibraltar. Germany and Austria-Hungary must now defend themselves on every frontier except such as are covered by these four minor and neutral countries.

In spite of the growing enmity of Italy a very considerable and profitable commerce has been carried on with Austria and the economic pressure which the Allies have endeavored to exert on their opponents has been materially relieved by the food and munition materials which have found their way over the northern border of the peninsula. This traffic will now be stopped and the two central European countries will be as completely invested as the fortress of Przemysl. By her geographical position as much as by her military strength Italy is a most formidable addition to the ranks of their en-

emies. The odds against them seem quite overwhelming when the opposing belligerents are lined up:

Great Britain	Germany
France	Austria-Hungary
Russia	Turkey
Japan	
Belgium	
Serbia	
Montenegro	
Portugal	
Italy	
Area of mother countries—	Area of mother countries—
2,770,000 sq. mi.	480,000 sq. mi.
Population of mother countries—	Population of mother countries—
313,000,000	117,000,000
Total area of empires—	Total area of empires—
31,000,000 sq. mi.	3,200,000 sq. mi.
Total population of empires—	Total population of empires—
852,000,000	150,000,000

From the above it appears that if we consider the extent of the territory of the Allies in Europe together with Japan the odds stand nearly six to one in their favor and nearly two to one in population. But since the Allies can and do draw upon their colonies and oversea dominions for both men and supplies it is more correct to consider the total area and population of the belligerent powers, in which case the odds stand ten to one in the matter of territory and nearly six to one in the way of population.

The number of troops which Italy will be able to put into the field is probably about a million and a half with a reserve of as many more. We may surmise that the force already mobilized on the northern frontier amounts to some seven or eight hun-

dred thousand. The navy is a strong one, ranking the sixth or seventh in the world. There are six dreadnoughts, twenty other battleships and armored cruisers, thirteen light cruisers, 120 destroyers and torpedo boats and twenty submarines. Both army and navy have had practise in the Tripolitan campaign only four years ago, and since they have had more than eight months for preparation they should be in most efficient shape.

The Austrians, on the other hand, have been fighting against heavy odds and have suffered terrible defeats from both the Russians and Serbians. The Austrian navy is inferior to the Italian and has so far kept safe from the French in the land-locked harbor of Pola. It is supposed that troops to the number of three or four hundred thousand including two German army corps have been stationed on the frontier to defend Triest and the Trentino against the Italian attack.

But the Austrians have the advantage of position. The Trentino is a natural fortress and its peaks and passes have been put into a state of defense in accordance with the lessons of the present war. There are no natural obstacles in the way of an advance around the head of the Adriatic to Görz and Triest, but if the Italians attempt this they will be exposed to attack on their left flank from the mountains to the north and a defeat here might give opportunity to the enemy for an invasion of Venetia.

# THE JITNEY

BY ISAAC DON LEVINE

**T**HE word "jitney" is of uncertain origin. It has been traced to Japanese, Indian and even Russian sources, but its real derivation is still a subject open to discussion. The word has two meanings; one is a slang synonym for a nickel, the other, derived from the first, is an automobile of any size or description used for carrying passengers at the fare of a jitney or five cents.

I first met the jitney in Kansas City. One afternoon last January I noticed a crowd at the corner of a downtown street there. The object of attraction was a jitney, a four-passenger Ford of an old make, but evidently in good condition still. On the windshield in front of the driver was a big crudely painted 5. Below this emblem of the jitney was a sign showing the route of this car.

Tho the day was very cold the jitney was promptly filled with passengers. I secured the seat at the driver's side. He proved to be a mechanic by trade, but being out of employment with no immediate prospect of securing a job he decided to invest his savings, amounting to over \$200, in a jitney. He bought a second-hand car for \$350, paid \$200 in cash and for the rest he gave a note which he was to redeem at the end of three months. The first day he worked eleven hours and netted \$6.75. This was his second day and he had already made over \$6.

His experiences were those of the average pioneer in the new business. The public is by no means slow to appreciate the value of the jitney, especially for short trips during rush hours. One enterprising driver put up a "jitney down and back" sign on his car and filled it with regular customers whom he promised to take to work in the morning and home again at night. The following story taken from the *Kansas City Star* is typical of the jitney man:

For nineteen years Joseph C. Howe conducted a grocery store. But when he looked thru his window and saw the many passengers alight from and board the jitney bus he pondered. Finally he decided to quit the grocery business. He sold his store and bought a seven-passenger car and yesterday entered the jitney business.

The following also from the *Star* shows that a different class of men enter the field:

Monday morning Edward O. Bruce, 217 Sterling building, decided to go into the jitney business. He hadn't used his car for several months and believed turning it into a jitney would be profitable. He hired a chauffeur and began running between the Union Station and Eighth and Grand. The first day he made \$9.60. Three other men in the building heard about his success and started cars.

It was precisely in some such manner that the growth of the jitney transportation service took place wherever it reached. Its coming was so sudden, so unforeseen, that there were no regulations, restrictions or fees of any kind to hamper its development. No licenses were necessary for turning a private car into a jitney. Anybody who owned or leased a car could use it any time on any street as a transportation vehicle. This is one reason for the marvelous growth of the new transit system. Small and large cars of all kinds and makes were hastily converted into passenger carriers and put into operation. Idle commercial trucks were transformed in a night into buses and sent out "jitneying."

The buses, of course, demanded

larger investments and were therefore slower in taking the field. Besides, the number of automobiles in the market that could be converted into buses is small. But the ingenuity of the jitney man became a factor to be reckoned with. It made up to a great extent for both the high price and the scarcity of the bus in the market. The story of one W. R. Roberts is illuminating. Roberts bought a taxicab chassis for \$450 and built a bus on it. The new parts for the motor cost him \$100, and the body, with seats around three sides, cost \$150 more. Thus he had a fourteen-passenger motor bus for \$700. He found the first attempt so profitable that he soon began building two more buses, one of which had a seating capacity of twenty.

Such was by no means the general way in which the jitney buses introduced themselves to the passenger public. There were pioneer cities where corporations were organized, as soon as the jitney invasion reached them, to operate jitney buses and compete with the trolley car. Ogden, Utah, was one of them. The *Salt Lake City Telegram* recorded the following when the jitney movement was still in its infancy:

Permits have been granted by the Ogden City Commission for the operation of three jitney bus lines on the main residence and business streets of Ogden, to be in direct competition with existing street car lines. The three lines are to be operated by a corporation organized with a capital of \$25,000.

When the buses first appeared it was thought that the light cars would be unable to compete with them and would have to withdraw from the field. It was suggested that the entire jitney system would ultimately crystallize into a jitney bus service similar to that in some of the large European cities. But it was soon discovered, in the words of a jitney expert, "that a light car with small gasoline, oil and tire expense can operate successfully in a two or three mile zone. A small car can operate at a profit over a considerably longer route and a big bus over a much longer route." Thus the small car and the large bus go hand

Brown Brothers

ALWAYS ROOM FOR ONE MORE JITNEY'S WORTH

in hand, altho the fact that the latter runs on a more positive schedule and is better suited to stand bad weather than the former ought to bring about its predominance in the jitney system of urban transportation.

The trolley companies are also inclined to see the greater danger to themselves in the jitney bus. They are doing their best to put the jitney out of business thru legislation. In St. Louis a "Safety First" campaign for jitneys prevailed and the city fathers ordered that all jitneys must be inspected at the city garage once in two weeks. There experts checked them up as to steering gear, brakes, wheels and other items affecting safety. But this inspection was made without cost to the jitney drivers and a comprehensive plan of regulation was dropt a few days before a local election, for the politicians found the popularity of the new transit method so great a force that they were afraid to enact any laws against it. In Chicago, Mayor Harrison certainly voiced public sentiment when he said: "As for bus lines over the streets of the city, no franchise is needed for them. I know everybody seems to take it for granted that a franchise would be necessary, but the streets are as free for private motor buses as for any commercial vehicles."

If there is a possibility of controlling the jitney bus because of its regularity, there is scarcely any of controlling the light jitney even when it is found imperative to do so. The following taken from the *Oakland Tribune* is characteristic of the uncontrollable jitney:

When the owners of four large motor cars went to a theater recently their chauffeurs drove around the corner, put jitney signs on the wind-shields and started to reap financial rewards, returning before the show ended.

All the efforts of the street car companies to arrest the growth of the jitney invasion were futile in face of the tremendous success and the universal favor the jitney met every-

SHOPPING BY JITNEY

Underwood &amp; Underwood

NEW YORK'S FIRST JITNEY EXPERIMENT

where. In Kansas City alone 40,000 passengers were carried by the jitneys in a single day several weeks after the first car began operating there. In San Francisco the United Street Railroads were losing \$5000 daily about four months after the jitney service had been inaugurated in that city. When this is being written more than a thousand jitneys operate on the streets of Los Angeles, while the jitney receipts in Seattle, Washington, are nearly \$4000 a day.

These figures speak for themselves. They show that the jitney is filling a real need. They point to many advan-

tages the jitney must have posessed over the street car if it made such a success. And indeed, the advantages of the jitney over the trolley car are so numerous that they cannot be ignored by any one interested in the problem of urban transportation in our country.

The greatest advantage of the new service lies in its rapidity. It is a conservative statement that the jitney would "cover" a certain line in half the time a street car could do it. The importance of this in our age when "time is money" cannot be overestimated. Besides this distinctive advantage—

The jitney provides every passenger with a seat, doing away with strap-hanging.

The jitney makes tracks unnecessary and tying up the traffic on the entire line on account of an obstruction impossible.

The jitney reaches all the sections of the city. It is always "on the spot" at boarding houses, hotels and theaters. It will help to establish closer relations between the city and its suburbs.

The jitney makes use of all the streets and boulevards.

The jitney is more sanitary than the street car.

The jitney does not leave its passengers in the middle of the street, but lands them on the sidewalk.

The jitney is the small investor's opportunity. It creates thousands of independent business men. And finally—

The jitney demands no special franchises and privileges. It keeps the streets clean and the residence districts undisturbed.

It is evident from the above that with the coming of the jitney a new factor has entered the problem of urban locomotion, a factor that invites serious consideration and earnest thinking. Whether the jitney has come to replace the trolley as the latter in its time replaced the horse car, or whether the jitney has come to fill the needs which the street car was unable to satisfy, without aspiring to the latter's place, is a question the near future will solve.

# THE PUZZLES OF NEUTRALITY

BY ALBERT BUSHNELL HART

THE administration at Washington in its policy of neutrality is navigating a foggy sea strewn with rocks, along coasts where the lighthouses have been put out and the buoys changed into floating mines. President Wilson is still manfully trying to use the regular charts of treaties and international law, and insists upon sailing the good old compass courses. In a world full of roarings and vaporings, the United States is the one great power in the world which continues to base its policy upon permanent lines of good will. Every belligerent has set up some new and strange doctrines of its own in international affairs, put forward in the hope to realize some small and temporary advantage over its military adversaries. While it is not true that international law has for the time being gone into "innocuous desuetude," it is true that the three powers with which we come closest into touch—Great Britain, Germany and France—all make use of what we might call an "eclectic international law," choosing the principles that suit them and filling in the gaps with new ideas of their own.

## CONFUSION WORSE CONFOUNDED

One reason for the present confusion on this subject is that too much stress has been laid upon documentary international law, such as Hague Conferences, Declarations of London, treaties, and the generalizations of the text writers; and too little attention has been paid to the fundamental reasons why there should be neutrals, neutral rights and neutral trade. Hence an international mix-up. Germany notifies the world that the seizure of provision ships and cargoes is so contrary to all principles of international law, that it justifies the sinking of American merchantmen bound to English ports without even the opportunity for the crew to escape. Then in the "Frye" case, the Germans insist that the capture of the cargo of the "Frye" was justified because it was consigned "for orders" to Liverpool, which is a fortified port; and the German presumption was that it was intended for the British Government. Germany then turns round and politely promises reparation for the destruction of the vessel because of a treaty of 1828 between Prussia and the United States, to which the United States had not alluded. This treaty, by the way, like the Belgian neutrality treaties of 1831 and 1839, was made by Prussia but is recognized as valid by the Empire of Germany; while

*This paper by the Professor of Government in Harvard University was written before the sinking of the "Lusitania." But it contains a valuable discussion of many important points involved in the resulting controversy with Germany.—THE EDITOR.*

many German writers have insisted that the Belgian treaties ceased to have binding force when Prussia and other states joined in a federal union.

So with England. In 1908 that power asked that the question of maritime law in time of war be left out of the Hague discussions, in order that they might be treated in a separate conference in London. The resulting Declaration of London of 1911 was satisfactory to Great Britain and was signed by her representatives, but appears to have been held up by a technicality in the House of Lords. Nevertheless when the present war breaks out, Great Britain announces that she will stand by the Declaration of London; then modifies the list of contraband in that Declaration; again alters that list to the extent of including rubber as contraband, which by the Declaration is declared to be under no circumstances contraband; then throws the whole theory of contraband to the winds by claiming the right to capture any vessel bound to enemy's ports or cargoes ultimately destined to enemy's territory. This is not so much a "scrap of paper" as a scrap-heap of papers.

## DISTURBED NEUTRALITY

The only way out of this mix-up is for the United States to insist, yesterday, today and every day to the end of the war, that whatever mean or brutal thing the belligerents may do to each other, the United States stands unmoved upon its right to be a neutral and to act as a neutral. From that safe and sane position steady efforts have been made to drive the United States. Both continental Eitrus and insular Boreas have blown with all their might to deflect the United States from its steady middle course. Englishmen write with grief and disappointment of the unwillingness of the United States to realize that the Allies are fighting our battles and that we ought to come to their aid by land and sea. Their treatment of our neutral ships, however, is not prepossessing. It gives some color for the German charge that the purpose of Great Britain is to get control of all the seas and make the laws of trade for other nations. On the other

side, the Germans, officially, unofficially and German-Americanally insist that the United States makes itself one of the allies by furnishing munitions to the enemies of Germany. We are told that the blood of German soldiers killed by shrapnel manufactured in America will cry out against us. Just what would be the legal status of the blood of British soldiers who were killed for the lack of our shrapnel does not distinctly appear! Nor is it plain where the blood of the Serbians, killed by German shrapnel fired from German guns in 1912, and from Bulgarian guns in 1913, is to be classified.

Nevertheless nothing is clearer than that there is a steady accumulation of anger and hostile feeling toward the United States. The English are not altogether furious that the United States should remain neutral because they are getting the goods. The English have driven apparently the last German commerce destroyer off the seas; they are feeding and supplying themselves, notwithstanding the German submarine campaign, and they are receiving supplies of food and ammunition from the United States in any desired quantity. It is true that they have accomplished this by their superior naval power, combined with a sublime indifference to their own principles of neutral trade.

The Germans, however, are in a very different case. Quite contrary to their expectations and to the probabilities as shown by the experience of the Southern Confederacy in our Civil War, they have been unable to seriously damage British merchant commerce. Great Britain is relentlessly uprooting neutral commerce, and that means substantially the American commerce with Germany and her allies. The English hope to starve out the Germans exactly as the Germans hoped by battleships, aircraft or submarines, to starve out the British Islands. The consequent frame of mind among thoughtful Germans seems to be not unlike that of thoughtful Northerners during our Civil War. We felt a sense of passionate resentment against the British people because they were akin to us in civilization and supposed to be a lofty and high-minded people who could sympathize with the aspirations of a great nation. The Americans insisted that the British Government was bound to take precautions against commerce destroyers such as it had never taken before. The United States rolled up, and once actually presented a bill for a thousand million dollars for the

prolongation of the war. That fierce feeling which we now see to be not wholly reasonable lasted for thirty-five years. It was extinguished only by an apology from Great Britain followed by a so-called arbitration in which Great Britain accepted a hand upon which she must inevitably lose the game. Fifteen and a half million dollars for the "Alabama" claim were paid in cash, and still it was not till the Spanish war of 1898 that John Bull again became the favorite cousin.

It looks now as tho there would be a similar experience between Germany and the United States. From the first week of the war to the present time the point of view of the most intelligent German subjects in the United States has been that they were unwarrantably deprived of the natural sympathy of the American people. This is a serious state of things for America—one of the most troublesome results of the war; and it is likely to leave behind it a legacy of international irritation.

#### NEUTRAL OBLIGATIONS

Nevertheless it is impossible for the United States to avoid this distressing state of things. First because it is not only bad moral policy to rob Peter in order to pay Paul, but because Peter is likely to make himself heard on the subject in the future. Still more because it is not the duty of the people of the United States to give either physical or moral support to either side.

The United States has trouble of its own—present and impending—and may thank God that it is outside of the realm of trenches and bombs and poisonous gases. It is the duty of this country to stand solidly and continuously by the great principle that it has a sovereign, national right to stay out of a war just as much as to go into it. We cannot command the great belligerents to lay down their arms, nor can they compel us to take up arms. The United States has an unrivaled opportunity to show that personal sympathies with either side cannot push the Government from its consistent duty of preventing military expeditions, or the building of warships, or the enlistment of troops, within our boundaries; that it will allow no foreign ships of war to make the United States their base of operation. When the war is over—for that date also is written in the books of the fates—the United States will have an honorable record in this respect. The difficulties of the Washington Government during the Civil War, and its insistence then on more than common neutrality on the part of other powers, are the best examples for the present.

#### MEANING OF CONTRABAND

In spite of all efforts to befog the issue the United States has a body of neutral rights, to which it is the more entitled because of its care to fulfil its obligations. Those neutral rights do not depend upon treaties, or Hague Conventions, or the good nature of desperate antagonists. It lies in the nature of human society and the organization of states. The bottom principle in the civ-

## Gray Gearless

### Detachable Row Boat Motor

#### FITS ANY ROWBOAT

**More Power**  $2\frac{1}{2}$  H. P. — because it has greater cylinder displacement than any other portable marine motor of the same rating, and because less power is wasted between motor and the wheel.

**The Gray Gearless** is made by a responsible and experienced Marine Engine building concern. There is service and responsibility behind it.

**The Gray Gearless is the lightest portable motor** for its power on the market. The crank case is made of aluminum. The main bearings are strong, long, liberal, and are interchangeable. This means long life. Bearings are easily renewable—in most other portable motors it would be necessary to buy a new machine when the bearings wear. Runs in either direction.

**The Flexible Shaft Drive** is the strongest part of the motor. This transmission is the big, strong, and mechanical feature. Made of Chrome Vanadium, heat treated; maximum strength, 250,000 lbs. per square inch.

All bevel gears are done away with, no wasted power from this source. The big, cumbersome speed retarded, containing hubs are also dispensed with.

The strong and smoother power of the wonderful **Gray Gearless** motor is transmitted to the propeller shaft by a wear-resisting Vanadium flexible drive shaft. Each one is tested to transmit 7 H. P.

**The propeller is the weedless type** suitable for use in either fresh or salt water. No supporting projections, pinions and racks to catch weeds. **The Gray Gearless** is a race winner; it drives your boat faster than is possible with other portable boat motors.

No Gears to Strip - No big hub to obstruct water or catch weeds. Note how clean a run the water gets for ward of propeller.

Price F. O. B. Detroit

**\$55.00**

This price includes the complete motor, ready to attach and operate; also ignition equipment, including high-grade spark plug and spark plug protector, battery box, battery set, spark coil and switch. Magneto, if desired, \$10.00 extra.

**Be An Agent** for this motor. Men wanted in every locality to sell the **Gray Gearless**. Write today.

## Book of 172 Boats to Select From

FIFTY LEADING BOAT BUILDERS have joined with the Gray Motor Co. in issuing a catalog of **Specialized Boats**—specialty of each concern from a 16 ft. fishing launch at \$103.00 to a beautiful mahogany express runabout with every ingenious device that modern thought has developed in a boat, with a self-starting 6-cylinder GRAY motor, complete in every detail for \$2500.00—or a snug, safe, roomy little cruiser with all the comforts of a home—**172 boats** that you choose from. Write for this catalog today, sent free. We make it easy for you to find just the boat you want, at the price you want to pay, and in the locality you wish to buy it in, with a **GUARANTEED** motor installed.

## Gray Marine Motors

3 to 50 H. P. 1 to 6 Cylinder.

You can have a 1915 guaranteed Gray Motor with all the new features in your boat for the least outlay of money. Complete line of 2 and 4 cycle motors. "There's a Gray for Every Boat." Gray's are cheapest in the long run. Write for catalog.

Gray 2 cycles sold as complete outfit (ready to install). The 3 H. P., single cylinder Model "U," sells for **\$55 complete**

Gray 4 cycles sold either as complete unit power plants or bare engines. Price, **\$156 and upwards** depending on equipment

**GRAY MOTOR COMPANY, 556 Gray Motor Bldg., Detroit**

ilized world is that peace and commercial intercourse are normal among nations, and that no two powers are required to become enemies because one of them is engaged in war.

We seem to forget that the ships of the United States and other neutrals have the same right to sail the seas and to enter the ports of all belligerents as tho there were no war going on—subject only to the principle that neutrals must not interfere with actual military and naval operations. Mines are now the ordinary defense of seacoasts and neutrals must take every precaution against them when approaching a coast or entering a port; and an area where a sea fight is going on is not a suitable place for merchant steamers of any kind. With those exceptions there are only two substantial limitations on neutral trade. The first of these is contraband—a term which every student of international law thought he understood until the present war. The reason for seizing contraband is simply that it is a direct participation in land and sea operations. Altho by the custom of nations no government is bound to prevent the shipment of contraband, no government will protect it once outside its ports or make any reclamation for its capture, if it be truly contraband.

The crux with regard to contraband is the list of contraband articles. And here the only question is whether the cargoes do actually and directly aid the recipient to carry on hostilities. The suggestion of the English that cotton ought to be contraband because a very small proportion of the cotton shipped might be transformed into explosives is ridiculously far-fetched. Copper seems to be a necessity for making of munitions, and perhaps might be added. Petrol is obviously likely under present conditions to be used in the field; but what about steel without which guns could not be cast and automobiles could not be built? Upon this whole question of the list the State Department has been weak, for while manfully protesting against delays and exasperations in the proceedings on vessels seized on the basis of contraband, it has never formally protested against the ever-expanding British list of contraband; it has never clearly applied the touchstone of actual military use to the articles held up by the British; and it has once incautiously admitted the "law of necessity" as a valid reason for altering the ordinary practises of international law.

### MEANING OF BLOCKADE

In the discussions of blockade also, there has been a hesitancy to base the position of the United States on the solid ground of the real nature of blockade. It is a very common practise of war to invest a port by sea, partly to cut off its commerce, partly to prevent supplies reaching the coast—always as a positive, active military measure. The United States during the Civil War captured vessels anywhere on the high seas bound to the ports of the Southern Confederacy, because outside each of those ports it had a competent blockading squadron.

## A MESSAGE TO PARENTS

If Education is to be preparation for complete living, boys and girls must be led to a proper appreciation of the vital interests, movements and events of the present. No one is fitted to take his place as an American citizen and voter unless he has an intelligent understanding of modern, national, political and social problems. It is surprising to see how many students are uninformed on the most commonplace news of the day. These students are not really to be blamed, for most of them have not been given the proper advice and guidance.

**Give Them The Independent**

That was the sort of blockade which it was supposed the immense British fleet would institute against the German coast, and the United States would never for a moment have questioned the capture of ships bound to actually invested ports. For reasons best known to themselves the British have not thought it prudent to establish such forces off the coast. They do not feel physically able to keep up such a blockade. Having failed therefore in what was supposed to be its obvious method of attack, Great Britain has now declared a blockade which is not a blockade.

The American Government has officially admitted to England that "the methods of modern naval warfare . . . may make the former means of maintaining a blockade a physical impossibility." Then instead of drawing the logical deduction that if a blockade is a physical impossibility it can neither be instituted or respected, our Government accepts the new kind of blockade, which is practically the closing of the English Channel and the water routes to the north of the British Islands which had for uncounted ages been the common property of mankind. A neutral vessel entering the North Sea without the consent of Great Britain in no way interferes with British warfare. The action of the British and German Governments in declaring areas on the high seas to be "military areas" or "zones of war" has no more justification than it would be to hold that the Straits of Belle Isle or the channel between Key West and Cuba were no longer open for American commerce.

#### PROTECTION OF NEUTRAL RIGHTS

To protect these rights which have been so wantonly violated by two great powers is a hard matter. Certainly the United States could protest with vastly more effect if it had a navy of the same kind as that of Great Britain and Germany—that is, a navy including a number of fast and massive dreadnoughts and also including a large flotilla of destroyers and of submarines, and a suitable aerial contingent. The friendship and the trade and good will of the United States are worth having, but not sufficiently so to protect our interests in a time of crisis. The United States is standing up as the champion of the neutral world, and is maintaining principles which would otherwise go under. Nevertheless nine months of war have been a sufficient proof that unarmed neutrality is a steam launch in a cyclone. However sound or seaworthy, the most it can expect is to live thru the storm.

#### WOMEN AND WAR

The Dowager Empress of Russia is said to be using the plan that American suffragists found so remunerative on Sacrifice Day, the proceeds of this Russian Melting Pot to go to the Red Cross.

Dr. Dorothy Smyley is one of the few women in the English army. As a member of the British Royal Army Medical Corps she was ordered to report for service with the British troops.

## If a King's Doctor told you to take Sanatogen—

you would be impressed—for you know that a King's Doctor must be a man of highest professional standing. You would take Sanatogen feeling confident that it would do the things promised; give you fresh vigor, fortify your system as no other tonic could.

Now it is a fact that the private physicians to seven Emperors and Kings, after personal observation of its effects, have endorsed Sanatogen in writing. (See, for instance, the accompanying letters of Dr. Ott and Dr. Kuhn.)

So you see a king's physician might recommend Sanatogen to *you*, if you could consult him—indeed there are over 21,000 practicing physicians who would tell you to take Sanatogen, because they all have written us, some telling of its power to strengthen the nerves, others of its power to enrich the blood and upbuild the system, and still others of its wonderful qualities as an aid to digestion.

Such are the credentials of Sanatogen—they should, they must convince you that Sanatogen has a service to perform in *your* case.

Sanatogen is sold by good druggists everywhere in three sizes from \$1.00 up.

*Grand Prize International Congress of Medicine, London, 1913*

#### Dr. Ernest Ott,

Late King Edward's physician, Marienbad, writes: "I have been using Sanatogen for a number of years in my practice with excellent results. These results have been notably good in the case of elderly people when it was desirable to build up the strength, to stimulate bodily functions, and to improve the circulation of the blood."

#### Dr. Conrad Kuhn,

Physician to the Court of H. I. M., the Emperor of Austria, writes: "I have had the very best results from Sanatogen in the treatment of frail, anemic children and patients suffering from wasting diseases."

## Cheating in Weights and Measures

BY BISHOP HATHAWAY

"Don't go elsewhere to be cheated. Come here," was one enterprising tradesman's unintentionally enlightening advertisement. There are many others who follow his policy and use short weights and measures, if they do not imitate his frankness.

Perhaps the most prone to cheat is the sharp butcher; he has more ways and chances. His is a spring scale with round face and pan beneath. A common trick is to stick fat under the pan to make the hand stand ahead. He kneads it in under the rim. Fat is the handiest; sometimes wax, tallow, putty, an iron strip, a nut or a screw, whatever can be slipped off when detected.

He may have the scale hanging so high you can't see in the pan, with an iron ring inside, covered with feathers, if he is a chicken butcher. It can be brushed off or slipped into the pocket. If you are buying fish, there are three or four ounces you pay for and don't get. He blandly empties them out as "schmutz" when the scale is tested. The vegetable man has a heavy paper in the pan or a bunch of bills may be filed on the hook with a nut hid in them.

To permanently set the scale fast, as we say, he bends the hand ahead. He can't bend it back again quickly, under the glass face of the dial, so he has a screw adjuster on the side which he can turn up and back instantly. Half a turn, the hand moves four ounces or more. To weigh short, turn up; right again after the sale. The so-called family scale is this type, a little square-shaped instrument, with the screw on top under the pan.

Weighing the hand is a trick of butchers, not so much of grocers. The butcher weighs a piece of meat and leaves his hand on as he reads the weight, standing meantime between you and the scale. If he is caught, it was accidental. Or he drops the meat on and reads as the hand shakes. The customer can't read a bouncing scale and rather than be called "a cheap skate" won't ask.

The trick of giving a certain money worth when weight is asked, is a cheat on its face. A customer asks for two pounds at twenty cents, and is given thirty-eight cents worth. If he insists, the butcher says he can't cut fine enough. If actual weight is read a fraction over, charged for, the customer is none the wiser. It is a mode of small scalping, but it brings certain and large gain on the whole.

The computation scale is a new kind, where the weight is shown on a chart, and alongside, the price, or computation. The older makes had the objectionable feature that the chart was made so the same price was shown for, say, eight, nine, and ten ounces. If ten cents was the right price for ten ounces, the same was marked for nine and eight ounces, always in the butcher's favor.

A computing scale company formerly put out this advertisement:

Can you do this? Buy twenty pounds pork loins at nine cents a pound, retail them to your trade at the same price and

get your money back? We can on our scale and make you three per cent profit besides. If your business amounts to \$10 a day sales we can earn you thirty cents in frac-tions you don't get now.

The fractions earned was the over-charge at ten cents for eight ounces, when the right price was ten cents for ten ounces.

When you pass a store and see a tin quart in a box of cranberries, you see one of the commonest cheats in gro-ceries. Berries are a dry commodity, but they are being measured in a liquid quart. A liquid quart is ten cubic inches less than a dry quart, so berries sold in a liquid quart are short by as much as a heaping cupful. Dry measures are usually made of wood and liquid meas-ures of metal or papier mache.

The most elusive cheater is the ped-dler, here today, away tomorrow. He can't be gotten to court except by ar-rest. If he is reported civilly, he gives a wrong name and finds a new place. Or if his sawed and filled weights are seized, he loses himself in the crowd and then gets more.

The customer has three ways of safe-guarding himself from all these dis-honest devices. The municipal bureau of weights and measures does its part in condemning false scales and meas-ures before they can be put into use. The city inspectors of weights and measures watch the tradesmen and try to prevent them from introducing any system of cheating in their daily busi-ness. But the customer must supplement these agencies by careful, personal su-pervision and check up the goods he buys for accurate count and weight.

## THE MARKET PLACE

### THE MARKET FOR SECURITIES

In the securities market, the reaction which began when the American ship "Gulflight" was attacked by a German submarine, and was sharply emphasized after the sinking of the "Lusitania," has been followed now by great dullness, with an advance of prices in the closing days of last week. In the week's first three days, the market was neglected because investors and traders were waiting for Germany's reply to our Government's note concerning the "Lusitania." Transactions on the New York Stock Exchange were in the neighborhood of only 200,000 shares a day. The million-share days which made the month of April a memorable one in the history of the Exchange were not forgotten, but there was no indication that such activity could be expected in May.

The recovery and advance shown in the last three days of the week—with 363,000 shares sold in the two hours' session of Saturday—were due mainly to the news from Italy, whose action, it was thought, would shorten the war and might affect favorably the reply of Germany to the American note. Due consideration was also given to the Pennsylvania Railroad Company's large order for cars and to reports that other companies were making inquiries. Many were convinced that the car and engine manufacturing companies would soon be very busy on domestic and foreign orders. Among the net gains for the week were the following: American Car and Foundry Company, 4; American Locomotive, 6 $\frac{1}{2}$ ; Baldwin Locomotive, 7 $\frac{1}{2}$ ; Bethlehem Steel, 12; Crucible Steel, 9 $\frac{1}{2}$ ; General Motors, 10 $\frac{1}{2}$ ; New York Air Brake, 9 $\frac{3}{4}$ ; Pressed Steel Car, 6 $\frac{1}{4}$ ; Studebaker, 6; Westinghouse, 9. With these additions, however, prices are much below the summit reached in the April movement. A majority of the copper mining stocks showed smaller gains, and prominent railroad shares were higher by from 1 to 2 points. The week's business was only 1,706,000 shares, which may be compared with the 5,000,000 weeks in April.

Sterling exchange fell to figures a shade lower than the record low quotation of March 23, which was 4.78 $\frac{1}{8}$ . The foreign debt is steadily growing, with the orders for war supplies. It is plain that London must speedily provide for large credits in New York, or send gold. For some reason the expected negotiations for credit have been delayed. If the British Government sends gold, it will come from the Bank of England's reserve at Ottawa, in Canada. In the early months of the war, when we were the debtors, about \$100,000,000 of gold was sent to Canada from this country. We have drawn back more than \$40,000,000 of it, and probably the

amount remaining is not less than \$60,000,000. But the shipment of it can easily be avoided by credit arrangements in New York. Some weeks ago it was expected that a British credit of \$100,000,000 would be established here before this time.

### IMPROVEMENT AND CONFIDENCE

At the annual convention of the Savings Bank Association of the State of New York, last week, 250 members were present. In the addresses of the president and others, the prevailing tone was one of optimism and confidence. Several pointed to what they regarded as signs of approaching prosperity.

A commercial agency has procured reports from ninety cities. These show improvement at nearly every point in the last few months, with a feeling of confidence as to the future. While a considerable part of the gain in manufactures is due to war orders, there is evidence of an increasing domestic demand. This is also the substance of reports procured by two or three daily newspapers.

### WAR METALS AND CHEMICALS

The price of spelter has been rising rapidly. Before the war it was four or five cents a pound. Sales were made last week at various prices ranging between sixteen and twenty cents. There are four grades. Spelter is needed for the manufacture of cartridge cases. More than one-third of the world's output has been produced in Belgium and Germany. As the Allies cannot get the metal, or compound of metals, from either of these countries, they seek it in the United States, where one-third of the world's supply can be found. It is said that in three days of last week contracts for the sale of from 75,000,000 to 100,000,000 pounds were made. One of the sellers was the American Zinc Company. Another was the Butte and Superior Company, the price of whose shares was increased by 11 $\frac{1}{2}$  points on the Stock Exchange. There was also a gain of 5 $\frac{1}{4}$  for National Lead shares. This was due to the demand for spelter, 200,000,000 pounds of which have been exported since the beginning of the war. Dispatches from the mining district say that our Government, because of the great demand from abroad, has engaged the output of two large producing companies.

The price of copper has not declined. In the Lake Superior district large orders have greatly stimulated production. The current output of the Calumet and Hecla Company has never been exceeded in the history of the corporation. This country produces a little more than

# The Healthful House

Of course you have pure water, a modern heating system and sanitary plumbing.

But—

What about the relations of rooms in your home—the arrangement of furniture—effect of walls, ceilings and floor coverings—and other like matters with their bearing upon your health and that of your family? What do you know of such things? In "GOOD HEALTH"—the magazine which teaches *practical efficiency for the individual and the home*—is commencing a series of articles on "The Healthful House." These articles are the work of Mr. Lionel Robertson, leading interior decorator of the United States, and Mr. T. C. O'Donnell, a scientific authority on healthful habitations. These gentlemen, in their articles, are telling many vitally interesting facts—knowledge you may easily use to make your home more healthful—to increase its restfulness—to add to its attractions and happiness to you in its possession and occupancy. Send ten 2c stamps (20c) for the April "GOOD HEALTH" with the first article on "The Healthful House" or—get the whole series by subscribing to "GOOD HEALTH" for one year. Only \$2, and worth more. Mail your order and remittance to—

half of the world's supply, and Germany's output is very small. Artillery experts say that her ammunition now suffers for want of copper.

Prices of the chemicals used in the manufacture of powder and miscellaneous explosives have been greatly increased by the war, the additions ranging between ten and 500 per cent. The price of picric acid has been multiplied by four, and that of benzol by five. Large advances for guncotton, saltpeter, quicksilver and chlorate of potash are shown. The war has affected in the same way many antiseptics, disinfectants and surgical supplies. The prices of some of these have been doubled, and for others the additions are from fifteen to sixty per cent.

## CONGRESS AND THE DEFICIT

The national deficit for the current fiscal year is now nearly \$110,000,000. Altho it has been said that the receipts from income and corporation taxes, soon to be due, and estimated to be from \$65,000,000 to \$80,000,000, would give the Treasury all needed relief until the assembling of Congress in December next, there is now much talk about a special session. The new Democratic leader of the House, Mr. Kitchin, of North Carolina, said last week that he would not be surprised if a special session should be called, to consider the revenue problem.

There are reports that the Government may decide to provide for its necessities by an issue of short-term notes. If there should be a special session, it would take into account not only the current shortage but also the effect next year of the proposed removal of the duty on sugar. When the tariff was revised, the duty was reduced by one-quarter, and it was provided in the act that the remainder should be taken off on May 1, 1916. A very considerable part of the revenue is derived from this duty. To compensate for the loss of it next year there must be new taxes.

There is a great demand for freight ships to carry war supplies from New York to ports held by the Allies. Because of this demand, the French Line last week chartered thirty-seven steamships. Other ships are to be engaged by Russia. It is said, however, that Russia is unable to move war freight from Vladivostok as fast as it is unloaded there, because the railway service is inadequate. For the improvement of this service Russia has placed large orders in this country.

Within the last three weeks \$9,250,000 of gold has been imported from France. The latest shipment was \$2,500,000. These imports, with \$2,500,000 engaged from Ottawa, make a total of \$63,165,000 imported since January 1. The shipments have been distributed, in part, as follows: Canada, \$40,490,000; China, \$5,200,000; Japan, \$3,625,000; France, \$9,250,000; Holland, \$2,000,000; England, \$1,100,000; South America, \$1,000,000; Denmark, \$300,000.

The following dividends are announced:

Southern Pacific Company, quarterly, \$1.50 per share, payable July 1.  
Union Pacific Railroad Company, common, quarterly, \$2 per share, payable July 1.  
Federal Mining and Smelting Company, preferred, 1 per cent, payable June 15.  
Mergenthaler Linotype Company, quarterly, 2½ per cent, payable June 30.  
City and Suburban Homes Company, 2 per cent, payable June 4.

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

1915

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578.109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## INSURANCE

CONDUCTED BY W. E. UNDERWOOD

### THE LIFE INCOME POLICY

It was in 1893, I think, that the Mutual Life Insurance Company put before American insurants for their consideration and acceptance a form of policy which, now in general use by all companies, differed in one essential particular from all others theretofore issued. Instead of providing that the capital sum of the policy be paid entire on the death of the insured, it was so arranged that the beneficiary would receive its equivalent in the shape of an annual, semi-annual or quarter-annual income. The idea of thus conserving the provision made by a policyholder originated with Mr. Emory McClintock, at that time the actuary of the Mutual Life, a man whose services and contributions to the science of life insurance have been of inestimable benefit, both to the institution and to all policyholders.

The continuous income policy has been steadily growing in favor with the public, but much more rapidly of late than usual. This is probably due to the increased attention it has been receiving from the managements of various companies. They have urged it more vigorously on agents, and the latter have made prompt responses. In their turn insurants in constantly growing numbers have been impressed with its advantages. The success of the crusade reacts on the companies, resulting in new features embodying additional conveniences to policyholders and beneficiaries.

One of the latest of these developments was made by the New York Life, which will now open an account with any beneficiary by issuing to him or her what is called an "Agreement and Account Book." Demands may be made against it at any time by the owner of the account, the company responding by sending a wallet of signed checks of \$20 denomination, negotiable for cash after being endorsed by the payee. The balances in the custody of the company are credited with interest at not less than three per cent.

In a way this is a modification only of the "lump-sum" withdrawal of the insurance benefit, for the whole amount stands at the demand of the owner—it may be taken in small sums periodically or all at one time.

The regular continuous income contract, on the other hand, can be so drawn under the direction of the insured person himself as that his beneficiaries cannot alter either the amount of the instalments or their periodicity. Here, the object aimed at—the conservation of the provision—is attained. Inexperienced beneficiaries cannot squander it, and it remains to them a sure income, safe against loss or diminution and free of taxation. Any substantial citizen thru this policy may easily

leave his wife or other dependent a life income of \$100 a month, at a very reasonable premium expense.

### HOW IT WORKS

An examination by the Insurance Department of Nebraska of the branch in that state of the Ancient Order of United Workmen, a fraternal assessment order, illustrates the sun-down road which all reserveless life insurance takes. Several years ago, the order's funds being at ebb, the rates were raised with the result that a surplus was steadily built to a maximum of about \$600,000, when Old Mortality again caught up and the dwindling process is in full swing. The examiner's report shows that in the last four years the deficit as between income and outgo has aggregated \$363,607. In 1914 the total income was \$798,896; the total disbursements, \$921,174. Of course, there must be another advance in rates to keep pace with the augmenting mortality due to the increasing average age of the membership.

Rev. H. C. H., Atlanta, Ga.—The company about which you inquire is financially sound; has had a natural growth; possesses a management of average ability; its policy forms are satisfactory; its lapse ratio is excessive and the acquisition cost of new business is high. As it is a stock company of course it is controlled by the proprietors—an especially weak point in comparatively new and small life companies.

E. L. S., Mayville, N. Y.—The surest and quickest way to learn any branch of the insurance business is to enter its working department. Secure an agency or a sub-agency and solicit business. You will first read the literature the companies furnish explanatory of their various plans and in a gradual, natural way work forward, as your needs enlarge, thru the more general technical literature of the business.

F. R. W., McKeesport, Pa.—The New York company you mention is sound financially and maintains all proper reserves for the protection of its policies. Legal reserve life insurance companies do not go into bankruptcy—they reinsure their policies in another life company with the approval of the State Insurance Department. Policyholders in a poorly managed reserve company do not suffer an impairment of their insurance—they get small or no dividends, and thus increase the net cost. The Standard Life is a comparatively new company with an authorized capital of a million (\$324,275 paid up) and a struggle ahead of it. Financial condition good; expense ratio, high; mortality experience, favorable. The Pittsburgh L. and T. is pretty well established, with over a hundred millions of insurance in force, most of which came from the Security Trust and Life and the Washington Life, both of which it reinsured. Management expenses, moderate; cost of new business, low; mortality rate too high; management, conservative and capable.

Miss F. L., Troy, Kan.—Company fully solvent, has a small surplus and maintains proper policy reserves. Its policies compare favorably with those of other companies. I do not believe the net cost during a term of years will average better than most companies nor as low as in ten or twelve of the best dividend payers.

## WHERE ART FALLS DOWN

BY W. G. BOWDOIN

The other day a man went to the Century Opera House to see Isadora Duncan dance. The performance as he subsequently described it, was beautiful. It was the poetry of motion and art of the highest type.

The man was so transported, his soul was so carried away by means of the psychology of art, that he became quite inconsiderate of the material things. One result of his frenzy that the graceful Isadora superinduced, was that he lost his purse. This was of course very sad as there was real money in it. However he had confidence in the refining influence of art and went with much confidence to the box office to await the return of his trashy purse.

The clock slowly ticked the minutes away, but still the purse finder lingered. He is still lingering and will probably continue to linger.

We have all heard of "art for art's sake," and have revelled in it, as a well turned phrase, but when it comes to the returning of a money laden purse, art suddenly becomes insufficient.

It is indeed a mighty pleasing thought that a Whistler etching might be uplifting in its influence. No one who visited the recent Knoedler exhibition of the grand paintings of El Greco and Goya, could help feeling something of the glorification of art. But when the God's gift is a well filled purse, and no one is looking, Art can go hang!

It is a mistake to suppose that if the walls of a penal institution are painted with colors having a religious symbolism, that regeneration will magically take place.

It is safe to say that not even Rembrandt or Titian or any other old or new master, could ever successfully take the place of good old fashioned bolts and interlocking bars.

Music has been credited with an ability that is inherent to sooth the savage breast, to make hens lay eggs, and cows give milk, but that does not mean that ragtime is a crime preventative or that if our night courts were opened with musical masterpieces rendered by trained orchestras offenses against the law would cease.

Alas, no! "Art is long," it is true, but, "money talks" and a purse that belongs to another, if its contents can be converted to the use of a finder, passes quickly beyond the realm of art with all of its ultra refinement.

This, of course, does not mean that New York should eliminate the Metropolitan Museum of Art, or that we should abjure free concerts and ignore the frozen music of architecture. By no means! It only shows the insufficiency of art, as applied to the finding of a lost purse. It ought to mean restoration, but it does not always do so.

Art ministers to the taste; beauty and propriety, according to Arnold W. Brenner, sometime president of the Architectural League, go hand in hand, but the time has not yet come when the most inspirational art can safely be relied upon to do police duty or to insure the restoration of a lost pocketbook.

# THE NEW BOOKS

## POEMS PLEASANT AND UNPLEASANT

*A Florentine Cycle and Other Poems*, by Gertrude Huntington McGiffert, are wistful, musical, pensive and untouched by the unrest and passion of the world. Especially lovely is the cycle called "The Homestead," with its woven memories and cherished traditions. Perhaps the most remarkable poem in the collection is the last, "The Aged Christ," a strange and repellent fancy of the Master saved from death and dwelling concealed among his disciples, grown old, decrepit and disheartened, doubtful of his Messiahship; he who had been incarnate Life and Hope in his youth, distrustful of life itself and of his mission. The poem has at least the good result of making the reader rejoice that Christ *did* die in his splendid young manhood, to live on in the hearts of men and to be alive forevermore.

*A Florentine Cycle and Other Poems*, by Gertrude Huntington McGiffert. G. P. Putnam Sons. \$1.25.

## THE TRAGEDY OF LONELINESS

Truly did Boston lose the last opportunity to redeem slipping literary laurels when to the English at second hand, was left the discovery of the best interpreter New England life has had in a generation. English literary "finds," particularly when they are Americans,—despite John Bull's most cherished traditions of conservatism—are to be accepted hesitatingly; they suffer, as a rule, from a tendency toward exaggeration, which renders them peculiarly catching on this side of the Atlantic. But there can be no occasion to quarrel with the judgment in the case of Robert Frost and *North of Boston*, no matter how erroneous at other times it may be. For this "discovery" at least can be accepted, not for what the British have extravagantly said of him, but for the sheer inability of his light to stay hid under a bushel.

The New England that *North of Boston* introduces is the same bleak land that Mary Wilkins Freeman and Alice Brown have made so thoroly their own in fiction; the bare hill-tops, and cold, harsh winds, where human beings, like the plants, must grapple close with roots deep in the flinty soil, to withstand the struggle for existence. It is a conflict that strips life of non-essentials, that under its barrenness locks up molten drama, which is the more portentous for its suppression.

From out the dreariness of life on these rugged farms, the motif that Mr. Frost has chosen is its tragic loneliness. And the pictures he presents are not abstractions, their detail is that of the cameo, their vividness and sympathy drawn from experience. For Mr. Frost, before he felt the literary call that took him across the now submarine-infested seas, tilled New Hampshire's flinty soil. The "Servant of Servants," "Home

Burial" and "The Hired Man" are perhaps the most notable poems in the volume. Take, for instance, the picture of the farmer's wife in "The Servant of Servants," who feels herself slowly being driven mad by the monotony of her life; or the woman's sympathy, given in a few bold strokes, with the poor derelict of the Hired Man, who has come back to die:

With nothing to look backward to with pride,  
And nothing to look forward to with hope,  
So now, and never any different.

And how, in the opening lines, she seeks to shield the old man from her less sympathetic husband:

Mary sat musing on the lamp-flame at the table  
Waiting for Warren. When she heard his step,  
She ran on tip-toe down the darkened passage  
To meet him in the doorway with the news  
And put him on his guard. "Silas is back."  
She pushed him outward with her thru the door  
And shut it after her. "Be kind," she said.

And thus in a sentence is revealed the whole psychology of a woman. The chief charm of these poems—if the word can be employed somewhat loosely—is not in the pithy verse, but in the psychological insight they reveal, in the Browningsque quality of their drama. Indeed, analyzed on the score of verse, the poems would be almost negligible; they suffer all the halting awkwardness

which is ever the handicap of *vers libre*; but they are gripping, they are powerful; rime would have spoiled them, robbed them of the homely atmosphere, as it does "Blueberries" and most of the poems of "A Boy's Will," an earlier and unconvincing volume of Mr. Frost's rimed poems which has also just been published.

In the necessity of this atmosphere, it may be believed, that we strike the reason for Mr. Frost's English debut, for we cannot help but be a little piqued at having been passed for our cousins. It is the bond with Masfield, with Housman, and with Wilfrid Gibson, and others of the newer English school, that has given strength and promise to his own work. And very great promise indeed, it is, if *North of Boston* is but the second guide-post.

*North of Boston*, by Robert Frost. New York: Henry Holt & Co. \$1.25. *A Boy's Will*, by Robert Frost. New York: Henry Holt & Co. 75 cents.

## A WELSH CONEY ISLAND

One does not look for a blatant seaside on the mystic coast of Wales, but Oliver Onions in *Mushroom Town* describes how such a place grew in thirty years from a huddle of huts and thatched cottages into a pretentious summer city with all the old mystery and charm lost in a pandemonium of crowds and noise. The story of how this transformation or bewitchment took place is full of studies of Welsh character, contrasted with the pushing people from Manchester and the North in general who carve their initials on the rocks that had been sprinkled with the blood of Merlin. "You mustn't come here if you want a couple of miles of beach to yourself" the reader is warned in the first chapter, and the book shares the restless and unformed state of a town in transition, barely saved from stupidity by the stretches of sea and the overshadowing mountains.

*Mushroom Town*, by Oliver Onions. G. H. Doran Co. \$1.25.

## MEMOIRS OF A BROTHER

Characteristically, Mr. A. C. Benson begins his memoir of his brother, *Hugh*, with a detailed description of a house and a garden. The nomadic American reader gets a surprised sense of how much a part of himself an Englishman's house and garden are. Robert Hugh Benson, the youngest of the three gifted brothers, became a Catholic, and his Anglican brother-biographer has a wholly sympathetic altho slightly wondering attitude toward his conversion. The book draws a most attractive and intimate picture of an exceptionally interesting family: the father, an Anglican bishop; the mother, a great-hearted and broad-minded woman; sisters and brothers singularly united in affection but independent in thought and action. *Hugh* is an unaffected and unexaggerated record of an unusual life.

Longmans, Green & Co. \$1.75.

## THE NEWEST BOOKS

*Sketches of Great Painters*, by E. W. Chubb, are interesting essays, full of anecdotes and excellently illustrated, on fifteen masters of art, from Raphael to Whistler.

Cincinnati: Stewart & Kidd. \$2.

*Naples and Southern Italy*, by Edward Holton, tells pleasantly of those lovely but less visited coast towns south of Genoa, down to Reggio, now a heap of ruins.

Macmillan. \$2.

*American Literature*, by Leon Kellner, is a most interesting short study of American writers by an Austrian professor of English philology, a Hebrew, with Puritan sympathies.

Doubleday, Page. 60c.

*Wolfine*, by X., and *Sundown Slim*, by H. H. Knibbs, are two stories that will attract dog lovers, for a great Irish wolf-hound is the good angel of one and an Arizona wolf-dog of the other.

Sturgis & Walton. \$1.25.

Houghton Mifflin. \$1.35.

*The Poets Laureate of England*, by W. Forbes Gray, rescues from oblivion some amusing figures, once London notables, who at least could write as poor odes as any by those real poets, Johnson and Dryden.

Dutton. \$2.50.

*Christianity and International Peace*, by Charles E. Jefferson. Not prepared under the spur of the present, but the fruit of years of thoro study and constant speaking and writing, on a topic for which at last there are listeners.

Crowell. \$1.25.

# New York Life Insurance Company

**Darwin P. Kingsley, President**

The New York Life is a Purely Mutual Company, now in its seventy-first business year.

On January 1, 1915, its outstanding business was 1,142,253 Policies, insuring the sum of \$2,347,098,388.

The number of policyholders insured is about one million, eighty per cent. of whom reside in the United States and Canada.

The other two hundred thousand are scattered over the civilized world, chiefly in Europe, including both the belligerent and the neutral countries.

The Company's program being one of International Peace and Prosperity, it has been able to observe a strict neutrality, and to relieve suffering humanity to a degree scarcely equaled by any other human institution.

The New York Life is a Republic of Man in which the war-drum throbs no longer and the battle-flags are furled, because its program is founded upon equal and exact justice to all, and there is no room for international hatred or greed.

It holds in trust about Eight Hundred Millions of Dollars, the largest amount of funds ever gathered by a single corporation for beneficent purposes.

Its income in 1914 was over One Hundred and Twenty-six Millions; its disbursements to beneficiaries and additions to book value of assets were over One Hundred and Nine Millions.

The Company's death-losses in 1914 were only 73 per cent. of the amount provided in the premiums for the mortality of the year. The total war losses, including those covered by policy conditions or otherwise, were less than two per cent. of the total.

No security issued by or in any country engaged in the present war and held by the New York Life is in default of either principal or interest.

The policies now offered by the New York Life receive annual dividends at the end of the second year, and those written since 1906 have received an extra dividend at the end of the fifth year.

The Company's Policies contain guarantees of valuable benefits not required by the laws of any State or country, including insurance against total and permanent disability. The disability benefits include a waiver of premium payments and the annual payment of one-tenth of the face of the Policy, until the disability ceases or the full amount of the Policy has been paid. The annual cost of this additional safeguard at age 35 is 54 cents per \$1,000 insured.

Policies are payable either in one sum, in annual instalments during a selected period, or during the life of the beneficiary. Or, the proceeds of the policy may be left with the Company at interest, and drawn out as needed in sums of \$100 or more at any one time. This \$100 will be furnished in five checks of \$20 each. You may insure not only against the contingency of premature death, but also against the danger of loss to the beneficiary through bad investments. A Monthly Income Policy furnishes ideal protection to a growing family.

The Annual Report showing business of 1914 sent on request to any Branch Office or to

# A Two-Minute Talk to Young Men

This is a personal message on a personal question. It is addressed to young men about to choose a business or professional career. It concerns also the man who is seeking the way to a higher position and a larger income in his present occupation.

Are you satisfied that you have selected the right career?

Are you satisfied with what you are doing?

Are you earning enough for the energy expended?

Do you fit the work you have chosen?

Are you fully realizing your opportunities for advancement?

Or—are others getting the good things that ought to come to you?

Are you thoroughly equipped, in order that you may grasp the Big Chance when it comes your way?

Consider these questions carefully. Much depends on your having them answered correctly.

See if there is not a valuable source of information and ultimate profit for you in our

## Vocational Service

which this announcement introduces. It costs you nothing but a postage stamp to get our counsel.

State your problem freely and fully. It will be kept in absolute confidence. You will receive our best advice after careful consideration of your particular requirements, based on many years' experience in the study of vocational opportunity and training.

You will receive the benefit that could come only from the largest institution in this coun-

try devoted to business and professional instruction by mail.

More than five thousand students of The International Correspondence Schools reported their promotions and increase in salaries to us during the year 1914. From these reports we estimate that I. C. S. trained men have increased their earnings over *twenty million dollars* in the past year.

That gives you some idea of the background of the service we are now offering.

You can secure your share of these millions. You can secure a better position and a larger income, if you will qualify yourself as an Expert in some occupation; for, to be really successful in these days, you *must* be an expert.

To help you in these things, our Vocational Service has been established. Those of you who are nearing the end of your school work may learn how to choose the right profession and how to prepare for it at home in order that you may start far ahead of the point you otherwise would.

Those of you whose occupations are uncongenial or unprofitable will learn how to qualify in your spare moments for a happier and more remunerative position.

Without placing yourself under any obligation whatever, write today to the International Correspondence Schools, Scranton, Pa., and you will hear from us—straight.

## J U S T A W O R D

The Independent considers itself fortunate to be able to reproduce for the first time the autochrome photograph by Arnold Genthe which adorns the cover of this number.

Dr. Genthe's work in color photography has probably reached the highest point acquired by any student of the Lumiere process.

This subject, a cypress tree above the blue waters of the Pacific, gives him a rare opportunity to practise his art. The photograph is literally a snapshot, all the colors of Nature being recorded at one exposure of half a second on a single negative.

The plates from which we print were made directly from the colored original. This is the first of a series of master covers which The Independent will publish during 1915 and 1916, thereby marking a new development in cover art.

James L. Slayden, a trustee of the Carnegie Endowment for International Peace, a Representative in Congress from the State of Texas, and an official delegate from the United States at the centennial celebration of Mexico in 1910, has written an article for The Independent, calling upon the United States to join not only the A. B. C. Powers, but the other Latin-American republics so disposed, to help us put an end to the sufferings and audacity of Mexico. It is a strong article, and will attract wide attention.

## P E B B L E S

A tourist without money is a tramp, and a tramp with money is a tourist.—*Kansas City Times*.

Steve They say that waiters can always size a man up.  
Lillian I suppose they measure him from tip to tip.—*Judge*.

Caller—Pardon me, sir, but is there another artist in this building?  
Artist—There is not. There is, however, a man on the fourth floor who paints.—*Philadelphia Ledger*.

When tumult agitates the scene,  
We sigh for peace once more;  
When life is placid and serene,  
We say that it's a bore.  
—*Washington Star*.

"When water becomes ice," asked the teacher, "what is the great change that takes place?"  
"The greatest change, ma'am," said the little boy, "is the change in price."—*Ladies' Home Journal*.

"I understand that you have a new motor car."  
"Yes."  
"Do you drive it yourself?"  
"Nobody drives it. We coax it."—*Washington Star*.

The One with the Eyeglass—I went into a restaurant and said: "What have you for dinner?"  
"Everything," said the waiter.  
"Bring it in."  
"One order of hash," yelled the waiter.—*The Auk*.

An undersized Italian grocer in Hoboken, married to a strapping big German woman who is vociferously loyal to the Fatherland, received a Black Hand letter last week which read:  
"If you do not give \$1000 to our messenger who will call on you Sunday night, we will kidnap your wife."  
He replied promptly: "I haven't got \$1000, but your proposition interests me greatly."—*Everybody's*.

Yells from the nursery brought the mother, who found the baby gleefully pulling small Billy's curls.  
"Never mind, darling," she comforted. "Baby doesn't know how it hurts."  
Half an hour later wild shrieks from the baby made her run again to the nursery.  
"Why, Billy!" she cried. "What is the matter with the baby?"  
"Nothing, muzzer," said Billy, calmly. "only now he knows!"—*Harper's*.

Young Bagley married the charming Olive, and after the wedding breakfast he chanced to notice one of the guests, a young man, who appeared to be extremely gloomy and was evidently not having a good time. He stepped up to the young fellow with the idea of cheering him up.  
"Er—have you kissed the bride?" he asked.  
"Not lately," replied the gloomy one, with a faraway expression.—*New York Times*.

The social caste of customers is not commonly supposed to be regarded in quick-lunch restaurants, but a Philadelphia paper tells this story:  
A fastidious person made his way into a steaming, fly-infested little restaurant. The young woman behind the counter placed a tumbler of water before him with a thump.  
"What's yours?" she asked sharply.  
"Coffee and rolls."  
She set before him a mug a quarter of an inch thick and as heavy as iron, filled with a brown fluid. The man seemed dazed. He looked under the mug and over it. "But where is the saucer?" he asked.  
"We don't give no saucers here," replied the waitress. "If we did some low-brow'd come pilin' in and drink out of his saucer, and we'd lose a lot of our swellest trade."—*Youth's Companion*.

## The Name GORHAM

Establishes the Character  
of Your Gift

The greatest attribute of a gift is the sentiment which inspires it — after that the gift itself may be expected to invite the recipient's curiosity.

It is erroneous to assume that people are less interested in the character and quality of a gift, than in what they pay for themselves.

Diamonds are preferable to rhinestones, platinum is more valuable than gold, and silverware is better for the Gorham trade mark — gift or no gift.

This inscription on a piece of silverware establishes the discrimination of the giver and unquestionably increases the recipient's respect for both giver and gift, for the name of Gorham possesses a significance in silverware such as no other name in the world affords.

For sale by leading jewelers everywhere.

## A REPLY THAT DOES NOT ANSWER

**T**HE German note on the sinking of the "Lusitania," which we print in full on another page, is ostensibly friendly in tone. In reality there is not the slightest modification of the attitude of defiance and provocation steadfastly maintained by the Imperial German Government since its unprecedented proclamation in February of a so-called war zone in the waters about the British Isles.

It purports to be at least a partial reply to the firm demands of the American Government for "prompt and enlightened action in this vital matter" of the preservation of the rights of the United States and of its citizens upon the high seas. In reality it is nothing of the sort.

The note first deals with the cases of the American steamers "Cushing" and "Gulflight." The intention of making such attacks by submarines upon neutral vessels is disavowed; and indemnification is offered, provided further investigation, possibly by an international commission of inquiry, shows the facts to justify the demand for it. Such a disavowal and such an offer would carry better assurance of good faith if precisely such attacks upon neutral vessels had not been accurately predicted in the original German proclamation of the "war zone"; if the American ship "Nebraskan" had not been the victim of a similar attack only two days before the sending of the present note; and if a new warning from the German Government to neutral vessels of these same dangers had not preceded this note by only a few hours.

In the case of the "Falaba," thru whose sinking an American citizen lost his life, the German contention is that she was not sunk until she tried to escape. This is a question of fact which might well be made a matter of investigation by an international commission as Germany proposes.

But the case of the "Lusitania" is the one which in the mind of the American people has overshadowed all others. On this case they have awaited with well-tempered eagerness but with determination a satisfactory reply. It is precisely on this case that the German note is unsatisfactory.

The Imperial German Government, by a flimsy tissue of fine-spun technicalities interwoven with statements of fact of more than doubtful accuracy, seeks to assert that the "Lusitania" was not an unarmed merchantman. The attempt is fruitless. If she had not been precisely that, she would have visited American ports only on condition of immediate departure or of being interned for the

duration of the war like the "Prinz Eitel Friedrich" and the "Kronprinz Wilhelm."

The "Lusitania" was a passenger steamer, pursuing her regular and lawful vocation exactly as she had pursued it ever since she went into commission eight years ago. In carrying ammunition in her cargo she violated no law of the United States. As a British ship she was, of course, subject to capture by the enemy, but her carrying of ammunition no more made her subject to destruction on sight than if she had been carrying Bibles. It is impossible to read the German assertions on the subject with patience; it is difficult to speak of them without indignation. But our Government should at once reply correcting the false charges in the German note and agreeing with such statements in it as are found to be correct.

The United States has demanded two things—reparation for the past and assurances for the future. In the words of the American note to Germany, "It confidently expects . . . that the Imperial German Government . . . will take immediate steps to prevent the recurrence of anything so obviously subversive of the principles of warfare."

There is no hint in the German note of compliance with this righteous demand. Indeed, there are two significant sentences in it that point unmistakably the other way. They are these:

"German commanders are . . . no longer in a position to observe the rules of capture otherwise usual and with which they invariably complied before this."

"The German Government believes that it acts in just self-defense when it seeks to protect the lives of its soldiers by destroying ammunition destined for the enemy with the means of war at its command."

To neither of these contentions can the United States accede. It must and will insist that, in so far as American ships and American citizens are concerned, the usual rules of capture shall be observed. It must and will insist that the German exercise of its undoubted right to destroy ammunition intended for the enemy shall not be accompanied by the wanton destruction of American lives.

The Imperial German Government would do well to read again with close attention the solemn adjuration of the President of the United States: "The Imperial German Government will not expect the Government of the United States to omit any word or any act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and of safeguarding their free exercise and enjoyment."

*WHILE THE SUN SHINES*

## A VACATION FROM YOURSELF

THE difference between a business trip and a vacation tour is that the aim of the former is to get to something and the aim of the latter is to get away from something. Now the something from which one would escape when released from daily duty is not a place but a state of mind. It is an axiom of metaphysics that all space is alike. Consequently it does not matter where one is if he carries with him his environment and his personality unchanged. The snail and the tortoise are so afraid that they will miss home comforts when they travel that they bear their houses on their backs wherever they go. Therefore, the snail and the tortoise can never take a real vacation and they show the effects of the limitation in their gait and manner.

If during your vacation time you live the same life, keep the same hours, eat the same food, wear the same clothes, see the same sort of people, read the same books and papers, and think the same thoughts, you might just as well stay at home. It would be cheaper and less bothersome. For that is not travel; it is merely change of position relatively to the imaginary lines of latitude and longitude. The labels on your trunk do not measure the extent of your tour. Tho you may proudly display the sphinx of Egypt and the chrysanthemum of Japan your neighbor who took to a hammock and a book in the backyard may have gone farther and fared better.

Getting away on vacation does not mean that you like to leave your town or your business or your home or your friends, for we hope you love them all. It means getting away from yourself, whom also, we hope, you love. But no matter how nice you are, you will be the better for being somebody else once in a while. It will give you a rest. Now we would not be understood as advising you to adopt an alias and leave all your principles at home. This is too often done. But do what you can to break up your habitudes and get out of the rut of routine. Start out on the first day with your mustache curled or your hair waved. If you belong to those who have neither a mustache nor long hair to do differently, you may at least change the expression of your face. Make a tour of the provinces in a new rôle. This is your chance to exercise that dramatic talent which you have always secretly known you possess but which the world has failed to recognize, even on those occasions when you appeared upon the amateur stage. In fact we all have

in the mysterious realms of the submerged self various secondary personalities who are dying for a chance to live. Among them are some who might be worth while bringing out and getting acquainted with. Vacation is a good time to try the process, for if the new friends prove annoying you can relegate them to the subconscious when you return home more easily than you could shake off undesirable acquaintances from the outside of yourself.

So, shuck your environment and shed your skin as you leave on your vacation. Recreation does not mean the re-creation of the same old self. To get away from your home town requires nothing more than a railroad ticket or a pair of legs, but to get away from yourself needs a strong will and constant watchfulness. That is why we suggested that attention must be paid to costume and make-up in the creation of a new character. "All habits are bad habits," says Chesterton. But one who took Chesterton literally would soon get into trouble. Doubtless James is the safer guide when he advises us to form as many habits as possible because they save the time and mental energy expended in many frequent decisions on individual cases. But it was James, too, who recommended that we "take a moral holiday" once in a while. By that he did not mean an immoral holiday, but a relief from that sense of personal responsibility for the universe which the New Englander like an Atlas bears on his own shoulders.

Perhaps these contradictory injunctions may be harmonized without being compromised if we say that there are very few habits too good to be broken. Said a model citizen to an erratic youth: "For twenty years I went to bed at ten and rose at six and never took a meal outside the house." "What were you in for?" was the irreverent reply. We complain of the restrictions imposed upon us by business and society, but after all our prisons are mostly of our own making. When we get a little liberty we do not know how to use it. We stand outside the barred gate on vacation day like a pardoned convict, blinking in the sunlight, frightened by the unaccustomed noise and bustle, uncertain which way to turn or what to do, and secretly longing to turn back into the accustomed ways. In our life imprisonment impulse has been suppressed and caprice has taken wings to vanish in the blue. It is only when we are freed that we realize how much of freedom we have irrevocably lost.

## STANDING BY THE PRESIDENT

IN our editorial on the sinking of the "Lusitania" we said, "We must trust the President. . . . In the hands of the President of the United States the honor and integrity of the United States are secure. Every American, without distinction of party and with no thought of personal interest, should hold up the President's hands, and in calmness of thought and carefulness of speech and with rigid self-restraint do his part to help him in the grave responsibility it is his to bear."

We see no reason to alter a word of this statement. But unfortunately there has been growing an uncritical readiness to "stand by" the President, not only in this right and proper sense, but also in a meaning of the

words which is highly objectionable and is full of evil import for that kind of political freedom which this nation preëminently stands for.

That the citizens of the United States would support their Government in any hour of peril, to the limit of human sacrifice and endurance, is certain. But we are not in that plight yet, and we ought vigorously to resent those who in substance assert a political or moral duty to stand by the President or any other minister of the sovereign people, irrespective of what that President or other minister himself stands for or advises.

The supreme duty of good citizens, in this emergency or any other, is to stand by American principles of re-

publican constitutional government, within and for the morally responsible state. These phrases, we are quite aware, are big and meaningless unless the individual minds of American citizens translate them into concrete ideas of specific obligation. American citizens are quite competent to make the translations under normal conditions. In particular, they are quite competent to grasp and hold by the idea that it is their duty to think and to speak freely. They are not to accept from a governmental or other source, command or direction upon their personal reactions to events upon which public opinion must form. And they are not to forego their right to pass individual judgment upon the words and acts of their representatives and executives.

The theory of the responsible republican state assumes that citizens not only will, but should, make their preferences known, and that they should make them known not in emotional outbursts or irregular action, but in frank, straightforward, plain-speaking, hitting-from-the-shoulder discussion. They should speak their minds on all debatable questions, without fear. The graver the issue, the more fearless, the more searching, the more open should be the discussion.

Never in our history has there been a time when discussion according to these standards was more necessary, more obligatory. The Government in all its branches—and not the President only—is charged with responsibility to decide and to act, in the hour of crisis. But let us never forget that the Government of this country, in all its branches, is a constitutional government, responsible to a people. This people has not yet waived its right to hold its agents accountable. The imperative and inalienable moral obligation rests upon the people to form its own opinion, and to acquaint its agents with what that opinion is.

This fact was well expressed by President Wilson in his Memorial Day address:

Duty for a nation is made up of so many complicated elements that no man can determine it. No group of men without wide common counsel can possibly determine what the duty of the day is. That is the strength of a democracy, because there daily rises in the great body of a democracy the expression of an untrammelled opinion which seems to fill the air with its suggestions of duty, and those who stand at the head of affairs have it as their bounden duty to endeavor to express in their own actions those things that seem to rise out of the conscience and hope and purpose of the great body of the people themselves.

In every proper meaning of the word we shall stand by the President. Let us also stand by our ideals and our own responsibilities as citizens of a sovereign republic.

### STARVING MEXICO

**M**EXICO, like Belgium, is starving. It suffers, not at the hands of an invader, but from the brutal selfishness of rival warring factions. But the effect upon the Mexican people is the same.

President Wilson has made an appeal to the American people for aid for their distressed neighbors across the Rio Grande. It is intimated that if the armed bands fighting in Mexico should attempt to interfere with the distribution to the suffering non-combatants of food and supplies from this country forceful measures would be taken to nullify their efforts.

It is profoundly to be hoped that the President's appeal for assistance, to be furnished to the people of

Mexico thru the American Red Cross, will receive the ready and generous response characteristic of the people of the United States at such a time. It is no less strongly to be hoped that a more positive and constructive plan of dealing with the Mexican problem will be devised by our Government.

While we have watched and waited, Mexico has slipped irresistibly into anarchy and misery. It can no longer be even pretended that what is going on in Mexico is the struggle of the Mexican people to determine how they shall be governed. We have held our hand these many months in the name of democracy and self-government. Has not the time come when we must act in the name of humanity and civilization?

### THE TRIPLE ALLIANCE OF BRITISH PARTIES

**G**REAT BRITAIN has, after nine months, followed the example of Belgium and France, by calling upon all parties to share in the responsibilities of Government during the war. Liberals, Unionists and Laborites unite in the new ministry, and the only reason why the Irish party is not represented is because John Redmond, preferring to maintain his independent attitude, declined a portfolio.

Such a combination of political opponents is not so surprising in England as it would seem elsewhere. The front benches in Parliament are never very far apart. The genius of the British political system was never more neatly or exactly expressed than by that statesman who coined the phrase, "His Majesty's Opposition," to match that of His Majesty's Government. That the leaders of opposing parties should be on terms of personal intimacy and should confer and coöperate on occasion is in the United States regarded with such suspicion that it may be brought forward in a libel suit to justify an accusation of corruption. But in England such relations are considered normal and advantageous. The change in the ministry is therefore not so great as it seems. In those anxious days immediately preceding the outbreak of the war, when the Liberal ministry was hesitating whether Great Britain should enter, when two of its members had resigned because of their unalterable opposition to the war policy and others contemplated similar action, Mr. Law wrote to Mr. Asquith to assure him that he would have the cordial support of the Opposition.

This promise has been kept. Parliament has voted with practical unanimity for the enormous appropriations asked by the Government and has refrained from captious criticism or partizan maneuvering. But this truce could not be expected to last much longer. The smoldering dissatisfaction with the conduct of the war could not be repressed. The failure to keep up the supply of ammunition, which French laid to Kitchener and Kitchener laid to drink, was at least undeniable and serious. The naval attack on the Dardanelles, which was to effect the capture of Constantinople by Easter, has instead cost the Allies seven battleships. Lord Fisher, crusty old sea-dog as he is, the idol of the people and the sailors and the annoyance of his colleagues, resigned in disgust and is apparently no more disposed to work under Balfour than he was under Churchill.

If there is any truth in the old saying that "compromise is the science of government" the British have,

in their way of managing affairs, more science than they seem to have. Leaving this factor out of his calculations was perhaps the biggest of the many blunders the Kaiser made. He knew that on July 17 King George had used the words "civil war" in referring to the impending struggle over the Irish question. He knew that Sir Edward Carson had an army of upwards of a hundred thousand Ulster men, armed with German rifles and ready to fight the British Government in case it should attempt to put into effect the Home Rule law thrice passed Parliament. What he did not foresee was that on the day that he declared war John Redmond would join hands with the leader of the Ulsterites and that Sir Edward, who then was liable to arrest for treason, would within a year be called to the Cabinet by his bitterest foes and given the office of Attorney General of the realm. But the Kaiser is not the only man who has made a mistake in his interpretation of British character, for it is not the easiest branch of psychology in the world.

### WHY WE DISCRIMINATE

**I**N considering the case of the "Lusitania" the champions of the German side lose sight of one vital distinction.

In all their warfare against merchant ships, the British have not killed a single non-combatant.

Not so the Germans.

The British have not thus far killed a single American citizen.

Not so the Germans.

Property is merely property, but human life is human life.

The British may have violated property rights.

The Germans have struck at life itself.

We cannot view the two acts with an equal mind.

### WAR GAMES WHICH PROVE NOTHING

**A**SO-CALLED naval war game has recently taken place wherein the Atlantic fleet under Admiral Fisher essayed to prevent a (mainly imaginary) hostile fleet under Rear Admiral Beatty from effecting a landing on the coast. The landing having (theoretically) been accomplished, arguments galore are filling the Big Navy newspapers as to the inadequacy of the navy, the immediate need for more big battleships, and so on.

War games under such conditions as the above prove practically nothing; or, perhaps more accurately, they may be made to prove anything by simply increasing or diminishing the numbers of one fleet or the other (on paper), or by agreeing that a small cruiser shall represent a squadron of Dreadnoughts, or a gunboat one of fast battle cruisers. The working out of battle problems—strategic and tactical—with all the units on each side actually present and following prescribed rules and conditions wherein the skill elements are increased and the chance elements (sometimes decided by throwing dice) are diminished—are valuable and useful. They have been practised for years by the British and German navies, but, up to a quite recent period, were disgracefully neglected by our own. Of this sort of work we cannot have too much—and the less we let shows and parades interfere with it the better. But it is a far cry

from this to games of the sort which have just taken place—and there is even wider disparity between the deductions to be drawn from the one and those which are now being drawn from the other. And certainly there are no reasonable conclusions which help the existing efforts to scare us into the enormous expenditure required for more big battleships of the existing type, which, even if begun now, could not be completed for about three years, during which period no one can tell what radical changes in naval construction the war may develop.

The failure of several of the submarines is somewhat disturbing, but was fully foreshadowed in the testimony of the commander of the submarine flotilla given before Congress last winter. Congress authorized a very substantial number of new boats, including some which are to embody the latest ideas in sea-going submersibles. It would be better if the navy construction corps were not left to itself to devise the latter. In fact, there is a growing opinion that we should get much better results if the engineers of some of the great industrial corporations—such as the Westinghouse or General Electric Companies—were directly asked to help.

### LESSONS FROM THE ASSEMBLIES

**A**T last the Northern Presbyterians have learned that Union Seminary, in New York, does not belong to the General Assembly, nor to the Presbyterian Church, nor to any denomination at all, but to the Christian Church Universal. That chapter may be considered closed. Union Seminary is not bound by the Westminster Assembly's Confession of Faith, nor by anything but Christian truth, as it can be best learned from the three sources of authority, the Bible, the Church and the human reason. From the beginning Union Seminary was what its name implies, union; and it had from the beginning and has had ever since professors of various denominations, and no legal authority and no endowments bind it under any control besides that of its trustees. If, as charged, it wanders from the Christian faith, the Christian Church as a whole will condemn it and cease to make use of it. It has the experience and the liberty which Vanderbilt University has had since its escape from the control of the Southern Methodist General Conference.

The General Assembly of the Presbyterian Church, South, has in its late session harked back to what we hoped it had forgotten, the evil principle that no religious denomination has the right to express a judgment on any matter in political discussion. It separated from the Northern Presbyterians of the old school because in the Civil War the latter condemned secession; and whenever the question of reunion has come up the Southern body has demanded that the united Northern Church should repudiate what the Old School body did. Now the Southern Assembly has condemned the Federal Council of Churches because it has thru its officials taken action in favor of arbitration between nations, and on certain measures for the prohibition of the sale of intoxicating liquors. Have they forgotten, conservative as they are, that the Old Testament prophets are full of politics, even attacking treaty arrangements with Babylon and Egypt?

*A GOOD CAST*

# THE STORY OF THE WEEK

## The German Note

On the 28th of May, two weeks after the dispatch of the diplomatic note of the United States dealing with the sinking of the "Lusitania" and other kindred cases, the German reply was returned. It is only a partial reply, for the German Government announces that it begs to reserve a final statement of its position with regard to the demands advanced by the United States in connection with the sinking of the "Lusitania" until this Government shall have replied to the present note with its presentation of what Germany alleges as facts. The full text of the note is as follows:

The undersigned has the honor to make the following reply to the note of His Excellency, Mr. James W. Gerard, Ambassador of the United States of America, dated the 15th inst., on the subject of the impairment of many American interests by the German submarine war.

The Imperial Government has subjected the statement of the Government of the United States to a careful examination and has the lively wish on its part also to contribute in a convincing and friendly manner to clear up any misunderstanding which may have entered into the relations of the two Governments thru the events mentioned by the American Government.

With regard, firstly, to the cases of the American steamers "Cushing" and "Gulflight," the American Embassy has already been informed that it is far from the German Government to have any intention of ordering attacks by submarines or flyers on neutral vessels in the zone which have not been guilty of any hostile act, on the contrary the most explicit instructions have been repeatedly given the German armed forces to avoid attacking such vessels.

If neutral vessels have come to grief thru the German submarine war during the past few months, by mistake, it is a question of isolated and exceptional cases which are traceable to the misuse of flags by the British Government in connection with carelessness or suspicious actions on the part of captains of the vessels.

In all cases where a neutral vessel thru no fault of its own has come to grief thru the German submarine or flyers according to the facts as ascertained by the German Government, this Government has expressed its regret at the unfortunate occurrence and promised indemnification where the facts justified.

The German Government will treat the cases of the American steamers "Cushing" and "Gulflight" according to the same principles; an investigation of these cases is in progress, its results will be communicated to the Embassy shortly, the investigation might if thought desirable be supplemented by an international commission of inquiry pursuant to Title III of The Hague Convention of October 18, 1907, for the pacific settlement of international disputes.

In the case of the sinking of the English steamer "Falaba," the commanding officer of the German submarine had the intention of allowing passengers and crew ample opportunity to save themselves.

It was not until the captain disregarded the order to lay to and took to flight, sending up rocket signals for help, that the German commander ordered the crew and passengers by signals and megaphone to leave the ship within ten minutes; as a matter of fact he allowed them twenty-three minutes, and did not fire the torpedo until suspicious steamers were hurrying to the aid of the "Falaba."

With regard to the loss of life when the British passenger steamer "Lusitania" was sunk, the German Government has already

expressed its deep regret to the neutral governments concerned that nationals of those countries lost their lives on that occasion.

The Imperial Government must state for the rest the impression that certain important facts most directly connected with the sinking of the "Lusitania" may have escaped the attention of the Government of the United States. It therefore considers it necessary in the interest of the full and clear understanding aimed at by either Government primarily to convince itself that the reports of the facts which are before the two Governments are complete and in agreement.

The Government of the United States proceeds on the assumption that the "Lusitania" is to be considered as an ordinary unarmed merchant vessel. The Imperial Government begs in this connection to point out that the "Lusitania" was one of the largest and fastest English commerce steamers constructed with Government funds as auxiliary cruisers and is expressly included in the navy list, published by the British Admiralty.

It is moreover known to the Imperial Government from reliable information furnished by its officials and neutral passengers that for some time practically all the more valuable merchant vessels have been provided with guns, ammunition and other weapons and re-enforced with a crew specially practised in manning guns.

According to reports at hand here, the "Lusitania" when she left New York undoubtedly had guns on board which were mounted under decks and masked.

The Imperial Government furthermore has the honor to direct the particular attention of the American Government to the fact that the British Admiralty by a secret instruction of February of this year advised the British merchant marine not only to seek protection behind neutral flags and markings, but even when so disguised to attack German submarines by ramming them.

High rewards have been offered by the British Government as a special incentive for the destruction of the submarines by merchant vessels, and such rewards have already been paid out.

In view of these facts, which are satisfactorily known to it, the Imperial Government is unable to consider English merchant vessels any longer as "undefended territory" in the zone of maritime war designated by the Admiralty Staff of the Imperial German navy, the German commanders are consequently no longer in a position

to observe the rules of capture otherwise usual and with which they invariably complied before this.

Lastly, the Imperial Government must specially point out that on her last trip the "Lusitania," as on earlier occasions, had Canadian troops and munitions on board, including no less than 5400 cases of ammunition destined for the destruction of brave German soldiers, who are fulfilling with self-sacrifice and devotion their duty in the service of the Fatherland.

The German Government believes that it acts in just self-defense when it seeks to protect the lives of its soldiers by destroying ammunition destined for the enemy with the means of war at its command.

The English steamship company must have been aware of the dangers to which passengers on board the "Lusitania" were exposed under the circumstances. In taking them on board in spite of this the company quite deliberately tried to use the lives of American citizens as protection for the ammunition carried and violated the clear provisions of American laws which expressly prohibit and provide punishment for the carrying of passengers on ships which have explosives on board. The company thereby wantonly caused the death of so many passengers.

According to the express report of the submarine commander concerned, which is confirmed by all other reports, there can be no doubt that the rapid sinking of the "Lusitania" was primarily due to the explosion of the cargo of ammunition caused by the torpedo. Otherwise in all human probability, the passengers of the "Lusitania" would have been saved.

The Imperial Government holds the facts recited above to be of sufficient importance to recommend them to a careful examination by the American Government. The Imperial Government begs to reserve a final statement of its position with regard to the demands made in connection with the sinking of the "Lusitania" until a reply is received from the American Government and believes that it should recall here that it took note with satisfaction of the proposals of good offices submitted by the American Government in Berlin and London with a view to paving the way for a *modus vivendi* for the conduct of maritime war between Germany and Great Britain.

The Imperial Government furnished at that time ample evidence of its good will by its willingness to consider these proposals. The realization of these proposals failed, as is known, on account of their rejection by the Government of Great Britain.

The undersigned requests His Excellency, the Ambassador, to bring the above to the knowledge of the American Government, and avails himself of the opportunity to renew, etc.

(Signed) VON JAGOW  
Minister for Foreign Affairs

Paul Thompson

## THE LEADER OF THE ITALIAN ARMY

While the King is *ex-officio* commander-in-chief of the Italian Army, the actual control is in the hands of Count Luigi Cadorna, Lieutenant-General and Chief of Staff. He is now sixty-five years old, that is to say, three years younger than his most redoubtable opponent, Von Hindenburg. Like many of the men who have made the new Italy, he comes from Piedmont.

There are strong indications that the German communication will not be accepted as satisfactory by the people of the United States. The prevailing note in the press is displeasure at the way in which Germany has failed to meet the main issue and has attempted to confuse the question by arguments more ingenious than straightforward. The action of the German Government is looked upon as a deliberate trifling with a subject of the utmost seriousness. Germany appears, in the opinion of most American commentators, to be playing for time and hoping to avoid the necessity for a prompt and categorical meeting of the American demands by endless disputation. It looks as though Germany had mistaken the temper and

the determination of the people of the United States.

#### The War on the Sea

A second American steamship has been struck in the war zone. The "Nebraskan" of the American Hawaiian Line, when forty-eight miles west of Fastnet, Ireland, was hit by a mine or a torpedo. The explosion occurred at 8:24 on the evening of May 25. The American flag had been hauled down a few minutes before, but the steamer's name was painted on both side in letters six feet tall. The derrick was hurled thirty feet in the air and the hatchways blown off, injuring two quartermasters and the boatswain. Four boats were launched with all on board, but after a while it was seen that the vessel was in no danger of sinking, so after an hour the crew went on board and took her into Liverpool. No submarine was seen, so there is doubt whether the vessel was struck by a German torpedo or by a British floating mine. The "Nebraskan" was one of the first cargo vessels to pass thru the Panama Canal.

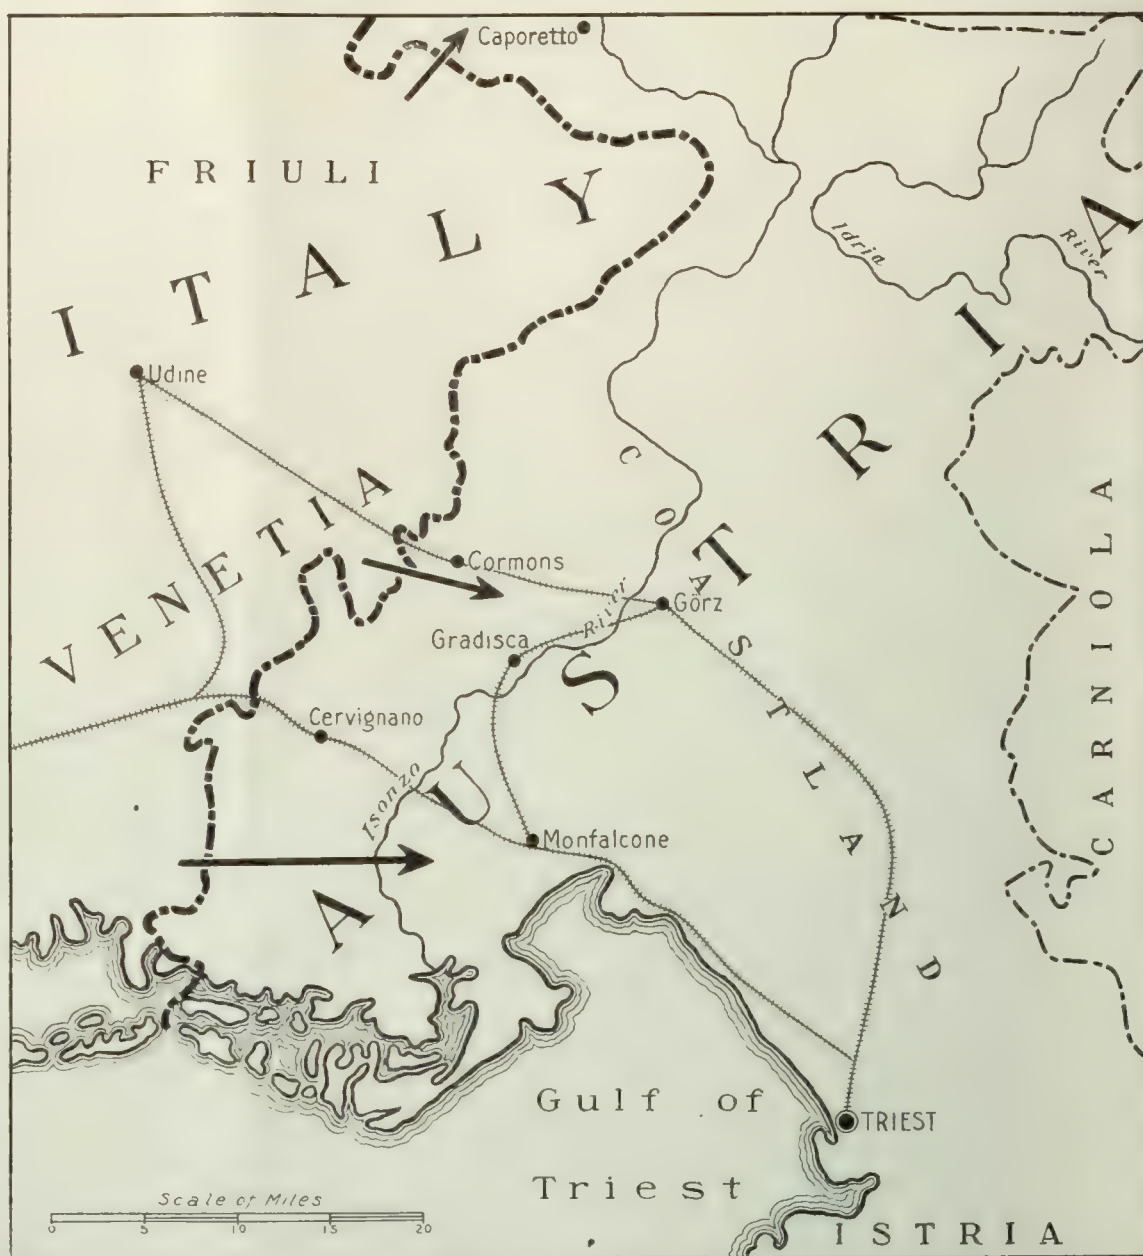

A second British naval vessel was blown up in the harbor of Sheerness at the mouth of the Thames on the morning of May 27. This was the "Princess Irene," of the Canadian Pacific Railway, which had been converted into an auxiliary steamship of the British navy. The explosion was so tremendous as to topple over chimneys and break windows for a long distance around. Large fragments of the vessel were thrown high into the air and scattered over an area of several miles. A little girl hit on the head by a piece of the wreckage was instantly killed. There were seventy-eight dockyard hands and a crew of 170 on board at the time and they all perished. The only man who escaped from the vessel was a stoker, who was picked up in the river badly burned.

The "Princess Irene" was moored on the same spot as the British battleship "Bulwark," which was blown up on November 26 with the loss of over 700 officers and men. The cause of neither disaster has been explained, but is officially asserted to be an accidental internal explosion.

#### The Invasion of Austria

The Italians began the war by crossing the Austrian frontier at a number of points between Switzerland and the Adriatic. So far they have met with no serious opposition and have succeeded in establishing themselves a few miles inside the border. The Italian Alpine troops, the Bersaglieri, whom all tourists know from their swift march and wide plumed hats, have distinguished themselves by scaling the heights on the western side of Austrian Tyrol. From these points of vantage, six or seven thousand feet high, they hope to be able to command the passes leading into the Trentino. With the aid of gunboats on Lake Garda the Italians have captured the hills to the north of Mount Baldo.

The chief efforts of the Italians, however, seem to be directed to that part

#### THE ITALIAN INVASION

The Italians demanded as the price of neutrality that the Isonzo River be made the boundary line, but that Görz be ceded to them. The Austrians were willing to concede the first demand, but refused the second. Now the Italians are trying to get by force what diplomacy failed to give them. They have advanced along the two railroads, in the direction shown by the arrows, half way to Görz and nearly to Monfalcone.

of the frontier which lies north from the head of the Adriatic. Here for a distance of some forty miles from Caporetto to the coast they are on Austrian territory. Their destination is obviously Trieste, toward which they are proceeding along the two railroads which here cross the boundary. On the line from Udine to Görz (Goritz) they have occupied Cormons, just over the frontier, and on the other line which goes along the coast they have advanced to the Isonzo River, which they demanded of Austria as the frontier, and they have occupied the hills commanding Monfalcone, some ten miles inside Austrian territory. On the coast they have taken the fishing town of Grado, which is situated near the boundary line. An air raid was made on the night of the 26th on the Austrian railroad leading to Trieste.

#### Closing Around Przemyśl

The Galician fortress of Przemyśl, which the Russians captured after one of the longest sieges in modern history, is now almost surrounded by the Austro-German forces. The railroad leading to Lemberg (Lvov) has been cut and a further advance in this direction may lead to the recovery of that city, which is the capital of Galicia and the only place of im-

portance taken by the Russians in the present war. Lemberg is not a fortress, but it would be necessary to defeat the Russian army in the field before it could be safely occupied.

The Russians as soon as they perceived that they could not keep the enemy away from Przemyśl, have been busily engaged in repairing the fortifications and putting it in a state to stand a second siege. Eight thousand men have been employed for the last two months in cementing together the remains of the concrete bastions and mending the gaps in the entanglements which the Austrians did not succeed altogether in destroying when they evacuated.

General Mackensen's forces are now in possession of both sides of the San River north of Przemyśl, tho on the left bank one division had to give way and lost six guns. On the 27th he reported that his captures from the Russians in his recent advance amounted to 27,000 men, ten heavy guns, fifty-four light guns and seventy-five machine guns. This advance movement of the Teutonic forces which carried them over four rivers in rapid succession was due chiefly to their superiority in artillery and likewise the retreat of the Russians may be laid to the failure of their ammunition supply.

At various points along the Russian front north of Galicia the Germans are showing renewed activity. In the hills about Kielce, in Russian Poland, they report the capture within a few days of thirty officers and 6300 men. The Germans have also resumed the bombardment of the fortress of Osowiec, northeast of Warsaw.

**The Russians in Azerbaijan** The Russians have defeated the Turks who invaded the Transcaucasian province during the winter and now are carrying the war into the enemy's country. An advance southward has enabled them to occupy the Armenian town of Van and the Persian town of Urumiah. The region about Lake Van and Lake Urumiah was recently devastated by hordes of Kurds and Turks and thousands of Christians were massacred. Immense numbers of the peasantry fled for refuge to Urumiah, where Dr. Harry P. Parkard of the Presbyterian Mission has been feeding and protecting them. Since January 2 the city has been completely cut off from the outside world and the efforts of the missionary societies and of our Government to send relief to the Americans there have been fruitless.

**French Gain Lorette Heights** South of the Belgian boundary the British and French keep pounding away on the German lines and making repeated tho slight advances. The chief gain is that of the French in the region north of Arras and southwest of Lens. Here the fighting has been going on continuously since last October with no considerable change in position. On the hills known to the French as Notre Dame de Lorette and to the Germans as Lorettoberg, fortifications had been constructed as strong as modern military engineering could make them. The earth parapets were reinforced with concrete and the trenches connected by a system of subterranean passages so as to form a veritable labyrinth. Double and triple lines of entanglements of barbed wire the thickness of a finger protected the trenches and concealed batteries were arranged to bear upon their own lines so that each trench captured would become a trap. Tunnels were run forward of the lines in such a way that a force advancing to the attack might be cut off by Germans rising out of the ground behind.

These positions were made the object of a persistent attack during the month of May. By means of heavy artillery fire the entanglements were swept away. The French soldiers advanced by leaping from one shell-hole to another and used the bayonet when they got within reach. After thirteen days of uninterrupted fighting the chief line of trenches, known as La Blanche Voie, or the White Way, was taken by assault from three sides and finally the French were in possession of all five spurs of the Lorette hills. On the plateau three thousand German corpses were counted and a thousand prisoners were taken.

## THE BRITISH COALITION CABINET

*Prime Minister and First Lord of the Treasury*—HERBERT H. ASQUITH, Liberal.

*Minister Without Portfolio*—Marquis of LANSDOWNE, Unionist (new member).

*Lord High Chancellor*—Sir STANLEY O. BUCKMASTER, Liberal (new member).

*Lord President of the Council*—Marquis of CREWE, Liberal (former Lord of the Privy Seal).

*Lord of the Privy Seal*—Earl CURZON of KEDLESTON, Unionist (new member).

*Chancellor of the Exchequer*—REGINALD MCKENNA, Liberal (former Home Secretary).

*Secretary of State for Home Affairs*—Sir JOHN A. SIMON, Liberal (former Attorney General).

*Secretary of State for Foreign Affairs*—Sir EDWARD GREY, Liberal.

*Secretary for the Colonies*—ANDREW BONAR LAW, Unionist (new member).

*Secretary for India*—J. AUSTEN CHAMBERLAIN, Unionist (new member).

*Secretary of State for War*—Earl KITCHENER (no party).

*Minister of Munitions*—DAVID LLOYD GEORGE, Liberal (former Chancellor of Exchequer).

*First Lord of the Admiralty*—ARTHUR J. BALFOUR, Unionist (new member).

*President of the Board of Trade*—WALTER RUNCIMAN, Liberal.

*President of the Local Government Board*—WALTER HUME LONG, Unionist (former President of Board of Trade).

*Chancellor of the Duchy of Lancaster*—WINSTON SPENCER CHURCHILL, Liberal (former First Lord of the Admiralty).

*Chief Secretary for Ireland*—AUGUSTINE BIRRELL, Liberal.

*Secretary for Scotland*—THOMAS MCKINNON WOOD, Liberal.

*President of the Board of Agriculture*—Earl of SELBORNE, Unionist (new member).

*First Commissioner of Works*—LEWIS HARCOURT, Liberal (former Secretary of State for the Colonies).

*President of the Board of Education*—ARTHUR HENDERSON, Labor (new member).

*Attorney General*—Sir EDWARD CARSON, Unionist (new member).

EDITORIAL COMMENT ON THE NEW CABINET WILL BE FOUND ON ANOTHER PAGE

**Bombardment by Gas** The new weapon introduced by the Germans seems to be successful in this close trench warfare altho it is not so irresistible as it appeared to be at first. The British in Flanders are getting used to it and are talking of employing similar means. Its composition is still in dispute and doubtless different gases are in use. One is quite certainly chlorine, as shown by its strong bleaching effect and irritation of the lungs, but apparently nitric fumes are also generated, for the reports speak of a reddish brown smoke which turns the hands and face yellow, the "xanthoprotetic reaction" familiar to all chemistry students.

The gases are emitted from steel cylinders placed along the foremost line of trenches with their nozzles projecting over the parapet. To reach the gunners in the rear shells are fired which

generate asphyxiating gases as they explode. If there is a steady and moderate wind in the right direction the fumes are carried forward over the ground like a low fog, so dense that a man in it cannot see his hand when held before his face. As it sweeps over the trenches the soldiers are stifled or stupefied, or at least have their eyes so irritated as to be in no condition to repel the charge that follows this gaseous bombardment. But the British troops have their eyes protected by motor goggles and their noses with respirators so they have been able to stay in the trenches while the cloud swept over them and when the Germans advanced expecting to find them incapacitated they were met by a steady storm from rifles and machine guns. Then, too, a sudden shifting of the wind has carried the fumes back over the German lines and compelled them to evacuate their own trenches. Another difficulty is experienced in timing the charge. If the Germans charge too soon they are involved in the gases they have generated. If they wait till the air is clear, the British being nearer and the first to know of it, are apt to have reoccupied their trenches.

The noxious vapors were used on the most extensive scale on May 24, for the generators were kept running for four and a half hours along the five-mile front east of Ypres. The cloud that covered the ground was forty feet high in places. With the aid of this the Germans took the first line of British trenches which brings them within two miles of Ypres. Their recovery of Hill 60, three miles southeast of Ypres, gives their guns command of the city and beyond. On the north of Ypres, however, they have been forced to relinquish the foothold they had gained on the western bank of the Yser Canal.

**British Lose Two More Battleships** The Turkish troops have again inflicted serious loss upon the Allied fleet attempting to force the Dardanelles. The victims are the British battleships "Triumph" and "Majestic." The former was sunk on May 25, while operating in support of the Australasian troops on the Gallipoli Peninsula. The "Majestic" was sunk early on the morning of May 27 off Sedd-el-Bahr at the tip of the Gallipoli Peninsula. In both cases most of the officers and crew were saved. No details are given out so it is not known how the attack was made. The most plausible surmise is that a Turkish submarine from Constantinople made its way thru the Dardanelles and around into the Aegean Sea and the Gulf of Saros. It is suggested, however, that the attack may have been made by a German or Austrian submarine from the Austrian naval base at Pola on the Adriatic. The French battleship "Leon Gambetta" was recently sunk at the mouth of the Adriatic by a submarine from Pola.

This makes six battleships which have been lost by the Allies at the Dardanelles since March 18. On that date the British battleships "Irresistible"

and "Ocean" and the French "Bouvet" were destroyed by floating mines, and on May 13 the British battleship "Goliath." Three submarines at least have also been lost here. The "Triumph" was a ship of 11,800 tons which was originally built in England for the Chilean Government but purchased before completion by the British Government for \$4,225,000. She carried four ten-inch guns. The "Triumph" took part in the bombardment of the German fortress at Tsing-tao in October in conjunction with the Japanese fleet. The "Majestic" was an older but larger vessel of 14,900 tons displacement and armed with four twelve-inch guns, built in 1898.

In spite of the mines and obstacles which have been placed in the narrows of the Dardanelles at least three British submarines have been able to enter the Sea of Marmora. The "E-14," which ran the Dardanelles about April 29, sunk two Turkish gunboats and two transports full of troops returning in safety on May 18. The submarine "E-11" got as far as Constantinople and discharged a torpedo at a transport alongside the arsenal pier. She also sank two ships in the Sea of Marmora carrying ammunition and supplies. The first attempt of this kind was made by the British submarine which on December 13 passed thru the straits and sunk the Turkish battleship "Messudiyeh."

#### The Situation in Mexico

It has been impossible to ascertain the results of the fighting between Villa and Obregon in the vicinity of Leon and Silao. Each side claims victory, but the decisive battle has not been fought. If the reports of Carranza's agents are to be believed, Villa

#### FROM DICTATOR TO COUNTRY GENTLEMAN

General Huerta mows the lawn on his new country place at Forest Hills, Long Island

has been driven back, and an army from the northeastern states is menacing his base at Torreon. But if Villa's representatives are telling the truth, he has been successful in several skirmishes. Unfortunately, there is evidence of falsehood or misrepresentation on both sides. While Carranza asserts that he is gaining territory and force, it is said that he fears attacks upon Vera Cruz

by bands of Zapatists, and is preparing to move his residence from the fortified lighthouse which has been his home to an island in the harbor. He has recently made overtures to President Wilson for recognition of his so-called Government. Duval West, the President's agent, has returned to Washington. It is said that his report about the condition of Mexico and the character of the factional leaders is a dismal and pessimistic one. At the end of last week the dispatches from Vera Cruz asserted that Carranza had decided to move against the capital, and that Zapata would not defend it.

The condition of the capital and of the greater part of the whole country is deplorable. Business and industry are paralyzed. In many places there are people on the verge of starvation, and they take part in bread riots. The Red Cross will appeal to the American public for help.

A commission of fifty-five persons, forty-four men and eleven women, sent by Carranza to study popular education in this country, has arrived in New York. An inquiry will be made concerning the schools and libraries, and it is said that the commissioners intend to remain in the United States for a year.

For some time General Huerta, formerly President of Mexico, has been very quiet. Having decided to make New York his home, he recently leased a large estate at Forest Hills, on Long Island, and brought to it from Spain his family of thirty persons—his wife, sisters, eight children and more than a dozen grandchildren. It is reported that he plans to lead a movement supported

#### THREE TORIES IN THE COALITION CABINET

The three leaders of the Opposition who have been called into the British Cabinet are men of ability and experience. Mr. Balfour first entered the Government in 1885 and was Prime Minister from 1902 to 1905. His successor as leader of the Opposition in the House of Commons for the past four years, Mr. Bonar Law, is an iron merchant from Glasgow. Ireland, the third part of the United Kingdom, is represented by Sir Edward Carson, who just before the war was threatening to raise an insurrection in Ulster if the Home Rule Act was carried out.

#### THE MOST EFFICIENT OF HUMAN MACHINES

Whichever way one's neutrality may lean he cannot help admiring the organization of the German Army. Here is scientific management carried out on a larger scale than ever before in the history of the world. To equip and maintain in the field for three-quarters of a year four million or more men on fifteen hundred miles of frontier without a breakdown anywhere involves a coordination of effort and attention to detail that is difficult to imagine. From the tip of his cloth-covered helmet to the soles of his hobnailed shoes the German soldier is thoroly prepared for what he has to do. In these photographs, fresh from France, we see the German reservists, the older men who have now been called to the front, as they kneel beside a stream in the rear awaiting the call of *Vorwärts*, and as they are lying in the firing line

by rich Mexican exiles and the old soldiers of his army, and that Eduard Iturbide is the candidate for the provisional presidency.

President Wilson, on the 28th, gave notice that a statement from him "on the present situation in Mexico" would be published within a few days. After his recent conference with Duval West he said that no change of policy was contemplated. It is thought at Washington that while he will not recommend intervention he will describe the intolerable condition of the country and warn the warring factions that if they do not speedily make peace they

must expect sharp protests and even interference from this side of the boundary. It is asserted that his statement and warning will have the approval of Argentina, Brazil and Chili.

#### Mr. Taft's Opinions

Ex-President Taft, guest of honor at the annual dinner of the National Manufacturers' Association, last week, made an address in which he sharply criticised the Federation of Labor and expressed an unfavorable opinion of the Clayton Trust act and the act creating the Federal Trade Commission. He gave hearty support to President Wilson for the lat-

ter's course in international affairs, and congratulated the association upon the message of loyalty it had sent to Mr. Wilson. The Clayton act, he said, referring to its provisions concerning "violations of the Anti-Trust law of labor organizations and agricultural associations," was passed for political purposes to satisfy the demands of the Federation leaders and with the hope of securing the votes of labor union men. In his opinion the Clayton act and Trade Commission acts added very little to the effectiveness of the Sherman law.

Inquisitorial methods for investigat-

ing business he condemned. Fear of such inquiry was a legitimate cause for alarm to business interests. The Trade Commission was merely a glorified Bureau of Corporations with larger salaries. The members appointed were not such men as could inspire public confidence in their judgment. Not one of them had national standing as a business man or as a lawyer. The power exercised by the leaders of the Federation of Labor was excessive and detrimental to the public welfare. They did not condemn the criminal acts of union men, and they sought immunity in general statutes against offences.

#### Pan-American Financial Conference

The address of welcome at the beginning of the session of the Pan-American Financial Conference in Washington, last week, was made by President Wilson, whose reference to measures for promoting communication between this country and South America by steamship lines have been the subject of much comment. "We are not trying," said Mr. Wilson, "to make use of each other, but to be of use to one another." He was surprised that such a conference had been so long delayed. If there was any one happy circumstance arising out of present distressing condition of the world, it was that "it has revealed us to one another and shown us what it means to be neighbors." He hoped that the conference would show the world in part the path to permanent peace. "There is only one way," said he, "in

#### A GOOD HAUL

A pair of German foragers have luck

which we wish to take advantage of you, and that is by making better goods, by doing the things that we seek to do for each other, if we can, better than you do them, and so spurring you on by so handsome a jealousy as that to excel us." There was one thing, he continued, that stood in the way:

The theory I have chiefly in mind is the physical lack of means of communication, the lack of vehicles, the lack of ships, the lack of established routes of trade, the lack of those things which are absolutely necessary if we are to have true commercial and intimate commercial relations with one another. And I am perfectly clear in my judgment that if private capital cannot soon enter upon the adventure of establishing these physical means of communication, the Government must undertake to do so. We cannot indefinitely stand apart and need each other for the lack of what can

easily be supplied, and, if one instrumentality cannot supply it, then another must be found which will supply it.

Secretary Bryan, in his address, spoke of the President's assertion at Mobile that this nation has no desire to take one foot of land from another nation. Secretary McAdoo said nothing could so stimulate trade and investment by the United States in South America as uniform laws relating to commerce and finance. A committee to consider uniform laws was afterward appointed. Postmaster General Burleson urged development of international parcel post. Mr. Vanderlip, president of the National City Bank, of New York, pointed out that the Federal Reserve system here and the great surplus of reserves due to it gave an unusual opportunity for the United States to engage in foreign loans. His bank has recently established a branch in Buenos Ayres. South America, he said, needed capital for their enterprises, and our loan could be greatly expanded.

At subsequent sessions many addresses were made. Mr. Warburg, of the Federal Reserve Board, advocated an American union of transportation and credit systems, so that these could be a unit in case of emergency. Much work was done by committees behind closed doors. One of the committees was appointed to consider the establishment of fast and frequent ship service, and it is understood that a prominent delegate from this country proposed the promotion of such service by the bond guarantees of the United States and the east coast countries of South America.

AND STILL THE DARK FLOOD SPREADS OVER EUROPE

# BEAUTY THAT WAS

BY JOHN MASEFIELD

Roses are beauty, but I never see  
Those blood drops from the burning heart of June  
Glowing like thought upon the living tree  
Without a pity that they die so soon,  
Die into petals, like those roses old,  
Those women, who were summer in men's hearts  
Before the smile upon the Sphinx was cold  
Or sand had hid the Syrian and his arts.  
O myriad dust of beauty that lies thick  
Under our feet that not a single grain  
But stirred and moved in beauty and was quick  
For one brief moon and died nor lived again  
But when the moon rose lay upon the grass  
Pasture to living beauty, life that was.

## THE POISON OF WAR

BY ARTHUR SWEETSER

I WONDER if people in this country comprehend the effect of modern warfare on human character. Returning from three months with the German, the French, and the Belgian armies, I am struck more and more each day with the fact that we over here have failed utterly to grasp the tremendous force of the shock to human nature occasioned by the modern battle, with its machine-like slaughter at great distances. The war is putting a stupendous strain on character.

I have seen men just fresh from the front who had a sadness, a pathos, a bewilderment in their expressions which all too well bespoke the whirlpool into which they had been drawn. I have seen hundreds of wounded hobbling away from the Marne and the Aisne or herded in foul-smelling freight cars and rudimentary hospitals, who had a blankness and a dulness in their eyes which betokened almost complete mental dismay. At the same time, I have seen on all sides reactions almost too unreasonable and too out of perspective to be believed. That delicate something within man, call it soul, spirit, psychology, what you will, has in thousands of cases been smashed so completely that future generations will suffer far more from its effects than from all the physical injuries and disabilities put together.

Many men, kindly and gentle in appearance, have actually boasted to me of the most gruesome of deeds—deeds which ordinarily would have shocked them even in the telling. I remember talking once with an English Tommy in the midst of a group

*Mr. Sweetser was the only American correspondent with Von Kluck's division on its dash to Paris. Cutting in on the German flank at Valenciennes on the Belgian border, he journeyed by bicycle thru Cateau, St. Quentin, and Compiègne to the burning city of Senlis, where he was held prisoner for two days. Regaining his liberty, he crossed the lines to the French, who at once arrested him as a spy and held him for two days without water and with only a few crusts of bread. Finally liberated, he rested in Paris for a week and then made his way, again by bicycle, thru the French guards to the Battle of the Aisne. Here again he was arrested on the edge of the firing line and marched under heavy guard for twenty-eight kilometers, handcuffed to a German prisoner, soaked by rain and mud, and almost without food. Again freed after three days, he journeyed from Paris to Antwerp, arriving for its siege and fall.—THE EDITOR.*

of excited French soldiers in a field near Compiègne. Shortly he took an empty cartridge shell from his pocket and looked at it fondly.

"I say," he said, "what do you think of that?" It's jolly nice, you know. It got my first German. We'd just got out from England that day and less than eight hours after were in the trenches. It was opposite a little village on the crest of a hill—I haven't any idea where. Pretty quick work, eight hours, wasn't it?"

"It certainly was," I replied. "How did it seem?"

"Beastly unpleasant," he went on. "I thought I'd funk out at first. It wasn't the shells that bothered me so

much—somehow we'd come out expecting them. It's the little things you don't expect that give you a turn. I suppose it's because you're a bit nervous anyway. Take the rain-water—it was up to our knees in the trenches and we couldn't get away from it. There wasn't a bally thing to smoke either—not a fag in the whole company. And you get fearfully fed up when there isn't a bloody thing to do but be a target—it gets on your nerves."

He seemed to be losing the thread of his story, so I asked him how long he stayed there.

"God knows," he replied. "Years, I fancy, and yet I don't suppose it was so long either. I felt so cramped and nervous it seemed like I'd blow up—and then some one started sniping. There was an officer in the nearest German trenches—I could just make him out—and I drew my gun on him. It's a funny feeling the first time you shoot at a man, and it was quite a time before I let go. I caught him cold—he crumpled up as if he hadn't a bone in his body." He paused a moment, juggling the empty shell in his fingers. His expression was proud and joyous.

"Well," he went on, "I slipped that cartridge out on the spot. It was my first German, and I thought what a bully souvenir it would make for the wife. First-class, isn't it? Don't you think she'll like it?"

Weakly I nodded assent. Yet I could not help wondering what a wife, and perhaps a mother, would say to it. Would she, too, glorify in this man-killing, or would she, as I did, shiver at this "first class souvenir?"

Shortly after I met another Tommy who had been in a bayonet charge a little while before. He was leaning listlessly against a wall, his eyes fixed in unseeing gaze on an open field beyond. A sadness enshrouded his still figure which made me hesitate to intrude. As I spoke in a soft, impersonal voice, he looked up indifferently and relapsed almost at once into absorption. Then unexpectedly, in droning, mechanical fashion, he told me how his company had become trapped in the trenches by a German cross-fire.

"We were going down like flies," he said. "It would have been the end of all of us to stay any longer in that trap with machine-guns squirting on us from both ends. About the only thing we could do was make a run straight at 'em—at least we'd die standing up. God knows anything was better than crouching there till we were all cleaned out. We couldn't even fight—it was just waiting."

By now the dulness had left his eyes and a ring came into his voice.

"It's funny," he went on, "how little things count. When the order came, I jumped over the earthwork and then went sprawling over a head of cabbage. It seemed as tho I'd never get to my feet again. Bullets were zipping all about me; the enemy's trenches looked like a long line of red; it seemed to me I was as big as a giant, with some one catching at my feet and all those guns going at me alone.

"I don't remember much more. There was one big final crash, and I leaped on the top of the trench and began to stab. Once I remember reaching out to get at some one and stepping on the face of a dead man at my feet. God knows how long it lasted—not long, I fancy—and then they broke and ran.

"It was an awful mess all about. Dead and wounded all mixt up—lots of Germans and many of us. Then those bloody machine-guns opened on us again. I tried to pull one of our fellows into shelter, but my right arm was out of commission. First I thought I was wounded. Then it came to me. I'd been swinging my bayonet so hard there wasn't any strength left."

His eyes clouded again.

"My God," he went on softly, "if I could only forget. It's all a nightmare now—still I can't help wondering—maybe the blows didn't get home—maybe—"

He turned his face away.

Just one more case. It happened outside Antwerp when the Belgians were fighting a hopeless fight to save their last stronghold from artillery they could not reach. I was having a

rough lunch in a dirty little inn on the edge of the fighting zone when a *sous-officier*, gray with mud and startlingly pallid, entered the room and dropt into a chair.

"Pardon, Monsieur," he said to me, "may I rest here a moment?"

"Certainly," I answered, and after a pause, "it's pretty rough outside today, isn't it?"

"*Mon Dieu*, it's terrible," he replied. "Those Germans, ah—"

He shuddered, and then looked resentfully at the small grimy window with its large, heavy curtains. Suddenly he burst out:

"That noise, always that noise—even in this quiet little room. They pound away night and day, night and day, till it seems as tho I'd go crazy. Can't I ever get away from it—can't I ever get where I won't hear those guns again?"

"You're just back?" I ventured.

"Yes," he replied, wistfully. "And I almost wish I weren't, almost wish I'd stayed out there with Jacques. Jacques was my best friend, Monsieur—he's dead now—yet I wonder if he isn't better off? At least he won't always have to remember."

His head fell into his hands. It seemed during a long silence as tho he were sobbing. Then he murmured:

"Ah, Monsieur, what a ghastly thing war is! How brutal! What things it makes us do! Two days ago I was happy—now I can think of nothing but Jacques—hear nothing but that roar.

"You see, it was night before last at midnight that they got us out to dig a trench. There was Jacques, who'd been my friend for years, myself, and about 120 others. We worked with terrific speed for we only had a few hours before dawn.

"Before we were half done it began to get gray. Suddenly there was an awful crash—then the hellish zip-zip-zip of a machine-gun. We all dropt where we stood in the half-dug trenches—Jacques and I were together—and in a second we saw the Germans had caught us from both ends. There wasn't anything we could do—to have tried to run would have been sure death—so we squashed down into the half-dug holes. I remember digging with my hands—burrowing like a mole to get myself under ground away from that ghastly fire. Any way I lay part of me was exposed and it seemed as tho any second might be the last. Hours and hours it seemed to me that those guns kept going.

"Suddenly there was a little gasp beside me. Jacques crumpled all in, limp and strengthless. I spoke—then I turned up his face. Ah, Monsieur, it was the look I've learned too well

recently—and yet to have it come to Jacques—*Mon Dieu*, it was too much!

"And the Germans kept right on with that hellish noise. It seemed as tho they might have let up a few minutes—it would have been a little thing to do—and it seemed as tho I'd go wild with fury that they didn't. I started burrowing again. I thought I'd never get away from it. Then my eye fell on poor Jacques. No, I couldn't do it—it was too much—and yet why not? It meant no harm to him now, poor lad, and I knew he'd want me to.

"Monsieur," he continued, almost in a whisper, "I pulled Jacques up, carefully, from the hole he'd been in, and doubled him up between me and the Germans. He'd done me many a good turn in life—yet how, I've asked myself ever since, could I have asked this of him in death?"

His voice broke, then—

"Heaven knows how long we lay there, Jacques and I—it seemed years. Several times there was a thud against the cold body beside me and each time I thought I'd go crazy. If only I could jump into the air, dance feverishly about, and then crash into that machine-gun with poor Jacques—

"Then at four o'clock in the afternoon came the order to retreat—twelve hours afterward. Somehow they'd got the Germans out and we had a few minutes' chance. I moved Jacques back and fixed him as well as I could. Then we ran—when we united in a little wood some way behind there were only twenty-two of the 120 left.

"Ah, *Mon Dieu*, to think of those twelve hours—and of what I did to Jacques. I wonder if it's true—certainly it isn't possible I could have profaned him in that way. Yet I know it is—I did it—I know I did it—can I never forget—"

It was enough to make one's heart bleed—that shaking, dust-covered head and shoulders and the grim silence broken only by quick breathing and the ever-present rumble of the guns. I could not but feel that here was another of those several million men who have experienced psychological and spiritual shocks in this war which would have made it far better if they too, could have fallen as Jacques fell, on the spot where they received their fatal wounds.

How much, I wonder, will Europe be retarded when all these men return home to live in mental anguish and to cause it, to continue on as mental derelicts and to pass on their sufferings to those about them and their children?

Such is the poison of war.

A COUPLE O' KIDS

# YEW BOW AND CLOTHYARD SHAFT

BY WILL H. THOMPSON

FOUR of us, all eager to test the efficacy of bows and arrows in a hunting expedition where rifles and shotguns were to be banished, started from Seattle in a gasoline launch, thoroly equipped and provisioned, for a five weeks' trip into the best game region of British Columbia. When our little floating lodge turned its prow to the north we could not repress a cheer. Above our heads eight mighty yew and lancewood bows swung by straps, and underneath our bunks nearly three hundred arrows rested in boxes. Our stove was a complete success and we took turns in cooking.

For two days we made full speed to the north along the mountainous shores of the mainland, and finally we came to anchor in Vanguard Bay. A trail one-fourth of a mile long leads from the bay to a wonderful lake in the interior of Nelson Island. Over this portage we carried two canoes, and along thirty miles of the shore line of this nameless lake we found the best shooting of our entire trip.

With the exception of the writer, none of the party had ever used the bow to hunt any larger game than jack-rabbits, and it was hard to convince them that a very powerful bow was unnecessary for deer, cougar, or bear shooting. Our hunting arrows, with few exceptions, were made of the dark, hard wood of shell-bark hickory, dry and very stiff, twenty-eight inches long, deep notched for the string, fledged with three white turkey feathers, which were three inches long by one inch wide, and finished with a head of steel two inches long by one inch wide at the base, tapering to a needle point and ground and whetted until each edge was as sharp as a knife-blade. The finished arrow weighed six hundred grains. The arrows used for shooting grouse and other small game were precisely similar, except that the heads were round masses of Babbitt metal, weighing about one-half ounce each, molded upon the ends of the shaft. Mr. Jackson, who had done much

*Older readers of The Independent will remember the delightful outdoor articles that we frequently published from the pen of the gifted Maurice Thompson, for many years one of our literary editors. Many of these articles dealt with archery—a pastime at which Mr. Thompson was an adept. The following article is from Mr. Thompson's brother, who was the champion archer of America in 1879, 1885, 1888, 1901 and 1908. The two brothers served side by side in the Confederate army during the Civil War and then practised law in Crawfordsville, Indiana, until 1889, when Will moved to the Pacific coast. The brothers wrote a book jointly entitled "How to Train in Archery." Both were poets, and altho Will did not publish as much as Maurice, his poem "High Tide at Gettysburg," written in 1888, is recognized as one of the Civil War poems that will live.—THE EDITOR.*

shooting at coots along the sloughs of the Missouri River, had fashioned some shafts of fir-wood, light and less finely finished, with steel heads filed to rough edges but not ground nor whetted.

Each of us when afield wore at his back a quiver made of heavy tarpaulin or soft leather, containing about fifteen arrows. Among those in Jackson's quiver could usually be found three "coot arrows" for use against the hundreds of crows and ravens that feed along the reaches of these North shores. Challiss, six feet four inches in his stockings, two hundred and fifteen pounds of clean bone and muscle, clung to his sixty-five pound bow and the shrill hiss of the big white feathers proclaimed the lightning speed of his shafts.

The first evening at Vanguard Bay we spent in preparation for all possible contingencies. Boots were softened with oil and their laces looked after. Arrows were selected with care and an extra string for each bow was pocketed. The leather "tips" for the first three fingers of the drawing

hand were examined, and the small luncheon that each should carry was decided upon. It was determined that we should hunt in couples, as should always be done in rough and strange woods, so that one suffering an accident might have a comrade within call.

Two and two we sallied forth the next morning, Challiss and Richardson taking a sweep around the northern shore of the lake, and Jackson and I plunged into the dark woods far to their left. Keeping well apart and yet occasionally marking each other as we crost comparatively open spots, we slowly and silently traversed many miles of this fine game region without seeing a living creature or hearing the sound of hurrying hoof or flutter of going wing. Jackson and I came together at the noon hour on the crest of a ridge, and here, finding a great stone to our liking, we spread our luncheon and while eating it compared notes. Both had found trails innumerable, fresh tracks in damp spots, beds in the dense bracken where deer had lately lain, and many other signs known to the wood-wise, that told of the recent presence of deer. Both were tired, for these woods are rough with stones and logs concealed by a cloak of bracken ferns and scarred with deep ravines filled with almost impenetrable brush. After an hour of rest we swung around to the left and followed back a course parallel to and half a mile from the one upon which we had come.

Challiss and Richardson came in late, talking excitedly of two deer that they had *almost* killed. Hunting together, they had just climbed upon a huge log when a big buck and a small doe arose from the ferns at their feet and ran straight away. Both shot, and Challiss' strong bow sent its missile hissing along the big fellow's back, just missing the neck. Challiss declared that that arrow was "going yet." They found a flock of blue grouse and got a shot or two, but did not make a kill. And so, had we depended upon our skill for our

TWO PERFECT ARROWS

The upper one is such as are used for rabbit and grouse; the lower one a big game arrow, which a good fifty-pound bow would drive thru a horse

food we should have gone to bed supperless.

The next day Challiss and Jackson paired, going to a small island after blue grouse, while Richardson and I once more searched the woods along the lake shore. Both parties returned in the evening with weary legs and empty hands. Only a few grouse were seen on the island and they were in thickets so dense that the bow could not be used. Richardson and I saw two deer, but only for a moment, as they waved their black tails for a parting salute while crossing a distant range.

Fresh meat was becoming a necessity, and Jackson and I planned for the morrow a trip around the lake in a canoe, one of us to sit astern and paddle the craft, the other to sit amidship with bow and arrow ready. Challiss and Richardson were to go fishing for red-snapper.

When morning came Jackson and I were away early. We walked over the portage to the lake, took one of the canoes and paddled along the left shore, in order that the archer might have his left side opposed to the shore and thus be able to shoot without turning around. Jackson took the paddles first and until the noon hour gave me full opportunity to scan the steep mountain side that lifted from the water's edge. But luck was not with me.

When it was time for luncheon we drew the canoe ashore and demol-

THE BOW IS BENT

ished our store of food with an appetite as keen as if we had earned it by success. Satisfied that the deer would not again come down to the water until late in the afternoon, we climbed along the mountain side for a mile, found a favorable ambushade

near a trail, and waited like two Indians for a wandering deer or bear. But neither came and five o'clock found us in the canoe, with Jackson holding the old fifty-pound yew bow and the writer at the paddle.

The hunting ground was ideal and the hour propitious. A weak wind blowing in shore rippled the water upon the rocks and drowned the slight sounds made by the paddle. Two hundred yards ahead of us I noted the mouth of a ravine opening at the water's edge, and a doe standing knee-deep in the water in the midst of the white branches of a fir tree. I whispered to Jackson: "A deer! see him? At the mouth of the ravine! At the edge of the water! Be ready!" The cool Bowman quietly nodded his head and as quietly reached behind his back, drew an arrow from his quiver, fixed the nock on the string, slowly lifted the bow and with half-drawn shaft waited upon my efforts to give him a shot. When the bow of the canoe was within seventy yards of the game. Jackson's left arm slowly raised, his right shoulder and elbow came back and there remained, one second, two seconds, three seconds, and then the limbs of the bent bow leaped! I heard the "tong" of the arrested string, the low, vicious whisper of the arrow feather, marked the white line of the flying arrow, and heard with a sigh the sharp "click" as the flat steel point split a hard fir branch that

DEEP INTO THE RIVEN BREAST OF THE CASCADE MOUNTAINS

crost the doe's body just below the right shoulder. The shot was a perfect one, but it had failed. The doe quietly dropt upon all fours, shrank low, and keeping the treetop between us and her, slipped into the ravine.

Within one hundred and fifty yards we passed between a small island and the lake shore along a waterway only fifty feet wide, and I was scanning the island when I heard Jackson's warning "shsh." I backed the boat as noiselessly as possible. He had his gaze fixed upon a patch of thick bushes surmounting a ledge fifty feet above the water and sixty-five yards up the mountain side.

His tense body and alert eyes told that he had marked game, but I could see nothing. Presently he signalled for me to move him forward. As I did so he raised his bow, as if to shoot, but quickly reversed his signal to "back the boat." This pantomime was repeated many times, until I finally said in a low voice: "I guess it has gone, Jackson." His right hand shook in violent disapproval of my action and again came the signal "Forward." I had not taken more than one slow stroke when I saw Jackson's

face light up. His lifted shoulders became tense. The extended left arm, holding the bow full-drawn, was as steady as a bar of steel, and his eyes blazed with triumph. The drawing fingers were directly below the right eye and placed firmly against the jaw-bone. Again came the seemingly interminable pause. My own arms and shoulders ached from the protracted strain. Just then the loosed string rang and the eager arrow went to its goal. I heard the missile strike. Then came a crashing of brush, the strong bounding of a deer, and then the low "smash" followed by silence.

We sat for a minute listening and then pushed the prow of the canoe on shore, and Jackson leaped out. Climbing the wooded slope for a few yards, he stopped, and then his exultant cry rang out, "Dead as a mackerel!" The deer had plunged off a ten-foot precipice of rock.

We drew the deer out of the hole in the rocks and looked for the arrow. But none appeared. In bounding thru the brush the deer had broken the arrow square off at the surface of the skin, and this fact amazed us, for the tough hickory should not snap despite any amount

of thrashing in the brush. Jackson went back upon the rocky trail, found the feathered portion of the arrow, about twenty inches long, and brought it to me. The wood was fir! In drawing his arrow from the quiver he had drawn a "coot" arrow. It was this inferior shaft, with the steel head far less keenly pointed than the "deer arrows," that the fifty-pound yew had driven thru the body and both shoulders of the deer.

So our adventures grew as we followed the wonderful inlet deep into the riven breast of the Cascade Mountains. We fished at the foaming mouths of mountain streams that came roaring down from snowy domes uplifted in the distance. We anchored close to granite walls thousands of feet high and watched the white goats on narrow shelves half a mile above us. We followed the trails wild feet had made, and harried the game with as much zest as did the savage men who were born to the wilderness and schooled in its ways. Whoever has not killed his game with the bow has missed the keenest thrill of the hunter's heart.

*Seattle, Washington*

## PEACE ON THE KIJIKON

BY IVAN SWIFT

We ain't been pipin' po'try much  
Sinct me an' fall was in the green,  
'Cause double-trouble wabble-clutch  
Ties up a skidder's lingosine.

It's grumble days and tumble nights  
An' double-shift an' fever-cramp,  
An' nothin' goin' right to rights  
Around a winter cedar-camp.

But now the crow is rowin' back,  
The fern is trimmin' up the streams;  
An' caulkin' work is gettin' slack—  
I'll take a drink o' dreams!

They's red-bush where the timber growed  
An' nary boss to chalk the time;  
An' what's the crime agin a toad  
In shakin' down a jag o' rhyme?

The river's bottle's full o' rye,  
An' beetles bumps along the bank;  
An', *say*, a bull finch in the sky,  
A-singin' sunlight, hips a tank!

In growin' troubles, dry or wet,  
A keg o' forty-acre song  
Can make a human jack forget—  
An' soberin' of it ain't so long.

We ain't a-braggin' what we does  
Is sinkin' ships with bump-the bumps;  
Nor just apologizin' 'cause  
We're carvin' kingdoms on the stumps.

It's Spring—an' what we done is done,  
To stack a shack or brace a rail.  
Most any gent can wad a gun—  
It's us as packs the dinner-pail.

But rackin' ribs is slumpin' now  
An' timber-thieves has solemn signed  
To split the swag an' *end* the row.  
It's *Spring*, I says, God help the blind!

We're s'posin' skeeters, mebbe fleas,  
Comes after this—but what's the use  
Of apin' monkeys over-seas,  
A-chasin' hawk an' losin' goose?

We hear they're choppin' yet in France,  
An' drivin' wedges in an' out,  
An' ain't averse to turkey pants  
Or plantin' lead instead o' kraut.

We puts a hand to pluggin' chinks  
Or punchin' blizzards 'twixt the eyes;  
But stickin' cant-hooks into ginks  
As good as us, is under size.

It's Spring along the Kijikon,  
The pijun's roostin' on the camp;  
They's johnny-jump-ups in the sun—  
An' Buster John's a *tramp*!

# THE WORLD OVER

## The United States Over

"See America First" has always been good advice, but like most good advice it has been proffered more often than taken. This summer, however, owing to certain difficulties in the way of seeing Europe, we shall have to take this advice unless we propose to do no wandering at all from our own firesides.

Of course, seeing America first this year means seeing both of California's great expositions, for it would be as mortal an offense to the Californians to visit San Francisco and omit San Diego or vice versa, as to express a doubt that California's climate is the best in the world or that California's oranges are no better than Florida's.

We therefore make this suggestion to our readers. Why not go to California by automobile, and return by rail or by the Panama Canal? The automobile ride will of course consume most of the time. But traveling leisurely, say about one hundred miles a day with a full day's rest on Sunday, the automobile part of the trip can be made in six weeks. Certainly there is no pleasanter way imaginable of seeing the United States and his wife than from the upholstered cushions of a noiselessly gliding touring car. And if one is courteous and friendly one can learn much of one's fellow citizens at ranch houses, inns and at country four corners.

Probably the Lincoln Highway route with such deviations as take in special points of interest is the best for summer travel. The southern route, traversing as it does, Texas and Arizona, is likely to be warmish, to mention no stronger word. The Lincoln Highway goes thru fifteen states and if one starts from Boston one would naturally go via New York, Philadelphia, Gettysburg, Pittsburg, Chicago, Des Moines, Omaha, Cheyenne, Denver, Salt Lake City, Reno, Lake Tahoe, Yosemite, and San Francisco to San Diego.

If one does not want to use one's own

car on so long a journey there are responsible tourist agencies, whose European business has been cut off this summer, who are making up automobile trips of this kind in which a whole flock, or herd or school, or whatever is the name, of automobiles are "conducted" to the coast. And one can book a seating with them that includes all expenses and first-class hotel accommodations for about eight hundred dollars.

The return trip can be made on any of the ten transcontinental lines for about one hundred and fifteen dollars, taking in such scenic marvels as the Canadian Rockies, the Yellowstone National Park, the Grand Canyon of the Colorado, etc. The return by way of the Panama Canal costs one hundred and twenty-five dollars up.

In other words, one can make this two months' trip across the United States and back, traveling strictly first class, stopping over a week at the exposition and an extra day here and there, all for about a thousand dollars. If there is a pleasanter and more profitable way of spending one thousand dollars we have yet to hear of it.

## Every "Bike" a Motorcycle

An interesting invention is the motor wheel, which can be attached in a few minutes to any bicycle and which does away with all necessity for tiresome leg work on the part of the rider. It consists of an exceedingly compact power plant which is mounted on a small wheel fitted with a heavy motorcycle tire. This wheel is attached to the bicycle frame beside the rear wheel and furnishes enough power to carry the rider 100 miles on a single gallon of gasoline.

The motor is a one-cylinder four-cycle with high tension magneto and carburetor. The driving gear and gasoline tank are also carried on the motor wheel. The motor is controlled by a

A GOOD CATCH OF SOUP STOCK

lever attached to the handle bars and both bicycle and motor are under perfect control of the rider.

It is predicted that this simple little device will help to restore bicycling to its former position as the most popular of all outdoor sports. Certainly, the motor wheel provides a simple and inexpensive means of locomotion and will be especially interesting to those who like to get out into the open.

## A Novel Industry

Catching snapping turtles for the market is the odd but profitable enterprise engaged in by J. S. and Max Bassler, of Darien, Wisconsin, who claim to be pioneers in the business. For a year or two now they have been engaged in hunting turtles and readily dispose of all they can catch at from six to twelve cents a pound. The turtles are used to make the turtle soup which is commonly supposed to be derived only from a turtle of more aristocratic rank.

The season for catching the turtles begins about September 15 and lasts ten or twelve weeks, an average catch for this period being four or five tons. The best field for the work, according to the Basslers, is in southern Wisconsin and Minnesota, and northern Iowa and Illinois. Along the small streams in these sections the snappers are abundant, altho it takes an expert to locate them in the deep mud beds where they go to spend the winter. The Basslers use a slender steel rod about six feet long, with a hook at the end. Wading along in the streams, they "probe" every likely looking place for turtle signs. When a turtle is struck the end of the steel rod is hooked into its shell and the creature then pulled

MAKE YOUR OWN MOTORCYCLE

out. As fast they are caught by one man, another washes and packs them into bags. A good hole will frequently yield 200 pounds of turtles. When they are shipped to market the turtles are packed one above another in barrels, which have small holes for ventilation.

### A Month's Traffic Thru the Canal

It is interesting to watch the monthly reports of the commerce going thru the Panama Canal. A recent issue of *The Canal Record* analyzes the traffic for February, from which it appears that 274,730 tons went from west to east and 145,551 tons from east to west. There are sixty-five different kinds of goods specified, but the most important are those represented graphically in the accompanying diagram. In almost every case the shipments are either from or to American ports, so, contrary to the previous expectations of many, the United States is getting the chief benefit from the Canal. This is largely due of course to the war, which has curtailed the British shipping and cut off the German altogether.

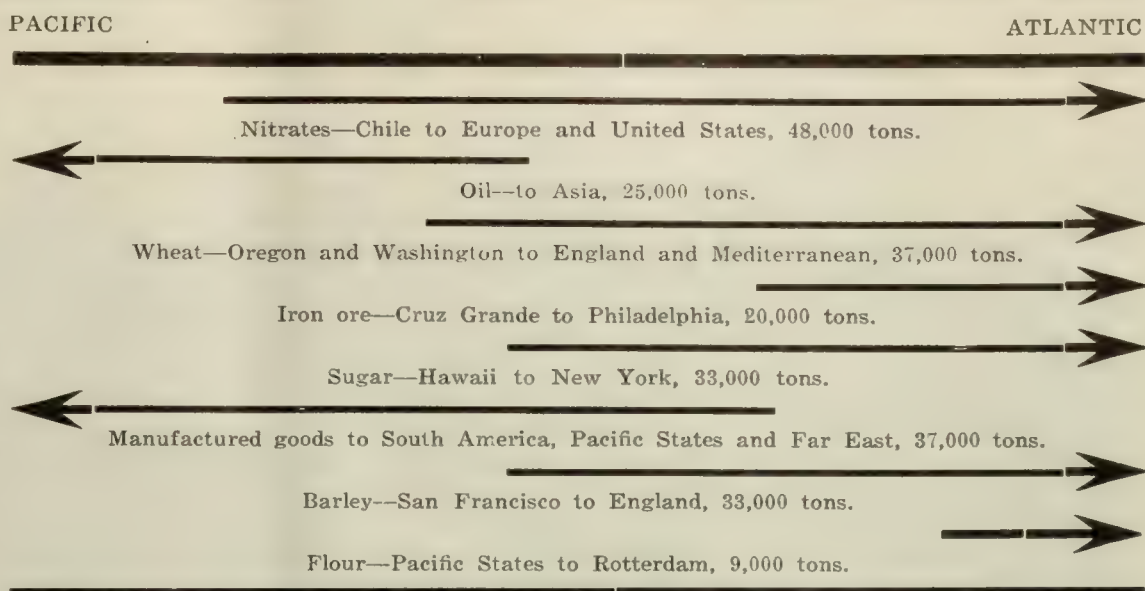

As will be seen by the diagram the chief shipments of eastern states are petroleum products and manufactured goods, mostly machinery, railroad material and other products of iron and steel.

In the reverse direction we find the current of commerce carries largely foodstuffs; barley from San Francisco, wheat from Portland and Seattle, and flour from our Pacific ports. The Dutch have, it appears, developed enormous appetites since the war began. We might almost class the Chilean nitrates as crude foodstuffs since they are necessary as a food for crops, but nowadays the "villainous saltpeter" is largely going into gunpowder.

### By the Light of the Moon

To the seeker after fresh impressions night photography in its varied phases offers a broad field for interesting work. Many unusual pictures of great artistic value may thus be obtained, entirely different subjects from those of daylight photography. One of the least practised phases of night photography is the making of moonlight studies.

All that is necessary for this work is a camera of sufficiently simple construction to permit of easy manipulation in dim light; a fairly rapid lens, preferably of rather long focus for the size plate in use; and a stand firm enough to support the apparatus without vibration when there is a breeze. Fast plates should be used, but not necessarily of the backed or nonhalation kind, since there is

A MONTH OF TRAFFIC THRU THE PANAMA CANAL

The head of the arrow shows the direction in which the goods were carried; the arrow's length the proportionate tonnage

very little chance for halation to occur. I generally employ a good brand of rapid color-sensitive plates, the same as for daylight work.

It is a good idea to obtain the gen-

THE VILLAGE STREET

Taken half an hour after sunset in January.  
Exposure, five minutes

THE SILVER GLEAM

Made on a June night by an exposure lasting from a quarter to ten o'clock to five minutes past

eral compass bearings of the moon, and then look for suitable subjects by daylight, to save time later. The principal thing to remember in such a case is the necessity of obtaining a simple composition presenting a pleasing pattern against the sky, since the details in the masses, which are of considerable importance by day, are largely, if not totally, submerged in the broad flat shadows characteristic of a night view. The best time for work each month is usually one or two nights before the moon is full, as it then rises early enough to allow one to make several exposures during the evening. In summer exposures range from 10 to 30 minutes, with stop F. 8, and extra rapid plates, for full night effects. Winter scenes can be secured with about half as long exposures if there is snow or ice present to reflect the light. By taking advantage of the diffused daylight which remains for some time after sunset the time of exposure can be considerably reduced, and in cases where there is no water to furnish bright reflections from the moon the results obtained are usually as good, and sometimes better, than those which are made later in the evening.

On account of the long exposures which have to be given, it is not practicable to include the moon when taking the landscape, but it can be secured on the same plate immediately afterward by removing the dark-slide and tilting the camera until the image appears in the desired location, and then exposing again for five or ten seconds. Such was the method followed in making the accompanying illustrations. To facilitate matters in locating the moon in the required spot a bit of gummed paper with a small hole in the center may be slightly fastened to the focusing-screen just before the camera is moved. This will exactly mark the position of the moon in relation to the rest of the picture, and the effect is good.

# THE STADIUM AND THE GREEK PLAY

BY MONTROSE J. MOSES

*Underwood & Underwood*

"IPHIGENIA" IN THE YALE BOWL

**A**N acknowledged feature of many of our colleges and universities is the Stadium, and no greater crowd can be gotten together than when the Yale Bowl or the Harvard Stadium are full to overflowing. I know of no function that could ever hope to occupy the gaping rows of seats unless it be the yearly football contest between Yale and Harvard, or some "world series" contest of organized baseball. In their palmiest days, the Greeks never dreamed of concentrating at one time an audience of forty thousand on a drama, and the consequence was that their playhouse on the hillside was a well-proportioned amphitheater, designed for a distinct purpose. One might well ask what the drama has to do with a discussion of stadia, were it not for the fact that Mr. Granville Barker has been and is still making the rounds of some of our leading universities, and using the athletic fields for the presentation of plays by Euripides. When his experiment has ended, he will have had an opportunity of comparing various forms of stadia in their relation to Greek drama. Whatever that opinion may be, we, who have been to Harvard and to Yale—imbued with a desire to have him succeed in his most commendable effort—come away sorely disappointed with the pros-

pects for Greek drama in such an immense receptacle as the Bowl or the Stadium. For it must be remembered that Euripides is caviare to the masses, and when the very large audience was assembled on that sunlit afternoon a few weeks ago to witness "Iphigenia in Tauris"—a healthy sized audience for theatergoers—it was a mere drop of humanity in the bucket of space. So, too, a few segments of seats in the Harvard Stadium were packed with the cultured few, and all the rest was emptiness.

Now, Mr. Barker never thought of utilizing the entire Bowl at Yale; he cut it directly in half by means of his portable scenery, with its towering gold doors; yet still the circling tiers of vacant benches seemed to hug the stage, and to mock its majesty. He never for one instant supposed that "The Trojan Women" would so attract crowds in Boston and Cambridge that the Harvard Stadium would be filled to capacity. So he used but an arc of that impressive structure; and even then the voices of the actors reverberated to right and left of them. Truly these Stadia cry out, "Why try to make a saucer of a bowl?" In California there is a Greek theater built on classic lines; the stage is permanently wrought in marble and stone. But

in the East we have to trump up our ancient playhouse, and we go to the least likely edifice for assistance. Rather better would it be for Mr. Barker to build for each occasion a temporary amphitheater, such as I understand they are to have in Philadelphia, when the University of Pennsylvania stands sponsor for "Iphigenia" and "The Trojan Women." Rather do as Ben Greet or the Coburn Players do with their outdoor Shakespeare, than foreshorten a really noble structure, such as a stadium is, with an idea of making of it such a perfect whole as the Greek theater was.

Yet, notwithstanding the drawbacks of a physical nature which were Mr. Barker's inevitable handicaps, the wonder is that he was able so well to overcome them, and to project into the vast throngs engulfed by those vaster auditoriums, a sense of the grandeur of Greek drama. For the proverbial theatergoer it is a relief to bask in the sunlight of a perfect day, to let the eye rest peacefully along colonnades, to drink in the sweetness of the greensward, and to know that on such a day there is to be given him some of the noblest specimens of dramatic art. It is good to get away from the artificialities of the footlights, of the stagey voice, and to hear words spoken under the

# More than 10,000 Eight-Cylinder Cadillacs are now in the hands of users and dealers have placed orders for 10,000 more

**M**ORE than ten thousand Cadillac "Eights" are now in the hands of users.

Dealers can see a demand ahead so great that they have placed orders for ten thousand more.

Figures so large—involving a sum of money so vast—point irresistibly to one conclusion.

The conclusion is that the usual large Cadillac clientele has been enormously augmented by this Cadillac "Eight."

The demand is not merely the normal Cadillac growth, but it is the opening up of new spheres of influence, and an inrush of new Cadillac admirers and enthusiasts.

It has assumed the proportions of a national movement, at least among those who own, or wish to own high grade cars.

This excess over normal comes from many sources but it is chiefly made up:

First, of the great number who are glad to pay more for the Cadillac because of the Cadillac "Eight" advantages, and Second, a very great number who are glad to pay less for the same excellent and satisfying reason.

It is frequently said that no company, other than the Cadillac, could have won such immediate and universal acceptance for any principle representing so wide a departure from conventional practice.

And it would seem that there is verification of this in the attitude of the two classes of buyers just mentioned.

Those who are willing to pay more, and those who are glad to pay less, accept the Cadillac "Eight" with equal eagerness—because of the performance of the car itself and because of the reputation of its maker for producing only that which it knows to be right.

They are no more insistent on a "demonstration" than old Cadillac owners—though it is only fair to say that a drive of but short duration immensely increases their enthusiasm.

This latter experience arouses even the most phlegmatic and non-committal.

The reports which they carry home, and to their clubs and to their places of business, largely explain why Cadillac dealers have ordered ten thousand more of these cars.

Has the full wonder of this demand been borne in upon you?

Have you thought of it in the light of the fact that the Cadillac is not a "low-priced" car,—as the term is commonly used?

The huge volume attained by cars of low price is a wonderful thing in itself—a sort of economic phenomenon.

But is it not much more wonderful that a high grade car should command such a market as this Eight-Cylinder Cadillac has won?

There is no other situation at all like it in the automobile industry.

It is not merely a figure of speech to say that the Cadillac "Eight" stands alone.

It does stand alone—absolutely and unapproachably alone—in point of performance.

It likewise stands alone in point of demand and of sales among high grade cars.

And, of course, it would not be so, if it ought not be so.

As you ascend in the scale of prices, the number of those able to purchase grow fewer.

If the Cadillac "Eight" had not preserved every Cadillac tradition and added new and potent powers of attraction—this great market would simply not be here.

There would not be and could not be the marked disparity in volume between the Cadillac "Eight" and those immediately above and below it in price.

It is a sort of a re-adjustment of the national view-point—a re-alignment of buyers—some leaving one field, and some leaving another, and most of them concentrating on the Cadillac.

Thus far we have found no one who has ridden in the Cadillac "Eight" who does not say that this is precisely as it should be.

With the Eight-Cylinder Cadillac performing in ways distinctly its own, performing in ways which have heretofore been believed impossible in any car, there is nothing strange in the fact that the dealers recognize that the visible demand is not yet half satisfied.

# STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

*We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.*

101 Fulton Street, New York

open sky, with a beautiful quality to the tones that proclaims the absence of roof. It was thus I felt on that afternoon at New Haven. There was no mystery of a curtain—white walls standing high, with three gold doors, an altar like a miniature skyscraper with its innumerable windows, a huge circular canvas, painted to represent marble, and serving as the orchestra. That was all. And as the sun proclaimed the hour of the afternoon when it was customary for the Greeks to take their drama—nearing five of the clock—a flare of trumpets bid the audience quiet down.

The golden doors swung open, revealing Miss Lillah McCarthy (Mrs. Barker) as Iphigenia, dwarfed against the gigantic height of a dull red background. As for myself—one of twelve thousand spectators—there swept over me an overpowering sense of the dignity of Greek drama.

I believe that had the play retained the dignity of its first impression in its outward garb, the audience would have remained held in silence to the end. There were moments in the exquisite Euripidean lines, made euphonious and poetic in translation by Professor Murray, which held the soul in thrall, and brought back the ancient religious significance of the theater; likewise, in the details of acting and in the imaginative handling of scenes—the work of Mr. Barker—there was evident a splendid creative force. But as actor followed actor, as group came upon group, the audience lost its gravity; they became expectant of new marvels rather than reverent. The investiture of the piece was Mr. Norman Wilkinson's contribution to the performance. It will be remembered that he was also responsible for the oddity of scene in the Barker production of "A Midsummer Night's Dream." In Greek days, authorities tell us that the costumes were often of brilliant design and color. But Mr. Wilkinson's imagination ran riot in his effort to impress upon us that Iphigenia was in a Taurian country.

The text came to me as a fresh creation, and for this Mr. Barker deserves our warmest praise. We cannot say that Mrs. Barker infused into Iphigenia the warmth or mystery that is in the part; there was a tendency to be dead level. She was decorative, but Euripides requires something more than pose. This detracted from the beautiful recognition scene—the brunt of which was carried by Mr. Ian Maclaren, who made of Orestes a loyal figure, torn between joy at finding his sister, and determination to escape the fate of all strangers on Taurian shores.

Makes Any Boat A Motor Boat

Now, at Harvard, we were given practically the same set, with similar details of music and chorus chanting. But the play was of more heroic mold. "The Trojan Women" is one of the greatest Peace plays; it exploits the futility of conquest, and brought down upon the head of Euripides the wrath of his own people.

There is no more poignant story than that of the tragedy of Andromache—which wrings the heart, and which at Harvard was beautifully depicted by Miss Edith Wynne Matthison. There is nothing more delicately lyrical than Cassandra, as played by Miss Chrystal Herne; nothing more coldly beautiful than Helen, as assumed by Miss Gladys Hansen. Mrs. Barker, as Hecuba, was still lacking in human sympathy—rapid in speech and wanting in color of tone. There is a mechanism about her technique which is hard.

But the surprise was the production of Norman Wilkinson, who was here as much in beautiful taste as he was lacking in "Iphigenia." It may be that tragedy does not afford much scope for brilliancy; or it may be that in the first play he was led astray by the barbaric opportunity. But here the blacks and white, the olive greens and the grays, the splendid regal and warlike tone of Menelaus, all added to the dignity of the piece, and did not shock the conventional idea of classic costume.

As the play ended with the last shafts of the golden sunset, one felt a civic sense of responsibility. Coming at this time, "The Trojan Women" should create a profound impression. Wise indeed were Mayor Mitchell and his committee for selecting this piece as the opening spectacle in the new Stadium of the College of the City of New York. It is a play filled with lines that might have been written yesterday. The thousands who saw it at Harvard went away with grief in their hearts, and a stinging sense of the futility of arms.

Altogether these are worthy occasions Mr. Barker is giving the universities in the East. He is helping to breathe new life into the popular conception of Greek drama. Thanks to Professor Murray and to him, we are being made to feel the undying humanity and simpleness of a "high-brow" literature. Moved as we were on both afternoons—feeling that there was a contemporaneity about it all—we suddenly began to realize that it was the same old Euripides, the same sunshine of an ideal afternoon fading into quiet evening, which used to appeal to an older civilization in the ancient long ago.

## WHY I AM AN OLD MAID

**M**UCH as I dislike the term, and much as I resent the unwarranted insinuations and derogatory suggestiveness of the appellation, I shall nevertheless apply the title of "Old Maid" to myself in these lines that I may make quite evident the fact that I am forty-five years old, and I am unmarried and that I realize the fact that, whether I am willing to concede it or not, the term is often applied to me by others.

There is probably no unmarried woman of twenty-eight in the United States who has not had this title of opprobrium applied to her, and there is probably not one of them who in her inmost soul has not resented it.

And why? The man who has outgrown the callow stage when he may be called a youth expects to be called a bachelor, and if he happens not to marry, the addition of the "old" does not disturb him in the slightest.

A woman, on the other hand, never minds being called a "maid." But when the prefix "old" is added, the word maid itself seems to change subtly, and the woman to whom the term is applied cringes, in secret, if not outwardly.

One might give many reasons for this; one might mention the spinsters of a former generation, helpless pensioners on the charity of others, and descant on the lack of business opportunity afforded the unmarried woman of the past, but after all, all these threads would probably lead to one fundamental reason, "Man proposes—and woman disposes." Let me prove this, and that the stigma of the name is often utterly unmerited.

I was the oldest of a family of four children. My father was a physician in the Middle West, a scholarly man, not much given to conversation, and his natural ability and skill in his profession were greatly helped by his dignified appearance. From him I inherited the rather serious disposition and natural dignity which have always been mine, and these qualities were strengthened, I think, as the same characteristics probably were in my father, by my tender-hearted, devoted, but oversentimental and neurasthenic mother.

I think I was not an unattractive child. Both my father and mother were good-looking, and I was a healthy, normal little girl, with smooth, luxuriant brown hair, large, lustrous brown eyes and splendid teeth. There was never anything fetching or coy about me, as there was about my mother and my little sister, but I was a fairly good-looking, healthy, well-bred child. My staid, old-fashioned manners were always noticed and remarked upon, and I came to take a certain pride in them, tho in a quiet way I thoroly enjoyed childish pleasures.

It was in my junior year at the high school that I first became aware of the attractions of the opposite sex. Until then I had regarded boys rather as

necessary nuisances than as possible companions and friends—interesting in a way, but not likely to be congenial.

Hence, I was surprised when Ralph Borden, a boy whose family had recently moved to our town, began walking home with me from school and coming over in the evening to study. He was a slender, wiry little fellow, two years older than I, and as full of life and fun as I was serious. Ralph was the youngest of the family, with a happy-go-lucky disposition and far from studious. So in our senior year I practically tutored him, and I feel sure that he would not have graduated had it not been for my help. In return, he showered upon me candy, flowers and other more costly gifts which my native sense of reserve made me unwilling to accept, but which my mother urged me to take.

When I was graduated from high school, the family was divided as to my next step. Altho she partially concealed it, my mother would have been willing for me to remain at home, and in the end I probably would have married Ralph and settled down to a more or less happy, but a probably very commonplace existence, spiritually, with him.

I, however, was determined to go to college, and my father, who had a more real appreciation of my character and inclinations, encouraged me in my determination. At last my mother yielded, and I went to Wellesley. I studied hard, loved my work and the college life, wherein I found what seemed to me an ideal atmosphere—and gradually grew away from Ralph.

He took a position of "light work and large pay" in his father's factory, and before I graduated from college, married a girl from the South, a little butterfly lady.

When I had graduated, and came home again, I tried to enter the social life of the town, but I found that difficult to do. Tho I was just past twenty when I graduated, most of my girl friends were married, or at least engaged. I had grown away from them during my four years' absence. My brave but disappointed mother did her best—but I was not meant for a society girl, and try as I might, I could not do the things she wanted. She used to say to me, "Don't be so formal and stiff!" "Liven up a little!" "Can't you flirt a little, Margie?"

The worst thing about it was, that for her sake, and that I might find the kind of friends I craved, I wanted to be a social success, but in the society that our town afforded I simply didn't fit. I had callers, but the girls I thought silly, and the men simply did not interest me at all.

Hence it was with a sense of delight that, the second winter that I was out of school, I received an offer to teach. My mother was horrified at the idea. The neighbors and mother's friends gossiped not a little over "Margie Milton's queerness" and "evident inability to catch a husband," but I didn't mind—at least, not a great deal, for I was still young—only twenty-two—and

Steel Rowboats, \$20. MICHIGAN STEEL BOAT CO., 1277 Jefferson Ave., Detroit, Mich., U. S. A.

I myself did not regard my case as "hopeless."

Have I given the impression that I did not care for men? I did not, as some girls do, but I had the deep-seated hope that some day the right man might come to me, that lodges in the heart of every woman worthy of the name.

It was when I was preparing to go away to teach that I first realized that I was beginning to be called "an old maid." And at the advanced age of twenty-two! At first, however, it did not hurt—it was only a little prick—a reminder of what might be ahead—and my interest in my work was so great that I soon forgot it.

The happiest four years of my life were spent at M—— College. I was engrossed in my work, my friends and my ambitions. I advanced steadily, and, having entered the literary field, first as a critic and then as an original investigator, I was promoted rapidly. At the beginning of my fourth year at M—— I was given an assistant professorship, and my work gave promise of a real career.

It was at M—— that I met the man for whom Fate seemed to have destined me.

Harold Jackson (as I shall call him) came to M——, a fine, strong fellow of twenty-nine, just out of a graduate school where he had received his A.M., as professor of chemistry. He had come from a family of slender circumstances, had worked his way thru college, and spent the last cent of his savings there. However, he was strong, well poised and ambitious, and his prospects for a successful career were splendid. He was a trifle shy, or perhaps diffident in his attitude toward women, but before the end of my second year at M—— we had found that we had much in common and I almost instinctively felt that the man expected had come.

All the things which had lain dormant in me for so long were aroused—the longing for husband, children, for a home of my own—all these sprang to life in the light of this new friendship, and at any time, I think, dear to me as my work and my career were, I would have renounced them for these other things.

I was very much in love with Harold, but with my old reserved disposition in control and my almost childish fear lest I should show the slightest sign of my love before he had spoken, I am sure that I gave him slight reason to think that he was or could be more to me than a most congenial friend.

The third year went by. I became almost indispensable to him, for I read proof for his treatises, discussed such phases of his work as I understood with him, and, with my equable disposition, kept him toned up and in tune with the world. He took a great deal of my time and strength, but I was glad to give them, and he was always appreciative. He acted as my escort on almost every college occasion and sent me flowers, and more often books—but he never spoke to me of love.

The fourth year came and his salary

thousands who come to the Wonder City during the summer vacation time. The most efficient hotel in America. Every comfort and luxury.

## HOTEL ASTOR

WILLIAM C. MUSCHENHEIM

BROADWAY, 44th to 45th Streets, NEW YORK CITY

was greatly increased. I had thought that perhaps he was waiting until he had more to offer me, and that now, at last, he would speak. But the days and the weeks went past—and he remained the same good friend, the same comrade that he had always been.

During the Christmas vacation of that year I did not write to him, and on my return to school he took me to task for it.

"But," I replied, "I didn't think you'd really care!"

"Care!" he answered. "Don't you know what you are to me?"

I waited—and there was a silence for a few minutes. Then he said, almost casually:

"What are we going to read next, Margie? I've a lot of things on my list—but maybe you have some ideas on the subject, too." And with that he launched into a discussion of books.

Commencement time came and went, and I went home in a miserable condition of mind and body. During the summer my mother died, and feeling that my duty lay in trying to make a home for my father, and that perhaps absence and the lack of me would make Harold realize his need of me, I resigned my position. My older brother was married, the younger was away at school, and the little sister had been in the midst of her trousseau at the time of mother's death. Within a year she married, and my father and I were left alone in the old home. My duties became domestic ones and their very domesticity and the thought of what might have been made them almost unbearable.

At first I heard from Harold regularly. His letters were friendly, tender, almost touching in their recognized need of me, sympathetic in the thought that I had had to give up my career—everything that I could ask except the one thing that I desired. And I never knew why this was—whether it was because he thought that his salary was not sufficient, or because he thought that my interest in him was purely Platonic—whether he thought that I would not sacrifice my career to matrimony, or because, having spent so many years in bachelorhood, he really hated to give it up, and so kept putting off the marriage that he really intended. As time went on and his need of me became less, he evidently forgot me, the letters grew less frequent, and finally he left M—and I lost track of him.

Would you—should you call a woman who had loved—an "old maid"? A woman who would have done anything—have sacrificed anything, so great was her love, in accordance with the dictates of her education and ideals? Who would have given up a career of promise and all that she hoped to be for the man she loved?

I was only twenty-six when my mother died. Two years later my second brother married and I became indeed the "old maid" of the family. My household duties were not heavy, but, tho I might have enjoyed them in a home of my own, I chafed under them, and as a result, at the end of the third

year of struggle to re-establish myself in a town that no longer knew me, a struggle rendered doubly hard by reason of the fact that I was considered "odd" because I had not married, my sister and her husband came to live with my father—and I was free.

For four years then I lived abroad, studying and traveling. My own earnings of my college days had been considerable and my father was more than generous, so I lived the life that I enjoyed most—going, seeing, studying, trying to forget, and, in a measure, succeeding.

I was thirty-three when I came home again—home to my old father and the rest of the family. Two little ones played around my sister and made the old home merry. The boys both had families, and altho they all welcomed me sincerely, I felt almost like a stranger. My life had been so different from theirs, and mine, too, had been deprived of the very things that made theirs most happy. The poignancy of the old wound had gone, but the sight of Ethel's babies hurt a little even then, and, after a few weeks, I went to the city where it was not long before I found interesting and much needed work along educational and philanthropic lines to do. I live in my own apartment, have a dear young girl whom I am educating living with me, and with her and a maid my household is complete.

I have been here twelve years, working hard all the time. I have many friends, and my life has accomplished something, I know. I am not an "economic drawback." Someone has said that "no one who produces anything is an old maid." If that be true I do not belong in the class of the scorned. I do not anyway. I am in the full flower of my womanhood. I am strong and well. I am one of the world's needed workers. Moreover, I am a modest ornament to the world, if one's standard for women is that. I am well dressed, well groomed, well poised and active—and I am almost always happy. What if my hair is a little gray—and I have never married?

The opportunity to marry does not come to every woman. At least the opportunity to marry with love does not always come. But every woman has an opportunity to work in some way for the betterment of the world, and no woman, so working, should be scorned, even in fun.

One real chance to marry I have had. Five years ago, a man of fifty, who is one of the best of my friends and whose name, even in so large a city, is a synonym for business ability, wealth, position, and, above all, for character irreproachable, did me the honor to ask me to become his wife. Was I tempted? No. I told him frankly that long, long ago, when I was only a girl, I had made a vow to myself that I would marry only for love, and failing that, that I would never marry for position, for money, for a home, for the sake of marrying—no—not even to escape the disgraceful title of "Old Maid." And I shall keep my vow

# PLAY VERSUS GYM

BY PAUL H. DOWLING

WHEN a college or great university can enlist as large a percentage as half its men students in some form of outdoor athletic sport, it has done a great deal toward overcoming the usually present difficulty of having only a handful of men engaging in the major sports and the rest of the student body taking no kind of physical exercise. That is what Stanford University has done during the past semester, and in the near future, with its new gymnasium as a center for outdoor athletics rather than as a place for indoor drill, further steps will be taken toward accomplishing the worthy aim of "athletics for every student enrolled."

Keeping a large number of students engaged in some form of regular exercise has always been a problem with most of our universities. In the American colleges, it appears that athletics are utilized by a very small proportion of the students, who are in the football, track and baseball squads or in competition for some other regular team.

E. E. Slosson, writing in The Independent for April 1, 1909, criticized Stanford University in particular because it possess such excellent facilities for all the year round outdoor sports, and because only a comparatively small number of students were even taking walks out of doors to keep themselves in good physical trim and in condition to do the best collegiate work. Dr. Slosson pointed out the advantages that the colleges of the Pacific Coast possess, and showed that they were entirely overlooking their opportunities in the natural playground environment that their climatic conditions make possible. His vision for Stanford was a "spectacle such as I have never seen, a whole school at open-air play, not forced gymnastics but spontaneous movement for the joy of movement. The sunny plain, the lake, the woods and the hillsides seemed alive with people, old and young, youths and maidens, each group with its appropriate

*It is rare that a dreamer has the good fortune to see his dream even half come true. The rash prophecy to which Mr. Dowling is kind enough to refer was instigated by my delight at seeing a gymnasium in ruins. I had seen in so many universities these big, ugly, gloomy, noisy, dusty, prison-like sweat-boxes wherein young men and women were daily forced to make a business of what should be a pleasure, that I could not help rejoicing over the misfortune which had compelled the students of Stanford to take to the open for their exercise. "All work and no play makes Jack a dull boy," and nothing in the college course is more like work than the painful and compulsory drudgery of training for an intercollegiate athletic contest. It is no wonder that those who are subjected to it regard the classroom as a place of rest if not of recreation.—E. E. S.*

priate part to play, each person with all his faculties engaged."

Stanford has awakened to the opportunity for year round outdoor sport, and in the planning of her new gymnasium, which is to take the

trainers during the football season are now to keep a large number of men at the game—which, by the way, is the English Rugby style of football—thruout the entire season. It is interesting to note that of the 239 men who reported for training, more than 150 stuck it out until the end and only a small proportion dropt out of the daily practise as the Varsity men were weeded from the candidates early in the season. Four games are played each week by the "second string" men and thus interest is stimulated rather than allowed to die down as the season advances. On one Saturday, five Rugby games were offered to the university students, the first and second Varsity and Freshmen against outside teams and also teams A, B, C, D playing each other. Two turf fields are kept in use during the season for the Rugby men, besides a soccer field, lacrosse field, running track, diamond for fall baseball, and numerous tennis courts, which are often all in use at one time. And not all of these athletes are men, for the women take a prominent part in athletics, maintaining a girls' crew, and basketball, tennis and fencing teams.

Figures will show the proportion of men students engaged in fall sports in 1914:

Total enrollment of men—1250 (including graduates)	
Football .....	239
Track .....	68
Baseball .....	55
Gymnasium .....	162
Tennis (estimate) .....	50
Soccer " .....	30
	604

Thus it may be seen that more than half of the undergraduates are engaged in some form of regular athletics. The constant aim is to get the student into the fresh air. Even the usual gymnasium courses will be given as nearly as possible out of doors. A roofed drill hall, open at the sides, and an open air drill court will utilize the warm and usually sunny climate of most of the year.

Berkeley, California

A COEDUCATIONAL CREW

place of the one destroyed by the earthquake of 1906, displays her new policy. The plans call for a large building to be used as a center for the many branches of outdoor sport. Comparatively little attention will be given to the usual indoor program of athletics, and more than ample facilities will be given for shower and locker rooms for the convenience of all students "at play" on the campus or nine-thousand-acre estate.

All efforts of the coaches and

AN OPEN AIR CLASS IN POETRY

# GRAFLEX CAMERAS

You can make snapshots indoors if you use a Graflex Camera. This picture was made indoors with the shutter set at 1-35 of a second. The negative had plenty of exposure, and the shutter operated fast enough to prevent the movement of the children from spoiling the picture.

No camera equals the Graflex for high speed photography. In this picture both the automobile and biplane were going at a very high rate of speed. This made it necessary to set the shutter at 1-1000 of a second to get a picture that was clear and distinct.

Photographs in the deep woods or in the shade offer many difficulties to those who are not equipped with a Graflex Camera. With the Graflex you can make pictures under light conditions that make photography impossible with cameras of the usual type.

With the Graflex Camera you can make exposures of any duration from "time" to 1-1000 of a second. You see the image on the focusing screen, right side up, the size it will appear in the finished print, *up to the instant of exposure.*

Our 64-page illustrated catalog tells why the Graflex is the best camera for *your* work. May we send you a copy?

NEW JERSEY SHORE RESORTS

GLACIER NATIONAL PARK

CALIFORNIA

GRAND CANYON

YELLOWSTONE NATIONAL PARK

LAKE GEORGE AND THE ADIRONDACKS

## THE SHORE RESORTS OF NEW JERSEY

*Time—From New York—One Week*

*This coast is famed for its numerous and fine beaches, its cities by the sea, its resorts following each other closely all along the shore from Atlantic Highlands on the north to Cape May on the south, its fine roads along the shore, its charming lakes near the sea, its attractive hotels and excellent boarding houses. Added to this the fishing, boating, bathing are of the best.*

*First Day.* Leave NEW YORK in the morning by boat or train. Arrive ATLANTIC HIGHLANDS in about one hour. This resort, located on Sandy Hook Bay, is the terminus of the steamship line, the point where change is made from steamer to train. Owing to its accessibility from the city it is a favorite place for people who like to spend their entire summer at the seashore and yet have to come to the city daily. Cottages and boarding houses abound. Sailing, golf and tennis are indulged in here, while a little beyond, at Highland Beach, there are fine facilities for bathing. After spending about an hour here

Leave ATLANTIC HIGHLANDS by train. The road passes thru Navesink Beach and Normandie, which consist mainly of charming villas with well-kept grounds bordered by fine hedges; Seabright, which, owing to its fine location between the ocean and the Shrewsbury River, gives opportunity for both ocean and still water bathing; Long Branch, for many years the most noted of the resorts; Hollywood and West End, with their splendid summer residences; Elberon, Deal Beach and Allenhurst—all having the same environment, and at the end of an hour

Arrive ASBURY PARK—a miniature Atlantic City with its superb bathing beach, its board walk, casino, fishing piers and fine hotels. Of great interest are the three fresh water lakes within its borders, which provide all kinds of recreation and amusement. Elaborate plans are made each year for the entertainment of the summer visitors, the most notable being the baby parade and children's carnival. Other features are the Carnival of Venice on Deal Lake and the Queen's Ball. Spend a couple of days here sailing, bathing, fishing and walking or driving. All day, as well as in the evening, you will find the board walk with its hundreds of people coming and going most fascinating. Fine concerts are given during the season. Take time to go to Ocean Grove, which is separated from Asbury Park by Wesley Lake, but linked to it by the continuous board walk. You will find it quite a contrast to its gay neighbor. It is a popular Methodist Camp Meeting ground and still retains much of its old atmosphere, especially on Sunday. Its great auditorium seats ten thousand persons and contains a fine organ.

*Third Day.* Leave ASBURY PARK in the morning by train. Arrive SPRING LAKE in about fifteen minutes. This is one of the most beautiful of the shore resorts and its hotels are not surpassed anywhere

on the coast. It is a fashionable spot, a center of social gaiety. The lake is a beautiful sheet of clear water separated from the surf only by a narrow strip of land and its shores are fringed with the dark green foliage of the pines. Here, as in Asbury, you may indulge in bathing and fishing, also in golf and tennis. The drives are many and very beautiful whether you take the road along the sea or back in the country.

Take a day for a trip to Sea Girt, one and one-half miles south, going by trolley if you desire. It is the summer headquarters of the National Guard of New Jersey. Then go on to Manasquan, quiet and peaceful with its quaint old houses and gardens. Continue the trip to Point Pleasant with its attractive bungalow colonies on the banks of the Manasquan River. It has a favored location between the river and the sea.

*Fifth Day.* Leave SPRING LAKE in the morning. Arrive ATLANTIC CITY in the afternoon. Hotels \$2.50 a day up, American plan. This is one of the most attractive cities of America and is called "The Playground of the World." Its boardwalk, sixty feet wide, is five miles in length. There are four great steel piers crowded with features of interest, while along the opposite side of the walk are shops, theaters and hotels in almost unbroken succession. Here you may spend your time yachting, boating, fishing and crabbing. The chief pleasure is bathing, which is daily indulged in by thousands. Golf can be had at the Country Club and many of the hotels have tennis courts nearby. Trips by trolley may be taken both on the island and the main land.

*Seventh Day.* Leave ATLANTIC CITY in the afternoon. Arrive NEW YORK in about three hours.

*Cost of trip, New York back to New York* .....\$8.75

## GLACIER NATIONAL PARK

*Time—From New York—Two Weeks  
(Season, June 15 to September 1)*

*First Day.* Leave NEW YORK in the evening.

*Second Day.* Leave CHICAGO in the evening.

*Third Day.* Arrive GLACIER NATIONAL PARK in the evening. This is the newest and second largest of our National Playgrounds. The wonderful beauty of its lakes and the grandeur of its mountains are unsurpassed even in the famous Swiss Alps. There are many glaciers here and canyons, mountains and streams and beautiful waterfalls. There are many ways of traveling, for one can go to most points of interest in comfortable autos, on foot, or on horseback. Even if your time is limited and you have but one day to spare, you can see enough to make you glad you stopped.

You can plan tours of from one to seven days. These are laid out for you and itineraries are given you as well as cost. If you prefer, you can wander about at will.<sup>1</sup> Hotels, of which there are two, one at the entrance of the Park and the other in the

<sup>1</sup>From chalet to chalet or from camp to camp in comfortable autos at reasonable prices and from these centers tramp or ride all about, for the trails are many.

heart of it, make a rate of \$4 and up per day, American plan. The chalets, which are most attractive, have a uniform rate of \$3 per day, American plan, and the Teepee Camps charge fifty cents per bed per night. Food may be purchased at reasonable prices at chalets near by, utensils and use of range in the camps are allowed.

*Fourth Day.* Leave GLACIER PARK HOTEL 9 a. m., by auto. Visit Two Medicine Lake, which is reached in about one hour and a half. The road winds over several ridges and along the shores of Lower Two Medicine Lake. The Upper Lake, where stop is made, is very clear and surrounded by high mountains of wonderful shapes. Among them is Mt. Rockwell, 8440 feet high, which has one of the finest shaped peaks in the Park. Rising Wolf is another notable mountain, which rises to a height of 9270 feet. Time can be delightfully spent here either on the lake or walking about viewing the grandeur of the mountains. After luncheon (cost 75 cents) at Two Medicine Chalet, visit beautiful Trick Falls, 90 feet high, which are near by.

Leave TWO MEDICINE CHALET 4:30 p. m. Arrive GLACIER PARK HOTEL 6 p. m. This is a fine trip if you have but one day in the Park and will cost you but \$2.50 for the round trip.

*Fifth Day.* Leave GLACIER PARK HOTEL 8:15 a. m., by auto. Arrive ST. MARY'S CHALET, 10:45 a. m. This is a beautiful ride of thirty-six miles over a fine road along the foothills of the mountains to St. Mary's Lake. A half hour is given to wander about there and then a commodious launch is boarded and one of the most beautiful water trips taken, an hour's ride thru magnificent scenery. The coloring on the rocks of the mountains, the curious peaks and finally the first glimpse of a glacier awe and charm at the same time. Stop is made at Going-to-the-Sun Chalet for luncheon (cost 75 cents). The view from this chalet is one of the finest in the Park and closely resembles beautiful Lake Louise in the Canadian Rockies. It is located on a rocky ledge two hundred feet above the lake, while Going-to-the-Sun Mountain, nearly a mile high, is in front of it.

Leave GOING-TO-THE-SUN CHALET 2 p. m., by launch. Arrive ST. MARY'S CHALET 3 p. m. Leave ST. MARY'S CHALET 3:45 p. m., by auto. Arrive GLACIER PARK HOTEL 6:15 p. m. This is also a one day's trip and the cost of it is \$7.50. If you are making a longer trip, spend the night at St. Mary's Chalet and

*Sixth Day.* Leave ST. MARY'S CHALET 11 a. m., by auto. The road from here follows the shore of Lower St. Mary's Lake and crossing over a ridge enters the Swift Current Valley. Then it winds over and up the mountains, passing Sherburne Lakes, presenting on every side views of indescribable grandeur. The distance covered is twenty-six miles, and all too soon you arrive Many Glacier Hotel on Lake McDermott. This beautiful lake lies nestling among the mountains whose rocks are gorgeous with coloring and whose peaks are glistening with snow. It is in the very heart of the Park, and presents some of the finest scenery to be found in it. From the hotel, as well as from the chalets, a

Manager

wonderful panorama of mountains and glaciers is spread before you. After luncheon spend the afternoon in walking about, getting this view from different points. From the chalets you will get a good view of McDermott Falls, the outlet of the lake.

*Seventh Day.* Leave **MANY GLACIER HOTEL** or **CHALETS** 9 a. m. (horseback), for a trip to Iceberg Lake, which should not be missed, as it is one of the features of the Park. It derives its name from the fact that great blocks of ice are seen floating in the water in midsummer. The lake is only one-half mile long and is the only real iceberg lake known on the continent. Luncheon is carried and you may leave there at 5 p. m. or earlier, as suits your convenience.

*Eighth Day.* Leave **MANY GLACIER HOTEL** or **CHALETS**, 8:30 a. m. (horseback). This is another interesting trip because of the grandeur of the scenery, terminating at Granite Park. This park is at an elevation of six thousand feet and en route you cross Swift Current Pass, the most picturesque pass in Glacier Park. Stop at Granite Park Chalet for luncheon, returning to Many Glacier Hotel at 6 p. m.

*Ninth Day.* Leave **MANY GLACIER HOTEL** 1:30 p. m., by auto. Arrive **GLACIER PARK HOTEL** 6:15 p. m. Spend one day here.

Cost of five days' trip, including launch and saddle horses..... \$21.50  
Meals and lodging extra, depending on where you stop.

*Eleventh Day.* Leave **GLACIER PARK HOTEL** in the evening.

*Thirteenth Day.* Arrive **CHICAGO** in the evening.

*Fourteenth Day.* Arrive **NEW YORK** in the evening.

Round trip rate from New York to Glacier Park, New York Central or Pennsylvania ..... \$86.70

Other lines..... \$82.20

Round trip rate from Chicago to Glacier Park..... \$48.00

Pullman berth from New York.... \$14.00

Pullman berth from Chicago..... \$9.00

## GRAND CANYON

Time—From New York—Fifteen Days.

*First Day.* Leave **NEW YORK** in the morning.

*Second Day.* Leave **CHICAGO** in the evening.

*Fourth Day.* Arrive **SANTA FE** in the afternoon. New Mexico is aptly called "A Land in the Sky." Its many square miles are at a higher altitude above the sea than the summit of many of our Eastern mountain peaks. It contains much that is old. Sleepy Mexican villages are passed, ancient Indian pueblos and still older abandoned ruins, all this giving a charm and an atmosphere of mystery most interesting to the traveler. Santa Fe is an old city and well worth a visit. Spend a couple of days here; you will not regret it, for there is much to be seen. Visit the old Palace that faces the Plaza. It is 300 years old and has been occupied by a succession of almost 100 governors. Here you will see the Ben Hur room, where General Lew Wallace when governor wrote part of his great novel. In the east end is the Historical Society Museum, containing a fine collection of antiquities, and in the west end the Museum of Archaeology and the School of American Archaeology. Visit the Shrine of San Miguel. Inside of the old church is a bell cast in old Spain many centuries ago. Also the Garita, ten minutes' walk from the Plaza, an old Spanish fortress. Adjoining is an old Spanish cemetery. Take the Circle Drive, seven miles long, to Tesuque Divide. Spend one day visiting the Cliff Dwellings, in Pajarito Park, the most wonderful prehistoric region in this country. If time permits, several weeks can be profitably spent in and about this city.

*Sixth Day.* Leave **SANTA FE** in the afternoon. En route pass Santo Domingo and San Felipe Indian pueblos. Arrive **ALBUQUERQUE** in about four hours. Albuquerque lies at an altitude of 4935

Fall Term Opens September 22, 1915.

## Hotel Buckminster

the largest, most exclusive and most beautifully appointed of Boston's family hotels will be opened to visiting tourists and motorists during the summer of 1915. Stop there on your way to the White Mountains. Stay over a week with your family and enjoy the countless one-day vacation trips about Boston.

The Buckminster, located at the junction of Beacon Street and Commonwealth Avenue, at the entrance to Boston's beautiful park system, is the only hotel in Boston from which a subway car can be taken at the door. The running time by subway to Park Street, the centre of the shopping and business district is seven minutes. It is absolutely fireproof and every suite is outside. The main automobile routes to New York and the West, also to the South shore pass the door. The North shore and White Mountain routes pass within two blocks.

It is far enough from the centre of the city to avoid the noise, dirt and traffic annoyances, but near enough to be perfectly convenient. A modern fireproof garage, equipped with a complete machine shop, is run in connection with the hotel.

### A Luxurious Permanent Home at a Moderate Price

Hotel Buckminster is prepared to quote yearly, monthly or weekly rates on either furnished or unfurnished apartments of from two to six rooms with bath.

## HOTEL PILGRIM

In Historic Plymouth

Plymouth, the oldest settlement in New England, possesses points of historic interest probably superior to any town in the United States. Standing upon the Piazza of The Pilgrim and looking out over Cape Cod Bay and Plymouth Harbor, one may look back for 300 years to the time when the tiny Mayflower with its freight of sturdy pioneers, carrying with them all their worldly possessions, sailed up that harbor and cast anchor off the wooded shore of what is now a thriving and up-to-date American town. Within three miles of The Pilgrim is Plymouth Rock on which the Pilgrims first stepped.

The Pilgrim, while not a new hotel, has been remodeled by its new owners. A large number of private bathrooms have been installed, closets have been built into many of the rooms, and the house has been entirely redecorated and a large part of it refurnished. An European plan Colonial café has been opened and the service both in the main dining room and the café will be maintained at the highest point of excellence.

The grounds of the Plymouth Country Club adjoin those of the hotel, and arrangements have been made whereby the privilege of the club will be extended to the guests of The Pilgrim. The golf course is considered to be the best on the South Shore. There are several tennis courts, as well as the one connected with the hotel, and a most attractive club house all within two or three minutes' walk of the house.

The bathing facilities at The Pilgrim are particularly good, with float and bath houses for guests.

Plymouth is noted for both its salt and fresh water fishing. There are a large number of ponds abounding in black bass, pickerel and perch. Guides with boats may be arranged for any time. Both power and sail boats may be secured for sailing and salt water fishing.

Automobilists will find The Pilgrim particularly adapted to cater to their wants. The State Road to Boston is one of the finest and most picturesque runs in New England, and the new Colonial Café will be open at all hours. Plymouth is the natural stop-over for parties touring to the Cape and The Pilgrim is the natural hotel at which to stop.

MRS. C. G. FRANCIS  
457 Centre St., Newton, Mass.

feet and a day may be spent here most profitably. It has a splendid hotel, the Alvarado, which is one of the attractions of the town. It is a widespread, low building and is not only a luxurious stopping place, but contains a collection of Indian relics gathered during years of great effort. The Mexican quarter, the Old Town, is still much as it was a century or two ago.

Seventh Day. Leave ALBUQUERQUE in evening.

Eighth Day. Arrive GRAND CANYON in afternoon. This tremendous chasm in the northwest corner of Arizona has a depth of 6000 feet and a width of thirteen miles. The huge gash in the earth is the work of the Colorado River cutting thru the earth. Side gorges have cut it to right and left, forming towers and turrets, cliffs, ledges and crags. There is a grandeur and weirdness about it. It must be seen, it cannot be described, but there is surely nothing in the world so stupendous. Visit Hopi House opposite the hotel, a reproduction of the dwellings of the Hopi Indians. Here live a small band of Hopis—men and women, weaving, making pottery or hand silver ornaments. In the evening they entertain you with their weird songs and queer dances. Drive over the Hermit Rim Road, a macadamized roadway nine miles long, to Hermit's Rest. This will give you a view of the canyon from many different points. Cost, \$3 per person. If you desire an exciting and fascinating journey, go on mule-back to the bottom of the canyon via Bright Angel Trail, leaving at 8:30 a. m. Cost for trip to the river, \$5 each for three or more people. If fewer, \$5 extra for guide. The auto trip to Grand View and back costs \$4 each person. Horseback jaunts and camping trips also arranged. Hotel El Tovar, \$4 up per day, American plan. Bright Angel Cottages, \$1 up per day, European plan.

Eleventh Day. Leave GRAND CANYON in the evening.

Fourteenth Day. Arrive CHICAGO in the morning.

Fifteenth Day. Arrive NEW YORK in the evening.

Cost of ticket New York to Grand Canyon and return \$106.20

Cost of ticket Chicago to Grand Canyon and return \$67.50

Pullman berth New York to Grand Canyon ..... \$17.25

Pullman berth Chicago to Grand Canyon ..... \$12.25

## YELLOWSTONE NATIONAL PARK

Time—From New York—Thirteen Days

This is the largest and oldest of our National Parks. It contains 3312 square miles and within its boundaries are mountains, plateaus, rivers and valleys; cliffs of volcanic glass, unsurpassed waterfalls and wonderful geysers. The most brilliantly colored canyon in the world is here, and Yellowstone Lake is the largest body of water in North America at so high an altitude. Three of the largest rivers in the United States have their sources here and the Continental Divide crosses the Park. These many beautiful and wonderful things help to make this a place of marvelous grandeur and beauty, and the scenic diversity makes the trip thru the Park a never ending source of delight.

First Day. Leave NEW YORK in the morning by rail.

Second Day. Arrive CHICAGO in the morning by rail. Leave Chicago in the morning by rail, thru train.

Fourth Day. Arrive GARDINER in the early morning and leave GARDINER at 10:15 by stage. Arrive MAMMOTH HOT SPRINGS at 11:30 a. m. This is the first stopping place in the Park and the afternoon and night are spent here. Trunks are

left, as only hand baggage is taken on the trip. The tour of the Park is leisurely made by stages drawn by four horses, also by two horse surreys for smaller parties, stopping each night at a large and perfectly appointed hotel. On the slope of Terrace Mountain, at Mammoth Hot Springs, are the wonderful painted terraces. Jupiter is the largest of the group, while beautiful Pulpit Terrace is beneath. The chief attraction is the wonderful coloring—yellows, browns, dark green and red are seen where the hottest water flows. In the abandoned portions or where the water is coolest, they are chalk white. One cannot see all the wonders except by walking and getting close to them. To visit all the prominent springs—by easy trails—requires about two hours. Liberty Cap, an extinct hot spring cone, fifty-two feet high; Devil's Thumb, Devil's Kitchen and many other wonders are found here. Fort Yellowstone is located here, for the United States cavalry is regularly quartered in the Park during the year. The parade in connection with the lowering of the flag at sunset will interest you.

*Fifth Day.* Leave **MAMMOTH HOT SPRINGS**, 8 a. m., by stage. Arrive **NORRIS** at noon for lunch. On leaving the springs, the road ascends the mountain with easy grades and many graceful curves. In three miles, without scarcely perceiving it, one rises 1000 feet, passing the Hoodoos, a most amazing jumble of rocks covering an area of about one square mile. The road passes between great blocks of limestone, some fully seventy-five feet high, called Silver Gate. Four miles from the Springs, you reach the Golden Gate, a narrow, picturesque passage. The walls are from two to three hundred feet in height and covered with a yellow moss which gives the pass its name. The government roadway was cut from the cliff, and the solitary stone pillar, twelve feet high, which marks the gate, was once part of the cliff wall. All along the route are many points of interest which the drivers point out. The most important are Obsidian Cliff, a ridge of volcanic glass 250 feet in height and geologically one of the most interesting objects in the Park. On the other side of the road lies Beaver Lake, about one mile long and a quarter of a mile wide. Here one sees several beaver dams forming artificial obstructions across the lake, showing the wonderful work done by these small creatures. The road then leads over one of the natural watersheds, passing Twin Lakes and the Frying Pan, to Norris, where stop is made for luncheon, after which time is given to walk about and see the many geysers and hot springs found here. While the geysers do not compare with those of the Upper Basin, still, being the first seen, they are of great interest. In front of the lunch station at the foot of the hill, covering a large tract, are many boiling springs. Board walks are laid all about the formation because of the many rivulets of hot water flowing from the pools and geysers. Here are found Congress and Emerald pools, both beautiful, especially the latter, which is off the main road and concealed in the timber. The water is hot and the coloring most beautiful. Black Growler and Hurricane are interesting because a large quantity of steam is continually pouring out, producing a peculiar sound. The deposit around these craters is at times very black and the water smells strongly of sulphur. Other noted geysers here are Constant, Monarch and Fearless. Leave **NORRIS** at 1:30 p. m. Arrive **FOUNTAIN HOTEL** 5:30 p. m. After leaving Norris, the road winds along the Gibbon River and Gibbon Canyon, a ride of exceptional beauty. Little puffs of steam are seen arising on all sides, and one realizes that this section abounds in hot springs. Gibbon Falls are passed and for three or four miles the road winds along pine clad terraces to the valley of the Fire-hole River. The Cascades of the Fire-hole are the next point of interest and then the road continues for some distance along the banks of the river and after crossing Nez Perce Creek, it continues on for about a mile to Fountain Ho-

NEW JERSEY

tel. The chief attractions here are the Fountain and Great Fountain geysers, the Paint Pots and Clepsydra Spring.

*Sixth Day.* Leave FOUNTAIN HOTEL 8:30 a. m. Arrive OLD FAITHFUL INN 10:30 a. m. The two hours spent in driving to Old Faithful Inn will be all too short to see the many wonders all along the route. Many geysers are seen. The stage stops for a view of Prismatic Lake, one of the most beautiful springs in the Park, noted for its wonderful coloring. Biscuit Basin, with its sapphire pool; Morning Glory Spring, a silent pool with its peculiarly shaped crater and its delicate coloring; Punch Bowl Spring, Handkerchief Pool and many other interesting points are passed. The rest of the day is spent at the unique Old Faithful Inn with its many surrounding charms. Possibly the most noted is Old Faithful Geyser, which gives its exhibition regularly every sixty-five minutes in plain sight of the house. One can view the eruptions at sunrise or sunset, by moonlight or sunlight, finding new beauties each time. At first it gives a few spasmodic spurts which throw quite an amount of water, then follows a great burst and a column of hot water two feet in diameter is thrown to a height of from 125 to 150 feet. It remains in the air for several minutes and then slowly disappears. It is on a mound terraced up about twelve feet high, and after the eruption you will find it interesting to walk about and look down into the shallow pools all about with their delicate colorings. Bee Hive, Giant, Giantess, Sponge, Oblong and many other geysers are found here and the afternoon will be delightfully spent among these marvels.

*Seventh Day.* Leave OLD FAITHFUL INN 7:30 a. m. Arrive THUMB STATION at noon. Leaving Old Faithful, the road winds along the Firehole River thru forests of tall pines to Keppeler Cascade, and a mile beyond leaves the river and follows Spring Creek for some distance to Craig Pass and over the Continental Divide. This great range of mountains, extending from Canada to Mexico, is the great watershed of the continent, and it is most interesting to see, at the same time and place, Two Ocean Pass, one of the sources of the Missouri River, flowing into the Atlantic Ocean, and a source of the Columbia, which flows into the Pacific. At Shoshone Point, one gets a magnificent view of the country and the snow-capped Three Tetons peaks fifty miles distant. At Lake View, a mile from Thumb, one catches the first glimpse of Yellowstone Lake nestled among the glorious hills. At Thumb Station a stop is made for luncheon. It is pleasantly situated on the shores of Yellowstone Lake. Time is given to see more geysers and paint pots and to wander along the shore. Here you have choice of routes, either continuing by stage over the mountain or by boat up the lake. Leave THUMB STATION at 1:15 p. m., by stage. Arrive COLONIAL HOTEL for dinner. The road leads around the lake and over the Mountains, passing the Natural Bridge, to the Colonial Hotel at the Lake outlet, where the rest of the afternoon and evening are spent. It is a delightful resting place. Fishing may be indulged in or boating on the lake.

*Eighth Day.* Leave COLONIAL HOTEL at 8:30 a. m. Arrive GRAND CANYON HOTEL, 11:30 a. m. The road leads along the valley of the Yellowstone for seventeen miles and thru lovely hill bordered Hayden Valley, passing Mud Volcano and Gothic Grotto Spring. The river, at first quiet and sedate, as it draws nearer the canyon, becomes restless and finally plunges over the precipice, a drop of 109 feet, forming the Upper Yellowstone Fall. The Great Fall, 308 feet high, is a mile below, and a short distance beyond is the hotel, where the afternoon and evening are spent. This locality abounds in wild and picturesque scenery, and during the afternoon drives are planned to the many points from which one can obtain the best views of the beautiful canyon so rich in coloring and so full of interest. Other canyons may be larger, but none can compare with it in beauty of its coloring. The views here in every direction are especially fine and time is given to view them

CHALFONTE  
ATLANTIC CITY  
THE LEEDS COMPANY.

ALWAYS OPEN  
ON THE BEACH

all, as they are within walking distance. A stairway leads down to the brink of the Great Falls.

*Ninth Day.* Leave **GRAND CANYON HOTEL** at 8:15 a. m. Arrive **NORRIS** for luncheon. The twelve mile drive between the canyon and Norris is thru pine forests, the greater part of the way. It passes over a divide at an altitude of more than 8000 feet. The Virginia Cascades are passed about three miles from Norris and these you will find interesting and quite unlike many of the falls in the Park. Leave Norris after luncheon. Arrive **MAMMOTH HOT SPRINGS** 3:15 p. m. Leave **MAMMOTH HOT SPRINGS** at 6:30 p. m. for **GARDINER**.

*Ninth Day.* Leave **GARDINER** 7:15 p. m.

*Eleventh Day.* Arrive **CHICAGO** in the evening.

*Twelfth Day.* Arrive **NEW YORK** in the evening.

Tickets on sale from June 11th to September 19th.

Cost of trip, New York back to New York, including all expenses while in Park.....\$129.70 to \$134.20

Cost of trip, Chicago and back, and including all expenses while in Park.....\$95.50

Cost of berth, New York to Gardiner \$13.50

Cost of berth, Chicago to Gardiner \$8.50

## THE MAINE COAST AND THE WHITE MOUNTAINS

Time—From New York—About Two Weeks

*First Day.* Leave **NEW YORK** in the afternoon by boat or in the evening by train.

*Second Day.* Arrive **PORTLAND** in the afternoon by boat or in the morning by train. Hotels, \$4 up per day. Boarding houses, \$2 up per day. Portland, the City by the Sea, is famous for its beautiful natural scenery, surrounded as it is by sea and shore, as well as for having been the birthplace of noted men. It combines the attractions of city life and the delights of a shore resort. Its wonderful location on the shore of Casco Bay overlooking the hundreds of islands which dot it, gives it a charm which few cities possess. You may spend weeks in it and not exhaust its many attractions. Excursion may be taken from here among the islands, to lakes nearby, and even to far away mountains.

*Third Day.* Spend the day in wandering about the city. Its elm-shaded avenues are a delight. Longfellow's home, where he lived for many years, is open daily, and time spent here will be pleasant. Go via trolley to the Eastern promenade or famous Portland Headland light. You will not soon forget the view, with its miles of sparkling water, its many islands and steamers and yachts sailing among them; then to the Western promenade, where the view is totally different, for here you get wooded forests and rolling farmland and off in the distance the peaks of the White Mountains.

*Fourth Day.* If the day is fine, take the sail among the islands of Casco Bay, which is acknowledged by travelers to be the most attractive on the Atlantic Coast. You may take one of the all-day tours, stopping for a shore dinner on one of the islands, or if time is limited, shorter ones may be taken. Cost of round trip, seventy-five cents. There are many attractive open air theaters in the parks surrounding the city where a pleasant evening may be spent. Peaks Island, near the mainland and connected by ferry (ten cents), also has a theater and other amusements.

*Fifth Day.* A trip to the celebrated **POCONO SPRINGS** will please. The roads, if you go by auto, and cars may be hired at reasonable rates, are fine and the scenery attractive. Or if you wish, you may go by train to Danville Junction, about one hour out, and auto stages are in waiting there to convey you to the hotel. The house stands on the top of a hill. The grounds are beautiful, the view superb, for on a clear day you can see the White Mountains, fifty miles away by air line, while at your feet

## PENNSYLVANIA

# GALEN HALL, WERNERSVILLE, PA.

## A FIRST CLASS HOTEL

We have erected a splendid big building on our Mountain at Wernersville. It's a wonder for completeness, splendid in its location, massive in strength, beautiful in every line—A Veritable Castle on a Mountain. 3 1/4 hours from New York via Central Railroad of New Jersey. ## YOU CAN LOOK Years Younger

By using my simple exercises of the Facial Muscles, "Beauty Exercises," I call them. You can **Banish Tell-Tale Wrinkles—Firm and lift up drooping flesh—Round out the too thin Face and Neck and**

**Make muddy complexions fresh and rosy—without drugs or anything artificial. My way is**

### Just Nature's Way

It will reduce unsightly, fat, double-chins and make the Flesh Firm. However, **neck exercises alone do not remove double chin**—the exercises must be scientifically directed, and the hundreds who have been benefited by my directions are the best guaranty as to what these exercises will do for YOU.

In addition to a Younger Face, I give you a Youthful Figure. The stocky waist-line disappears; you will develop graceful lines, and a graceful carriage, which is as great a charm as a beautiful face.

**Free Instructions** for beautifying the HAIR, HANDS, NAILS and FEET are included.

Write today for my Illustrated Facial Beauty Booklet—FREE. If you tell me what improvement you would like, I can write you more helpfully.

KATHRYN MURRAY, Dept. 336, 109 N. Wabash Ave., Chicago  
*The first woman to teach Scientific Facial Exercises*

## Hotel Puritan

### BOSTON

Commonwealth Ave.  
100 yards from Massachusetts Avenue car lines

### The Distinctive Boston House

A public house especially attractive to those who demand the best and prefer a homelike atmosphere.

Single rooms from \$2. Combined sitting-room, bedroom and bathroom from \$4.

*Some globe trotters have been good enough to call the Puritan one of the most inviting and comfortable hotels in the world.*

Booklet mailed on receipt of your card.  
**H. P. COSTELLO, Manager**

### Montessori House for Children

From June to September, a mother who is a Montessori graduate will receive in her home on a large farm, children from three to eight years. Careful supervision of health and diet. Visiting physician. Address MRS. SARA B. HAYES, Hillside Farm, Ashland, Mass.

are a chain of beautiful lakes. The Maine State Building will take up a part of your time. It was brought from Chicago at the close of the fair and is used for a library and it also contains during the summer months a fine collection of paintings by noted artists. Cost of trip by rail, including auto from station, \$3.50.

**Sixth Day.** Leave PORTLAND at 9 a. m. by train for a trip up the Songo River. At Sebago Lake station connection is made for the trip, which is made by steamer. The sail is varied and full of interest. It crosses Sebago Lake and passing Songo Club House enters the mouth of what is known to be the "crookedest of all the Maine rivers." It has been made famous by Longfellow, Hawthorne and Whittier. It is but two and a half miles long, as the bird flies, but you sail six miles and make twenty-seven turns before you reach the head of the river. The river is narrow and the reflections in the clear water most fascinating. After sailing five miles you reach the "Lock" and you are lifted seven feet into the Bay of Naples. After a short trip across the bay the steamer enters narrow and beautiful Long Lake, and nine miles further, Harrison, the last landing, is reached at 1:15 p. m. The steamer then starts for the home journey and Portland is reached at 5:30 p. m. Round trip, \$2.50.

**Seventh Day.** A trip by trolley to OLD ORCHARD, where you will have an opportunity to indulge in a sea bath in a fine surf. This is one of the finest beaches on the Atlantic seaboard. On the return, stop at Scarborough Beach and drive to Prout's Neck, a high promontory thirty feet above the level of the ocean. The rocks, the woods, the pretty coves and fine beaches make the trip ideal. This is one of Maine's leading shore resorts.

**Eighth Day.** Leave PORTLAND in the morning for a trip to BRETON WOODS. From start to finish you will be charmed with the scenic beauty of it. The trip from Crawford Notch is as wonderful as any thru the Rockies. The mountains are not as high, but equally as beautiful and interesting. From the hotels at Bretton Woods, where you can stay for luncheon (cost \$1.25) you get a fine view of Mt. Washington, 6000 feet above sea level, the highest of the White Mountain peaks. The return trip is equally attractive, for the views are well worth seeing a second time.

**Ninth Day.** As there are many trolley trips to points of interest, this day may be spent in visiting Cape Elizabeth, Riverton Park, Underwood Spring or Yarmouth, a quaint town on Casco Bay. Cost of these from 10 cents to 30 cents round trip.

Allow time during your stay to attend organ recital held every afternoon in the Auditorium in the City Hall. It is a wonderful organ presented to the city by one of her noted sons and is an attractive feature of summer life in Portland. Cost of admission, 25 cents.

**Eleventh Day.** Leave PORTLAND by train. Arrive PORTSMOUTH in about two hours. Hotels \$1.50 up, European plan. A city of old-time mansions and historic interest. If you prefer you may stop at New Castle, about two miles out, where there is a large and famous hotel and where you will get fine views of the surrounding country as well as of the sea.

**Twelfth Day.** Leave PORTSMOUTH by boat. Arrive ISLE OF SHOALS in about two hours. This group of islands, or more preferably rocks, are seven miles out at sea and most picturesque. Have a shore dinner there and in the evening return to Portsmouth.

**Thirteenth Day.** In the morning go via trolley for a trip to YORK BEACH, passing Kittery en route. The scenery is attractive and the trip enjoyable.

Leave PORTSMOUTH in the afternoon. Arrive BOSTON in a couple of hours. Leave BOSTON 6 p. m. via steamer.

**Fourteenth Day.** Arrive NEW YORK in the morning.

Cost from New York to Portland... \$6.00  
Cost of berth..... \$2.00

Approximate fare Portland to Boston ..... \$2.50  
 Boston to New York ..... \$4.00  
 Cost of entire trip ..... \$14.50

## LAKE GEORGE AND THE ADIRONDACKS

Time—From New York—Fifteen Days

**First Day.** Leave NEW YORK in the morning. Arrive SARATOGA SPRINGS in the afternoon. Hotels \$2.50 up per day, American plan. These wonderful springs are now under the control and management of the State and this Spa is now as good as the famous European spas. Aside from the springs, Saratoga is a most attractive resort. The air is clear and pure and the residential section of the resort is not surpassed in natural beauty anywhere.

**Second Day.** Spend the morning in visiting the springs and in the afternoon drive along the fine roads. The country is rolling, well wooded and charmingly diversified by hills and streams.

**Third Day.** Take the trip to Saratoga Lake, going via trolley to the lake and connecting there with the steamer, which makes hourly trips to White Sulphur Springs. You will get a delicious dinner at the hotel and then you will enjoy a ramble in the pine grove surrounding it, returning to Saratoga in the late afternoon.

**Fourth Day.** Leave SARATOGA SPRINGS in the morning by train. Arrive LAKE GEORGE in about one hour. Hotels \$2.50 up per day, American plan, or \$3 up per day, European plan. This is one of the most popular as well as one of the most picturesque lakes in America. It has a wonderful charm not only owing to its beauty but to the fact that it has been the scene of many historic and romantic events. It is thirty-two miles long, enclosed by majestic mountains, and contains innumerable islands heavily wooded. Herbert Spencer writing of it, said "Lake George is the most picturesque thing I saw in the United States."

**Fifth Day.** Go via trolley to Warrensburg, a pleasant village located on a plateau in the valley of the Hudson among the foothills of the Adirondacks. Spend the rest of the time driving, boating or fishing.

**Sixth Day.** Leave LAKE GEORGE in the morning by boat for the trip thru the lake. Arrive BALDWIN at the foot of the lake in about three hours. There board a train, which connects with the steamer at FORT TICONDEROGA on Lake Champlain.

Leave FORT TICONDEROGA on arrival of train. The trip thru Lake Champlain has its fascination even tho the lake is not as picturesque as Lake George. Here the shores are low and the long ranges of the Adirondack and Green Mountains form a wonderful background. The views are pleasing and much of romance lingers about them. On its shores are the impressive ruins of Forts Ticonderoga, Montgomery, Amherst and St. Frederic. At the extremity of historic Crown Point they have erected a beautiful memorial lighthouse, as a memorial to Champlain, the discoverer of the lake. Several hours are spent going north on the lake till PLATTSBURG, the last stop, is reached in the late afternoon. Spend the night there or at BLUFF POINT, three miles south.

**Seventh Day.** Leave PLATTSBURG or BLUFF POINT by train. Arrive LAKE PLACID in about three hours. Hotels and boarding houses from \$2 up, American plan. Lake Placid and Mirror Lake, renowned for their beauty, are separated by a narrow strip of land but a few yards in width. At the head of Lake Placid rises old Mount Whiteface, and looking toward the south the peaks of McIntyre and mighty Marcy, the highest of the range, are seen. The shores are thickly wooded and in the fall the great variety of trees give a wealth of coloring such as is seldom seen. This is a center from which many delightful trips may be taken. Horseback riding is a favorite pastime, as is mountain climbing,

# NIAGARA TO THE SEA

## A Glimpse of Fairyland

There is nothing quite like the scenery of the Thousand Islands of the St. Lawrence—nowhere in the world you will see just that translucent "blue" of the water or just that delightful maze of island-dotted river scenery.

The palatial steamers of the Canada Steamship Lines pass through this fairyland of Canada on their way from Niagara to the Sea. It's a trip you'll enjoy every minute of, from the time you go aboard at Niagara Falls or Toronto, until you reach Chicoutimi at the head of the glorious Saguenay River.

Booklet telling all about it, sent for 6c., to cover cost of mailing.

Thos. Henry, Passenger Traffic Manager,  
**Canada Steamship Lines, Limited**  
 175 Victoria Square, Montreal, Que.

Fares from Niagara Falls:	
To Montreal and return .....	\$18.55
To Quebec and return .....	\$25.90

golf and tennis. Trails radiate in every direction.

*Eighth Day.* This day may be spent in climbing to the summit of Whiteface; from there the spires of Montreal are to be seen on a clear day.

*Ninth Day.* In the morning take the trip by steamer around Lake Placid. You will be charmed by the beauty of it and in the afternoon drive thru beautiful Wilmington Notch to High Falls.

*Tenth Day.* Go via auto to Keene Valley, twenty miles from Lake Placid. You will enjoy every moment. The roads are fine, the scenery varied, wonderful views of mountains on every side for the valley is hemmed in by mountains. Beautiful Cascade Lakes are passed en route and a visit can be made to the grave of John Brown, which is just off the main road. Have luncheon in the valley at one of the many good hotels to be found there. If time permits drive to Ausable Lakes at the extreme end of the valley. The road takes you thru dense forests and the lakes are the most beautiful and wildest in the Adirondacks.

*Eleventh Day.* Leave LAKE PLACID in the morning by train. Arrive RAQUETTE LAKE in the afternoon. Hotels and camps \$2.50 up per day, American plan.

*Twelfth Day.* Leave RAQUETTE LAKE in the morning by steamer to BLUE MOUNTAIN LAKE. The steamer crosses Racquette Lake, dotted with beautiful islands, then winds its way thru tortuous channels up the Marion River and on thru Utawana and Eagle Lakes to Blue Mountain Lake, covering a distance of twelve miles. The lake is 1800 feet above sea level and one of the loveliest of the mountain lakes. After luncheon leave Blue Mountain Lake and arrive Raquette Lake in the evening, cost about \$2.

*Thirteenth Day.* Leave RAQUETTE LAKE in the morning by train. Arrive EAGLE BAY in about forty minutes. Leave EAGLE BAY via steamer, which connects with train, for the trip thru the FULTON CHAIN of Lakes, four in number. The trip is full of interest, for the shores of the larger lakes are dotted with hotels and camps which during the season present a gay appearance. Many canoes, rowboats and launches are going about filled with happy vacationists. Mountains covered with vast forests of spruce, balsams and white birch surround these lakes. Old Forge, at the foot of First Lake, is reached in time to connect with train for Fulton Chain.

Leave Fulton Chain on connecting train. Arrive Albany in the evening. Leave Albany same evening by boat.

*Fourteenth Day.* Arrive New York in the morning or spend the night in Albany and leave Albany in the morning by boat or train and arrive New York in the evening.

Cost of round trip ticket from New York back to New York.....\$20.95  
Side trip from Racquette Lake to Blue Mountain Lake and return.. \$2.00

### THOUSAND ISLANDS, ST. LAWRENCE, MONTREAL, AND QUEBEC

Time—From New York—Fourteen Days

*First Day.* Leave NEW YORK in the morning. Arrive CLAYTON in the late afternoon. Leave CLAYTON on connecting boat. Arrive ALEXANDRIA BAY in an hour. Hotels \$2.50 up per day, American plan. This attractive resort is a good central point from which to take the many delightful excursions among the wondrously beautiful islands, rich in natural attractions. While many of them are dotted with elegant villas and beautiful homes, many are still covered with firs and pines; some are but great rocks and others are open fields. The narrow channels, the bays and inlets and the multitude of islands make the region most picturesque. Fishing is one of the favorite pastimes and the river is

## MOUNT GREटना PARK

On Line of CORNWALL & LEBANON RAILROAD

The most popular and attractive mountain cottage resort in the State

### HOTEL CONEWAGO, MOUNT GREटना, PA.

A modern up-to-date resort hotel will be open for the season on June 19th. This hotel is pleasantly located on an eminence above Lake Conewago and is becoming more popular each year. Cottage Settlement and Hotels protected by sewage system and disposing plant. Apply to SAMUEL H. LEWIS, Newport Apartments, 16th and Spruce Sts., Philadelphia, Pa., until June 15th; after that date at Hotel.

#### DATES OF CONVENTIONS, ETC.

Pennsylvania Chautauqua, July 2-30. United Brethren Assembly, Aug. 3-12.  
Annual Assembly Reformed Church, Aug. 7-14.

Write to the undersigned for copy of beautifully illustrated booklet of Mount Greटना.

A. D. SMITH, Pres't and Gen'l Supt. Cornwall & Lebanon R. R. Co. LEBANON, PA.

celebrated for the variety and abundance of its fish. Here you will find the mighty muscallonge, the gamey black bass and the pickerel, which is easily caught. This region is also celebrated for the many motor-boats flitting here and there and everywhere. The races of the American Power Boat Association are held here yearly, at which time some of the fastest motor-boats in the world are seen on the river. Golf is popular and there are well-kept links. Camping is also popular and the State of New York owns several islands which are open to the free use of campers. House-boating is another attraction and you will find here a limited number of these boats for hire.

**Second Day.** In the morning take the fifty-mile ramble among these beautiful islands. The steamer winds in and out among them and you will never forget the beauty of this charming trip. Cost 75 cents. In the afternoon take the Club Ramble via the steam yacht "Ramona." She is small and is able to go thru the narrow winding passages and intricate channels impossible to the larger boats. Cost 75 cents. In the evening take the same trip by searchlight. You will find it fascinating. The great searchlight on the steamer illuminating the beautiful American and Canadian Islands, giving them a weirdness which charms. Cost 50 cents.

**Third Day.** Take a fishing trip with a good guide, who will lead you to good fishing grounds. Leave in the morning and fish till noon, then go ashore at one of the numerous spots where the state has erected fireplaces, and your guide will cook the fish you have caught. He will also produce from the boat other good things and will give you a lunch fit for the gods.

**Fourth Day.** Take the trip to Canada. Round trip to KINGSTON, ONT., is made in one day. It is a quaint, strongly fortified city full of historic interest.

**Fifth Day.** Leave Alexandria Bay in the morning. Arrive MONTREAL in the late afternoon. On the trip down the river many interesting towns are passed, among them Brockville, Ont., Ogdensburg, New York, and Prescott, Ont., where change is made from the lake steamer to the river steamer for the trip thru the rapids. Running the rapids is interesting and some of the passages are quite thrilling. The Long Sault Rapids extend for nine miles down the river and you pass many beautifully wooded islands. The steamer is carried by the sheer force of the current. Coteau, Cedar, Split Rock and Cascade Rapids follow and finally the Lachine, the last of the chain. The channel thru there is narrow and the rocks are many, some hidden and some exposed to view, and it is thrilling to watch them and note how the steamer passes, at times but a few feet from the edge. The clouds of spray arising from the churning of the waters all add to the excitement. As you draw near the city of Montreal, the first thing that charms is the mountain behind the city, Mount Royal, from which one gets a magnificent outlook. Montreal is interesting because of its age, founded in 1642 by the French, and its historic spots that are part of the history of the American continent.

**Sixth Day.** In the morning take sight-seeing car for a trip around the city and later the trip around the mountains. Spend the afternoon visiting the various points of interest in the city, among them the Chateau de Ramezay, built in 1705, now a museum with its quaint rooms and many interesting relics; the Church of Notre Dame, the second largest church on the continent; the famous Bon Secour Market and the Church of the Bon Secour. This is near the river and from the tower you will get a fine view of it. You will find many public buildings worth visiting as well as the Grey Nunnery, and the older parts of the town with their narrow streets and primitive buildings.

**Seventh Day.** Visit Mt. Royal Park in the morning, either driving or going via the Incline Railway. You will be fully repaid, for the view is magnificent. The city lies at your feet, miles of river can be seen

## Seeing the Exposition on

"A. B. A." American Bankers Association **Cheques**

Safest, handiest "travel money."  
Get them at your Bank

and on a clear day the Adir and Green Mountains are visible.

*Eighth Day.* Leave Montreal in the evening by steamer.

*Ninth Day.* Arrive **QUEBEC** in the morning. This quaint town offers unlimited attractions. It has many historical sites, old landmarks in good state of preservation, unique and picturesque streets and houses, and in addition scenic beauty hardly equaled anywhere. Drive about town in one of the quaint vehicles called a caleche. You will find the drivers most polite and anxious to show you all the principal points of interest: the many churches and handsome public buildings, Ursuline Convent and other nunneries, the Citadel high above the St. Lawrence with views in every direction and forming a background the Laurentian Hills miles away, the Plains of Abraham and Dufferin Terrace, from which you can look down into the old part of the town.

*Tenth Day.* Go via electric train to St. Anne de Beaupré. On the way you will get a fine view of the Montmorency Falls. You can spend a couple of hours there visiting the famous shrine of St. Anne, for the church contains much of interest with its many chapels, its pyramids of crutches, its old paintings and relics. Visit the Scala Santa, a unique religious structure. The large flight of stairs inside the building called Holy Stairs, which the worshipers ascend kneeling, contain relics of the Holy Land. You will find many statues in the building, each presenting some incident of the Passion. On the return trip stop at the Falls, which are 274 feet high and take the elevator to the top. Have luncheon at the Kent House, built by General Sir Frederick Haldimand, then Governor-General of Canada in 1778. It is surrounded by a beautiful park and owing to the history of its romantic past and its beautiful views is well worth a visit. On the return you will enjoy a car ride in the special observation cars, which make seven trips daily. They have experienced guides who point out all the places of interest.

*Eleventh Day.* Leave Quebec in the morning by boat for the trip thru the Saguenay, returning the next day. Among the important stops made are Murray Bay, one of the most popular watering places on the Lower St. Lawrence, and Tadousac, an old French town. Time is given here to visit the oldest church in Canada. On the return, the entire Saguenay River is taken by daylight and you are then able to see Capes Trinity and Eternity, 1800 feet high, near the mouth of the river.

*Thirteenth Day.* Leave Quebec in the morning by train.

*Fourteenth Day.* Arrive New York.

Cost of ticket from New York to New York ..... \$32.25  
Side trip from Quebec to Saguenay and return ..... \$9.50  
War tax on tickets into Canada, \$1.00 additional.

### A TRIP THRU CALIFORNIA

Time—From New York—About Two Months

California has always been a great show place, for nature is prodigal there, giving her glorious mountains and wonderful canyons, the largest and oldest trees in the world, wonderful scenes and wonderful products. Romance, too, is there in historic missions. This year two wonderful expositions are added, both very beautiful. The one in San Francisco, located on the shores of the bay near the Golden Gate, which for beauty can hardly be excelled, gives a marvelous presentation of what the world has accomplished. The one in San Diego has "everything in motion," for what is not turning is growing. Here we find not what the world has done but the process by which

## Crouch & Fitzgerald

Announce their fresh new stock of Reliable Luggage for Vacation Travelers.

### The "EXPOSITION"

Case is admirably adapted for your trip to the Coast. You need a case of large capacity, light enough to be easily handled. The "Exposition" meets every requirement. Outside finish in Black Enamelled Canvas with Black Leather trimmings. Case and tray beautifully lined with Cretonne. Size 28 x 16 x 8. Price \$22.

Many other sizes of this and Leather finishes, all hand stitched. Send for illustrated booklets about other Vacation Specialties, Hand Bags and Wardrobe Trunks.

14 West 40th St. . . 154 Fifth Ave. at 20th St. . . 177 Broadway  
New York

it is done. Aside from these two wonders, one must see the great nature wonders—Yosemite, its domes and cliffs; Tahoe, the great lake in the heart of the Sierras; the old Franciscan missions, and innumerable other points all interesting and delightful. Choice of three routes going and returning

FIRST ROUTE

First Day. Leave NEW YORK at noon Saturday by steamer.

Fifth Day. Arrive NEW ORLEANS in the morning. Having several hours here will give you an opportunity to take the various belt line cars, which will give you a good idea of the city. The St. Charles belt will take you thru the American residential section and the Esplanade belt the French residential section. You can wander thru the old parts of the city, for they are very accessible. Leave New Orleans in the evening.

Seventh Day. Arrive EL PASO in the evening. Hotels \$1.50 up. European plan. Spend the day in this city, which you will find interesting. There are trolleys running in every direction. Take the trip via sight-seeing auto to Juarez, Mexico. You will find that this city belongs to an age long passed. The homes are of adobe with grated windows. Bull fights are still held here and they have a noted race track. Cost of trip, \$1.

Eighth Day. Leave El Paso in the evening.

Ninth Day. Arrive LOS ANGELES in the evening. Hotels from \$1 up, European plan.

SECOND ROUTE

First Day. Leave NEW YORK in the afternoon.

Second Day. Arrive CHICAGO in the evening over Santa Fe Railroad. Leave Chicago in the evening.

Fifth Day. Arrive GRAND CANYON in the morning. El Tovar Hotel, \$4 up per day, American plan; Bright Angel's Camp, \$1 up per day, meals a la carte. Spend a couple of days here taking the various drives and the trip on horseback to the bottom of the canyon. Cost of Hermit Rim Road drive \$3 per person; Canyon trip, \$5.

Seventh Day. Leave Grand Canyon in the morning.

Eighth Day. Arrive LOS ANGELES in the evening.

THIRD ROUTE

First Day. Leave NEW YORK in the morning.

Second Day. Arrive CHICAGO in the morning. Leave Chicago in the morning, Rock Island route.

Fifth Day. Arrive TUCSON in the afternoon. Hotels \$1.50 up per day, European plan. The city and mission nine miles distant are both interesting. It is surrounded by picturesque mountain peaks and is noted as a health resort. The nearby mountain resorts have remarkable records. It is the seat of the University of Arizona, of the Carnegie Desert Botanical Laboratory and an agricultural experimental station.

Sixth Day. Leave Tucson in the afternoon.

Seventh Day. Arrive LOS ANGELES in the morning. Hotels \$1 up per day, European plan. The "City of the Angels" is one of the wonder cities owing to its phenomenal growth. The climate is mild. Flowers bloom thruout the year.

Or arrive PASADENA, seven miles distant. Hotels \$1.50 up per day, European plan. This city is noted for the beauty of its homes. It has a picturesque location in the San Gabriel Valley at the foothills of the Sierra Madre Range.

Spend several days at either city and take the following trips: Trolley trip around the beaches, \$1. Old Mission trip, \$1. The trip up Mt. Lowe, from which you get a magnificent view of the surrounding country. The cars wind round the mountain to Alpine Tavern, 5000 feet high, cost \$1.

NO EUROPE THIS YEAR—VISIT FOREIGN AMERICA  
12 DAY ALL EXPENSE \$60<sup>00</sup> UP  
NORTHERN CRUISE

Seeing Foreign America, including all essential expenses for travel, berth and board, is offered by the

RELIGIOUS EDUCATION and SOCIAL SERVICE INSTITUTES during the SUMMER QUARTER open to special students with scholarship aid. Apply to F. C. SOUTHWORTH, President.

MEADVILLE THEOLOGICAL SCHOOL,  
Meadville, Pennsylvania.

One day for the trip to Catalina Island, cost \$2.75. One day trip to Riverside and Redlands, going by train and returning by trolley, including drive to Smiley Heights and along Magnolia Avenue (world famed) in Riverside; cost \$3.

*Fifteenth Day.* Leave Los Angeles in the morning. Arrive **SAN DIEGO** or **CORONADO BEACH** in the afternoon. Hotels \$1 up per day, European plan. San Diego is old in history. She is also favored in her location, her mountains, her climate. Coronado, should you prefer to stay there, is reached via trolley and ferry. Hotel \$4 up per day, or Tent City at lower rate. Two days must be given to the Exposition. The grounds, the buildings, the wonderful open-air organ where daily concerts are given, and the exhibits all interest and repay one for the time spent. Spend a day in taking one or more of the beautiful drives.

*Nineteenth Day.* Leave San Diego at noon. Arrive **LOS ANGELES** in the afternoon and connect with train for Santa Barbara. Arrive **SANTA BARBARA** in the evening. Hotels \$3 up per day, American plan. This charming city resembles Mentone in France. Several restful days may be spent here. Driving, riding, boating and bathing may be enjoyed. There are also fine golf links and tennis courts. Drive to Miramar, a flower-girded cottage settlement located on the ocean three miles from the city. It can also be reached by train. Visit the Mission, one and a half miles from the center of the city. It can be reached by trolley. It was founded in 1786 and is the best preserved and best known of all the California missions. The garden is especially fine and the view from the belfry unsurpassed.

*Twenty-second Day.* Leave Santa Barbara in the morning. Arrive **PASO ROBLES HOT SPRINGS** in the afternoon. Paso Robles Hot Springs Hotel, \$4 up per day, American plan. These celebrated springs were known and used by the Indians before California history began. They are on El Camino Real, the royal road of Spanish days, at the foothills of the Santa Lucia Mountains in a great natural park of live oaks. Drive along the royal road to Mission San Miguel, eight miles from the springs. It is one of the oldest and most attractive of the California missions. There are many other drives for the roads here, as all over the state, are fine. Horseback riding over the hills and thru the valleys is one of the chief delights. If you prefer, you may bowl, play golf or tennis, or swim in an immense plunge.

*Twenty-third Day.* Leave Paso Robles Hot Springs in the afternoon. Arrive **DEL MONTE** in the evening. Hotel Del Monte, \$4 to \$6 per day, American plan. "The Riviera of America" is the name given to the peninsula on which Del Monte is located, an ideal region having the broad Pacific on one side, the blue Bay of Monterey on the other, and the rolling hills with their forests of fragrant pine back of it. This delightful resort is situated in a park of 125 acres, which for beauty is worth the trip across the continent. Take the famous seventeen-mile drive. You will be interested in the grove of ancient cypress. Visit Monterey, from 1770 to 1849 the capital of California. It has many landmarks—old adobe buildings and early missions. Then drive three miles to the Carmel Mission, where lies the body of Father Junipero Serra. There are many other drives here if time permits. A fine golf course of eighteen holes, tennis courts in perfect condition, a bowling green and archery provide for sports.

*Twenty-fifth Day.* Leave Del Monte in the morning. Arrive **SAN FRANCISCO** in the early afternoon. Hotels from \$1 up per day, European plan. Several days must be given to the wonderful Exposition. The superb location, the buildings, the flowers, the exhibits all will please. There are many delightful short trips to nearby places. You will get a good idea of the city by taking the sight-seeing car, leaving ferry loop at 10 a. m. Cost 75 cents. A three-hour ride with stop at the Cliff House to see the beach, the Seal Rocks and Golden Gate.

Take one day for the trip to Mt. Tamalpais, including Muir Woods on the return journey. Cost \$2.90. Take Sausalito Ferry,

from Ferry Building and at Sausalito change to electric railway to Mill Valley, a pretty town nestled in a canyon. Transfer here for the trip to the summit (2592 feet), which is made over the "crookedest railroad in the world." The views are impressive. Stop here long enough to take the walk around the peak and then have luncheon at the tavern. At 2 p. m. the train leaves for Muir Woods. This canyon is in an absolutely primeval condition, entirely covered with a dense forest growth, the redwood predominating. A couple of hours stop-over is given to see the Big Trees and San Francisco is reached about 5 p. m.

Another day visit Berkeley and Oakland. This is over the Key Trolley Route and the boat leaves Ferry Building at 10 a. m. It covers sixty-eight miles and the cost is \$1. In Berkeley you see the University of California, campus and recent buildings, the Greek Theater, Campanile and new library. The grounds are very beautiful, having many live oaks which are very ancient, also other handsome trees. The residential section is passed and the trip to Oakland takes in the public buildings, Lake Merritt, Oakland Museum, charming grounds.

Take a trip to San Jose and Lick Observatory. San Jose, the "Orchard City" of California, in the beautiful Santa Clara Valley. The Lick Observatory on Mt. Hamilton is reached by stage or automobile from San Jose. Or, if you prefer, you may make OAKLAND headquarters. Hotels \$1.50 up per day, European plan. It is across the bay and it takes but twenty-five minutes by train and boat to reach San Francisco. The drives about here are many and the scenery charming. All sections of the state are accessible. There are many beautiful parks in and about the city.

**Thirty-third Day.** Leave San Francisco in the evening.

**Thirty-fifth Day.** Arrive PORTLAND in the morning. Hotels \$1.50 up per day. The "City of Roses" is noted for its scenic beauty. It is located in the valley of the Willamette, protected on the west from the sea by the Coast Range Mountains, and with beautiful snow-capped Mt. Hood on the east. Trolleys run in every direction and a couple of days may be pleasantly spent in taking various trips, also in seeing the parks and public buildings. Take one day for the trip to Mt. Hood. Leave 10 a. m. by rail to Hood River, then by automobile to Hood River Lodge, which is reached at 2 p. m. Returning leave Mt. Hood River Lodge at 3:30 p. m. Arrive in Portland 7:15 p. m. The outlook from the Lodge is unsurpassed in scenic grandeur. Cost of the trip, \$8.

**Thirty-eighth Day.** Leave Portland in the morning. Arrive SEATTLE in the afternoon. Hotels \$1 up per day, European plan. There is much to interest one in this city, with its fine location on a series of terraces rising from the shores of Puget Sound. The higher parts of the city command fine views of the Olympic Mountains with their snow-capped peaks. Two lakes are within the boundaries of the city, making it unique and adding much to the beauty of the drives. The Totem Pole in Pioneer Square is interesting. It was brought from Alaska and is a good example of its kind. The first morning take the Seeing-Seattle car. It will give you a good idea of the city and show you all the principal points of interest. You may also enjoy a trip to the U. S. Navy Yard, reached by steamer. Leave at 7:20 in the morning for a trip to Mt. Ranier-Tacoma. The train arrives at Ashforth at 11:45, where change is made for auto. Thence over a splendid road which winds thru Succotash Valley and penetrates the forest, crossing many well constructed bridges over deep ravines; along the sides of canyons and curving about the base of mighty peaks until National Park Inn is reached. Cost of trip to Inn and return, \$6.50.

#### FIRST ROUTE

**Forty-first Day.** Leave Seattle in the evening (Great Northern Railway).

**Forty-second Day.** Arrive GLACIER PARK in the evening. Five days may be

# Better Cigars for Less Money

My rare Havanas—  
unpurchasable in any store  
—cost you half what they  
should because you and I deal  
together personally. The  
dealer's profit goes to you.

Yet you get that same delight-  
ful cigar I myself have smoked  
for over 40 years. Today 12,000  
discriminating smokers say I  
am a full-fledged connoisseur.

## I'm Hard to Please

This business was started by my  
friends who used to depend on me to  
divide up my private stock. The  
circle grew. Before long I kept a  
friend in Cuba busy selecting only  
the finest tobacco.

Today I command the choicest  
plants grown in the mountainous  
Vuelta district—noted for its most  
expensive tobacco. I sold over  
2,000,000 cigars last year.

Since I pay no salesmen's salaries  
or expenses, I can afford to sell my  
private monogram J. R. W. panatela  
for \$5.00 per hundred, \$2.60 for fifty;  
charges prepaid. That's not far  
from cost.

## Decide for Yourself

Once you smoke a few of my cigars  
—so mild and sweet—you'll want  
more. Not merely because you save  
30 per cent. to 50 per cent., but  
because they measure up to your most  
critical standards. Because  
they are all uniformly  
enjoyable.

**First Five Free!**  
Just to convince you that you  
cannot duplicate these cigars  
for twice the cost—smoke five  
at my expense. Merely send roc  
for packing, postage and reve-  
nue, with your letterhead, busi-  
ness card or reference.

## THE HANDBOOK OF NATURE-STUDY

By  
ANNA BOTSFORD COMSTOCK  
CORNELL UNIVERSITY

This is the achieve-  
ment of fifteen years'  
work in the successful  
training of students and  
teachers in the proper  
methods of presenting Nature-Study, and the  
correlating of health, geography, arithmetic,  
drawing, and language work with Nature-  
Study.

The Handbook of Nature-Study is an in-  
spiration to the trained and untrained teacher.  
In its 234 stories and lessons is given the  
answer to that query "What, Where and  
Why" of the Nature student.

The adaptability and value of this book is  
shown by its wide distribution. It is used in  
thousands of rural, city and normal schools,  
colleges, and homes in all parts of the world.

900 pages, 1,000 illustrations.

Bound in one volume \$3.25 Postpaid \$3.65  
Bound in two volumes \$4.00 Postpaid \$4.50

evening.

### SECOND ROUTE

*Forty-first Day.* Leave Seattle in the  
afternoon.

*Forty-third Day.* Arrive **YELLOW-  
STONE PARK** in the morning. Spend five  
days for the trip thru the Park.

*Forty-eighth Day.* Leave Yellowstone in  
the evening.

*Fiftieth Day.* Arrive Chicago in the even-  
ing. Leave Chicago in the evening.

*Fifty-first Day.* Arrive New York in the  
evening.

### THIRD ROUTE

*Forty-first Day.* Leave Seattle in the  
afternoon.

*Forty-second Day.* Arrive **GLACIER** in  
the afternoon. Spend one day here. Glacier  
House at station, \$4 up per day, American  
plan. Walk to the Great Glacier and take  
the trail to Lake Marion.

*Forty-third Day.* Leave Glacier in the  
afternoon. Arrive **FIELD** in about four  
hours. Mt. Stephen House, located at sta-  
tion, rates \$4 up per day. During the day  
spent here visit Emerald Lake in the beau-  
tiful Yoho Valley.

*Forty-fourth Day.* Leave Field in the  
evening. Arrive **LAKE LOUISE** in about  
one and one-half hours. This is one of the  
most beautiful lakes in the world, surpass-  
ing in coloring many of the famous Swiss  
lakes. Chateau Lake Louise, a short dis-  
tance from station. Rates \$4 up per day,  
American plan. Cost from station, 50 cents.  
Visit the lake in the clouds. Ride the trail  
to Saddleback Mountain. Take the trip to  
the Valley of the Ten Peaks, and many  
others equally interesting may be visited  
at costs ranging from \$1.50 to \$3.

*Forty-sixth Day.* Leave Lake Louise in  
the evening. Arrive **BANFF** in an hour  
and a quarter. Banff Spring Hotel rates \$4  
up per day, American plan. This is near  
station; cost to reach it, 25 cents. Here  
you will be interested in the Hot Sulphur  
Springs and fresh water bathing pools. You  
will find excellent golf links, beautiful  
river trips and wonderful drives and rides  
among the mountains.

*Forty-seventh Day.* Leave Banff in the  
evening.

*Forty-ninth Day.* Arrive **ST. PAUL** in  
the evening. Leave St. Paul in the evening.

evening.

Cost of ticket from New York back  
to New York, either route.....\$116.30

(Good for three months)  
Berth in Pullman from New York  
to the Coast.....\$18.00

### BARBARIANS

I pause beside the stream and hear  
The waters talking all the way;  
If I had a proper ear  
I could tell you what they say.

The lovely tree against the sky,  
Which the first sun rests upon,  
Has a message for my eye,  
If I had a proper one.

On the heath I met a wind.  
It whispered to me as I stood;  
If I had a proper mind  
I could answer, so I could.

I am deaf and dumb and blind,  
No reply can I invent  
When a stream, a tree, a wind  
Asks am I intelligent.

From "Songs from the Clay,"  
by James Stephens (Macmillan).

## DUTCH BULBS

From  
Now  
Until  
July 1st  
—Not  
Later

Hyacinths, Tulips, Narcissi,  
Crocus, give, for a small out-  
lay of time and money, an

house from December until  
Easter, and in the garden, from  
earliest spring until the mid-  
dle of May. Bulbs are  
grown almost exclusively  
in Holland, in enormous

quantities, and sold at very low prices. Usually  
they cost double before reaching you.

By ordering from us now instead of waiting until Fall,  
you make a large saving, get a superior quality of Bulbs not  
usually to be obtained at any price in this country, and  
have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and  
are shipped to our customers immediately upon their  
arrival in the best possible condition.

If you wish to take advantage of our very low prices,  
we must have your order not later than July 1st, as  
we import Bulbs to order only. They need not be paid  
for until after delivery, nor taken if not satisfactory.  
(References required from new customers.) For prices  
on smaller quantities see our import price list, the most  
comprehensive catalogue of Bulbs published, may be had  
for the asking.

will take the sting out of corns and bunions and  
give instant relief to Tired, Aching, Swollen,  
Tender feet. Sold everywhere, 25c. Don't accept  
any substitute. Sample sent FREE. Address  
Allen S. Olmsted, LeRoy, N. Y.

## SUMMER CAMPS THAT TEACH

The summer camp for boys or girls has always had a well-deserved reputation for good, wholesome fun. A sugar-coated pill of education in the guise of play is the added attraction of two camps which are delightfully different and which combine with the beauty of New England scenery and outdoor life some unusual instruction. At "Oahe," a camp for girls in New Hampshire, under the direction of Dr. Charles Eastman, the secrets of genuine Indian woodcraft, nature lore and handicrafts are taught by college-educated Indians, who are trying to preserve the historic culture of their race.

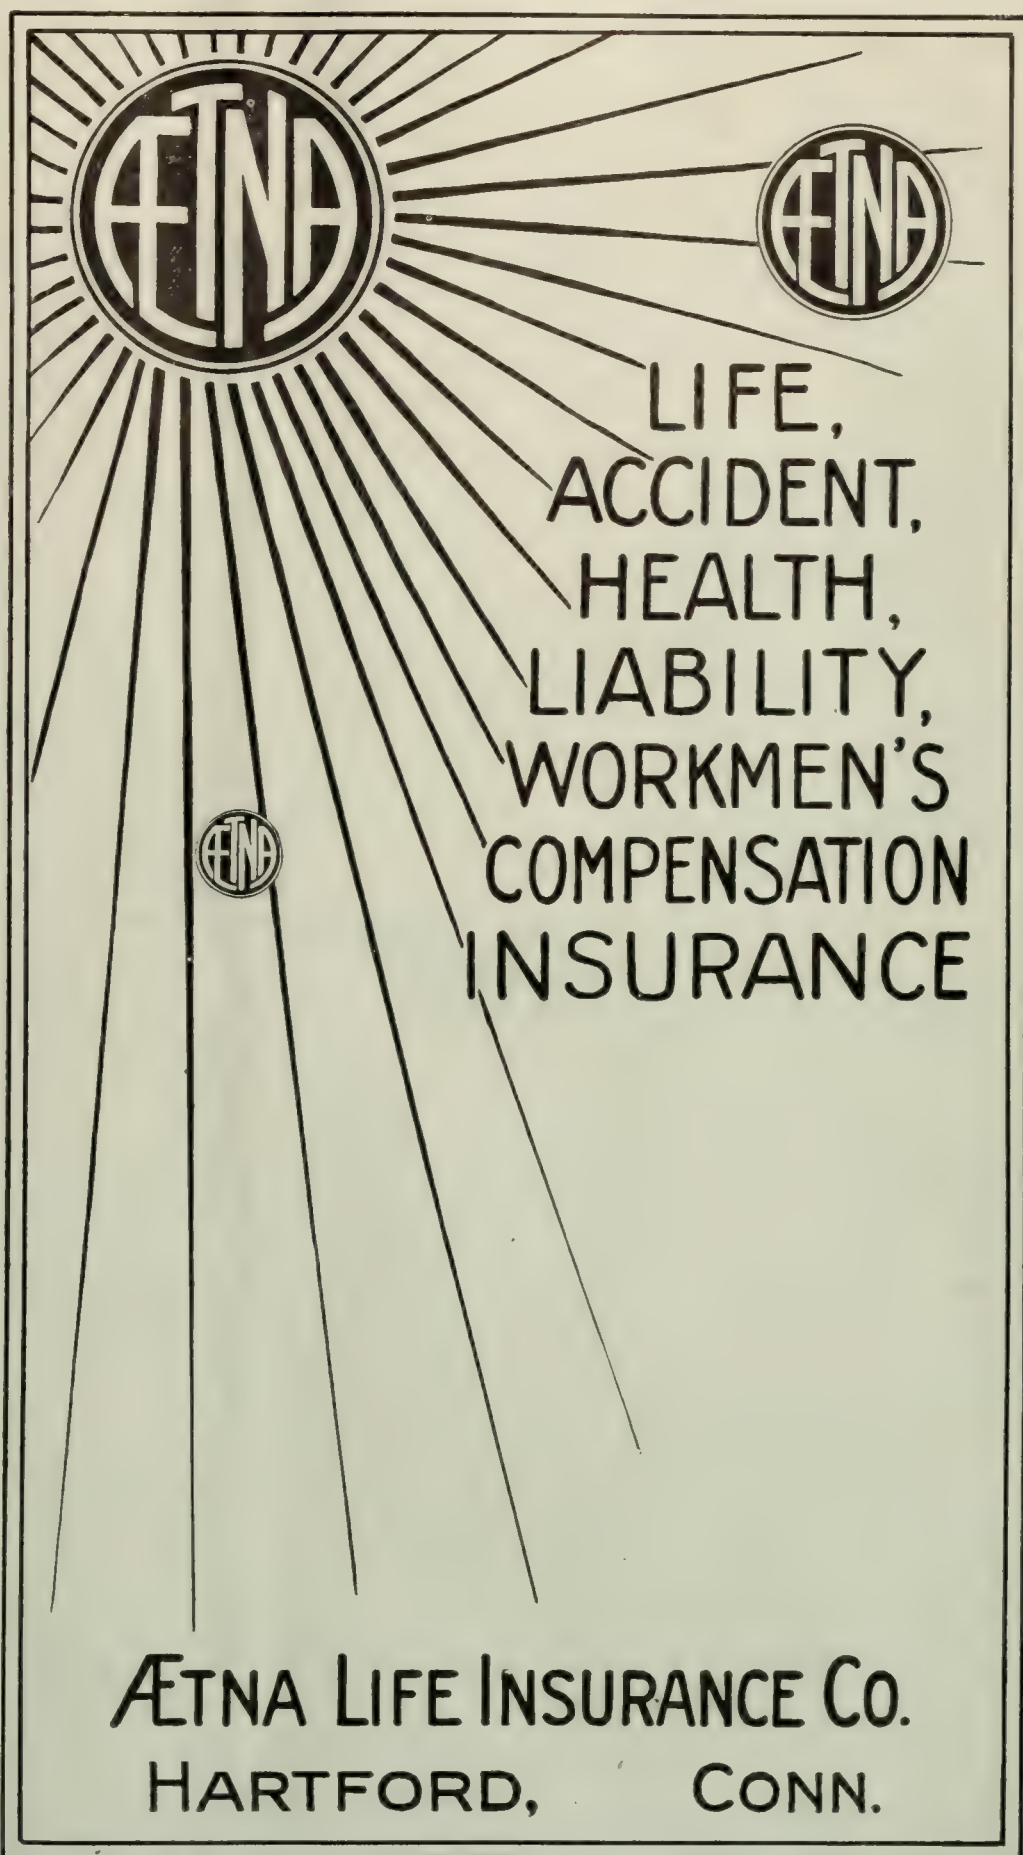

And under the supervision of the Massachusetts Agricultural College is a camp for boys which offers vocational training by the regular college instructors, and also has organized athletics, hikes, special instruction in photography, surveying, wireless telegraphy, first aid, seed testing, and military drill, and campfire talks by prominent men who are interested in boys' work. "To interest the boy in agriculture and country life" is its primary object, and to this it adds three other aims: "To impress on the boy his responsibilities as a member of society; to teach the boy clean, wholesome sports, recreation and proper spirit in competitive contests; and to demonstrate the value of a boys' camp as an educational factor."

## THE VACATION USE OF PUBLIC LIBRARIES

Not the least valuable results from the use of books taken from the great Detroit Public Library is found in the extension privilege granted during summer vacations. Beginning officially, June 1, and in some cases earlier, and lasting until October 1, patrons are permitted to take out of the city on vacation trips as many volumes as they deem necessary or desirable for their intended reading. Card holders may thus take books for all summer and carry them to any corner of the world.

Last summer books were carried completely around the world. The number thus removed from the library on vacation tours ran up well into the thousands. And the greatest point is that not a single book was lost. Exceptions to the rule are the latest fiction and some standard technical works and of course standard works for reference only. Most of the volumes chosen last year treated of travel and standard fiction, with a sprinkling of poetry and essays. The summer privilege has also been extended to apply to those families of the city which are lucky enough to be able to spend their winters in the south.

A recently originated feature of the library which is found to be of great value is the collection of clippings on current civic problems. Within three months the collection has assumed such proportions and has shown itself so useful and practical as an aid to the study of current questions that an entire room will be devoted to the collection within a short time.

## THE NEW BOOKS

### OUR INSECT FRIENDS AND ENEMIES

To say that the annual loss to the agriculture of this country thru the depredations of insects amounts to about seven hundred million dollars may be sufficiently truthful so far as the accuracy of the estimate is concerned, but does not mean very much. For such estimates are based on the assumption that the millions of tons of grain and cabbage and cotton destroyed by the insects are worth as many dollars as similar quantities of materials that escape destruction and reach the ultimate consumer. But it must be obvious that if we could eliminate the insects in question the supply of agricultural products, in proportion to the demand, would produce a decided lowering of prices. However, there is a real loss, which should be measured in terms of commodities, rather than in terms of dollars. And the insects, taking the class as a whole, constitute a serious factor in determining the cost of living, as well as in duration of life.

An excellent account of the relations between human beings and this class of animals is found in the new book *Insects and Man*, by C. A. Ealand. The book is sufficiently technical for the person who needs to follow up for details of identification and application, and at the same time quite readable and interesting for the lay person. Insects are treated in their relation to plants and in relation to our domestic food animals. The chapters on beneficial insects, household insects and insect control are practically useful, the first of these bringing together a mass of information that is not readily available. At the present time civilized man makes direct use of comparatively few insects—the bee for honey, the silk-moth for silk, and the lac insect, being the most important. But the indirect value of the bees as pollen carriers is incalculable, whereas honey as a food is practically negligible in our national economy. It is interesting to learn that so many families of insects have in the past contributed directly to the food supply of various races of mankind—from the manna insect of biblical times to the larvæ of beetles, flies, butterflies and moths, the adults of ants, termites, and the eggs of water-beetles consumed by the "natives" in all parts of the world to the present time.

Confining themselves to the relations of insects to the health of man and a few of his domestic animals—but extending the word entomology to include all the joint-legged animals, Professors Riley and Johannsen of Cornell University have prepared a very useful *Handbook of Medical Entomology*. This work is much more comprehensive than the one by Ealand, and is addressed more

directly to the professional student. There are detailed descriptions of the structure and life histories of the important species, excellent illustrations and keys of value for specific identification, and historical notes on the growth of our knowledge of the relations described, making it a valuable reference book for schools and libraries.

*Insects and Man*, by C. A. Ealand. The Century Co. \$3.50.

*Handbook of Medical Entomology*, by Wm. A. Riley and O. A. Johannsen. Ithaca: Comstock Publishing Co. \$2.

### A REAL REFORM

There has always been something comic in our willingness to discuss radical changes in every branch of labor save that of the houseworker, but here we have a housekeeper who goes to the root of the domestic service problem in *Wanted, Young Women to Help with Housework*. Like most reformers, C. Helene Barker is hard on her forerunners who have failed to see the essence of the difficulty. We plead that reforms have come from the workers, not the employers—more shame to them—and there is no reason why the housekeeper should have been more just and wise than the manufacturer. Her brother learned by strikes and is still learning. Her lessons have come from unpleasantnesses with individual employees singularly lacking in a sense of the solidarity of workers.

Housekeeping is one of the individualistic trades, and like all such has been slow to respond to the new sense of social freedom and justice. The solution is eight hours' work a day, six days a week, with board and lodging outside. This puts housework on precisely the basis of other employments. The arguments against this are embedded in habit. The arguments for it appeal to one's sense of fair play. The time schedules for households of one, two or more helpers are not theories, but plans tried and found practicable, and they require more adjustment in the minds of both employer and employee than in household habits. This change will raise the status of the houseworker, thus attracting a better class of workers and so making for the comfort of the employer.

*Wanted, Young Women to Help with Housework*, by C. Helene Barker. Moffat, Yard & Co. \$1.

### HUMAN VALUES

The measurement of national prosperity in terms of product or trade balance has been in the past the prevailing mode of checking up the accusations and reproaches of social reformers, calamity howlers and sentimentalists. But from time to time a thinker arises who is sufficiently naïve or sufficiently shrewd to ask the question "What's the use?" And then we are compelled to go back to first principles. Readers of *The Independent*

## —THE JAPANESE PROBLEM IN THE UNITED STATES—

By H. A. Millis

A frank and highly interesting discussion of an important question; the result of a special investigation and study of the actual conditions in California, considering immigration and the treatment of established Japanese.

\$1.50

ent will recall the refreshing essays by James MacKaye that have appeared in its pages and that have challenged us to justify our faith in things—or in man, as the case might be. In a series of lectures delivered at Harvard University some six years ago and now reprinted in book form, this engineer applies his direct thought to the question of the goal of human striving. He compares the utilitarian and scientific approach to the problem with the intuitional and ideological, and concludes, as we should have expected, in favor of the former. Human happiness is the most interesting thing in the world, and the happiness of nations should be the aim of statesmen and leaders. Mr. MacKaye is therefore one of those moderns who would substitute "political engineers" and inventors for diplomats and politicians and bosses and wire-pullers.

Wealth is to be considered as a means to welfare, and not an end in itself. Increase of production is practically within our control. A more serious problem for the political engineer is the increase of consumption-efficiency, which involves the question of adequate distribution. The distribution of fertilizer is as important a factor in farm management as adequate quantity. We are producing enough wealth to give us a high average "per-capita" happiness; but we have not learned to put it where it will do the most good.

An entirely different approach to the economic problem is that found in the seventeenth volume of the Hart, Schaffner & Marx Prize Essays. In this Mr. G. P. Watkins treats most learnedly and abstrusely of the theory of economic value, pointing out—with the aid of diagrams and mathematical formulæ—the variations in and the species of utility. In the last quarter of the book the reader begins to gather some suggestions that these theoretical problems may have some practical relations to life. The chapter on multiple utility is perhaps the most suggestive, and shows evidence of original thinking more than any of the others.

Both of these books, so radically different in method and immediate aims, lead to the conclusion that however efficient the managers of affairs economic may have been in increasing production, they have made a miserable failure of the lives that have been dependent upon their management.

*The Happiness of Nations*, by James MacKaye. B. W. Huebsch. \$1.25.

*Welfare as an Economic Quantity*, by G. P. Watkins. Houghton, Mifflin Co. \$1.50.

### ON THE WAY TO SAN FRANCISCO

Enos R. Mills has lived and climbed much in *The Rocky Mountain Wonderland* of Colorado and has had all sorts of adventures among its peaks and encounters with its four-footed denizens. His book is illustrated by especially good photographs of a region it were a shame to pass by even on one's way to the Rockies of California.

Houghton. \$1.75.

### A BOOK OF A THOUSAND PICTURES

With pictures of birds in all their natural colors, several hundred pen drawings, and photographs of nests and eggs, *The Bird Book*, by Chester A. Reed, is a valuable acquisition to any nature library, and an admirably arranged text-book and guide for

Published at  
64-66 5th Ave.,  
N. Y.

The Macmillan Company

On sale  
at all  
bookstores

the bird student, broad in scope, accurate in description, and convenient for reference; a bird encyclopedia packed into 472 pages with an index covering more than two thousand subjects.

Doubleday, Page. \$3.

#### LOCAL TRADITIONS

Such books as *Stories of Old Kentucky*, by Martha Grassham Purcell, have a practical and especial value in America. Each state has such picturesque tales of its early days. These should be the inheritance of all its children, and some pains to this end is needful since many of the children are Americans in the making, whose familiar household talk is no link between the present they see and the past from which it grew.

Am. Book Co. 66 cents.

#### THE ARTIST OF THE COUNTRY SIDE

Landscape gardening is the imitation of nature and her revelations. This is the theme about which Samuel Parsons in *The Art of Landscape Architecture* gathers many problems and solutions, many cautions, precepts, and fundamental rules for the outdoor decorator. Both a history and a text-book, covering many ages and countries and citing more than a hundred authorities, its illustrations, taken from the Orient and Europe, make the book itself a work of art.

Putnam's. \$3.50.

#### FOR DEFT FINGERS

When *Mother Lets Us Make Toys* is the twelfth of a clever series of books on occupations for children. With such cheap materials as boxes, spools, button molds, and wire, G. Ellenwood Rice shows how to construct all sorts of things, from rocking horses to lawn mowers. With this series surely no mother need dread even several rainy days.

Moffat, Yard. 75 cents.

#### BUILDING THE FARM

Efficiency, economy and utility in the various lines of farm construction is the theme which R. P. Clarkson discusses in *Practical Talks on Farm Engineering*. His style is simple and straightforward, and any one can understand and follow the directions which he gives. Some of the topics covered are farm buildings, sanitation, drainage and irrigation, farm power, and the care and use of farm tools.

Doubleday, Page. \$1.

#### COMFORT ON THE FARM

If anything will keep the boy on the farm and tempt the city man thither it is such possibilities of the ingenious use of natural forces as is explained in *Electricity for the Farm*. F. I. Anderson has written no fairy tale, however, but a practical guide for setting the nearby brook to whirling the windmill, turning the farm machinery and lighting the house.

Macmillan. \$1.25.

#### OUT-DOOR PLAYS

In *Plays for Pioneers*, by Constance D'Arcy Mackay, are five well-arranged pageant-plays for local festivities. "The Fountain of Youth" tells of the discovery of Florida; "May Day" of Puritan New England; "The Vanishing Race" and "The Passing of Hiawatha" of Indian lore; and "Dame Greel o' Portland Town" of Revolutionary times. Practical suggestions for costumes and setting accompany these plays.

Harper. \$1.

#### A FRIEND IN NEED

*Indoor Games for Awkward Moments* may serve to tide over the hostess whose experience is limited or whose ingenuity is slight. It contains directions for all sorts of informal games, tricks and competitions, both old and new, which have been collected by Ruth Blakely.

Hearst. \$1.

#### A MODERN CINDERELLA

A charming little story of two girls, with the necessary complication of at least one man, is *Diantha*, by Juliet Wilbor Tompkins. The contrast between "good, old Di" and her "spoiled beauty" sister is well

**D**URING the past thirty-seven years, THE TEACHERS MAGAZINE has been a leader among educational magazines. It is better and richer than ever and many of its departments contain the quality of work not to be had elsewhere. Among these are the departments of Drawing, Penmanship, Primary Work, Making, Music and Shorthand. Not the least important feature is the Personal Service Department by means of which our subscribers are helped in numerous ways, without charge.

**HAMMOCK & COMPANY,**

31 East 27th Street, New York

brought out before the author introduces the fairy godmother and makes Diantha a beauty too. And then of course they all live happy ever after.

Century. \$1.25.

#### A MAN'S JOB

A story of a real hero, who makes his work ideal and makes his ideals work is *Still Jim*, a novel which places Honore Will-sie in the front rank of authors of worthwhile fiction. Still Jim's career as a boy and later as an engineer, in charge of the great irrigation dam of the Reclamation Service, is full of interest and vigorous life. Beneath the "good story" episodes, a poetic love of out-doors and a far-reaching philosophy of the race struggle between the old and the new in American life give a real and permanent value to the book.

Stokes. \$1.35.

#### PIRATE AND PARSON

*Dr. Syn* is a tale of smuggling in England and of several interesting ex-pirates, by Russell Thorndyke. Dr. Syn, the gentle vicar of Dymchurch, the blunt captain of the King's Men, with a small boy whose cherished ambition is to be a hangman when he grows up and hang the school-master, form a fascinating trio.

Doubleday, Page. \$1.25.

#### BUILT AND FURNISHED

Richardson Wright's *Inside the House of Good Taste*, with its two hundred pictures, has many attractive tho not inexpensive suggestions for those bent on the adventure of house furnishing, and the chapter on the nursery has original and practical ideas. But an adventure indeed is described by John A. McMahon in *The House That Jack Built*, where a man utterly unversed in tools sets out to build a fireproof house; and succeeds, too, at a cost of twenty-three hundred dollars.

McBride, Nast. \$1.50. Duffield. \$1.25.

#### FOLK WHO WRITE

Thoreau, who we were assured was dead, along with Whittier and other gods of an earlier day, is but just coming into his predestined kingdom, the Pocket Edition. Why indeed has he waited so long, for there is none to compare with him as comrade of a summer day's outing in America, where our outings are to be this season.

Elizabeth Stuart Phelps startled the last generation by her suggestion of pianos in Heaven. The poet Péguy, a devout Catholic mystic, now dead upon a French battlefield, went further when he wrote of the Holy Innocents rolling hoops with their crowns and palms. "At least I think so," said God, "for they never asked my permission." How like Bernard of Cluny, his Heaven ringing with the "shout of them that feast!"

Irving Cobb's "books that have helped me most," tho he does not so name the list, is a diverting change from the worthy but mostly ineffective attempts to get us to put Plato, Dante, Goethe and Darwin into our summer trunk. Besides holding in vivid memory Stanley's *Africa* along with *Crusoe* and *Swiss Family Robinson*, he reads yearly, as "universal," some of Mark Twain, Stevenson, *Pickwick*, *The Gentleman from Indiana*, Mr. Dooley, George Ade, the Psalms and Lee's farewell and Lincoln's Gettysburg addresses.

It was at a summer hotel that a newcomer fell into chat with a lady whose uncommonly good talk made her evident solitude remarkable. This was explained when another guest announced "That's Molly Eliot Seawell. I hope she won't put me in any of her books!" Does the innocent youth choosing literature as a profession realize that certain small clouds of social ostracism still hang over even the modern Grub street?

Henry Sydnor Harrison has not been writing a new story this spring. In February he went to London, brushed up his French, learned to drive a motor car, and has since been running an ambulance between Neuilly and a hospital base near the front.

## Apulia No Longer Dry

Water was turned on a few weeks ago in the aqueduct that is to give a constant supply for the first time to Apulia, whose three provinces lie along the Adriatic Coast in southeastern Italy. With 2,200,000 people and more than 200 towns, Apulia has always suffered from lack of water. It was dry in Horace's time, as the adjectives applied to it by him show. Its geological formation deprived it of water storage and springs. Depending for drinking water upon rain, at times in the hot season the Government has found it necessary to send water to the coast cities in tank ships and to distribute it in tank wagons. In neighboring provinces on the other side of the Apennines there was water to spare, but until the first long tunnel thru the Alps was completed it did not seem possible to draw from that reservoir.

Ten years' work and the expenditure of \$35,000,000 have overcome the difficulties which for many centuries were insurmountable. The work is a fine example of the modern engineer's skill. On the other side of the mountains where all the natural conditions favor storage, the water is collected by twelve small canals, all of which lead into one large one. In this the water passes to collecting wells, from which it is drawn into the main canal of the aqueduct. Of this water course's 132 miles, 60 miles are in tunnels and 4 in siphons. The problem was not an easy one, and to solve it many power and pumping stations were required along the route.

From the terminus of the main aqueduct the water was to be distributed to the people of three provinces. In a certain sense, what had been done up to that point was only a beginning, for to the 132 miles of main line, with the collecting wells and pumping stations have been added 970 miles of branch canals and 147 reservoirs. The Romans in ancient times could build remarkable aqueducts, but they were unable to make the long tunnels by which alone Apulia could gain relief.

## Forward on the Farm

Almost every farmer is now familiar with the gasoline engine; and by running the engine a few hours each day, he knows that he can store up power for supplying his house with water, irrigating his garden and lawns, supplying his barn power, and lighting his house at night. The cost for a common country homestead does not exceed, for irrigation, for light, and for a large part of household and farm work, an original outlay of more than five or six hundred dollars.

The taste for buttermilk has grown upon the people during the last ten years and the consumption vastly increased. Department stores very generally serve it with crackers, and not a few saloons find it more valuable than intoxicants to keep on tap. Professor Metchnikoff insists that the general use of buttermilk will greatly prolong life.

## Important Books of Absorbing Interest Fleets of the World—1915

Compiled from official sources and classified according to types. 103 illustrations. 198 pages. Long 8vo. \$2.50 net.

You want to look up the points of a battleship, cruiser, destroyer or submarine that has appeared in the day's news, or to make sure of some naval term, or to compare gun strengths of the different navies or ships,—this book will give you all the accurate data. It is indeed a volume of the greatest value to those interested in the naval aspect of the war.

The illustrations of battleships, cruisers and submarines, the complete list (of all ships) with date of completion, and tonnage of the ships of all nations, makes the work one of thoroughness and value unrivaled by any other publication.

The book is up to date,—it contains a table of naval losses in the present war up to a short time ago,—the internment of the Kronprinz Wilhelm is noted,—and in the regular tables are listed the ships that are being built which will be completed this and next year. Every reader, and particularly every library, that pretends to keep informed upon present day happenings should certainly have this book upon their shelves.

## Famous Days and Deeds in Holland and Belgium

By PROF. CHARLES MORRIS

16 Illustrations from famous paintings. \$1.25 net

In this handsome work, the author of the very popular Historical Tales narrates Dutch and Belgian history in the form of striking stories, each telling of some event of historical importance—the founding of the Beggars' League, the siege of Haarlem, etc., etc., including several tales of the present great War.

## How Belgium Saved Europe

## AN IMPORTANT TARIFF DECISION

A decision announced last week by the Federal Court of Customs Appeals promises to reduce the national revenue by about \$10,000,000 a year and to compel the Government to refund nearly \$20,000,000 already paid in tariff duties by importers. If this shall be the unfortunate effect of the decision, many will recall the fact that the five per cent discrimination in the Underwood tariff bill was adopted in the face of earnest warning from the State Department and virtually against the protests of the Senate. As the free balance in the Treasury is now only \$13,000,000, and the deficit for the fiscal year to date is about \$110,000,000—or \$132,000,000, if Panama Canal expenditures be included—the expected reduction of revenue, with the repayments, excites much interest at Washington.

The tariff revision of 1913 said that there was to be a five per cent discount of the duties on all goods imported in American ships, "provided, that nothing in this subsection shall be so construed as to abrogate or in any manner impair or affect the provisions of any treaty concluded between the United States and any foreign nation." This was an attempt to aid the American merchant marine by a kind of disguised subsidy. Open subsidies were forbidden by the national platform of the Democratic party, which favored promotion of the growth of the merchant marine, "but without bounties or subsidies from the public Treasury." Mr. Underwood was warned by the State Department that, under the provisions of our commercial treaties with nearly all the nations of the world, such a discount, if granted to goods in American ships, must also be given to imports which the ships of these nations bring. Russia was the only notable exception. There was doubt as to British goods not produced in the European possessions of the empire. In the Senate the proposed discount was stricken out, but in conference it was restored. The Senate, however, procured the addition of the proviso about treaties.

After the new tariff law went into effect there was some delay about this part of it, but eventually the Government ordered that enforcement of it be suspended, on the ground that the section was inoperative so long as the treaties existed. Importers and the owners of American ships protested. The Board of Appraisers ruled that the discount should be allowed for goods in American ships, but not for those in the ships of foreign nations. The court, four judges concurring and one expressing dissent, now decides that the discount must be allowed not only for goods in American ships but also for

those brought by the ships of all the treaty nations. In addition, it must be given for all such goods imported which were held in bond when the tariff law became effective, nearly two years ago, and be granted for Cuban goods, thus increasing the discrimination for Cuba from twenty to twenty-five per cent.

It is estimated that the reduction of customs revenue, upon the basis of current importations, would be about \$10,000,000 a year; also, as we have said, that nearly \$20,000,000 already collected must be refunded. With a restoration of our normal imports, the annual reduction would rise to \$14,000,000 or \$15,000,000. But action in accord with the decision is not to be taken at once. While the judgments of this court are usually final, a law enacted last winter, probably with this case in view, provides for an appeal to the Supreme Court when treaties are involved. And so there will be an appeal, but the prevailing impression at Washington is that the decision of the Court of Customs Appeals will be confirmed.

Those who sought to convince the court that the discount could justly and safely be allowed to goods in American ships alone argued that the commercial treaties, with their "most favored nation" clauses, were inoperative. As to this the court said:

Most of these treaties are hoary with age, and the particular provisions of all of them under consideration here are familiar to the executive, legislative and judicial officers of the Government past and present. By no department of the Government have these provisions ever been repudiated, or denounced as unconstitutional, or denied force and effect, so far as we can ascertain. On the contrary, they have, during all the time since their negotiation, been recognized, respected and enforced. To now hold them invalid for any reason, in view of these circumstances, would, in any event, be to assume a grave responsibility, and to defeat them in the face of the contention of the Department of State, the Treasury Department and the Department of Justice, would be little less than usurpation. Fortunately, the duty of repudiating them can by no stretch of authority rest with us, for the very statute which we are now construing recognizes their existence and binding force, and declares in effect that they shall not thereby be abrogated or impaired. It is a matter of some gratification to know that the executive departments of our Government uncompromisingly insist that our treaties shall be observed by us.

Neither our Government nor our courts will regard these commercial treaties as "mere scraps of paper."

The trial of William Rockefeller and thirteen other directors of the New Haven road, indicted for violation of the Sherman act, will begin on October 5. Two other directors offered pleas for immunity, which was granted. There are five more who made successful application for a separate trial.

The following dividends are announced:  
Underwood Typewriter Company, preferred, quarterly, 1½ per cent; common, 1 per cent, payable July 1.

Brooklyn Rapid Transit Company, quarterly, 1½ per cent, payable July 1.

## EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

*Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.*

82. Mr. W. E. C., New York City. "My work, that of corporation manager, confines me to long hours at the desk, giving no leisure for the open-air exercise that I greatly need. Age is 52. My physician says my heart is weak, and cautions against violent gymnasium exercises. How can I keep in fit condition?"

A good athletic trainer, to be found at such an institution as the New York Athletic Club, should be able to outline a safe regime. A graduate in medical gymnastics, or mechanotherapy, could aid you by a system of scientific massage, and Swedish or so-called "passive" movements. The medical director of the Zander Institute, New York, might prescribe a mode of treatment, or help you to install the Zander apparatus, to suit your needs, in your own home.

83. Miss L. V. A., Maryland. "Our family is wealthy, socially prominent, and very conservative. I am a girl of twenty, eager to become independent and self-supporting, and accomplish something in the world. All my relatives oppose the idea of my becoming a wage-earner, on the ground of its being unladylike. What can I do?"

Your relatives are intellectual mummies. They belong in a museum of archæology, beside the dinosaur and the dodo bird. However, you should respect your parents' wishes, while dependent on them for support; do not show yourself ungrateful and disloyal by seeking a position as wage-earner while a guest in their home. Buy one of the books recently published on woman's work, suggesting the hundreds of vocations and occupations now available to ambitious girls. Many of these may be learned by correspondence, some even started at home. Do a little sacrificing, and devote part of your regular allowance or "pin money" to learning what you feel you can do best. When you *prove your ability*, your family's opposition may turn to pride.

84. Mr. E. M. F., New Jersey. "I am at the head of my class in college, and my professors urge me to become a teacher. I do not feel any particular desire to teach, but am not acquainted with any other profession, and could probably secure a position as instructor, thru special influences. Would I better try for this?"

In the name of conscience, no. Have some pity for the poor youngsters on whom you conspire to inflict yourself. The schools of this country are all covered over and messed up with apologies for teachers, who slumped into their jobs because they didn't know of anything better to do. Any work is bad for you unless you know it is best for you. Moreover, one of the surest ways to fail in a position is to get it thru "special influences." Would that you might have the moral courage and physical pluck to devote your next summer's vacation to the study of blacksmithing or bricklaying or some other real man's work. Or, get a job for a year as porter, office boy or truck driver. Then, if you want to teach, you will enter

the vocation as a regular human being—not as a mere walking encyclopedia.

85. Mr. S. T. J., North Carolina. "I expect to become a physician, and am greatly interested in some of the drugless methods now being used and advertised. Can a school prepare a young man to be a doctor by mail instruction only? Some schools of osteopathy, dietetics, and other healing systems claim to do this. I would take such a course if I thought it reliable."

No correspondence course ever devised can train a man to be a real physician. Furthermore, any college advertising such a course should be closed by law, and the charlatans who ran it be heavily fined. We believe in drugless methods of regaining and maintaining health, where such methods are scientific and sane. But a long and thoro training in clinical work is as fundamental to the practise of healing as an actual experience in shop work is fundamental to the profession of building or shoemaking.

86. Prof. B. R. N., Long Island. "One of my friends recently took his own life, having become despondent thru ill health, loss of work, and family troubles. I know several persons who have threatened suicide. Are such cases open to help, and if so where can the help be found?"

A movement has been lately inaugurated, to prevent suicide and restore health to the minds of those tired of living. Rev. H. M. Warren, 327 West Fifty-seventh street, New York, may be able to give you particulars or references, along this line.

87. Mr. C. S. H., Ohio. "Have been a railway station agent and telegraph operator for five years and am deeply interested in office system. Have had an article on How to Systematize a Railway Office published by a leading railway journal, and have made my office one of the most efficient along this line. What kind of work would you advise me to enter, in order to become an expert systematizer? Please name some of the best books on office system."

Why change your work? Why not expand where you are? First, ask permission from the magazine to reprint your article in separate form. Get this out in a strong, artistic pamphlet, of size to go easily in a regular, long commercial envelope. Mail this to any prominent railroad officials you know personally, with request for their opinion. Lock these opinions away. Prepare a list of all the offices on your road, near you, which might advantageously employ the methods you have installed in your office. Send this list, neatly typewritten, together with brief, strong extracts from those opinions and a copy of your pamphlet, to the official of your road who has control of the office system. Register the letter and send a respectful "night letter" to reach him a little earlier, calling attention to the important letter and requesting consideration. Tell the official your record, ambitions and qualifications; do it on one page. If this doesn't bring results, let us know. A list of books on office management is in preparation and will be mailed you when complete.

88. Mr. J. C. E., Connecticut. "Can you tell me whether any magazines are published on the manufacturing of rubber, automobile tubes and tires in particular?"

You should find what you want in *The Automobile*, New York, or the *Club Journal* of the Automobile Club of America, 247 West Fifty-fourth street, New York. If not, send your question to the Rubber Club of America, 17 Madison avenue, New York.

89. Mr. F. D. W., Illinois. "I have won several college prizes for literary work, and my friends think I have unusual ability as a writer. The newspaper field looks very attractive, but I do not know now to prepare myself to be a newspaper reporter. Can you tell me?"

We can. Live on sawdust for a month; hire a prizefighter to give you a handsome beating every morning before sun-up; walk the streets ten hours in carpet slippers which you have previously filled with pebbles; borrow an accommodating boiler-factory, and dictate 5000 words of immortal epics and comics in the space of fifteen

## Invest Money in New York

Real Estate Values  
Follow Its  
Business Leadership

THE chief gateway of the Nation's rapidly increasing foreign commerce, the center of the Country's financial interests, foremost in its industry and trade, New York, today, is responding to the leadership which has come to it with circumstances. It has always met and will meet every situation. Vitality marks its growth. Its continued progress is assured.

To assist in providing business and residential space for the City's ever increasing population, the American Real Estate Company invites your co-operation. It is the oldest and one of the largest real estate operating companies in New York. A record of successful and serviceable business covering 27 years squares promise with performance.

The time is at hand to employ money profitably in New York real estate. Great transit lines are under construction and great developments assured. The American Real Estate Company opens this opportunity to investors through the medium of its 6% bonds, the direct contract obligations of the Company, available for purchase in these two convenient forms:

#### 6% Coupon Bonds

In denominations of \$100, \$500, \$1,000 and upward, paying interest semi-annually by coupons attached. Principal payable in 10 years.

#### 6% Accumulative Bonds

For those who wish to invest \$25 or more a year, and accumulate \$1,000 and upward in 10, 15 or 20 years. Purchasable by annual, semi-annual, or quarterly instalments. These instalments bear interest at the rate of 6% per annum, which is compounded, accumulated and paid with the total instalments at the maturity date.

Write for literature giving full details of the Bonds and the business upon which they are based, including a map of New York City, showing location of the Company's properties.

**American Real Estate Company**

Founded 1888 Capital and Surplus, \$3,560,855.41  
526 Fifth Ave., Room 506, New York

The Union Trust Company of New York offers a special service to individual trustees who desire to have the clerical and routine administration of their trusts carried on at a low expense by an expert organization.

The Union Trust Company will care for the trust property, assist in making investments and in selling securities, collect the income and pay it over as directed, and will render accounts in the form in which a trustee is required by the Court to state his accounts. A trustee will avoid expense and trouble by having his accounts kept in proper form.

Correspondence and Interviews are Solicited.

# The "Two Hartfords"

The Hartford Fire Insurance Company has transacted a fire insurance business, honorably, for more than one hundred years. Its reputation and traditions are its most valuable assets and forbid sharp practice. It has ample financial resources.

The Hartford Accident and Indemnity Company has been organized to conduct a general casualty and liability business. It is progressing on the liberal, yet sound, principles that have always been the keynote of the growth of this organization.

The Hartford Agent in your town is a good man to know. He can be relied upon to secure for you the manifest protection of the policies issued in the good name of the "Hartford."

**Hartford Fire Insurance Company**

**Hartford Accident and Indemnity Company**

**Hartford, Conn.**

Fire Insurance and Fire Prevention is a book for property owners. It is free. Ask for a copy.

The Criminal and Financial Liability of Motorist is a free book for car owners. Ask for a copy

minutes, to a stenographer deaf in both ears, with one arm paralyzed and the other missing; dive off the dock with the manuscript in your teeth, and swim five miles to the nearest newspaper office; canter in jauntily and inform the city editor, with a seraphic smile and bow, that you have arrived and would fain begin your day's work.

These directions are merely preparatory. When you have them down fine, ask for a job on the nearest city paper. After you leave the hospital, write for more explicit instructions to the School of Journalism at Columbia University, New York. In case you don't fancy our directions, you may write the school first.

90. Mr. C. C., Texas. "I am a boy of eighteen. Why is it that among those of my own age, there seems to be some barrier, that I cannot overcome? They do not give me their confidence and fellowship, and I come away from every gathering of young people, feeling deprest, even bitter. I crave their friendship, how can I gain it? I have spent much of my time with books, and with older people."

Age is not in years, but in mental and spiritual development. You are probably ten years older than your companions of the same age, and they feel, perhaps unconsciously, their own ignorance, and dislike you for creating this feeling. Why not make friends with children—lead their games for them, or teach them in Sabbath school? Most children are really wiser than youths of eighteen—this age being the pinnacle of egotism, which is the most exact synonym for ignorance.

But do you give your companions *your* confidence and fellowship? Are you as friendly as you want them to be? Get a classic essay on friendship, and see if you measure up to specifications. Learn to be a leader in some game or sport; young folk idolize a champion, and will suddenly yearn to cultivate your society, once they see a medal on your breast.

Realize, however, that the greatest men are the most lonely; and if you have in you the seeds of greatness, you must plant them in solitude and water them with tears.

91. Mrs. R. B. M. "I am anxious to read your books, and to own an efficiency library of the best works on the subject. I cannot afford to buy these books, as our financial circumstances have become reduced, owing to the hard times. Is there any way for me to educate myself in efficiency?"

Yes. And the first step is to turn your back on the idea of "hard times." The purpose of "hard times" is to strengthen people who have had too easy a time. Luck that doesn't look right has merely lost the "p" in front of it.

Could you not found a circulating library in your community? Interest a number of your friends in the Efficiency articles and Question Box, let them club together and raise \$15 or \$20, for which amount you could obtain a really valuable small library of books on personal, industrial and domestic efficiency. Appoint some member of your circle as librarian, adopt rules for drawing and using books, and meet once a week or month for general discussion. We shall be glad to suggest titles of books to form such a community or neighborhood library.

92. Mr. J. C., Ohio. "I am secretary of a manufacturing company, in a city of moderate size. What would be the best way to keep in touch with the newest methods of industrial education, efficiency work, promotion systems, etc.?"

We can never state the best way of doing anything, for the simple reason that no man on earth knows it. A better way might be discovered while our answer was being put in type. A good way for you to keep informed would be to join the National Association of Corporation Schools, obtain their published data, and their current bulletins. Write for details to Mr. F. C. Henderschott, Irving Place and Fifteenth street, New York. Another good way would be to take and read regularly such business magazines as *System*, *Advertising and Selling*, *Fame*, *Printer's Ink*, *The Efficiency Magazine*, and such trade journals as may apply to your business.

## A WORD TO CORRESPONDENTS

Within the past twelve months, the service demands on this department have grown to comparatively huge proportions, particularly among those of my readers who prefer private replies thru the mails. Altho the pressure is not continuously heavy as yet, it is so great at times as to cause what, to the inquirers, may seem to be inexplicable delay. In this connection it must be remembered that a man may ask a question in five lines, the answer to which will cost the turning over of half a dozen books and several hours research. To be sure, that kind of query is not the rule, but it occurs often enough to maintain a pretty fair average.

Collating recent correspondence, I find that about seven of every ten letters received by this department enclose postage for return by mail. This number is easily subject to a reasonable reduction, as I have discovered by going over the matter, and in the interest of despatch I am going to request the co-operation of correspondents in an effort to place it at a minimum. There are exceptional cases which will necessitate the use of the mails in furnishing the information required. In all such, correspondents are cordially invited to consult the department, enclosing stamps for replies by mail.

As an aid in facilitating the service directly thru these columns, correspondents should remember that their communications cannot be printed, our limited space permitting only of the most concise replies. They should, therefore, observe the following rules:

1. If the questions asked exceed one, each question should be numbered.
2. Copies of the questions as numbered should be retained.

The inquirer may make his questions as voluminous as he feels is necessary, taking care, however, that each subject or point upon which information or advice is desired be kept by itself and properly numbered.

By following the simple system here indicated, the quality of the service can be raised by making it more timely.

## ANOTHER ASSESSMENT EXAMPLE

As noted on various occasions in this department, the promoters of assessment life insurance schemes have exhausted every resource in their efforts to devise a scheme that would obviate the necessity for reserves and which would result in furnishing protection against death at a cost lower than that demanded by old line companies. In short, they have been engaged in the hopeless problem of circumventing the

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

laws of mortality. Some of them, being densely ignorant persons, were honest enough; but the majority of them, having sufficient knowledge of what they were doing, deliberately engaged in the traffic for the temporary profit it would yield during a decade or two.

There has just come to my desk a letter from one of our readers in New England, describing a case which has been developing under his eyes for thirty-five years. From the viewpoint of one who, to paraphrase a line of Matthew Arnold, sees life insurance steadily and sees it whole, who understands its objects and the means thru which they are attained, the result indicated by our correspondent is lamentable. Life insurance as a provision against the penalties of death and old age was devised to outlast the furthest day of either, decreasing as a burden and growing in strength as a prop from the first day to the last. Is this the case with the fallacy tagged assessmentism? My correspondent says of the person whose condition he described, after explaining that the latter became the holder in 1880 of a certificate in a certain company which is now in course of gradual extinction:

"It was an assessment scheme and the annual dues were small. He was working on a salary and has kept up the payments until now. He is now eighty-one years old and apparently in good health, but unable to earn anything and entirely dependent for his living on the small wages of another member of the family, his own resources being entirely exhausted. . . . The last four quarterly premiums have amounted to a total of \$254.34. This amount the insured, of course, is utterly unable to pay. . . ."

The question propounded is as to whether it is better to get the help of friends in carrying this burden, monstrous grown and steadily growing, to the day of death in the hope that there would be a remnant over the debt left for dependents, or whether it would be wiser to use such funds directly in the interests of such dependents.

One hesitates to answer such a question. Consider the thousands of dollars this man has paid out in thirty-five years on this so-called insurance of \$3000. It is impossible to guess at the amount thus squandered. Remember, he possesses not a penny of equity for it. Each dollar as he paid it out as premium evaporated, leaving not a trace. Graver still, consider the wasted years. What sort of an estate might he have built in the shape of insurance with the money he has squandered on this counterfeit? I do not believe he can have invested less than an average of \$125 a year during thirty years. He was forty-six years old when he started. At that age he could have bought \$3000 of real insurance on the Ordinary Life plan in a good dividend paying company at a premium of \$115.65, the actual cash surrender value of which in the thirty-fifth year is \$2843. Add to this the annual dividends withdrawn (estimated at fifteen per cent of the premiums, figured on the mean time of

seventeen years) and there would be something approximating a total of \$3200 in the way of benefits available during the assured's lifetime. As it is now, he is struggling along trying to carry a burden almost as large as that a real life insurance company would be carrying for him.

Assessment life insurance is a bargain-counter affair to those who die promptly after getting it. It is an awful thing to tie up with during a long life.

#### DEFERRED DIVIDEND POLICIES

In one of its publicity statements the Bankers Life Insurance Company of Lincoln, Nebraska, asserts that if a man "carries a deferred dividend policy—the best insurance known—he will have a policy that is a *savings bank* as well as insurance."

The truth of that statement rests wholly on the meaning given the phrase, "deferred dividend." If the payment of the dividend were only deferred to some future date, when it would come into the possession of the holder of the policy under which it was saved, we could find no fault with the claim made; altho it must be remembered that individual circumstances vary, and that which is best for one may not be best for another.

But when the Bankers Life refers to a deferred dividend policy it means one which provides that the payment of all dividends accruing under it shall be postponed ten, fifteen or twenty years, and that if the assured does not carry it thru to the end of its contract period, he will forfeit them. A man may pay all the premiums on a twenty-year deferred dividend policy, but if he should die at any time before the twentieth year has expired, the dividends are transferred to the surviving policyholders. The same result occurs under lapsed policies.

It is more advantageous for a man and his dependents if he can leave all his dividends with the company. To that extent he may build up the amount of the original insurance in event of death, or the cash value if he survives the necessity for protection. He does combine insurance and saving there. But if he makes a gambling stake of those dividends every year, wagering, as it were, against all his insured associates in the company that he will neither die nor lapse his policy within the contract term, then he not only does not combine savings with insurance—he does a wicked thing in becoming, if he is successful, a sharer in money derived from policies carried by more unfortunate people. If he is a loser, he has gambled away money that is essential to the welfare of his family.

Life insurance dividends are not profits; they are excess premium payments. They should be used in buying more insurance or in extending the term of the original policy. They make poor gambling stakes. The kind of deferred dividend insurance the Bankers Life advocates and sells is not "the best insurance known." It belongs with the worst.

1915

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.16

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

## Lost Light

An interesting example of the methods by which astronomers arrive at conclusions in regard to the universe is given in the arguments used to prove that a certain amount of light is absorbed in space.

We know, reasons Professor J. C. Kapteyn, the eminent Dutch astronomer, that space contains an enormous amount of meteoric matter. This matter would naturally intercept some part of the starlight. In the second place, we find that the stars gradually thin out as their distance from the sun increases. This may be due to the absorption of light in space, or, if space is transparent, it may be that the limits of the universe are reached with our present telescopes.

If the latter is the correct supposition then, since this apparent thinning out is found in every direction in which our telescopes can be turned, our solar system would seem to be in the densest part of the universe. But since our sun is only an average star, the probabilities are that it is neither in the densest nor in the thinnest portion of the universe and that the density of the stellar system is nearly uniform thruout.

The apparent thinning out of the stars is therefore held to be caused by the absorption of light in space; very distant stars may have their light so scattered that none of it is perceptible on the earth.

But on account of the importance of this question more proof is required, so the resourceful astronomer thinks up additional tests. If, he argues, the absorption and scattering of light by meteoric matter is really a fact, then the lost light will be the weaker or violet light and the waves of light which come to us from distant stars will be the stronger or red rays, making the mass of stars at that distance seem redder than those nearer to the earth.

Methods for determining which stars are nearer and which are farther from the sun having been worked out with precision, the astronomer chooses a large number of the most distant stars and comparing their light with that of a large number of stars near the sun he finds that the more distant stars as well as the fainter stars are on the average redder.

Here again still other questions meet him, for even this general redness of the distant stars may be due to an intrinsic quality of those stars and not necessarily to the absorption of light in space. Thus the search for truth goes on and any new proof is carefully tested and evaluated in relation to previous theories.

The value of definite knowledge in regard to the loss of light in space lies in its bearing on the extent of the universe and the distribution of the stars in space. Exact information on this point will help in determining the distances of stars and thereby add to our knowledge of the structure of the universe.

## Build Your Own Business

Organized  
1850

under our direct general agency contract. This is a liberal proposition for which men of ability can qualify.

A few exceptional opportunities are open at present. For particulars address:

John F. Roche, Vice-President.

A Scrap of Wood

The latest business-aid service instituted by the Government is a wood-waste exchange, conducted by the Forest Service of the Department of Agriculture. Twice a month the exchange sends out a circular headed, "Opportunities to Buy Waste," containing the names and addresses of factories having waste wood for sale, with exact information as to species, sizes, forms and quantities. Similarly, another circular gives the specific requirements of wood-using plants which desire to buy waste material.

One of the first waste problems solved was that of a furniture maker in Michigan, who wrote to the Forest Service asking how to dispose of sugar maple blocks and sticks which were cut off in the process of furniture making and which he had to sell merely as fuel. Samples were obtained from him and the Forest Service then located a scrubbing-brush manufacturer who used small maple blocks for brush backs. The result was that the furniture maker was enabled to sell his waste at a much higher price than it had brought as firewood, while the brush maker was enabled to buy brush-back material in suitable sizes at a much lower figure than it had been costing him.

The Pianist's Speed

Astonishing statistics have been gathered with reference to the amount of work accomplished by the brain and nerves in piano playing.

A pianist in view of the present state of pianoforte playing has to cultivate the eye to see about 1500 signs in one minute, the fingers to make about 2000 movements, and the brain to receive and understand separately the 1500 signs while it issues 2000 orders. In playing Weber's "Moto Perpetuo" a pianist has to read 4541 notes in a little under four minutes. This is about nineteen per second; but an eye can receive only about ten consecutive impressions per second, so that it is evident that in very rapid music a player does not see each note singly, but rather sees them in groups, probably a bar or more at one vision. In Chopin's "Etude in E Minor" (in the second set) the speed of reading is still greater, since it is necessary to read 3950 signs in two minutes and a half, which is equivalent to about twenty-six notes per second.

A Victory for Steam

Recent accidents to oil-burning submarines have influenced the French naval authorities in substituting steam for oil as the motive power in their submarines, especially those of the largest class. This return to steam is noteworthy, as the French are inclined to consider oil burners as too dangerous for war vessels of various types. For the new Gustave Zédé, submarine engines of 4000 horse power—steam—are ordered. They will produce a speed of nineteen knots instead of the twenty knots possible with oil burners.

## CRUMBS SWEEP UP

Permanent organization of the Virginia  
Social Hygiene Association has been ef-  
fected and work has begun on the problem  
of social evil thruout the state.

A new law in Connecticut allows only  
one drug store for every 3000 inhabitants.  
It does not affect the licenses of druggists  
already established.

As a result of the carpenters' strike in  
Chicago more than 100,000 building work-  
ers have been idle for two months, at a loss  
of more than \$10,000,000 in wages.

In Montgomery, Alabama, three barrels  
of flies are caught daily in sixty large traps  
placed upon the streets in different parts of  
the city by the Sanitary and Health De-  
partment.

Alabama has started a "Buy It Now"  
campaign, arguing that "It" can be bought  
cheaper now than later, and that every  
purchase made at this time will help to  
bring prosperity.

The Town Council of Hermitage, Arkan-  
sas, has passed an ordinance providing that  
any negro found intoxicated on the streets  
shall be dyed by being dipped in the blue  
vat at the dye works.

Organized labor in New York State is  
urging the Constitutional Convention to  
propose woman suffrage, the eight-hour day,  
the prohibition of child labor, state insur-  
ance, widows' pensions and the taking of  
the veto power from the Governor.

The Federal Court of Appeals, trying a  
Louisiana case, has decided that a debt in-  
curred thru dealing in "futures" where  
there was no intention to deliver or receive  
the commodity dealt in, cannot be collected  
in states which have laws making gambling  
debts invalid.

Under the direction of school authorities  
the children of Utah are organizing clubs  
for summer vacation work. Local and state

institutions are offering valuable prizes for  
the best specimens of soil products shown  
by boys' clubs and for the best results  
achieved by the girls' clubs in canning,  
bread-making and sewing.

A parcel of land at the northwest corner  
of Seventh avenue and Forty-second street,  
New York City, which, together with the  
buildings on it, was sold eighteen years ago  
for \$55,000, is now assessed, apart from its  
buildings, at \$1,500,000.

More than four hundred lawsuits have  
been filed recently against railroads in Illi-  
nois under the law which provides that  
grain must be weighed both before and  
after shipment, and the shipper reimbursed  
for loss, if any, in transit.

At their recent convention in Los Angeles  
the Northern Baptists elected Dr. Shailer  
Mathews, dean of the divinity school, Uni-  
versity of Chicago, president for the com-  
ing year, and chose Minneapolis for their  
1916 meeting.

The discovery of foot and mouth disease  
in a consignment of lambs shipped north  
thru Louisville has caused a hold-up of  
shipments by that route, much to the an-  
noyance of Kentucky and Tennessee sheep  
men, whose spring lambs had just begun  
to move to the northern packers.

An organization to be known as the Ger-  
man Settlers' Commission has been effected  
in Florida. Its object is to attract success-  
ful German farmers from the northern and  
eastern states to Florida, where, the Ger-  
mans who compose the organization claim,  
better opportunity is offered.

At its May meeting the Milwaukee Min-  
isterial Association listened to a discussion  
of "The Minister" by a number of laymen,  
some of them non-churchgoers, who had  
been invited to criticize the clergy freely  
and frankly. It is said to have been pro-  
ductive of excellent suggestions.

Eleven huge bells are on their way by  
water from Troy, New York, to Los An-  
geles, California, where they are to form a  
chime for the new million-dollar Bible In-  
stitute. They will have the twofold distinc-  
tion of being the largest bells on the Pacific  
coast and the first to pass thru the Panama  
Canal.

The United States Department of Agri-  
culture has given warning that the seven-  
teen-year locusts are due to appear some  
time in June this year in scattered localities  
between the Hudson and Mississippi  
rivers and along the Appalachian plateau  
into northern Georgia and South Carolina.

The Anti-Saloon League of America asks  
that every church in the United States send  
its pastor as a delegate to the biennial con-  
vention to be held at Atlantic City July  
6-9. The Million Dollar Pier is to be fitted  
up to seat 30,000 persons, and most of the  
famous temperance advocates are to be  
present.

The California Wine Association advises  
vine-grape growers to make arrangements  
for drying a large portion of this year's  
crop. It is claimed that, under the present  
high tax imposed by the Federal Govern-  
ment and the prospect that it will be  
doubled next January, the wine industry  
will languish.

Governor Hunt of Arizona has chosen  
Miss Esther Ross of Prescott to christen  
the new battleship "Arizona," to be  
launched at the Brooklyn Navy Yard June  
19. He has also appointed fifty prominent  
citizens of the state to accompany her. They  
will make the trip from Phoenix in a spe-  
cial train.

At a recent election in Denver, involving  
a bond issue for a women's industrial home,  
city hospital improvements, and home rule  
on the liquor question, the "woman vote"  
was the lightest known in the twenty-two  
years of suffrage in Colorado. Mrs. Martha  
J. Crammer, a member of the State Board  
of Pardons, says: "Only a few more elec-  
tions, and all the women in Denver will  
quit voting."

# Summer Strength and Satisfaction

come from the gradual release of the body from the heavy Winter foods that fog the brain and clog the liver. This happy release comes through fresh fruits, green vegetables and well cooked cereals. Nothing in the whole wide range of Nature's bounty is so deliciously wholesome and strengthening as

## SHREDDED WHEAT BISCUIT with Strawberries

In this dish you have all the body-building elements in the whole wheat grain steam-cooked, shredded and baked, combined with the most luscious product of the American garden—a combination that gives a mental buoyancy and muscular vim that make you fit for the day's work. A toothsome treat beyond compare.

**It is the shredding process that put the "eat" in whole wheat.**

For breakfast heat one or more Biscuits in the oven to restore crispness and serve with milk or cream. Deliciously nourishing and wholesome for any meal in combination with berries or fresh fruits of all kinds. Prepare the berries as for ordinary serving and pour them over the Biscuit, adding milk or cream and sugar.

## A DECLARATION OF INTERDEPENDENCE

**T**HE calling of a conference in Independence Hall, Philadelphia, on Thursday, the 17th, for the purpose of discussing the formation of a League of Peace, may be the beginning of the most important step taken in international relations since the Czar of Russia convoked the first Hague Conference.

We publish elsewhere the proposals that will form the basis for discussion, also the list of eminent Americans who have signed what may be called the Declaration of Interdependence. In addition we print three "Federationist" papers, not anonymously as were the Federalist papers of old, but signed by three men holding as high positions of respect in this day and generation as did Hamilton, Madison and Jay during the period of the Constitutional Convention of 1787.

Our readers will be interested to know what part Mr. Taft, Mr. Lowell and Mr. Marburg have taken in this League of Peace movement.

It was Mr. Marburg who suggested the series of dinners held in New York City during the winter and spring to which were invited a group of the leading political scientists and statesmen of America. Out of these dinners came the League of Peace proposals now about to be publicly launched at Independence Hall.

It was Mr. Lowell who was largely responsible for the adoption of Article III of the proposals, which guarantees that force shall be used against any member of the League that goes to war without first submitting its case to due process of law. This, of course, is the crux of the whole idea.

It was Mr. Taft who finally drafted the proposals and now has consented to preside at the Conference and give it the weight of his support. His active interest in the development of international law has been second to none in America.

**T**HE proposals themselves are so ably and fully discussed in the three papers already mentioned that there is little more for us to do than to give our concurrence. The Conference, in our opinion, might well go even farther and make the League stronger in some respects than these preliminary proposals anticipate.

For instance, while we agree with President Lowell that the exercise of force is more effective than non-intercourse as a means of compelling a nation to live up to a scrap of paper, yet we see no reason why non-intercourse should not be recognized as one of the possible ways of putting pressure upon a recalcitrant nation.

We also think that *all* the nations rather than "all the *great* nations" should be invited to join the League.

When the Czar called the first Hague Conference only those twenty-six nations were invited that had a representative at the Court of St. Petersburg. At the second Hague Conference, thanks to the insistence of the United States and Mexico, all the nations were invited. The movement for the substitution of law for war has, therefore, already become coterminous with the confines of the globe. Consequently it would seem to be wiser to build our international structure on the foundations already laid at The Hague, than to start over again with a mere glorified alliance or entente. Of course, if some of the nations who receive the invitation decline to cooperate, then it will be eminently proper to proceed without them. The backward nations must not hold the whole world back. It must be kept in mind, however, that unless a sufficient number of the great powers join the League, the project would be certain to be ineffective from the start.

Perhaps, also, Article IV of the proposals should be widened in scope, so that the legislature would be permitted to do more than merely "formulate and codify rules of international law for the guidance of the court." Why should not the legislature have power to make rules for the League itself, such as altering the constitution, formulating rules for the use of the international forces, admitting outside or expelling inside nations, etc.?

**B**UT these and other possible improvements are, after all, minor matters. The proposals as a whole are advanced, adequate, statesmanlike and sound. As Mr. Marburg points out, they do everything except "bind the League to enforce the award." But who doubts that once the League is established this final step will be taken?

The Conference at Philadelphia should plan to place its recommendations before President Wilson and all men of good will in the United States and throughout the earth. The world is already ripe for the idea. Even now we hear of similar groups springing up in other countries. In England, where the movement is receiving much consideration, one of the groups is so close to the British Government that it would almost seem as though Premier Asquith and Sir Edward Grey are behind it.

The League of Peace, then, is the most promising next step in the political organization of the world. But as that first League of Peace which we established in America over one hundred years ago—the Confederation with its Continental Congress and Court—was hopelessly inadequate for the needs of our forefathers and they had to develop it into "a more perfect union," so any international league that we are likely to establish today can never satisfy our needs of universal peace until all the nations of the earth come within its benefi-

cent sway. But come they must, sooner or later, and when that golden day arrives then at last we shall have attained that world federation which the historian Freeman has said will constitute "the most finished and the most artificial production of political ingenuity."

### THE CRUX OF THE WHOLE MATTER

GERMANY has apologized for sinking the American ship "Gulflight" and offered reparation. The captain of the German submarine fired too quickly. He did not see the American flag until the torpedo was on its way. This is the German explanation.

The explanation gives away the whole German case. It proves what President Wilson pointed out in the note to Germany: "Manifestly the submarine cannot be used against merchantmen . . . without an inevitable violation of many sacred principles of justice and humanity."

It was only because the German commander was violating the perfectly clear and universally accepted rules of international law that he made his mistake. International law forbade him to sink a merchantman on suspicion. International law gave him but one right in the first instance, that of visit and search. International law, even in the case that he found the ship to be an enemy ship, required him to put passengers and crew in safety before he torpedoed her.

There can be no question that the commander of this submarine and the commander of every submarine that has made a similar attack on a merchantman, neutral or enemy, was acting in plain violation of international law. It is pleaded on the other side by Germany that the submarine cannot obey the international rules because of its own limitations. But the plea is ineffective. The inability of the submarine to do what the law demands does not change the law, nor relieve any civilized power of its obligation to obey it.

Here is the crux of the whole matter. The United States stands firm upon the principles of international law. Germany is striving to maintain a precarious footing upon the limitations of the submarine as an offensive weapon against merchant shipping.

### WHO SHALL INTERVENE IN MEXICO?

WITH the President's message to the faction leaders in Mexico the period of watchful waiting comes to an end. Carranza and Villa and Zapata and Obregon must get together and work for Mexico instead of their own selfish ends, or the United States will be constrained to act itself.

"Mexico is starving and without a government" is the President's concise statement of an intolerable situation. He is profoundly right when he says that we cannot stand indifferently by and do nothing to serve our neighbor. The only regret is that we have waited and watched so long, while the people of Mexico have sunk deeper and deeper into helplessness and suffering.

The President's warning, if it be not heeded by the reckless men at whose mercy Mexico lies, spells intervention. Some force from outside the Mexican borders must go in to resolve the chaos that Mexicans have brought about.

Whose shall be the force? Who shall intervene?

Ours is the duty of leadership, for we are Mexico's "next friend." But ours should not be the task alone. Intervention, when it comes, should be All-American intervention. It should be undertaken not by one nation but by four—the United States and the three A B C powers of South America, whose friendly service we have already availed ourselves of to good effect in a critical time.

On another page we print an article from the pen of Congressman Slayden, of Texas, urging such a joint attempt to solve Mexico's vexed problem.

In the direction of coöperation with Argentina, Brazil and Chile lies the path of wisdom and effectiveness. What we said in March in discussing the possibility which has now all but become a fact we believe more strongly than ever now:

To invite their coöperation would be an assurance of our good faith and disinterestedness. It would quiet the suspicions, entertained with greater or less definiteness and intensity by many of our neighbors in South and Central America, that we are afflicted with an insatiable hunger for territory. It would imbue the act of intervention with the impressiveness and prestige of an international movement.

Mexico is an All-American problem. Its solution should be undertaken by the All-American powers.

### WATERLOO

ONE hundred years ago this month the people of Europe and of the United States of America were sure that the fate of civilization was hanging upon the issue of an unprecedented war. On the afternoon of June 18th the Battle of Waterloo was fought, and next day the world rejoiced that civilization had been saved. It was not, however, the first time. It had been saved many times before. We may reasonably hope that it will be saved again.

Compared with Gettysburg or Gravelotte, not to mention the conflicts now raging, Waterloo was not a great battle. Draw on a piece of paper a horizontal line crossed by a vertical line. Imagine the horizontal line to be the axis of a shallow valley running east and west, sloping gently away to a height at the north, and in a like manner to a height at the south. Imagine the vertical line to be a highway. In the northwestern quarter of the diagram is a chateau with extensive farm buildings. In the northeastern quarter is a farmhouse surrounded by orchards. The English troops under Wellington are extended along the northern ridge—50,000 infantry, 12,400 cavalry, 5600 artillery. Napoleon's well-disciplined ranks, over 70,000 in number, are deployed along the southern height. From the east Blücher with 50,000 Prussians is approaching a mile an hour, thru the almost impassable mud created by a downpouring rain of four days' duration.

At half-past four in the morning the rain ceased. It was Napoleon's opportunity. No longer the man that he was when he took command of the Italian army in 1796, he let the hours go by until half-past eleven, when he gave the order for artillery and infantry fire along the whole front. A dash to capture a position at the chateau was met by iron resistance; one to capture the farm and orchards was but partially successful. Before half-past two Napoleon knew that Blücher was coming. He wrote a letter to Grouchy to hold Blücher, and he

seems to have believed that Grouchy could do it. Then, between four-thirty and seven o'clock, he hurled four furious charges at Wellington's front. Meanwhile, Blücher came up, deployed along the eastern end of the valley, and attacked the French on their right flank and in the rear. One last charge of the Imperial Legion against Wellington broke in destruction and rout, and Napoleon's career was over. It was on the whole a busy afternoon, and the losses were heavy—22,000 or more English and Prussians, 32,000 or more French.

For seventeen years really, for more than fifteen years nominally, Europe had been dominated by the personality of one man. For one hundred years, historians and biographers have been occupied with his character and achievements, and it is not likely that much new information about him remains to be discovered. Research and review have, on the whole, confirmed and established the judgment of him that was arrived at by his contemporaries. A man of lightning-like decision and action, yet as calculating as a chess-player; relentless in his purposes, he had but one aim—his own advancement, power and glory. Acknowledging no obligation that stood in the way of success, he fired the people of France with enthusiasm for glory at any price. One after another, he invaded, humiliated, and partially conquered the nations of Europe, until his first real disaster overtook him in the Russian campaign. Perilously near, it seemed to his enemies, had Europe come to absorption in one all-powerful, ruthless, military empire.

How quickly it all crumbled! Looking back upon it now, after a hundred years, it is easy to see what a mere piece of map-making it was. The habits, the loyalties, the purposes, of the peoples that Napoleon's legions brought for an hour to their knees, were not changed. Their invaded countries had suffered, in places they had been desolated, but not beyond recovery. In the century that has passed they have all prospered and have grown strong. In population, wealth, enlightenment, they have achieved more of things worth while than they had achieved in a thousand years before. And France, the conqueror, has achieved most of all; not because she conquered, but because, defeated and humiliated, she profited by the lessons of adversity and acquired a self-mastery unexampled, perhaps, in history.

When the Napoleonic wars at last were over, and the world breathed freely again, the hope arose that the last attempt of an ambitious soldier, or of an arrogant nation, to bring the whole world into subjection, had been made. Men indulged themselves in dreams of peace, and in spite of the Metternichs, a surging wave of humanitarian feeling mingled with a new enthusiasm for knowledge and a passionate zest of economic enterprise. It was all to the good. The world is a better place today, even as it carries once more the crushing load of war's devastation and sorrows, because for a generation or two mankind so eagerly gave itself to an expectation of progress and happiness.

If the world misread the future in the days of Napoleon's triumphs, again in the day of his defeat, and once more in the years of enthusiasm for peace and prosperity, it did not wholly misread it. We cannot believe that it wholly misreads the future now, or will altogether misread it in the decades that shall follow the end of this new conflict. It took much time and great sacrifices to overwhelm the imperialistic menace, but it was over-

whelmed. The possibility of preventing war upon a scale of unprecedented magnitude was not established and made secure; but forces were generated which have not in this past year been destroyed, and which will continue to grow stronger in coming days, until they shall be adequate at last to keep the peace among all the nations of mankind. If the one hundredth anniversary of Waterloo cannot be celebrated with joy and in splendor, we can yet observe it with stout hearts, and with undiminished faith that the rational and righteous mind will yet master the conditions of human existence, including the secure establishment of justice, liberty, enlightenment and peace.

## WHAT IS THERE TO SAY?

**H**ERE is the suffrage case in a nutshell. It is from the pen of Mrs. Carrie Chapman Catt:

The suffrage movement has been inspired from the beginning by precisely the same motives as have forwarded similar movements among men. A desire for personal liberty in governmental matters; a feeling that an outrageous injustice is done the mothers of the race who are denied a voice in the welfare of their country; a conviction that our claim of a government of the people is a mere travesty when half are denied expression of their political desires; that governments are weak along the lines where women's instincts and inclinations are strongest; that the disfranchisement of a sex is a discrimination based upon superstition and tradition instead of reason and common-sense—these are the motives that impel women to seek the ballot.

What have those opposed to the voting of women to say to this?

## A DECISION THAT BRINGS LIGHT

**B**IGNESS in business is no crime.

"The real test of monopoly is not the size of that which is acquired, but the trade power of that which is not acquired."

Thus speaks the United States Circuit Court, and, so saying, exonerates the United States Steel Corporation from the charge of being an illegal trust.

The decision is one of great importance. It throws another shaft of light across the twilight zone surrounding the Sherman Anti-trust Act. If it is confirmed by the Supreme Court upon appeal, it will definitely establish the basic principle with which we began—that bigness in business is no crime.

The decision of the court proceeds upon simple, straightforward lines.

Only such combinations are illegal as prejudice the public interests by unduly restricting competition or unduly obstructing the course of trade. So has the Supreme Court decided. The public interests here involved include the interests of competitors, of the purchasing public and the general public. Given these principles, their application becomes a question of fact. Does a given combination in fact prejudice the public interests by unduly restricting competition or unduly obstructing trade? Did and does the Steel Corporation in fact unduly restrict competition or unduly obstruct trade?

To this decisive question the court finds only a negative answer. Competition in the steel trade is increasingly keen. The Steel Trust's competitors are growing more rapidly than it is growing. The course of trade in the basic industry has been nowise obstructed.

This decision should help business. For business hates

uncertainty. It has long been uncertain whether mere size was not a criminal offense in an industrial corporation. It thrives on confidence. It has needed assurance that the law did indeed make a distinction between good trusts and bad. Every new illumination of the twilight zone means more confidence and better times.

### AN EXPLODED CHARGE

FOR eight years rabid opponents of Mr. Roosevelt have maintained the Tennessee Coal and Iron Company incident as one of the cardinal charges in their indictment against him. That charge has now been effectively exploded by a Federal court.

When the United States Steel Corporation at the height of the panic of 1907 acquired the stock of the Tennessee company, says the court, it committed no wrong. It clearly follows that when President Roosevelt declared in advance that he should not consider the acquisition as giving grounds for Federal prosecution of the Steel Corporation under the anti-trust law, he did exactly right.

This by-product of the Steel suit will be a sad disappointment to those newspapers and individuals who suffer from Rooseveltphobia. But it should be a matter of gratification to the people who put national pride above partizanship. For there are, strange as it may seem, some Americans who would rather see a President of the United States, even when he is of the opposite party or another faction, right than wrong.

### DANDELIONS AND BUTTERCUPS

THEY are the earliest, the brilliantest, the starriest of all our spring flowers, but also the weediest, the most troublesome and persistent of all the weeds that disfigure and beautify a lawn. No sign of spring is more welcome than the first dandelion that breaks out from the greening bank, but when they come by thousands, as if to enrich us with their abundant gold, we are already weary of them and choose the restful monotony of the smooth-shaven green. Yet children do not tire of them, but gather them by the handfuls, and make chains of the long stems, and hang them about their necks after an hour's wilting has made the ends hold close enough not to slip.

Children can afford primitive and natural pleasure in beauty; but we older ones think of the nuisance they are in the even lawn, and cut them off with a knife for "greens," or merely pick a quart of the yellow blossoms to make a gallon of dandelion wine. We hate to see them go to seed, those beautiful round balls of fluff that tomorrow fly away to sow mischief and beauty where beauty is unwelcome. But the mothers that send the boys with knives to bring in a peck of dandelion tops for dinner do not know that for every top snipped off four more will come. They are hydra heads; out of every wound four more heads sprout, and the last end is worse than the first. If you want to kill a dandelion you must take a narrow angular trowel, thrust it down straight the full length close to the root, and raise it from the bottom. It requires radical treatment, like a bad habit.

The buttercup can be removed more easily. Its root

does not run down a foot for moisture like dock, but spreads out just below the surface, very much as does the plantain, which the Indians called the white man's footsteps. The plantain has no claim for existence. It is an abomination anywhere. It can be destroyed easily with a flat, broad knife made for the purpose, but if allowed to seed it will next year cover the sod. The buttercup is not ugly, like the plantain, but mints the richest of yellows, and that yellow polished like a mirror, the brightest blossom that grows, the only flower that will reflect its gold under a little girl's chin.

What is a weed? It is something, no matter how beautiful, that insists on being where it is not wanted, where it interferes with other things, things more useful, crowding them out, making them less valuable than they might be. What more beautiful than a dandelion or a buttercup? But they are weeds. Flower or man, beauty, grace, or any admirable quality that crowds out useful growth, that starves and kills real food and strength, is a weed. Napoleon was a weed; Aaron Burr was a weed. Europe is just now a weedy field, and those are sharp, strong knives that are cutting up the weeds by the roots to have a garden full of the fruits of peace, where now are the *dents de lion* of war.

### EXPRESSIONIST PAINTING

WE are reminded that time is fleeting and so is art when we read in a critique of a new art exhibition just opened in Berlin that "the work of Gösta Adrian-Nilsson is reminiscent of the more traditional or early work of the Italian Futurists." It was only two years ago we provincials in New York City were gazing awestruck or otherwise at the "Nude Descending a Staircase," "Mlle. Pogany" and other examples of Futuristic or still more primitive art. And now the Cubists have become commonplace, the Futurists are antiquated, and the Post-Impressionists have given way to the Expressionists. At least that is what they call themselves, tho what they express is not obvious to the uninitiated. It seems that they have discarded ideas as belonging to the old-fashioned literary art, and the artist portrays merely his mood or emotion. The sight of the canvas then excites in the spectator an emotion not necessarily the same as inspired the artist. "Impressionism is frozen art, bits of the external world copied off and fettered in a fixed and rigid form. Expressionism is the outward fluid face of the inner thought, feeling or impulse." So says the critic of *The Continental Times*, published in Berlin.

"Colors are chords. You paint with a fiddle-bow and fiddle with a paint-brush." Fiddling thus with a paint-brush, to adopt our critic's apt phraseology, they give us, it seems, the "Portrait of a Poet," with hair of crimson lake and emerald green eyes; also the picture of a railroad train in which the "noise and bustle are all expressed in vivid color, abrupt angles and swirling vortices."

Most of the Expressionist school represented in the Berlin exhibition are Scandinavian or German artists. France, on the contrary, is going in for Belgian art, and President Poincaré recently opened at the Luxembourg an exhibition of Belgian paintings and prints which had been presented to the French nation in response to M. Rodin's gift of his statuary to England.

# THE STORY OF THE WEEK

## A Warning to Mexico

President Wilson's appeal to the American public, on May 28, for contributions of money and food to be given by the Red Cross to suffering Mexicans, was followed, on June 2, by his warning to the leaders of the Mexican factions. In his appeal he said that the people in many parts of Mexico had been reduced to the verge of starvation. At the same time the Red Cross published a long statement showing that there was ample warrant for his assertion.

In his warning, which was in the form of a statement given to the American people, altho it was sent by telegraph to Carranza, Villa, Garza and Zapata, he spoke, at the beginning, of the Madero revolution, commending its purpose, with which, he said, our people instinctively and generously sympathized. But the leaders of the revolution, in their hour of success, had disagreed and turned their arms against one another. They were unable or unwilling to coöperate, and Mexico was "apparently no nearer a solution of her tragical troubles than when the revolution was first kindled." And she had been swept by civil war as by fire. Her crops were destroyed, her fields were lying unseeded, and no man seemed to see or lead the way to peace and order. There was no proper protection for her own citizens or for resident citizens of other nations. "Mexico," said he, "is starving and without a Government."

This country, he continued, could not stand indifferently by and do nothing to help her neighbor. Our people wanted nothing for themselves in Mexico. They did not desire to settle Mexico's affairs or to claim a right to do so. But they did not wish to see utter ruin come upon her, and they deemed it their duty to aid any instrumentality which promised to effect a settlement embodying the real objects of the revolution. It was time for the United States to state its policy. It must presently "lend its active moral support to some man or group of men, if such may be found, who can rally the suffering people of Mexico to their support in an effort to ignore, if they cannot unite, the warring factions," return to the Constitution, and set up a government which the great powers of the world could recognize and deal with.

And so he, "publicly and very solemnly," called upon the leaders of factions to act, to act together, and to act promptly for the relief and redemption of their prostrate country. And it was his duty to tell them that "if they cannot accommodate their differences and unite for this great purpose within a very short time, this Government will be constrained to decide what means should be employed by the United States in order to help Mexico save herself and serve her people."

## The Warring Factions

No answers to the President's warning had been received from Mexico at the beginning of the present week, but it was known that Carranza's reply would soon be sent. In the meantime it was reported that overtures had been made for a reconciliation of Carranza and Villa. Both were saying, however, thru their agents, that their action had been in the spirit which animated the President's statement. The exprest opinion of prominent Mexicans in this country was that the support of any group by the forces of the United States would cause a war in which the Mexican people would be united against the foreign power.

Reports of the defeat of Villa by Obregon promised to give increased force to Carranza's claims. Obregon and Carranza asserted that in a five days' battle Obregon had captured Leon, routed Villa's army, made his cavalry leader a prisoner, taken Villa's artillery, and driven Angeles to the mountains.

In current discussion about the "man

or group of men" to whom our moral support might be given, the name most prominently mentioned has been that of Eduardo Iturbide, who has been in Washington several months, since his escape from the Mexican capital, where he was under sentence of death. Others considered are Pedro Lascrain, Madero's Minister of Foreign Affairs, and Vasquez Tagle, who was Minister of Justice in Madero's Cabinet. It is said that Mr. Wilson will limit the time required, probably to sixty days. The Red Cross is receiving assistance from our Consuls in Mexico and from our troops on the border.

## The Steel Trust Acquitted

By the unanimous decision of Judges Buffington, McPherson, Woolley and Hunt, of the Federal District Court, sitting at Trenton, N. J., the United States Steel Corporation was acquitted, on June 3, of the charges preferred in the Government's suit for dissolution of the great company. This suit was begun in October, 1911, and the testimony taken covers 15,000 printed pages. The principal opinion was written by Judge Buffington. Judges Woolley and Hunt, while concurring, set forth differing views as to certain points, but all were in agreement as to the decision. The Government's petition is not granted. The company is not to be dissolved, because it has not violated the Sherman Anti-Trust law, except, possibly, in the dinner agreements with competing companies, but these were discontinued before the beginning of the suit.

The court sought the business facts which would show whether the combination and its conduct were prejudicial to public interests, with respect to effect upon competitors, the purchasing public and the general public. It finds that while the company's business was increased in ten years by about forty per cent, that of its eight leading competitors was enlarged by much greater additions—Lackawanna, 63 per cent; Republic, 90; Cambria, 155; Jones & Laughlin, 206; Indiana, 1495; Bethlehem, 3779. Because of the condition and facilities of these competitors it is satisfied that the steel and iron industry cannot be monopolized. The testimony of customers proves that real competition has existed. The company's great foreign trade was not built up by restraining others or by taking trade from them. It was created by the company and it shows no violation of the Sherman act.

There was nothing wrong, the court says, in the company's acquisition of the Tennessee Coal and Iron property in 1907. That was done in a fair business way, and was "the honest exercise of one's right to contract for one's benefit unaccompanied by a wrongful motive to injure others." The court thus approves of President Roosevelt's

## A PIONEER DOCTOR OF LAWS

Columbia gave its honorary degree of LL.D. to a woman for the first time on June 2 at the one hundred and sixty-first commencement. Dr. Louisa Lee Schuyler founded the State Charities Aid Association of New York, originated the first American training school for nurses, initiated legislation for State care of the insane, was one of the original trustees of the Russell Sage Foundation, and has been in all things "a pioneer in the service of noble women to the State." She is the great-granddaughter of Alexander Hamilton of the Class of 1777 at Columbia

## A MOB THAT GOT WHAT IT WANTED

A crowd in Milan—over a hundred thousand strong—shouting for war with Austria

refusal to interfere with that transaction. It exonerates Mr. Carnegie, saying there is no proof that his relation to the company was other than that of a seller of his interests, and it was true that he desired to retire from active business. No monopoly of ore or other raw materials was formed. "The real test of monopoly," the court says, "is not the size of that which is acquired, but the trade power of that which is not acquired." And, again, it remarks that considerations of bigness should be laid aside; the question is not how much or how large, but in what manner was the business done. Judges Woolley and Hunt express the opinion that those who formed the company had monopoly in mind, but found themselves confronted by forces beyond their control. The Corporation, they say, has not been a monopoly and did not at the beginning of its existence attempt to make one.

Attorney General Gregory gives notice that he will appeal to the Supreme Court. Mr. Wickersham, who, as Attorney General, began the suit, says he is not surprised by the decision, as some recent decisions of the same court had prepared him for it. George W. Perkins, a director of the Corporation, says the decision is a great victory for twentieth century economics and moral conduct. He believes that the effect of it upon business will be most beneficial. In deciding to appeal from it to the Supreme Court, he adds, the present Administration exhibits insincerity, inconsistency and incompetence.

Our Volcanoes An alarming and destructive eruption from Mt. Lassen, the volcano in California, has ruined many farms. Settlers and ranchmen fled for safety. Great streams of lava and mud ran down the sides of the mountain. Live stock was withdrawn from the vicinity, as the running waters and wells were filled with mud. When the great canopy of smoke clouds was lifted, it was seen that the peak, formerly symmetrical, had become a wreck, and that the cra-

ter was shattered. The streams of lava and mud had been half a mile wide.

In Alaska, beginning May 18, the volcano Iliamna and another volcanic peak, both on the west coast of Cook Inlet, and about 150 miles from Seward, were in eruption for several days. No eruption is reported from Mt. Katmai, which covered Kadiak Island with ashes three years ago.

**Orders for War Supplies** The production and delivery of the ammunition recently ordered in this country by the Allies will be delayed, owing to difficulties encountered by those who are adapting manufacturing plants to new uses. For example, the transformation of factories in which railroad equipment has been made into factories for the production of shrapnel has presented many obstacles, some of which were not foreseen. On account of the changes re-

quired, there has been a very great demand for machine tools. Orders for such tools are said to exceed \$25,000,000, and the manufacturers cannot fill them. Russia and Italy also seek such tools, desiring to use them on their own territory. There is a scarcity of the skilled labor which the makers of ammunition need.

Two weeks ago Russia's order for 22,000 freight cars, given to six companies, was reported. Russia has now added, dispatches from Chicago say, an order for 40,000 similar cars, the cost of which will be from \$25,000,000 to \$30,000,000. Italy is in the market for shrapnel. Colonel Bertram, the head of a war supply committee in Canada, says that the shrapnel orders placed in that country call for 9,000,000 shells, at a cost of \$170,000,000, and that they give work to 30,000 men. But it is known that a large part of the work is to be done in the United States. A new order for 350,000 pairs of army shoes has been given to two factories in Brockton, Massachusetts. The Du Pont Powder Company, having declared extra dividends, is about to enlarge its plant in the West.

Rumania has agents here seeking shrapnel, and has placed an order for 500,000 pairs of shoes. It is admitted that the Westinghouse Company has an order for 1,000,000 rifles, and it is said that other orders make a total of \$55,000,000 for this corporation. An unconfirmed report gives the General Electric Company an order for \$75,000,000 worth of rifles and cartridges. It is asserted by officers of the Aero Club that the orders here for aeroplanes and the engines used in them amount to \$16,000,000.

Mt. Lassen, advertised as a tourist attraction, has resumed its place definitely among the forward-looking volcanoes of the earth, and has spread devastation in the path of the lava and mud it emits. This debris marks the site of four buildings, including a large house

THE RECAPTURE OF PRZEMYSL

By Mackensen's eastward sweep thru Galicia the Russians have lost all they had gained since September 3, when they occupied Lemberg (Lvov). Their hold on this city is now threatened from the west and south. The Austro-German forces, which took the fortress of Przemyśl, are pursuing the retreating Russians along the railroad and at the same time another army under General von Linsingen, having defeated the Russians at Stryi, has driven north of the Dniester. The heavily shaded area is still held by the Russians. The arrows show the points of attack

facture of submarines, has been transferred to Atlanta. He had claimed immunity because of his office, and the prosecution had been discontinued. In New York, five men, Germans or Austrians, were indicted for defrauding the Government by false manifests. They had been exporting to Germany, by way of Italy, rubber concealed in barrels apparently filled with resin. Three of them pleaded guilty, and as it appeared that they did not know they were violating any law, they were punished only by fines.

**Przemysl! Recaptured** The Russian reverses continue and they have now lost the only fortress they have taken in the ten months of war. The Galician stronghold of Przemyśl, after withstanding the Russians for more than six months, the longest siege in modern warfare, surrendered to them on March 22, is back in the hands of the Austrians ten weeks later. General Mackensen did not wait to besiege the fortress, but carried it with the same method and the same swiftness as the Germans did Liège, Namur and Antwerp. Within twenty days after the Teutonic forces arrived in the vicinity and four days after the big guns were in position the Russians evacuated the city.

This precipitate retirement is surprising since they had been energetically occupied in preparing the place for defense ever since it became evident that it would be attacked. The Jews, who form a large part of the population of the city and who had been allowed by the Austrians to remain during the siege, were now expelled. The forts which had been blown up by the Austrians on the morning of their surrender were repaired as well as possible and provided with guns brought from the Polish fortresses of Ivangorod and Brest-Litovsk.

Przemysl is situated at the point

where the San River coming thru the hills along the edge of the Carpathian plateau makes a right angular turn toward the north on its way to the Vistula River. It was defended by three rings of forts, over forty in number, on the surrounding hights. The chief at-

tack was made June 1 by the Bavarians on five forts in the outer ring about five miles north of the city. These were showered with shells from the German Krupp and Austrian Skoda guns of various calibers, certainly as high as 12-inch and probably also 16-inch. On the following day the Germans charged the forts in close formation and in spite of terrible losses carried two of them by assault. Then they turned the Russian guns around and directed them against the middle ring of defenses. These the Germans stormed in the night and at 3:30 on the morning of June 3 entered the city. The Austrian Tenth Corps entered from the south and west two hours later.

**Closing in on Lemberg** The capture of Przemyśl is the climax of the most striking operations of the war. The Russians who had occupied almost the whole of Galicia and Bukovina and had invaded Hungary have now possession only of the corner of Galicia about the capital, Lvov, as they call it, or Lemberg, as the Austrians call it. During the month of May the German and Austrian forces took prisoner about a thousand officers and more than three hundred thousand men, and captured 251 cannon and 576 machine guns, as well as enormous numbers of rifles and cartridges. This does not include those which fell into their hands by the oc-

Janet M. Cummings

WHAT ENGLAND THOUGHT OF PROHIBITION

Tho Lloyd George received an enormous mail favoring prohibition when the public was asked for its opinion, legislation did not follow and the British workman is still handicapping the British soldier by underproduction

cupation of Przemyśl as it is not yet known how much of their munitions and supplies the Russians were able to destroy or carry away when they evacuated that city.

They retreated along the railroad in the direction of Lemberg, fifty miles east, but it is doubtful if they will be able to hold that city. It is said that in anticipation of its fall the Russian headquarters have been moved back to Brody on the frontier. General von Maritz has followed the retiring Russians as far as Mosziska, about fifteen miles. Between this point and Lemberg there is a lake region which would afford a fine line of defense if the Russians were in a condition to take advantage of it.

Even if they were it would not ensure the safety of Lemberg for another force is approaching the capital from the south and is now less than twenty-five miles away. This is in command of General von Linsingen, who broke down the Russian defense at Stryi, where sixty officers and 12,175 men were taken prisoner. The Russians next attempted to make a stand on the north side of the Dniester River, but were dislodged from this position and have fallen back toward Lemberg.

This severe setback will probably prevent the Russians from resuming the offensive in Austria-Hungary very soon and so will enable the Germans to withdraw their troops either for an attack upon Italy or to strengthen their lines in France, where they are being hard pushed. The Germans are also said to have renewed their attack on the Russian defenses before Warsaw on both the western and northern sides. It is rumored that an attack is being

made on Riga by the Baltic fleet and the land forces from East Prussia.

#### Russian Ammunition

The Russians ascribe their collapse, doubtless correctly, to the failure of their supply of munitions. On four rivers in succession they had entrenched themselves in strong positions but had to relinquish them because they could not load their guns. Even the infantry ran short of arms and many Russian soldiers were captured who had nothing but pikes or bayonets on poles. In men Russia is richer than all the other Allies in Europe put together, but her facilities for manufacturing equipment are limited. During the year preceding the war the Russian Government had been actively engaged with the aid of French funds and factories in accumulating the necessary supplies for the campaign, but since the war Russia has had to depend mostly upon her own resources. Her only free port in Europe is Archangel, opening on the Arctic Ocean, and that was closed by ice until the first of this month. It was expected that the Dardanelles would be opened before this but the naval attack of the Allies was a disastrous failure and the land attack has made little progress, so the Black Sea ports cannot be used for the export of wheat or the import of arms. The Japanese have returned the Russian arms taken during the war in Manchuria and has been supplying Russia from the factories besides, but these have to be transported by the Trans-Siberian Railroad across Asia and Europe. The hundred million dollar orders that have been placed in the United States are mostly yet to be filled

and then may have to be sent via Vladivostok unless they can go thru Norway, Sweden and Finland, a round-about route at best, and liable to interruption by German submarines from the North Sea. If the German advance into the Baltic provinces continues it will still further curtail the Russian supply.

In the lavish use of projectiles the Germans have gone far beyond the anticipations of any experts except perhaps their own, so other countries have been unable to keep their troops supplied. Next to the Germans the French and Italians are best provided for in this respect. It is frankly admitted in Parliament that the failure of the British to take advantage of their costly inroads on the German lines is due to the inefficiency of their factory system and that is why a new department of munitions has been created with Lloyd George at the head of it.

#### The Italian Invasion

The censorship is so strict in Italy that we get little except the very scanty government reports. From these we gather that mobilization is complete and that the Italian forces which have crossed the frontier at various points are making progress tho they do not appear to have got more than five miles inside the enemy's territory anywhere. Nor do they seem to have met with any strenuous opposition so far.

The Italians have two objectives; on the west the capture of the Trentino, on the east the capture of Triest. The Trentino is the name given by the Italians to that part of Austrian Tyrol which projects like a peninsula down into Italy. In the middle of it is the

#### THE SCENE OF THE AUSTRO-ITALIAN WAR

The Italians have invaded the Trentino from west, south and east and have got within gunshot of Rovereto. On the eastern frontier they have gained the highs above Tolmein and advanced along the railroads leading to Trieste. In this birdseye view the Italian territory is dark and the Austrian light. The inset shows Lake Garda at the entrance to Trentino, where the Italians have begun their invasion of Austrian territory

city of Trent, protected by mountains on all sides and strongly fortified. From Trent and Adige River flows thru deep defiles down into the Venetian plains. Up this river the Italian troops are now endeavoring to make their way and they are also attacking the Trentino salient from both sides. That is, the invasion is being undertaken simultaneously from the west, south and east, all three lines converging on Trent.

Half way down the Adige from Trent to the frontier is the town of Roveredo (Rovereto), which is already within range of the Italian guns from the east and south. It is, however, well fortified and not likely to surrender without resistance. The operations during the week have been retarded by the heavy rains which have flooded the passes and stopped the movement of artillery by mud. In clearing away the barbed wire entanglements the Italians made use of the same expedient as was employed in the defense of Panama against the British buccaneers. They drove forward a herd of the wild long-horned Italian cattle by exploding bombs behind them and the frightened animals in their stampede plunged thru all obstructions.

On the eastern frontier the object of Italian attack is to cut the railroad which runs south on the other side of the Isonzo River to Triest. They have crost the river to the north of Görz (Goritz) and captured the ridge of Monte Nero. From this point, over 7000 feet high, their guns can easily bombard Tolmein (Tolmino) six miles southeast. This will give them command of the river valley thru which the railroad runs.

The Italian Government has seized all the German and Austrian ships in Italian ports. There are fifty-seven of these and their estimated value is twenty million dollars. A division of the Italian fleet is bombarding the Austrian towns along the Dalmatian coast and sinking merchant vessels in the Adriatic Sea.

#### The Souchez Sugar Factory

For a week the fiercest fighting on the western front has raged about a sugar refinery which stands near the town of Souchez. Three times in as many days this changed hands. First the French took it from the Germans after a hard bombardment. When the

victors entered they found the basement filled with German dead. Then the German shells began to knock holes in the walls and dig cellars in the ground about and a midnight charge put them again in possession of the place. They were, however, not able to hold it long against the French artillery and at last accounts the building or what is left of it is occupied by the French. The desperate character of the struggle here is shown by the fact that this one French regiment has in the three weeks ending June 1 buried 2600 German dead and taken 3100 prisoners.

Three miles south of Souchez and near Neuville are the fortifications known as "the Labyrinth" because of its elaborate system of trenches and tunnels. The only way to dislodge the Germans from these subterranean strongholds is to blast them out by countermining and setting off heavy charges of explosives. This is a slow process. A gain of a hundred yards was made during the week at this point. On May 8 the French sappers near Carency exploded at one time seventeen mines, each containing a thousand pounds of explosives.

#### GENERAL VON MACKENSEN

Two months ago the Russians had spread over almost the whole of Galicia and had possession of the chief Carpathian passes leading into Hungary. Now they have been driven out of the western half of Galicia and its principal fortress, Przemyśl, has been regained by the Austrians. The movement which has effected this radical transformation of the situation was carried out by General August von Mackensen, who distinguished himself earlier in the war by leading the army which invaded Poland and came near capturing Warsaw. From his name one would infer a Scotch ancestry, but he comes of a Saxon family. Like Hindenburg and other generals in the present war, he is over the age which is supposed to limit military activity, for he was born sixty-five years ago. He entered the Life Guards in 1869 and is the author of a history of that regiment

#### Zeppelins Reach London

Twice during the week England was visited by German airships, but the censor does not allow anything about it to be published or cabled except the official announcement, and this does not disclose the places attacked. According to this statement the Zeppelins dropt about ninety bombs late Monday night. Most of these were of an incendiary nature, but only three of the fires they caused were of sufficient importance to call out an engine. There were six persons killed, a man, a woman and four children. One of the bombs dropt into a room where five children were sleeping and killed Elsie Leggatt, aged three. The others were saved tho burned. The Zeppelin raid caused a renewal of the

anti-German riots and many German shops were sacked.

According to the German version the airships passed over the heart of London and damaged the docks. The raid is said to be in retaliation for the attack on the undefended town of Ludwigshafen by French aeroplanes on May 27. There were eighteen of these aeroplanes of which one, according to the French account, and six, according to the German, were shot down or captured.

Friedrichshafen, on Lake Constance, where the Zeppelin works are located, was decorated with flags in honor of the London raid, and Count Zeppelin received many congratulatory messages on his triumph.

The official reports of the British, Belgian and French investigating commissions on German atrocities in Belgium have been extensively circulated in this country, but

### THE GREAT WAR

*May 31*—Zeppelins drop bombs on London, killing six. Twelve thousand Russians captured in battle of Stryi, Galicia.

*June 1*—Turkish losses on Gallipoli estimated at 40,000. Italians enter the Trentino by way of Adige River.

*June 2*—Germans renew attack on Warsaw defenses. Republic of San Marino declares war against Austria.

*June 3*—Przemysl captured by Austro-German forces. Italians take heights of Monte Nero on Austrian frontier.

*June 4*—Germany expresses regret over mistaken attacks on American ships "Gulflight" and "Cushing." British gain 100 yards in the Labyrinth south of Neuville.

*June 5*—Twenty vessels sunk by German submarines in three days. Australasian troops gain 500 yards on Gallipoli.

*June 6*—German fleet attacks Riga. Austro-German forces closing in on Lemberg from south and west.

murdered, about 20,000 buildings were demolished or burned down and that during the second invasion alone about 80,000 homes were plundered and destroyed. The last Russian expedition against Memel likewise was nothing more than a savage raid, accompanied by atrocities of every description. The movable goods of the poor as well as of the wealthy were stolen, looted or wantonly destroyed by the Russian troops in every conceivable way. Cattle and provisions were taken without payment or promissory certificates. Homes, farm buildings and provisions were without reason or purpose destroyed by fire.

The brutal lust of the Russian soldiers for murder did not stop even at old men, women and children. The murder of a little girl about two or three years old is a particularly horrible instance. Revolting also is the case of an entire family which fell victims to the lust of murder of Russian soldiers. The man was spiked to the table, the child to the door, and the body of the wife was mutilated. In another instance a man and his wife were nailed by the tongue to a table, in which position they perished of hunger and loss of blood. Innumerable are the cases of bestial attacks upon women and girls by officers and men.

Three hussars were found hanged in a barn with their heads down and their noses and ears chopped off, so that they must

the official reports of the German investigations on the atrocities committed by the Belgians and Russians are not yet accessible to Americans owing to the control by Great Britain of all means of communication with Germany except the wireless, and this is not sufficient to carry even the messages of the German Embassy at Washington. A large number of copies of the German White Book containing the evidence of the violation of the rules of warfare in the invasion of East Prussia were sent to the United States in the "Dante Alighieri," a merchant ship of a nation then neutral, but as we stated in our issue of May 10 the British refused to let her pass Gibraltar except on condition that the books be not unloaded in New York but carried back with the ship.

Count von Bernstorff, the German Ambassador, has, however, given out an abstract of the contents of the German White Book, from which we quote in an ameliorated form:

It has been officially ascertained that at the time of the first as well as of the second invasion of East Prussia by the Russians thousands of men, women and children were carried off, thousands were

have died in frightful agony. Cossacks in riding past German prisoners of war cut off their heads or chopped off their limbs. They tore the bandages off the wounded so that they would bleed to death, pierced out their eyes, cut off the tongue, ears, fingers and feet of others or smashed in their skulls. A prisoner slightly wounded who was pinned to the wooden floor of a veranda by a sword, which went thru his mouth, had the flesh stripped off his entire forearms from the elbows down, while his fingers were cloven to the wrists.

The facsimile is given of an order from the Russian General Staff found on a Russian officer of high rank which commanded that all the male inhabitants able to work, from boys of ten years upward, be driven before the storming columns. This was evidently made with the intention that the German soldiers in order to meet the attack of the Russians should have to shoot down their own compatriots.

These charges are said to be supported by the published affidavits of witnesses and names of persons and places are given. In this respect, then, the German White Book differs from the Bryce report on Belgium where in most cases the names of those telling of atrocities were not published or the circumstances specified in a way to be identified because the country is still in the hands of the invader.

# ALL-AMERICAN INTERVENTION IN MEXICO

BY JAMES L. SLAYDEN

**I**N an editorial that was printed in The Independent of March 22 these words occurred: "There is no longer revolution in Mexico. There is anarchy."

The only surprising thing about this statement is that it was not printed more than a year ago. It is a deplorable fact known to all Americans who have knowledge of Mexican affairs since 1911, whether they be miners, ranchmen, merchants, commercial travelers, military or naval officers. It has only failed of recognition by those editors who have believed in the sincerity of the claims of some unworthy Mexican leaders that they—and they only—stood for the people, the constitution and liberty, and in certain official circles.

The "people" thus stood for by these great captains of anarchy have been their own crime-stained followers; the "Constitution," a document which has never been taken seriously, which is of value only as a shibboleth, and of value in that way only in other countries, and the "liberty" has been the privilege of committing crimes of vengeance, greed and lust without punishment.

The writer has never believed that the real Mexican people have ever been represented in the so-called revolutions that have in four years brought Mexico from order and prosperity to shame and poverty. It may well be doubted whether, despite the claims of large "armies" under this or that chief, there have been, all told, from the retirement of General Diaz down to the battle of Celaya, as many as 150,000 men under arms. The mass of the Mexican people prefer peace and an opportunity to earn a living. The writer has been told by truthful Americans who own mining properties in Mexico that their old hands have begged them to resume operations. Of course, they could not resume work because neither their lives nor their property would be safe. Forced loans (never repaid) and frank confiscations do not encourage mine owners to continue, or to resume, their operations.

A curious feature of these "revolutions" in Mexico is the marked hostility to property. Even when no military necessity suggested, when absolutely nothing of strategic value was to be gained by it, an appalling amount of property has been burned or otherwise destroyed. While foreigners are not popular in Mexico it may be said, in justice to these patriotic armies, that they have just as cheerfully destroyed the property of

*The author of the following article is a Member of Congress from the Fourteenth District of Texas. He represented the United States as official delegate to Mexico at the centenary celebration in 1910, and has written and spoken much on Mexican affairs. He is also a trustee of the Carnegie Endowment for International Peace.—THE EDITOR.*

their own countrymen, and even that in which they themselves have a proprietary interest, as, for example, the government-owned railways. All this property of foreigners that has been unlawfully taken or destroyed must be paid for some time and the money to pay for it will be earned in the sweat of the Mexican laborer.

It may be asked why if so small a part of all the people are engaged in revolution they do not organize, put an end to anarchy and hang the chiefs who have caused all this misery? The answer is easy. They have no arms and no organization, and the best friend of the Mexicans must admit that they seem to lack the qualities for such an enterprise.

When will it end and how? The President said in his Indianapolis speech that it is none of our business how they settle their business or how long they take in doing so. Any American must regret not to be able to agree with the President. The longer they take in settling their troubles and the longer they persist in the methods of anarchy the more certain it is to become the very pressing business of Americans who cannot always be restrained from taking a hand in its settlement. An explosion on the frontier, long-restrained resentment let loose, public sentiment aroused and the mischief will be done. That is the most likely thing possible. The writer sincerely hopes he will not be understood as suggesting such a thing or of approving it. He deplores it and he thinks it is not necessary and in a few words he will try to tell how he thinks peace between the United States and Mexico may be maintained.

In The Independent editorial referred to above it is suggested that:

A. The rights of American citizens within the Mexican borders must be insured.

B. The aspirations of the Mexican people for liberty and self-government must be encouraged.

C. The rights of citizens of other nations in Mexico must be protected, since under the Monroe Doctrine we cannot permit other nations to intervene themselves.

D. We must see to it that Mexico does not continue to be an international plague spot.

That is a program the writer outlined in the *American Journal of International Law* for January. The first, third and fourth of these proposals are of pressing and vital importance and it is urgently necessary that they be adopted and executed.

The time has come when a "strong hand from the outside must be laid upon the clashing factions that peace may be restored." But whose hand shall it be?

The Independent suggests that "the three great nations of South America, the A B C powers . . . be invited to join in the work of intervention."

The writer feels flattered that his suggestions made in January should be even partially agreed to by The Independent. But The Independent doesn't go far enough. All the peaceful and orderly government of Central and South America should be invited to cooperate in the inevitable intervention. A representation from all those willing to join in the movement would probably make it unnecessary to proceed further. It would be a show of force that even a dull-witted bandit could understand. It would avoid the further development of jealousies between the countries of South and Central America. It would be an appreciated recognition of the sovereignty of each. It would be a guaranty to Mexico and to all the other American countries that the United States in engaging in such a movement were not setting out on a career of conquest and annexation. Such an assurance will go far to establish really cordial relations between the United States and all the other American republics and ought to be useful in the development of trade. The precedent for such an intervention and one that carried with it the guaranty of no transfer of territory is found in the joint movement to Peking in 1900. But there must be no cooperation with European powers in the settlement of a purely American political question. It will help to the solidarity of the American countries, a solidarity that may be of value in the future. It would help to quiet the nerves of those timid people who believe that an invasion from Europe or Asia is imminent if they knew that the one hundred and seventy-five million people on the western hemisphere are united to maintain the doctrine of America for the Americans.

INDEPENDENCE HALL, WHEN THE DECLARATION OF INDEPENDENCE WAS SIGNED  
From an old print

## A LEAGUE FOR THE ENFORCEMENT OF PEACE

ON the anniversary of the battle of Bunker Hill, June seventeenth, there will be held in Independence Hall, Philadelphia, a conference for the purpose of considering the adoption of proposals for a League of Peace, and deciding upon steps to be taken with a view to obtaining the support of public opinion and of governments. Ex-President Taft will preside and the Conference will be addressed by speakers of national and international eminence. There will be presented to the Conference as a basis for its discussion a tentative platform of four articles, the product of a series of discussions by a smaller group of international lawyers and publicists. These articles are as follows:

*It is desirable for the United States to join a League of all the great nations, binding the signatories to the following:*

*First: All justiciable questions arising between the signatory powers, not settled by negotiation, shall be submitted to a judicial tribunal for hearing and judgment both upon the merits and upon any issue as to its jurisdiction of the question.*

*Second: All non-justiciable questions arising between the signatories, and not settled by negotiation, shall be submitted to a Council of Conciliation for hearing, consideration and recommendation.*

*Third: The signatory powers shall jointly use their military forces to prevent any one of their number from going to war, or committing acts of hostility, against another of the signatories before any question arising shall be submitted as provided in the foregoing.*

*Fourth: Conferences between the signatory powers shall be held from time to time to formulate and codify rules of international law, which, unless some signatory shall signify its dissent within a stated period, shall thereafter govern in the decisions of the Judicial Tribunal mentioned in Article One.*

The Conference is called by a National Provisional Committee of one hundred and thirteen members, which includes the names of former President Taft; former Secretary of War Dickinson; former Secretary of the Navy Metcalf; Oscar S. Straus and Judge George Gray, members of the Hague Court; Theodore Marburg, former Minister to Belgium; President Lowell of Harvard; President Hibben of Princeton; Cardinal Gibbons; Senator Williams of Mississippi; William Allen White, editor of the *Emporia Gazette*; Andrew D. White, former Ambassador to Germany; President Wheeler of the University of California; President Alderman of the University of Virginia; John Mitchell; and three eminent international lawyers: Professor Woolsey of Yale, Professor Wilson of Harvard and Professor Moore of Columbia. A complete list of the members of the Provisional Committee will be found on page 469.

# A LEAGUE OF NATIONS

THE PLAN FOR AN ALLIANCE OF THE GREAT POWERS FOR  
THE ENFORCEMENT OF PEACE DISCUSSED BY

WILLIAM HOWARD TAFT  
FORMER PRESIDENT OF THE UNITED STATES

A. LAWRENCE LOWELL  
PRESIDENT OF HARVARD UNIVERSITY

THEODORE MARBURG  
FORMER MINISTER TO BELGIUM

## A RESTRAINT UPON WAR

BY WILLIAM HOWARD TAFT

FORMER PRESIDENT OF THE UNITED STATES

**T**O constitute an effective League of Peace, we do not need all the nations. Such an agreement between eight or nine of the great powers of Europe, Asia and America would furnish a useful restraint upon possible wars.

The successful establishment of a League between the great powers would draw into it very quickly the less powerful nations.

What should be the fundamental plan of the League?

It seems to me that it ought to contain four provisions. In the first place, it ought to provide for the formation of a court, which would be given jurisdiction by the consent of all the members of the League to consider and decide justiciable questions between them or any of them which have not yielded to negotiation according to the principles of international law and equity, and that the court should be vested with power, upon the application of any member of the League, to decide the issue as to whether the question arising is justiciable.

Second: A Commission of Conciliation for the consideration and recommendation of a solution of all non-justiciable questions that may arise between the members of the League should be created, and this commission should have power to hear evidence, investigate the causes of differences, and mediate between the parties and then make its recommendation for a settlement.

Third: Conferences should be held from time to time to agree upon principles of international law, not already established, as their necessity shall suggest themselves. When the conclusions of the commission shall have been submitted to the various parties to the League for a reasonable time, say a year, without calling forth objection, it shall be deemed that they acquiesce in the principles thus declared.

Fourth: The members of the League shall agree that if any member of the League shall begin war against any other member of the League, without first having submitted the question if found justiciable to the arbitral court provided in the fundamental compact, or without having submitted the question if found non-justiciable to the Commission of Conciliation for its examination, consideration and recommendation, then the remaining members of the League agree to join in the forcible defense of the member thus prematurely attacked.

First. The first feature involves the principle of the general arbitration treaties with England and France, to which England and France agreed, and which I submitted to the Senate, and which the Senate rejected or so mutilated as to destroy their vital principle. I think it is of the utmost importance that it should be embraced in any effective League of Peace. The successful operation of the Supreme Court as a tribunal between independent states in deciding justiciable questions not in the control of Congress, or under the legislative regulation of either state, furnishes a precedent and justification for this that I hope I have made clear. Moreover, the inveterate practise of arbitration which has now grown to be an established custom for the disposition of controversial questions between Canada and the United States, is another confirmation of the practical character of such a court.

Second. We must recognize, however, that the questions within the jurisdiction of such a court would certainly not include all the questions that might lead to war, and, therefore, we should provide some other instrumentality for helping the solution of those questions which are non-justiciable. This might well be a Commission of Conciliation, a com-

mission to investigate the facts, to consider the arguments on both sides, to mediate between the parties, to see if some compromise cannot be effected, and finally to formulate and recommend a settlement. This may involve time, but the delay, instead of being an objection, is really one of the valuable incidents providing for the performance of such a function by a commission. We have an example of such a Commission of Conciliation in the controversy between the United States and Great Britain over the seal fisheries. The case on its merits as a judicial question was decided against the United States, but the world importance of not destroying the Pribiloff seal herd by pelagic sealing was recognized, and a compromise was formulated by the arbitral tribunal, which was ultimately embodied in a treaty between England, Russia, Japan and the United States. Similar recommendations were made by the court of arbitration which considered the issues arising between the United States and Great Britain in respect to the Newfoundland fisheries.

Third. Periodical conferences should be held between the members of the League for the declaration of principles of international law. This is really a provision for something in the nature of legislative action by the nations concerned in respect to international law. The principles of international law are based upon custom between nations established by actual practise, by their recognition in treaties and by the consensus of great law writers. Undoubtedly the function of an arbitral court established as proposed in the first of the above suggestions would lead to a good deal of valuable judge-made international law. But that would not cover the whole field, and something in the nature of legislation on the subject would be a valuable supplement to existing international law. It

would be one of the very admirable results of such a League of Peace that the scope of international law could be enlarged in this way. Mr. Justice Holmes, in the case of *Missouri vs. Illinois*, points out that the Supreme Court, in passing on questions between the states, and in laying down the principles of international law that ought to govern in controversies between them, should not and cannot make itself a legislature. But in a League of Peace, there is no limit to the power of international conferences of the members in such a quasi-legislative course, except the limit of the wise and the practical.

Fourth. The fourth suggestion is one that brings in the idea of force. In the League proposed, all members are to agree that if any one member violates its obligation and begins war against any other member, without submitting its cause for war to the arbitral court, if it is a justiciable question, or to the Commission of

Conciliation if it is otherwise, all the members of the League should unite to defend the member attacked against a war waged in breach of plighted faith. It is to be observed that this does not involve the members of the League in an obligation to enforce the judgment of the court or the recommendation of the Commission of Conciliation. It only furnishes the instrumentality of force to prevent attack without submission. It is believed it is more practical than to attempt to enforce judgments after the hearing. One reason is that the failure to submit to one of the two tribunals the threatening cause of war for the consideration of one or the other, is a fact easily ascertained, and concerning which there can be no dispute, and it is a palpable violation of the obligation of the member. It is wiser not to attempt too much. The required submission and the delay incident thereto, will in most cases lead to acquiescence in the judgment of the court or in the

recommendation of the Commission of Conciliation. The threat of force against plainly unjust war, for that is what is involved in the provision, will have a most salutary deterrent effect. I am aware that membership in this League would involve, on the part of the United States, an obligation to take part in European and Asiatic wars, it may be, and that in this respect it would be a departure from the traditional policy of the United States in avoiding entangling alliances with European or Asiatic countries. But I conceive that the interest of the United States in the close relations it has of a business and social character, with the other countries of the world, much closer now than ever before, would justify it if such a League could be formed, in running the risk that there might be of such a war in making more probable the securing of the inestimable boon of peace of the world that now seems so far away.

New Haven, Connecticut

## THE INTERNATIONAL POLICEMAN

BY A. LAWRENCE LOWELL

PRESIDENT OF HARVARD UNIVERSITY

VALUABLE as are treaties for international arbitration, most thoughtful people have become convinced that they must remain in large part ineffective for preventing war without some means of compulsion. It is not enough for nations to agree to submit disputes to arbitration if there is no power to compel them to do so. We need not only a tribunal but also a policeman, or rather a sheriff and *posse comitatus*; and in the absence of any superior power to enforce the treaties it would seem necessary for the nations themselves to adopt some plan whereby they agree to restrain any one of their number from making war upon another before submitting its grievance to the tribunal. This may involve the use of force, a resort to war to prevent war, and we must honestly face that possibility. Any one who is not prepared to oppose unlawful force by force used to maintain law is simply aiding the doctrine that might makes right.

For Americans the participation in a League of Peace means a departure from traditions of non-interference in the affairs of other continents. But men who will not take part in the *posse comitatus* of a sheriff in enforcing the law, or quelling a riot, have no business to criticize his conduct or give him advice. It is sheer

impertinence for us to frame plans for preventing war in Europe, or to instruct the nations there what they ought to do, if we are not to assume our share of the responsibility and burden. By the force of circumstances we have become one of the family of nations, and cannot avoid being put in jeopardy by breaches of the peace. If, therefore, we cannot maintain a position of complete political and moral isolation, we cannot refuse to take part in a League of Peace which we believe other nations ought to form.

The object of such a league should be to reduce the probability of war as much as possible; for no one not sanguine to a marvelously comfortable degree believes that by any contrivance war can be at once and forever banished from the earth; and to attempt too much means to accomplish less. The best aids in reducing the probability of war would appear to be publicity and delay; if the resort to arms could always be prevented until the matter in dispute had been submitted to public hearing before an impartial tribunal, even if its decision is not wholly satisfactory to the parties concerned, much would be gained. Of course, with human nature emotional and defective, it will not always be possible so to constitute a tribunal that its judgment will

be fair; but it ought to be possible always to secure a fair hearing, a full public presentation of evidence and arguments, and that in itself would tend to avert war. Passion would have time to cool down, public opinion would have a chance to be formed both within the nation and in other countries, the military advantage of a sudden attack would be lost, and people would consider soberly whether the game was worth the candle.

The proposal for a League of Peace provides, therefore, for an agreement between all the great states in the world first, that before taking up arms they will submit their differences, if justiciable to an international tribunal, and if not justiciable to a council of conciliation; and second that they will enforce this by jointly declaring war on any member who attacks another before the matter has been so submitted and a reasonable time allowed for hearing and judgment. That the need of such a joint enforcement of the treaty would be highly improbable is self-evident. The knowledge that it would be used would be enough; but its whole effect depends upon the fact that it is sincerely intended, and would in any case be fully carried out if necessary. No doubt any agreement among nations may be abortive, or may break

down at the time of trial, and hence it is wise not to make it too hard to fulfil. For this reason the plan does not contemplate a universal agreement to abide by, or enforce, the decisions of the tribunal or council. A nation that is perfectly willing to compel by force of arms delay and hearing, may well be reluctant to go to war to force another state to accept a decision which it does not think just.

It has been suggested that non-intercourse should be substituted in the plan for enforcement by arms; yet this would be far less effective in preventing war, and in fact more difficult to carry out.

A country that has bound itself to its neighbors to go to war under certain conditions may be expected to do so, but to upset all trade and industry by non-intercourse involves delay and strenuous commercial op-

position at home hard to overcome.

War is a terrible thing, involving fierce passions, and it can be prevented only by strong, bold and rapid measures. The plan presented is not free from defects; it contemplates not a utopia, but an improvement; yet of all the proposals so far put forward it seems to offer the best prospects for removing this scourge.

*Cambridge, Massachusetts*

## THE OBLIGATION TO KEEP THE PEACE

BY THEODORE MARBURG

FORMER UNITED STATES MINISTER TO BELGIUM

**T**HE failure of existing institutions to prevent war points to the need of sanction. All the present Hague institutions for the settlement of international disputes are voluntary. Nations may or may not resort to the Permanent Court of Arbitration, to the International Commission of Inquiry, to Mediation and Good Offices, according as they see fit.

Many men formerly satisfied with these voluntary institutions now believe that the element of obligation must be added. It is only a question of how far they are willing to go. Shall we, thru the united action of the nations, forbid war, or should we simply compel disputants to resort to institutions already in existence or hereafter to be set up in the honest endeavor to compose their quarrels before they are allowed to make the appeal to arms?

On the threshold of the inquiry we are met by the consciousness that the leagues of the past have not had signal success either as instruments of justice or as preventives of war. The recurrent meetings of the Quadruple Alliance were on the whole fruitless. The Holy Alliance, far from fulfilling its purpose of promoting the Christian religion, occupied itself with supporting royal authority, notably in Naples (1821) and Hungary (1849), and in one instance, with France as its mandatory, threw down liberal institutions (Spain, 1823), which the country had wrung from its reluctant monarch, and restored despotism.

The Concert of Europe has done

some creditable things. It smashed the Turkish fleet at Navarino in 1827 and liberated Greece. It has mitigated the unhappy lot of the Armenians in Turkey. It has prevented more than one Balkan war. But how many failures are registered against it and what disaster has overtaken it now! To the existence of the Triple Alliance and Triple Entente, formed ostensibly for peace, the very extent of the present cataclysm is traceable.

In planning a new league manifestly a first duty is to ascertain why the leagues of the past have failed. And our search need not carry us far afield.

We are confronted at once with the fact that each of these leagues was composed of a small number of powers, so small as to permit of collusion to prey upon nations outside the league, or of the wilful triumph of selfish interests to the injury both of its other members and of the world at large.

Within the state the cause of justice is advanced under a democratic regime by the play of opposing interests, the interests of one individual against the interests of another individual, of one class against another class, and by the united thinking of the many. This leads to the conclusion that if we can set up a league which shall embrace all the progressive nations, big and little, we may look for wise and just action from it. But which are the progressive nations? To measure progress in terms of numbers—growth of population, yards of cotton, or pounds of steel—is to set up a false standard. True progress lies in the growth of the spiritual and intellectual forces, of things other than the material, above all, in growth of justice; justice of man to man, justice of employer to employee, justice written in the law, justice interpreted by the court, justice of the state toward its

people, and justice of nation to nation. No nation which fails habitually to protect the life, liberty and property of the people within its own borders can bring strength to the league. Persistent injustice within a state is almost certain to involve that state sooner or later in foreign war even tho it escape civil war. Injustice on the part of a league will involve the league in war, precisely as illegal and inhuman practises in the conduct of war tend to draw into the conflict an ever wider circle of nations. Justice is the growing purpose of the world. War is to be condemned principally because it is a source of such wholesale injustice. Justice, rather than the suppression of war, is the real end to be sought. War, with all its horrors, is preferable to gross and protracted and widespread injustice.

The progressive nations, then, may be said to be those in which there exists a measure of good laws fairly well administered.

Specifically, this would give to the league the eight great powers—including the United States—the secondary powers of Europe, and the "A B C" countries of South America. In this group we find three great peoples with common political aspirations, namely, those of Great Britain, France and the United States, peoples which no longer regard democracy as a passing phase of political experiment, but as a permanent fact of politics. We find in it two powerful nations, Great Britain and the United States, which may be said to be satisfied territorially. We find, moreover, a group of smaller nations with no disturbing ambitions.

It is believed that if such a league could be formed substantial justice would emerge from its united action just as under the Federal Government substantial justice results to the forty-eight states, originally sov-

NOTE.—The present discussion of a League of Peace was started by Mr. Hamilton Holt in *The Independent*, September 28, 1914. Mr. Holt having previously dealt with the subject at the Third American Peace Congress, 1911. The question was recently examined at four round-table conferences in New York, composed of students of international law, men prominent in the peace movement and of men of wide, practical experience called together for the purpose of ascertaining how much of the "desirable" plan, worked out at the previous gatherings, was in their opinion a "realizable" project.—T. M.

foreign entities, now composing the American Union. And unless justice results the league cannot endure. Unless justice results we do not want it.

Now, a desirable plan would embrace such a broad league, a league which should not itself attempt to pronounce upon international disputes but would refer the disputants to certain institutions for the settlement of controversies and insist that they may not resort to war.

In such a project we find four progressive stages:

*First Stage.* Institutions such as we now have, supplemented by a true court of justice, all of which institutions shall be purely voluntary or facultative.

*Second Stage.* The element of obligation added in so far as the nations shall bind themselves to resort to these institutions.

*Third Stage.* The further addition of an agreement to have the league act as an international grand jury to hale the nation law-breaker into court and to use force to bring it there if recalcitrant.

*Fourth Stage.* The final addition of an agreement to use force, if need be, to execute the award of the tribunal.

Now, how much of this "desirable" plan is a "realizable" project?

The difficulty that faces us with regard to the last two steps is the reluctance of nations to make the surrender of sovereignty and inde-

pendence which they involve. It means that the signatories bind themselves to make war, under certain conditions, in the common interest. Can the United States Senate be brought to such a view of its duty to mankind? The last step, that of enforcing the award, involves likewise the danger of oppression unless the league charged with such a duty should embrace all or nearly all of the progressive nations. On the other hand, the demand that controversies be referred to a tribunal and that the decision of such tribunal be awaited before making war involves no danger of oppression. It is a reasonable demand. A project which included bringing a nation into the presence of a tribunal but made no attempt to execute the award could therefore be safely instituted by a league embracing all, or nearly all, of the great powers without awaiting the adherence of the secondary powers, tho the presence of the latter would make the league all the stronger.

As the nation which consented so to refer its disputes to a tribunal would not be obliged either by its own promise or by the will of the league to observe the award, the proceedings would be much in the nature of a mere inquiry. But since publicity tends to correct not only illegal practises but unjust ones, too, and does it without resort to a court of law or even to a tribunal of arbitration, it is felt that in the

majority of cases the controversy would be stilled by investigation alone.

It will be observed that the plan here proposed moves forward the present practise in two particulars, namely, in binding the signatories to resort to international institutions for the settlement of controversies before making war and in compelling them so to do if recalcitrant.

This is as far as some men of wide practical experience are willing to go. They are unwilling, for example, as part of a realizable plan, to take the fourth step, namely, bind the league to enforce the award.

Moreover, it is felt that out of the more modest project the greater project may grow, that if nations acquire the habit of submitting their controversies to a tribunal, presently the world will become impatient of failure to respect an award made under such conditions.

The balance-of-power theory, which has so long governed European politics, would fall before the security promised by a league, in fact must fall if the league is to operate successfully. That theory presupposes rival nations or groups of nations whose potential strength and whose influence, therefore, balance each other. This can only lead to the formation of a group outside the league sufficiently strong to oppose the will of the league. That spells war

Baltimore, Maryland

## SOLOMON

BY FULLERTON L. WALDO

The Great King in the little cup of his hand  
Held all the wine of the world to spill or to quaff . . .  
Ivory from ultimate isles of the alien sea,  
Pearls from the shadowless, fronded depths between;  
Earth for gold was hurt to the uttermost heart;  
Almost he reached to the imperturbable stars.  
Orient, out of the Orient, maidens of Orient  
Mute in their beauty, were eyes unuplifted before  
him . . .

One, the One Woman that Solomon failed of finding,  
Neither was in the Palace nor in the purlieus;  
I doubt if the King or a servant of his had seen her.  
Somewhere, sequestered, invisibly walking in beauty,  
Their eyes would be veiled, or be blinded forever,  
beholding.  
She hath arisen, and trampled on other splendor,  
As Day treads out the stars, when the Night is  
over;

Turning, hath held out her arms, with a cry of the  
human,  
Unto the Man she loves, that humanly loves her.

Cedarn the blackness; out from the Palace mar-  
moreal  
Lights pour, lutes complain, and gossamer twinkles,  
Fountain-play enwreathing with silvery laughter,  
Where rose-leaves and musk, jessamine, unguents,  
frankincense  
Stifle the air . . .

Here, where they sit on the hillside  
Under the stars, the Woman and her Beloved,  
Do they long, as they look, for the lights and the  
laughter?  
Would she be one of the Thousand of Solomon there  
Where all is Vanity; or is it better thus  
Sitting, with Love beside her, beneath the stars,  
Whilst airs of the Night and of Eden breathe over  
them both?

OPENING UP THE COLUMBIA RIVER—WHERE THE RIVER GOES

Underwood & Underwood

WHERE THE SHIPS GO

THE PANAMA IS BY NO MEANS THE ONLY JOB OF DITCH-DIGGING THAT UNCLE SAM HAS BEEN DOING. THE DALLES-CELILO CANAL, WHICH IS INAUGURATED THIS MONTH, PERMITS OCEAN-GOING VESSELS TO GO FIVE HUNDRED MILES FURTHER UP THE COLUMBIA RIVER AND BRINGS INTO DIRECT COMMUNICATION WITH ALL PARTS OF THE WORLD AN AREA OF 250,000 SQUARE MILES IN THE

INTERIOR OF IDAHO, WASHINGTON, OREGON AND BRITISH COLUMBIA. THE UPPER PHOTOGRAPH SHOWS THE OBSTRUCTION TO AVOID WHICH THE CANAL WAS BUILT. THE LOWER PICTURE SHOWS ONE OF THE UPPER LOCKS OF THE CANAL, THE COLUMBIA RIVER AND THE RAILROAD WHICH HAS HITHERTO SERVED AS A PORTAGE. THE CANAL IS FIVE MILES LONG AND COST A MILLION DOLLARS A MILE

**HUDSON**

**\$1350**

F. O. B.  
DETROIT

*"The Road Cruiser"*

## Ready—the 1916 Hudson

Countless tongues in the past few months have voiced this question everywhere:

What more can HUDSON do?

Now the answer is ready. And we believe this answer will amaze the most zealous HUDSON admirers.

### Another \$200 Reduction

First, we've reduced the price by another \$200. That makes \$400—23 per cent—since this new type first came out.

To grasp that, remember former conditions. Only a little time ago, \$4000 was a low price for a Six. The cheapest Six cost  $2\frac{1}{2}$  times HUDSON'S price today.

We brought out this new-type HUDSON, late in 1913, at a \$1750 price. It startled Motordom. Some of the oldest makers in the business told us the price was impossible.

But we gave it to you on a car of HUDSON standard—on a Howard E. Coffin design. And men bought

that car in such numbers that next season we were able to quote \$1550 on it.

At that new price, men bought 10,000 of the 1915 model. They forced us to treble our output, to build enormous factory additions. And now we are able to quote you \$1350 on this famous Six.

### We Refined the Six

Old-time Sixes were heavier by some 1500 pounds. This vast weight reduction required better materials and better designing. It required higher quality, greater refinement. A thousand crudities had to be eliminated.

No iota of strength was sacrificed. Seating capacity was not reduced.

In beauty, luxury and equipment we gave you the best of the times. Yet while adding class and quality, we gave you a moderate price. And, by cutting out excess, crudity and waste, we cut tire cost and fuel cost in two.

Now this model, whose price suggested low grade, has become the modern ideal of a high-grade car.

### Four Innovations

- 1—Yacht-Line Body
- 2—Ever-Lustre Finish
- 3—Roomier Tonneau
- 4—\$200 Reduction

## New, Graceful Yacht Lines Now The New HUDSON Ever-Lustre Finish A Roomier Tonneau—A \$1350 Price

Another attraction in this new-year model is a new conception of artistic beauty.

We have been growing toward this body type for years. First came fore doors, then the straight-line body, then the stream-line. Now, as a climax, come lines so graceful and sweeping that we call this the Yacht-Line Body. Every appearance suggests "The Road Cruiser," which its designers call it. Even the door tops are upholstered to secure unbroken lines. Now a leather binding protects the whole top of the body.

The tonneau is extra-wide and roomy. The rear seat has been widened, the sides and back are heightened. With seven in the car, no person is crowded. And two of the seats disappear when not wanted, doubling the tonneau room.

As a climax in luxury, we this year use enameled leather upholstery over deep curled hair. Never before has leather of this grade been used in a car at this price.

### The Ever-Lustre Finish

And now comes what you have wanted most—a finish that stays new.

We've attained in this chassis a car that stays new. After years of use, with proper care, it should run like the day you buy it. The car grew old in looks alone, as the usual finish will.

*The Roadster*

Now we have a finish of wondrous lustre which will keep its newness. We have built in our factory enormous ovens, large enough for hundreds of bodies.

The result is a baked-on finish, brilliant, deep and enduring. It resists weather and washing, rubbing and mud. We call it the Ever-Lustre finish, found only on this new HUDSON car.

Experienced motorists, who have seen cars quickly grow dull and shabby, will consider this a great innovation.

Note that all these new attractions come to you in a \$1350 HUDSON.

You used to look to high-priced cars for all the major advances. Now you get them all—all that seem worth having—in a \$1350 Six.

This remarkable model, in the first place, came as the apostle of lightness. Then, after a year of refinement, it revealed new standards in beauty and equipment. This year it brings you the Yacht-Line Body, and this finish of lasting lustre.

*The Cabriolet*

HUDSON typifies in the highest degree the modern ideals of good taste.

That's the secret of its place and class. In all things we are coming to simplicity, away from excess, waste and show. And HUDSON typifies that trend.

You want quality, elegance, refinement just as much as ever. Makers who forget that sadly miss their cue. But you don't want over-weight, over-size, over-tax of any kind simply for impression.

Men who subscribe to that creed are driving 15,000 of these new-type HUDSONS now. And the vogue is just beginning. This year's advances, we believe, will attract 20,000 more.

See this car early if you want early delivery. Every new HUDSON model brings an overdemand. Last July found us 4000 cars behind orders. This 1916 model has no real competition. It is sure to oversell.

7-Passenger Phaeton or 3-Passenger Roadster, \$1350, f.o.b. Detroit. Also a New Cabriolet, \$1650 f.o.b. Detroit.

Ask your dealer to explain the far-reaching HUDSON service. This will show you one reason why HUDSON cars give such boundless satisfaction.

HUDSON MOTOR CAR COMPANY  
Detroit, Michigan

**Most HUDSON Dealers Now Have This New Model**

# SECTION HAND, COLLEGE PRESIDENT—SENATOR?

BY JOHN E. ROSSER

**F**ROM Section Hand to University President" or "From Snipe to Senator" would be an alluring title for a writer of the school of Oliver Optic and Horatio Alger, Jr.! The first title precisely describes the career thus far of Samuel Palmer Brooks, executive head of Baylor University, the large and growing Baptist institution of Waco, Texas. The second may become equally descriptive if the present movement to make Dr. Brooks United States Senator to succeed Mr. Culberson should prove effective. When the time element is considered, this record is all the more noteworthy; for at the age of twenty the subject of this sketch was an almost untutored driver of spikes and shoveler of dirt on a Texas railroad; at thirty he was a university graduate; and at thirty-nine, over a roadbed that was the smoother because of his labor with pick and spade, he traveled to Waco, to be inaugurated president of his Alma Mater. Doctor Brooks—for he is an LL. D., where one of the L's might fittingly stand for Labor—belongs to that goodly number of eminently useful citizens whose lives stress to the breaking point that venerable saying concerning the profligacy of ministers' sons. Forty years ago his father, a Baptist preacher, heeding the call of the West, removed with his family from Mill-edgeville, the birthplace of Doctor Brooks, and the sometime capital of Georgia, to Johnson County, Texas. Of his subsequent distinguished heir the father was wont to say: "Palmer will venture." Perhaps the young fellow who, finding no royal road to learning, constructed one with pick and shovel, came naturally by his audacity; for in the 60's and 70's it was deemed no inconsiderable undertaking to journey from Georgia to Texas.

In the new country the young fellow found but little opportunity for learning what is in books. Schools were few and far between, and the pecuniary compensation of his father's ministry did not suffice to furnish the leisure and advantages that may come with wealth. It was a hard struggle—one either to submerge to mediocrity or to elevate to distinction; and the grim-faced youth determined to make it the latter alternative. While toiling at this task and

that, to aid in acquiring necessities for the home, he dreamed a dream. He would develop his capabilities to the utmost; he would take his place with those who largely serve. At first he thought to fit himself for the practice of medicine. A neighbor physician generously offered to lend him such books as he most needed, and, with these tucked under his arm, the youthful aspirant to a medical career trudged proudly home—his tall, sinewy figure presenting a picture not unlike that of another

he arrived at Baylor University, whose curriculum was not so formidable then as now, but difficult enough to compel him to enter the academic department for two years of preparation. It did not humiliate him, a stalwart man of twenty-five, to sit with piping-voiced striplings. With equal lack of embarrassment, during the scattered months when he had been able to attend the public schools, he had stood in spelling classes no other member of which reached far above his waist-line.

When, despite the most rigid economy and persistent self-denial, he saw his dollars dwindling, he again banked his muscular energy, arising early to milk the cows of neighbors. Toward the latter part of his six years in the academic and collegiate departments of Baylor, he taught at possible intervals—thus finding a profession that he came to prefer to that of medicine.

Having determined to make teaching his life-work, after he had received his diploma from Baylor, he taught for a while in public schools. Given then a teaching position at Baylor, he found that his scholarship was inadequate to the task, so he went to Yale, where he took the bachelor's degree in 1894 and master's degree later, and where he was working toward the doctorate when he was recalled to Baylor, this time to become its president. Under his administration Baylor University has prospered in material resources, in patronage, and in enlarged purpose and achievement. With no assured support of a state behind him, and with no care-denying plethoric endowment, when occasion demands he knows how to make an appeal that does not fail of its intent.

And he is much more than an unusually efficient college administrator. "Palmer will venture." Sundering the fetters that convention is wont to place upon the teacher, he takes an active and telling interest in the politics of his city and state. The champion of unworthy cause may safely expect an opportunity to break a lance with him, and he is a foeman to be reckoned with.

In his chapel talks—gems of candor and pointedness—he tells his students, more than a thousand in number: "Think world-thoughts! Don't permit your view to be limited

DR. SAMUEL PALMER BROOKS

young fellow who some years before, up in Illinois, borrowed law books from which he was to acquire knowledge afterward to be used in a nation's crisis.

But the medical books were filled with strange words and phrases that perplexed to bafflement. Young Brooks soon saw that he was attempting the folly of building a house without first laying the foundation therefor. He had never permitted himself to turn out a shoddy job, and he resolved that the superstructure of his ambition should not be reared on a base of hay and stubble. He would fit himself to grapple with those esoteric doctor books. He would go to school—yea, thru college. To make this possible he then began wielding the heavy implements of the section hand, cashing in on his unusually powerful physique.

So, with his little hoard of dollars,

by the boundaries of Podunk and Pull-tight!" And he himself thinks "world-thoughts." The cause of peace has for years enlisted his active interest. In 1907 he organized the Texas State Peace Congress, the first state organization of its kind in this country.

"What do you regard as the chief characteristic of Doctor Brooks?" I asked of one who has known him intimately for years. "What attribute, what trait of personality, best explains his gift for molding men to his purposes?"

"Doctor Brooks is always more human than scholastic," was the hesitating reply. "But I hardly know how to answer your question—yes, yes, I do!"—this with tense earnestness—"it's his unlimited capacity for friendship! No condition of personal danger or of personal advantage could swerve him from fealty to a friend! He never fails you!"

Then, in confidence, I learned how bigotry had once sought to throttle and crush the speaker, and how Doctor Brooks unhesitatingly and fearlessly demanded that the downfall of his friend, in whom he reposed trust born of knowledge, spell his own undoing. I was not surprized, therefore, when shortly afterward a student said to me, "I would feel free to go to Doctor Brooks with any trouble on earth."

Dallas, Texas

## WAR AND MUSIC

The most popular of all serious orchestral music in Berlin just now is Beethoven's "Eroica" symphony, which had six performances inside of thirty-six hours recently in that city. When Beethoven finished this symphony, in 1804, he dedicated it to Napoleon, for whom as liberator and hero of the French Republic his enthusiasm kindled. When he learned later that Bonaparte had proclaimed himself Emperor, he took the score of his "Eroica," tore its title page in two, threw it on the floor and stamped on it. His idol was shattered. It is an interesting speculation whether Beethoven would not have done the same thing last summer if his symphony had been dedicated to Kaiser Wilhelm II.

Eugen Ysaye, the Belgian violinist, whose birthplace at Liège and whose home in Brussels have both suffered devastation by the German invasion, had a bad time of it in his flight from Ostend as the Germans approached after the capture of Antwerp. The violinist, his wife, his elder daughter and his son Gabri, being unable to find places on a steamer for England, persuaded the skipper of a fishing boat to take them to Dunkirk. The boat had fourteen passengers. Without food, the little party passed the night in fear of floating mines. They succeeded in reaching London three days later, after severe hardships. All their baggage was lost, including a box containing all the manuscripts of Ysaye's compositions. Gabri, the son, has since rejoined the Belgian cavalry. Two other sons are fighting in the French army.

## Doing Business with a Business Concern

The business man is an important factor in your daily life and happiness.

He may raise wheat or cattle; he may manufacture flour or shoes; he may run a grocery or a drygoods store; he may operate a copper mine or a telephone company. He creates or distributes some commodity to be used by other people.

He is always hard at work to supply the needs of others, and in return he has his own needs supplied.

All of us are doing business with business men so constantly that we accept the benefits of this intercourse without question, as we accept the air we breathe. Most of us have little to do with government, yet we recognize the difference between business methods and government methods.

We know that it is to the interest of the business man to do something for us, while the function of the

government man is to see that we do something for ourselves—that is, to control and regulate.

We pay them both, but of the two we naturally find the business man more get-at-able, more human, more democratic.

Because the telephone business has become large and extensive, it requires a high type of organization and must employ the best business methods.

The Bell System is in the business of selling its commodity—telephone service. It must meet the needs of many millions of customers, and teach them to use and appreciate the service which it has provided.

The democratic relation between the customer and the business concern has been indispensable, providing for the United States the best and most universal telephone service of any country in the world.

## IN THE STADIUM

What's Hecuba to us, or we to Hecuba that we should weep for her? Yet we did. At least there were to be heard on the one side a catching of the breath, on the other a blowing of the nose, while here and there in the vast throng a flutter of white showed a tribute to dramatic art such as was not known to Euripides, or Shakespeare either, since handkerchiefs were not known in their days. But here were we, a strange people in an unimagined land, separated by three thousand years and six thousand miles from Troytown, yet shedding tears over its immortal woes, as all the generations before us have done. We believe even less than Euripides in Poseidon and Pallas who rise in their machines and appear above the walls of Ilion. They are obviously hollow and built of *papier maché* and their elevators creak as they vanish. Even Troy we doubt since Schliemann who left the gold fields of California and a still more profitable grocery business to dig for it could find little that looked like the city of his dreams and Homer's.

But tho Troy was mythical and the gods are dead, Hecuba is real and immortal. She is Niobe whose fount of tears is exhaustless; she is Rachel weeping for her children and will not be comforted because they are not; she is eternal motherhood in anguish over the destruction of what she had created. Those of us who sat on the concrete semicircles of the New York acropolis that afternoon and looked upon the mobled queen (Polonius: Mobled queen is good) saw in her neither Lillah McCarthy the actress nor the widow of Priam, whom she impersonated, but rather a multitude of women, not so much Trojan as Belgian, French, Prussian, Polish, Galician, Serbian, of all lands laid desolate and all towns destroyed. When Hecuba held upon her lap the crushed corpse of her little grandson Astyanax, cast down from the city walls, we could not but think of the bodies of mothers and babes which floated on the sea when the "Lusitania" went down. And in the flames of burning Troy we saw Louvain and Rheims, Memel and Lodz.

How are ye blind,  
Ye treaders down of cities, ye that cast  
Temples to desolation, and lay waste  
Tombs, the untrodden sanctuaries where lie  
The ancient dead; yourselves so soon to die!

The first protest against war in literature, Gilbert Murray calls this *Tro-*

*jan Women* of Euripides, which had its *première* in B. C. 415. For that reason, being a pacifist, he took greater pleasure in its translation than any other of the plays. Certainly he Englished none better, as the following stanzas attest, wherein the chorus calls down the lightning on the galleys bearing back to Greece the Trojan women as slaves to the King of Sparta and his faithless spouse:

Out in the waste of foam.  
Where rideth dark Menelaus.  
Come to us there. O white  
And jagged, with wild sea-light  
And crashing of oar-blades, come,  
O thunder of God, and slay us:  
While our tears are wet for home,  
While out in the storm go we,  
Slaves of our enemy!

And, God, may Helen be there,  
With mirror of gold,  
Decking her face so fair.  
Girl-like; and hear and stare,  
And turn death-cold:  
Never, ah, never more  
The hearth of her home to see,  
Nor sand of the Spartan shore,  
Nor tombs where her fathers be,  
Nor Athena's bronzen Dwelling,  
Nor the towers of Pitane;  
For her face was a dark desire  
Upon Greece, and shame like fire,  
And her dead are welling, welling,  
From red Simois to the sea!

Yet again the "dead are welling, welling, from red Simois to the sea," the dead of many lands, for hither now the swift ships have brought the men of Gaul and Albion and those who dwell beyond the Pillars of Hercules and in the Antipodes to fight for the possession of the Propontis. From Magna Græcia they have come, from Tauris and from Mesopotamia and the blood of Scythians, Hypoboreans, Macedonians, Sarmatians, Libyans, Dacians and Gepidæ flows together into the ebbless current of the Hellespont. The Allied forces, like Agamemnon, beached their boats at the mouth of the Scamander and marching on to the Plains of Troy encountered the enemy on the banks of the Simois. Off the point where stands the tomb of Ajax the dreadnought "Irresistible," vainly so called, was struck from below by a weapon more deadly than Poseidon's pitchfork. The burial mound of Achilles on which was sacrificed Hecuba's daughter, Polyxena, marks the spot where the Tricolor first encountered the Crescent a couple of months ago.

It is the same old drama on this self-same site, tho the actors are more numerous and their arms more terrible. Men are wounded and women weep as they did of old. We see no end to it all, nor have we light upon this mystery of human hate and pain other than had the Hecuba of Euripides:

Lo, I have seen the open hand of God;  
And in it nothing, nothing save the rod  
Of mine affliction, and the eternal hate,  
Beyond all lands, chosen and lifted great  
For Troy! Vain, vain were prayer and  
incense-swell  
And bull's blood on the altars! . . . All is  
well,  
Had He not turned us in His hand and  
thrust  
Our high things low and shook our hills as  
dust,  
We had not been this splendor and our  
wrong  
An everlasting music for the song  
Of earth and heaven!

## REVISED PATRIOTISM

In the piping times of peace that ended last August the English had grown ashamed of their national hymn. It became customary in singing it to "omit the third verse," which read

O Lord our God arise,  
Scatter his enemies,  
And make them fall;  
Confound their politics,  
Frustrate their knavish tricks:  
On Thee our hopes we fix,  
God save us all.

In the English Hymnal this harsh language was replaced by two blandly amiable stanzas guaranteed not to contain anything to offend the most sensitive alien. But now the temper of the nation has changed and even the old version is found inadequate to express their feelings. The *Church Times* urges the restoration of the unexpurgated hymn and prints the suggestion that "hellish" be substituted for "knavish."

Apropos of national hymns it appears that the cause of this whole war was a mistake in translation. We are assured by one of the hyphenated periodicals that *Deutschland über Alles* does not mean, as it is commonly understood in English speaking countries, that Germany aspires to be "over everything," that is, to dominate the earth. To mean this the dative case would be used instead of the accusative, *über Allem*, instead of *über Alles*, for the latter means simply that Germany stands above all other nations, first in the hearts of its countrymen. It corresponds then to our

Of all the lands in east and west  
I love my native land the best.

I always knew that their grammar would get the Germans into trouble some day, but did not suppose it would be as bad as this. Even Mark Twain's malediction has been exceeded.

It should never be too late to correct an injury to a woman's reputation even tho she be a queen. Those who knew no better have called Marie Antoinette ignorant because when told that the poor were starving for want of bread she asked why they did not eat cake. But now the city authorities of Hamburg, who are supposed to know their business, have urged the people to eat more cake in place of bread to escape starvation. Wheat is scarce in the besieged land, but the Germans have beet sugar to burn—no slang—since their exports are cut off.

If the French conquer Germany will they take the Völkerschlachtdenkmal away from Leipzig and put it up in the Place de la Concorde at Paris?

He who does not get into the habit of doing a little more than is expected of him will some day find that he has got into the habit of doing a great deal less.

The world is so full of a number of things  
I'm sure it could spare the superfluous  
kings. —*New York Evening Post*.

Dr. Esenwein

# The Future of Your Daughter

Your daughter will have opportunities you never enjoyed; will meet difficulties you never encountered. Conditions are changing. Shall we meet these changes with ignorant antagonism or intelligent foresight? Women already have the vote in a dozen states. We cannot get away from this fact. One woman believes the spirit of home and mother-love may be carried into the larger relations of civic life. She is teaching this to girls—and mothers of girls—through the Camp Fire Movement. The story of her work has been put into a book. Over 250 pages with more than 50 pictures showing girls at work and play—learning to cook, sew, make clothes, swim, dive, go on "hikes," hold "council fires" and doing many other useful and beautiful things. A book of delights and a book with a message. Price only \$1.25 *postpaid in the U. S.* Ask your bookseller or send your order and remittance to—

**GOOD HEALTH PUBLISHING CO.**

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

## THE FLYING AGE

BY G. DOUGLAS WARDROP

*The National Aeroplane Subscription*

The failure of Congress to make adequate provision for the aeronautical needs of the army and navy has led to the starting of a public aeronautical subscription in this country similar to the French and German subscriptions of 1912-1913. This step was taken on May 21, by the governors of the Aero Club of America, who have decided to make a direct appeal to the American people for contributions to a fund with which to train aviators, provide aviation corps for the militia of each state and put a hundred aeroplanes into use for carrying mail, the machines and the trained aviators flying them to constitute a reserve for military service in case of national need. The Atlantic Fleet is now maneuvering without a single aeroplane; on the day President Wilson's note was transmitted to Germany the navy had only three aeroplanes in commission, and the army barely twice as many. Only half a dozen of the licensed aviators of the United States have made flights of more than fifty miles, and none know even the rudiments of military aeronautical requirements. Every military and naval authority in Europe now recognizes that a navy without aerial eyes is as helpless as a submarine without a periscope; an army without aerial scouts and aerial auxiliary can be coralled and slaughtered like a herd of sheep; a harbor or naval station without aerial defense is at the mercy of every puny submarine. The public subscription just started should put American aeronautics on the substantial basis which all far-sighted citizens desire.

### How Aeroplanes Protect Shipping

Charles C. Witmer, the American aviator, late pilot of Mr. Harold F. McCormick's aeroyacht, arrived in New York recently from Russia, where he was for six months with the Black Sea Fleet. Upon his return to America Mr. Witmer called at the Aero Club of America and in an interview with one of the editors of *Aerial Age* said in part: "If the British Government had employed the same methods that the Russians have put into effect to keep the Black Sea coast free of German vessels, the 'Lusitania' could not have been destroyed. Since the time the

'Breslau' and 'Goeben' threatened Sevastopol the Russians have been depending entirely upon aircraft to keep the coast free of sea raiders. Every day of my three months' stay in Sevastopol I saw the aeroplanes leave for a reconnaissance trip that would take them fifty miles out to sea. Seven aeroplanes were used for this purpose, and they searched a fifty-mile strip of the ocean daily, at intervals, looking for German submarines and cruisers—which, by the way, did not venture near after one experience had taught them a lesson. One morning one of the air scouts brought back the information that the 'Goeben' and the 'Breslau' were making for the port, and were then only a few miles distant. The order was immediately given for the seven flying boats to 'take the air,' each carrying two forty-pound bombs. While the orders were being executed a shell from the 'Goeben' came shrieking between the two rows of hangars, but fortunately did not explode. The purpose was undoubtedly to wreck the railroad tunnel at Sevastopol, and thereby paralyze the railroads. Then the seven flying boats—all of American make, delivered just before the outbreak of the war—started, and circling over the two steamers as they proceeded in full retreat under full steam out of the harbor, dropt their bombs and hurried back to shore. After that initial success the defense of the entire coast was left to the aeroplanes, and for three months I saw them go out daily to reconnoiter. In this way Russia was able, with an equipment of seven aeroplanes, costing about \$100,000, to dispense with the services of several cruisers and to insure ample protection at Sevastopol from the German sea raiders."

#### Italy's Air Fleet

Italy's fleet of dirigibles and aeroplanes, both sea and land-going, is characterized by a real originality of conception. This applies more especially to her excellent airships, which for the greater part have been entirely national creations and have given a very good account of themselves. Numerically the Italian fleet ranks fourth among the aerial powers, right after Great Britain, Germany and France, and fairly ahead of Russia; qualitatively it can safely be put on the same level with its more powerful rivals.

"How did you get that stitch in your side?"

"Oh, I got hemmed in a crowd."—*Harvard Lampoon.*

Borleigh—Some men, you know, are born great, some achieve greatness—

Miss Keen—Exactly! And some just grate upon you.—*Buffalo Courier.*

They can reform all they want to, but there will be trouble in this world as long as kisses taste as good as they do.—*Mechanicsville (Ohio) Morning Telegram.*

"Are you the editor of the paper?" asked the lady with the drab spats, calling.

"I am," replied the man with the poised pencil.

"Well, I called to ask you if you wouldn't get larger type. My name was in your paper five times last week, and a neighbor of mine told me she never saw it."—*Yonkers Statesman.*

## THE NEW BOOKS

### INDIA'S LAUREATE

When a man crashes thru comparative obscurity into the blaze of a world wide popularity as has Rabindranath Tagore, made recently in the birthday honors of King George an English baronet, there is, as a rule, such an influx of data pertaining to both the man and his work that within a short time the literature on both subjects consists largely of repetition.

Hence, it is with distinct satisfaction that one turns to such a book as *Rabindranath Tagore, the Man and His Work*, by Basanta Koomar Roy, with an introduction by Hamilton Wright Mabie. This is less a life of Tagore than a brief history of the development of his character and general tendencies. Beginning with an account of the poet's immediate ancestry and laying particular stress upon the interesting personality of his father, the writer sketches vividly the school days, the entrance into politics and the development along wider lines of those traits which later on obtained for the great Indian the Nobel Prize.

In a sense this book is peculiarly authoritative, for written by a fellow countryman, it gives the viewpoint of the East. It is interesting to observe the storm of jealousy which arose in Tagore's native land on the poet's sudden and enthusiastic acceptance by the world at large, a jealousy felt only by those rhymesters whose smallness of spirit was in itself evidence of their unworthiness. As Basanta Koomar Roy says, there is no writer in India today who has come within a stone's throw of reaching Tagore's mark as philosopher, essayist, dramatist, novelist or poet. Surely it is only once in a generation that a genius is found who is at once so versatile and yet has set so high and so beautiful a criterion.

A companion to this volume is *Rabindranath Tagore, a Biographical Study*, by Ernest Rhys. In a slight degree the title is misleading, for unlike the other this commentary lays a heavier emphasis on the work than it does upon the writer, or, rather, it is concerned more with Tagore in connection with his work than his environment. Mr. Rhys takes up in turn each field of the literary art in which Tagore has labored, and notes with a running commentary, which is both instructive and entertaining, the works of the poet best known in each.

That Mr. Rhys's acquaintance with Tagore was of a more or less intimate nature adds charm to his book. The preface, retrospectively prophetic in tone, gives a sidelight on Tagore which is of undoubted significance as is the fact that both Basanta Koomar Roy and Ernest Rhys sum up the poet with a quotation from his own works: "Na-

ture shut her hands and laughingly asked every day, 'What have I got inside?' and nothing seemed impossible."

Closely related to these comes another work, *The Songs of Kabir*, translated by Rabindranath Tagore and Evelyn Underhill. According to the preface Kabir, a weaver and a mystic, was born in India about 1440 and lived to a green old age, the leader of an extensive cult. There is not space here to go into the fundamentals of his philosophy; suffice to say that his doctrine was both sane and sound, embodying a spiritual normality which he found India in need of at that time and which undoubtedly the world is in acute need of today. Kabir's verse is very like that of Tagore in tone and color. If one likes Tagore one will like Kabir.

It is regrettable that while there are excellent translations of Tagore no step has been made as yet toward putting his verse in an accepted English form. The beauty of the philosophy and of the expression is there, but not the metrical and rhythmic perfection that has gone so far to endear the poet to even the humblest of his native followers. What has been done for Latin and Greek verse in its most difficult forms can surely be done for Indian.

*Rabindranath Tagore*, by Basanta Koomar Roy. Dodd, Mead & Co. \$1.25. *Rabindranath Tagore*, by Ernest Rhys. The Macmillan Co. \$1. *Songs of Kabir*, translated by Rabindranath Tagore and Evelyn Underhill. The Macmillan Co. \$1.25.

### MYSTERIOUS RUSSIA

The least understood of the warring nations is Russia. Of her spiritual and material reactions toward the war we have but faint glimpses. For this the censorship is partly responsible, but more is the mystical, enigmatical character of the Russian people. How they view the present struggle Stephen Graham attempts to set forth in *Russia and the World*, as he found it when the news of the Great War came to him in the midst of a Siberian walking tour.

For Russia this is a fight for the "national ideal." It is a revolt against German "materialism"—as the Russians understand *kultur*—an effort to uproot Teutonic influences which the Russians feel have been undermining their national life. More and more has all business, banking, manufacturing, and the exploitation of resources fallen into the hands of the Germans, so that the German problem had become only secondary to the Jewish problem, also economic rather than religious in its origin. Thus if the Russians were to adopt a motto for the war, it would be, "getting rid of the German spirit in life, getting rid of the sheer materialist point of view."

The war evoked "national enthusiasm, national tenderness, and moral unanimity." It closed the vodka shop, healed the fratricidal strife in Poland.

## F. A. Ringler Co. DESIGNING PHOTO-ENGRAVING AND ELECTROTYPING

21 and 23 Barclay Street to  
26 and 28 Park Place  
NEW YORK

Immediately Russia "grew lighter as tho an evil spirit had jumped off her back." The "progress from quietness and vast illiteracy" has been confirmed, the people at last are confident of a voice in the counsels of nations. Such are some of Mr. Graham's statements, hardly reconcilable with what we hear of Russian treatment of Finns and Jews since the war began. But he admits that for Russia this is not a war of enlightenment. Nor does that seem to trouble him. He has become an admirer of the virtues of the Russian peasants, "mystical, careless, in soul akin to the Celts," of their great simplicity and inherent democracy, and in the depth and piety of their religious zeal he sees promise of a new spiritual power to the world.

Interesting also is the chapter devoted to the discussion of the terms of peace. Germany, particularly, will desire the good offices of the United States, he says; in fact, she has "had an eye to that from the beginning and has spent an immense amount of money in order to obtain an unfair advantage thru America's partiality." Equally will it surprise many Americans to learn that feeling in America "was confessedly anti-British at the beginning of the war," a condition he warns Englishmen, due to the fact that "British blood-relationship is on the wane and that of the Jew is on the upgrade," to the "trusts, the undue influence of money and the corruption in the Administration."

It is to be hoped that Mr. Graham's judgment of Russia is sounder than that on the United States.

*Russia and the World*, by Stephen Graham. New York: The Macmillan Co. \$2.

### AMERICA THE PRODIGAL

A large theme always has a fascination for Mr. Churchill, and in his new novel, *A Far Country*, he attempts the double task of depicting American life in its political and its social prodigality. The growth of an inland city, "twelve hours from the Atlantic seaboard," offers a rich field for exploitation, and the story is told, from within, by one of the exploiters of his native town, a corporation lawyer with a quiescent conscience, eager ambition and a pathetic faith in the established order. Success—not failure—is the "far country" in which he comes to himself and to a better mind. The predatory politics and finance of the closing years of the nineteenth century furnish forth "the far country" with riotous living, plenty of husks and indubitable herds of swine. Among them the Prodigal is always full of restless longing. Incidentally he has married the "wrong woman" and the divorce question has to be thrashed out, among other complications. The kind of working hypothesis upon which the hero reconstructs his life includes a renewed faith in democracy and a revaluation of old loyalties. Mr. Churchill is not without that kind of courage which is brave enough to re-discover the moral code of the Ten Commandments.

Democracy is an adventure, the great adventure of mankind. The trouble in many

Stained with Cabot's Creosote Stains. Darius, M. Grant & Shepard, Architects, N. Y.

### Stain Your Bungalows

Don't paint them. Stain them all over, roofs, siding and trimmings, with

### Cabot's Creosote Stains

The glossy "painty" effect does not harmonize with the bungalow idea, but the soft, deep colors of our stains suit perfectly. They are rich and transparent, bringing out the grain of the wood and increasing its natural beauty. They cost only half as much as paint and only half as much for labor to apply. If your bungalow is in the woods, where skilled labor can't be had, you can do your own staining with perfect results. Our stains are made of the strongest and finest colors, ground in linseed oil, and specially refined Creosote, "the best wood preservative known."

Cabot's Stains are sold all over the country. Send for stained wood samples and name of nearest agent.

## Gray Gearless Detachable Row Boat Motor FITS ANY ROWBOAT

**More Power** 2½ H. P. — because it has greater cylinder displacement than any other portable marine motor of the same rating, and because less power is wasted between motor and the wheel.

**The Gray Gearless** is made by a responsible and experienced Marine Engine building concern. There is service and responsibility behind it.

**The Gray Gearless is the lightest portable motor** for its power on the market. The crank case is made of aluminum. The main bearings are strong, long, liberal, and are interchangeable. This means long life. Bearings are easily renewable—in most other portable motors it would be necessary to buy a new machine when the bearings wear. Runs in either direction.

**The Flexible Shaft Drive** is the strongest part of the motor. This transmission is the big, strong, and mechanical feature. Made of Chrome Vanadium, heat treated; maximum strength, 250,000 lbs. per square inch.

All bevel gears are done away with, no wasted power from this source. The big, cumbersome speed retarded, containing hubs are also dispensed with.

The strong and smoother power of the wonderful **Gray Gearless** motor is transmitted to the propeller shaft by a wear-resisting Vanadium flexible drive shaft. Each one is tested to transmit 7 H. P.

**The propeller is the weedless type** suitable for use in either fresh or salt water. No supporting projections, pinions and racks to catch weeds. The **Gray Gearless** is a race winner; it drives your boat faster than is possible with other portable boat motors.

**Be An Agent** for this motor. Men wanted in every locality to sell the **Gray Gearless**. Write today.

Price F. O. B. Detroit

**\$55.00**

This price includes the complete motor, ready to attach and operate; also ignition equipment, including high-grade spark plug and spark plug protector, battery box, battery set, spark coil and switch. Magneto, if desired, \$10.00 extra.

## Book of 172 Boats to Select From

FIFTY LEADING BOAT BUILDERS have joined with the Gray Motor Co. in issuing a catalog of **Specialized Boats**—specialty of each concern from a 16 ft. fishing launch at \$103.00 to a beautiful mahogany express runabout with every ingenious device that modern thought has developed in a boat, with a self-starting 6-cylinder GRAY motor, complete in every detail for \$2500.00—or a snug, safe, roomy little cruiser with all the comforts of a home—**172 boats** that you choose from. Write for this catalog today, sent free. We make it easy for you to find just the boat you want, at the price you want to pay, and in the locality you wish to buy it in, with a **GUARANTEED** motor installed.

## Gray Marine Motors

3 to 50 H. P. 1 to 6 Cylinder.

You can have a 1915 guaranteed Gray Motor with all the new features in your boat for the least outlay of money. Complete line of 2 and 4 cycle motors. "There's a Gray for Every Boat." Gray's are cheapest in the long run. Write for catalog.

Gray 2 cycles sold as complete outfit (ready to install). The 3 H. P., single cylinder Model "U," sells for **\$55 complete**

Gray 4 cycles sold either as complete unit power plants or bare engines. Price, **\$156 and upwards** depending on equipment

**GRAY MOTOR COMPANY, 656 Gray Motor Bldg., Detroit**

## Allen's Foot-Ease for the Troops

Over 100,000 packages of Allen's Foot-Ease, the antiseptic powder to Shake into your Shoes or dissolve in the foot-bath, are being used by the German and Allied troops at the front. It rests the feet, prevents friction of the shoe and makes walking easy. Sold everywhere, 25c. Sample sent FREE. Address, Allen S. Olmsted, Le Roy, N. Y.

## Runs on Alcohol

at cost of less than ½ cent an hour anywhere without electricity, springs or batteries. Superb construction. 12-inch blades. Adjustable roller bearing. Reliable. A proved comfort. Prompt delivery.

## Keep Cool

Write for price and free circular.  
Lake Breeze Motor, 133 N. Jefferson St., Chicago

## MANUSCRIPT

Suitable for CLOTH BOUND BOOK issue; any field, 25,000 words and upwards, carefully read and considered WITHOUT charge. Published under our imprint and management, in A-1 style, if accepted. Copy must be forwarded COMPLETE to warrant examination. Roxburgh Pub. Co., Inc., Boston, Mass.

## 20-Minute Exercises for Busy People

You keep in the pink of condition, if you follow instructions in "GOOD HEALTH" written by the Physical Director of the Battle Creek Sanitarium. "GOOD HEALTH" is the magazine which teaches you how to keep well. \$2 a year or—sample copy for ten 2c stamps. Remit to Good HEALTH PUBLISHING Co., 306 W. Main St., Battle Creek, Mich.

minds lies in the fact that they persist in regarding it as something to be made safe. But no adventure is safe—not life itself. The Prodigal Son is the parable of democracy, of self-government in the individual and in society. In order to arrive at salvation most of us have to take our journey into a far country.

The author's belief in our "getting back," as individuals and as a nation, makes the book worth while, since it is no cheap optimism nor blind opportunism, but a reasoned faith in humanity and in God.

*A Far Country*, by Winston Churchill. The Macmillan Co. \$1.50.

## LAW BETWEEN NATIONS

International law supersedes municipal law, and may in turn be superseded by an act of Parliament or of Congress establishing a later municipal law. The two systems or classes of law are not as independent as is casually supposed. Any aid to a better understanding of what international law is, its scope and authority and progress, is an aid to civilization. Mr. Cyril M. Pecciotto has rendered such an aid in his *Relation of International Law to the Law of England and of the United States*, and Dr. Oppenheim has enhanced its value by a clear-cut introduction.

McBride, Nast. \$1.75.

## THE LAST OF THE GAME TRAILS

Big game hunting in Africa is supposed to be the last ambition of a sportsman, but Stewart Edward White had to go it one better. To the thrill of the big-game trail he added the sensation of finding a hunter's paradise never before seen by white men and the last of its kind in the world. On a par with Roosevelt's African adventures are the tales of the excursion into the unknown parts of German East Africa told in *The Rediscovered Country*.

Doubleday, Page. \$2.

## BRILLIANT CONSERVATISM

"The Constitution of the United States," says Henry Cabot Lodge in his interesting volume on *The Democracy of the Constitution*, "is a true representative of what a constitution should be." Using this statement as a premise, he develops an extremely logical defense for our "fundamental instrument," which, from the point of view of the conservative, is especially worth while. Mr. Lodge's arguments are apt, his illustrations well taken, and his style, altho lacking in flexibility, is clear and emphatic.

Scribner. \$1.50.

## THE MELTING POT

Edward A. Ross presents a significant study of the make-up of the American people in his striking book, *The Old World in the New*. Altho immigration statistics are not available before the year 1820, a careful résumé from other sources of the original make-up of our people is given and the various accessions that have been received from Ireland, Germany, Scandinavia, Italy and other European sections are traced with the political and economic causes which have affected the flow of the immigrant tide and its economic and social effects.

Century. \$2.40.

## MATHEMATICS AND ART

*The Curves We See in Life*, the spirals of shells, ferns and nebulae, are compared in an unusual book by Theodore Andrea Cook, with the exact logarithmic curves and spirals which geometry might produce. This original work has interest for the mathematician, the botanist, the conchologist, for the painter and the architect and for the lover of Dante and of Da Vinci, of whose manuscripts there is an especial study.

Holt. \$5.

## MODERNIST VERSE

In *Panama and Other Poems*, Stephen Phillips has gathered his more recent magazine verse, which can hardly be criticized beyond saying that it is about up to the author's average. To attempt further dis-

section would entail an analysis of Mr. Phillips' whole work which has no place here. The poems in this volume have a very wide range of thought and action and will be of decided interest to those who are followers of the—so-called—modernist movement.

Lane. \$1.25.

#### THE FEMININE ADVENTURE

The business world is inhabited by lambs and ravening wolves. At least Marie Van Vorst in *Mary Morland*, and several other recent story writers so picture it. By a convenient death, virtue and love triumph and the footman enters with a silver tray.

Boston: Little, Brown. \$1.35.

#### THE COST OF LIVING

Housekeeping today has become a science which, beginning with the home, extends to all the producing and distributing agencies by which the home is supplied. Hence *Lower Living Costs in Cities*, where statistics say one in every three Americans dwells, with its study of everyday matters like food, rent, health, education and municipal utilities, should interest every urban householder. It was prepared by Clyde Lyndon King and is one of the series of the National Municipal League.

Appleton. \$1.50

#### THE KEY TO ARMAGEDDON

Among the most interesting of the pre-war books now being republished is Dr. Charles Sarolea's *Anglo-German Problem*. Written in 1912, after the Agadir crisis, the Belgian statesman saw in Germany's efforts to regain the hegemony of Europe which she had held from 1870 until the formation of the Triple Entente the clue of tragedy and with convincing power traced its development toward present denouement.

Nelson. \$1.

#### FOLK WHO WRITE

Was it not Louisa Alcott whose ambition was to be the author of the most thumbed book in the library? Today she would wish rather for the honor that has come to O. Henry, the putting of his stories into raised point for the blind. "I am very, very old and I am blind and I'm nearly dead," said one poor lady, "but I do love O. Henry's stories."

If we wish to know what education and growing up really do for us, why not study the earliest writings of successful authors? For instance, Mr. Porter, author of *Henry of Navarre, Ohio and Pepper*, wrote at eight what he considers his best work. Plot—'hero, private, kills a Confederate; made corporal; kills another Confederate, rather large one; made sergeant; so on till generalissimo. Structurally fine,—unity, mass, coherence, wallop on every page.'

The Spanish Government is planning a commemoration of the three hundredth anniversary of the death of Cervantes. A statue of Don Quixote is to be erected in Madrid, and a new edition of Cervantes' work in the Castilian tongue is being prepared. Time was when Spain was too busy killing her neighbors to mind about literature. Now hers is the one blest corner of Europe where a government has time to concern itself with statues and scholarship.

When a New York physician was told quite simply by a new patient, a gentle looking, little foreign lady, that the operation for appendicitis had been performed "in a dreadful place, a preezon," she hid her amazement under a change of subject. Later she learned that the appealing stranger who grew more charming on acquaintance, was the author of *The Life Story of a Russian Exile*, Marie Sukloff, who killed General Trepoff, was sent to Siberia and had finally escaped to America.

F. Hopkinson Smith, to whom, if to any, one would expect writing to be easy, made eight drafts of *Colonel Carter of Cartersville*, and there were exhibited this winter ten writings of one of Mrs. Deland's stories. Wouldn't this be a wise and kindly item for editors to enclose with rejected manuscript?

## You Know This Trade-Mark Through National Periodical Advertising

THE success of a manufacturer, whether he makes clothes or biscuits or automobiles, depends upon the friendliness of the public—not necessarily friendliness for the business, nor for the man at the head of it, but for the product of the business.

Big business cannot be built without big friendliness. But friendliness to be effective in the promotion of a business must be positively and constantly directed toward the product of that business.

That is the reason for trade-marks—to give direction and certainty to the friendliness that has been created by a satisfactory trial of the product itself. If a man buys an axe that holds its edge, cuts well, fits the hand and balances right, he develops a friendliness for that kind of an axe and wants another one like it when the first wears out.

When the axe does not bear a trade-mark the value of the friendliness created by the first axe is lost.

But if the axe is trade-marked that manufacturer has a continuous, progressive asset in the good will of every purchaser.

Trade-marks make profits out of good will.

Conversely, it is not worth while for manufacturers to place their brands on unworthy goods because such goods will not create the friendliness which is the basis of value in trade-marks. Trade-marks on unworthy goods are danger signals to the consumer.

That is why branded goods are so generally the best of their kind.

Trade-marks and national advertising are the two most valuable public servants in business today. Their whole tendency is to raise qualities and standardize them, while reducing prices and stabilizing them.

# THE MARKET PLACE

## A STEEL TRUST STOCK MARKET

The entire market on the New York Stock Exchange was favorably affected last week by the decision of the Federal court in the Government's suit for dissolution of the United States Steel Corporation, which is commonly called the Steel Trust. Monday was a holiday. Before the opening on Tuesday, Germany's unsatisfactory reply to our Government's note concerning the "Lusitania" had been read thruout the land. Prices at the beginning were lower than the closing figures of the preceding week, on account of this controversy. But the public showed no inclination to sell, and recovery followed the decline. On Wednesday there was some improvement.

At the beginning on Thursday there was an advance. Rumors were heard to the effect that the Government had lost its suit against the Steel Corporation. The market broadened; 766,000 shares were sold, against the recent totals of 200,000 or 300,000. At the close it was seen that the price of Steel shares was higher by 4%. But the court's decision was not given to the public until nearly an hour after the close. It is evident that the advance was due to purchases by persons who either had knowledge of the decision or were guessers of a gifted kind. Their guessing was highly profitable. The next day, when the decision had been read, and the breadth of the great company's victory was realized, there was a violent advance in almost all parts of the list, and nearly 1,000,000 shares were sold. Those of the Steel Trust rose, but only a part of the gain was held. The shares of the International Harvester Company, whose similar case is pending in the Supreme Court on appeal from the decision at St. Paul in favor of dissolution, showed a sensational advance of 16 points, and at the end of the week their net gain was 9 points.

While the controversy with Germany exercised a restraining influence, advance was promoted by war order news and the rising prices of metals, as well as by the Steel Trust decision. At the close of the week the gains of ten copper mining companies ranged from 1 to 9½ points, with Amalgamated at the head of the list, and Anaconda showing 5½ to its credit. Higher prices and growing demand for lead accounted for an addition of 4 points to the figures for National Lead shares. One motor company gained 16 points and another 4. In the list of miscellaneous war order companies the following additions may be noted: Bethlehem Steel, 11½; General Electric, 12; General Chemical, 10; Studebaker, 5¾; Federal Smelting, 7; Pressed Steel Car, 3¾; Westinghouse, 3½; New York Air Brake, 2½; American Locomotive, 2¼; Baldwin Locomotive, 2. A majority of the active railroad shares were

higher by from 1 to 3½ points. Trading in Steel shares was about 25 per cent of the week's business, and the result was a net gain of 4¾. It would have been 9 if the highest price reached could have been retained.

The American Can Company and the Corn Products Company, as well as the International Harvester Company, were encouraged by the decision. Suits against them are pending. It is expected in what is called the Wall Street district that the New Jersey court's decision will be confirmed on appeal. Nearly a year will elapse before the final decision can be known. Arguments will be heard at the October term of the Supreme Court, and the court's judgment will be announced from three to five months later.

## A STOCK DIVIDEND

The Ford Motor Company has again excited public interest in its transactions, not this time, however, by a profit-sharing plan or a rebate to buyers, but by increasing its capital stock from \$2,000,000 to \$100,000,000. It has declared a stock dividend of 2400 per cent, or \$48,000,000, and the remaining \$50,000,000 of the new issue is to be retained in the treasury. But there are only eight stockholders. Henry Ford, who owns fifty-eight per cent of the present capital of \$2,000,000, will now add \$27,840,000 to his holdings. The dividend gives \$5,000,000 to Vice-President Couzens, \$4,800,000 to David Gray, about \$2,400,000 to each of four other owners of shares, and \$48,000 to one who now has \$2000. Under the profit-sharing plan adopted a little more than a year ago, the employees have received several millions. There are 21,000 of them.

## WHEAT AND COTTON

For several weeks the price of wheat in our markets has been falling. In two successive days the net loss was nine cents a bushel, and the loss in the last thirty days exceeds twenty-five cents. At the end of last week wheat for July delivery was sold in Chicago at 1.14. Demand from Europe has temporarily lost force. Exports last week were only 4,872,000 bushels. The weekly average was 7,800,000 in April, and about 6,850,000 in May.

While the winter-sown wheat has been affected unfavorably by storms and in other ways, the crop still promises to be a very large one. The prospect for spring-sown wheat is unusually good, and the increase of spring acreage is said to be more than ten per cent. It is still expected that the full crops will exceed even that of last year, which was very much greater than any that had preceded it.

The Government's first cotton report shows a high condition, 80, which may

be compared with 74.3 at the corresponding date in 1914 for last year's record-breaking crop, and a ten year's average of 79.5. But acreage has been reduced, probably by about fifteen per cent. The reduction will be made known in next month's report. There has been a great change in the cotton market and in the condition of our cotton-growers since the great money pool was formed for their relief soon after the beginning of the war. Exports then were almost nothing, and our own spinners' takings had fallen twenty-five per cent. Now, when the record of ten months since the beginning of the war is compared with that of the corresponding months in the preceding year, it is seen that the takings of domestic spinners have increased and that the exports have been less by only nine per cent.

But the price received for exported cotton has almost been cut in two, falling from \$566,877,000 to \$330,494,000. Exports recently have been declining.

## WAR METALS

While the price of spelter, or zinc, continues to advance here and in Europe having risen from 4 or 5 cents a pound to 28 cents, for the best grades, the price of copper in this country has for some time remained substantially unchanged. But this price is very high, and it is yielding large profits to the mining companies. Four of them declared quarterly dividends recently, increasing the amount per share by one-third or one-half. Many have wondered why our exports of copper have continued to be less than the normal quantities. In the first four months of the year they were only 177,000,000 pounds, against 304,000,000 in the corresponding months of last year.

The explanation is that Europe is taking copper in the form of finished products, rather than the raw metal. Great quantities are used here in the manufacture of ammunition. In addition, the exports of brass (a compound of copper and zinc), needed in the production of ammunition, have been very large. Shipments of brass bars, plates and sheets in the three months ending with March were 18,920,830 pounds, against only 1,781,770 in the corresponding months of 1914.

The following dividends are announced:

American Chiclet Company, preferred, quarterly, 1½ per cent, payable July 1; common, 1 per cent, payable June 21.

American Can Company, preferred, quarterly, 1¾ per cent, payable July 1.

American Car & Foundry Company, preferred, 1¾ per cent; common, ½ per cent; both payable July 1.

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable July 1.

Niagara Falls Power Company, \$2 per share, payable on and after July 15.

## Miss Hall's SCHOOL FOR GIRLS

In the Berkshire Hills, on the Holmes Road to Lenox. Forty-five acres. One thousand feet above the sea level.

Miss MIRA H. HALL, Principal  
Pittsfield, Massachusetts

## CHOOSING THE SCHOOL

THAT schools are advertised in such numbers and variety adds to the embarrassment of choosing. But it makes possible a wise choice if sufficient attention is given to the question. The very idea of the private school and its reason for existence is that it is "difficult," that it represents a special type of education suiting the exceptional need of the child or demand of the parent.

How many other boys do you know who are exactly like your boy; how many that require the same kind of training? His own brother is not like him and the discipline that would help the one might hurt the other. It might be objected that this logic would lead to a school for every individual, that is, to the private tutor, but this conclusion ignores the fact that a large part of a student's education is given him by his schoolmates. It makes, at least, as much difference to him who these are as who his official and salaried teachers are. Almost any school is better than none, any kind of education preferable to mere instruction.

But the fact that every boy or girl is a unique personality, and reacts differently from every other to the same stimulus, makes it necessary to send him to the school, wherever and whatever that may be. It would be as absurd to send him to "a" school as it would for you to enter a drug store and ask for "a dose of medicine." The best school for your boy is the school that will do best for him, no matter what it may do for others.

In view of the diversity of individual requirements it would of course be presumptuous for us to prescribe one particular type of school as "the best" for all. All kinds have their distinctive virtues, otherwise they would not be in existence. The most that we can do where we do not know the pupil concerned is to see wherein these types differ, leaving it entirely to the parent to decide what weight should be given to these points.

In the first place we find the private schools divided into two general classes according to location. Some are established in the country, some in the city, while others make a more or less successful attempt to combine accessibility with seclusion.

A somewhat similar division is that between large and small schools, though here the important point is not so much how many students are enrolled in the institution as a whole but what is the size of the groups of students who are so intimately associated in boarding hall or class rooms as to form a unit of close companionship. It is not possible to determine how much individual attention each student receives by the simple process of dividing the number in the student body by the number in the faculty. It sometimes happens that in institutions where the ratio is one to fifteen the association between instructor and pupil is closer than where it is one to ten.

The form of support also divides the

private schools into two classes, those that are endowed and those that depend entirely upon the fees of the students. The endowed schools are usually older and their history and traditions have given them an established reputation to maintain. On the other hand these traditions or the conditions of endowment may hamper their freedom, so we sometimes find among the younger schools supported altogether by their students a quicker response to the demands of the times for new forms of education.

The private school differs from the public school essentially in that it has the power to select its students and so can form a more homogeneous body by the exclusion of any whom for any reason it seems undesirable. In practise, however, this distinction is sometimes not so great as it is in theory and it may happen that a private school by its need of tuition fees will have lower standards of admission in regard to scholarship and character than the public schools.

As to religious training, there are three main types. Very few of the private schools are exclusively secular. Many are distinctly denominational, but most of them aim to maintain a decided religious atmosphere without sectarian bias.

In the choice of schools for young men the matter of military drill is often a deciding factor, and seems likely to become of greater importance in the future than it has been in the past. In every state a public college is maintained, with the aid of the national Government, in which military training is compulsory and many private schools, especially in the South, make a specialty of it. Apparently it is meeting with increasing public favor both on the grounds of patriotism and of individual benefit. The question of the advantages and disadvantages of the military form of education was admirably discussed by President Pritchett of the Carnegie Foundation in an *Atlantic* article on "The College of Discipline and the College of Freedom," in which he compared West Point and Harvard as the extreme types.

One of the first questions which a parent has to settle before he can choose a secondary school for his son or daughter is that of the probable future career. Is it to be a preparatory or a finishing school? If the former, for what college is it to prepare? Some private schools make it their special object to qualify their students for the examinations of a particular college or group of similar colleges, and the more closely they are adapted for this the less they may suit those of other aims.

Since all colleges nowadays give various degrees and allow various options in admission requirements the preparatory schools are also offering different courses, altho these are often not so completely differentiated in reality as they are on paper. But one can at least distinguish among five kinds of training; classical, scientific, literary, artistic and vocational. Many schools attempt with varying success to combine these in such a way that every student

Address PRESIDENT WILLIAM A. WEBB  
Lynchburg Virginia

may have a taste of all. Where unmistakable signs of some special talent, say for music, manifests itself in youth, then the choice is simplified by being narrowed. But young people normally will take an interest in any study which is attractively presented and it is a common error of fond parents or teachers to mistake the delight and facility they may show in the exercise of some new faculty for a proof of specific genius. Because a boy likes to shoot or collect birds' eggs it does not follow that he will become a great general or ornithologist when he grows up. Whether a girl takes most pleasure in modeling clay or dough, in making sonnets or dresses, does not determine her destiny or even her disposition. Youth is a process of finding one's self and there should be a sufficient variety in the courses and elasticity in the curriculum to afford opportunity of developing the individual tastes and talents.

In examining a school it is of course necessary to see that it has adequate facilities for the work it professes to do, that is for instance, whether the books in the library and the apparatus in the laboratories are sufficient for the courses offered in literature and science. The more important question of how many "born teachers" there are in the faculty is one not so easily ascertained since the number of capital letters after an instructor's name gives little indication of his ability as an instructor.

Lastly the matter of cost is often a limiting if not a determining factor in the problem. In this connection it must be remembered that the expense of schooling depends more upon the standard of living among the students than upon the price of tuition.

We have attempted here nothing more than to specify some of the points that are to be taken into consideration in the choice of a school. At least as much time and attention should be given to the selection of the miniature world in which the boy or girl is to spend the formative years of life as is given to the choice of an automobile or camera. Modern psychologists, however they may differ on other points, agree as to the importance attached to the period of adolescence. This is the time when the personality crystallizes. Later influences may change opinions and modify character, but will never be able to effect a radical transformation of the self. It is then that habits are formed, ideals inspired and impulses born. It is then, if ever, that the religious nature is awakened and all those emotions which lead toward the higher life have their first inception. There is only one such sunrise in any one's day and it must not be missed.

It must be remembered that in every school many lessons are learned which are not in the curriculum and these for good or ill may be most indelibly impressed upon the plastic mind. The soul of a school, the *genius loci*, the *esprit de corps*, is something very real and supremely important. But this cannot be put into print or picture nor can it be ascertained by a look at the plant.

# Insurance

Conducted by  
W. E. UNDERWOOD

## FRATERNAL INSURANCE AND RESERVES

It is becoming increasingly evident from the numerous letters I am just now receiving on the subject, that the views I have recently expressed on assessment life insurance have interested a number of persons. Among those who have written me—some seeking information, other requesting advice, and yet others challenging my statements or defending the system—is Mr. P. J. Reilly of Fargo, North Dakota, who tells me he has been a member of the Ancient Order of United Workmen for thirty-four years.

Appealing to my sense of justice and admitting the correctness of many of my statements, he reminds me that "all fraternal insurance societies were founded in ignorance" as respects proper insurance methods. He would have me note that the A. O. U. W. is the pioneer in fraternal insurance and the first to adopt adequate policy reserves. He tells me that each state jurisdiction is independent, and free to formulate its own system; that each pays its own death claims, and uses such rates and actuarial methods as its members elect.

Commenting on a comparison made by a member of the order, who is also a policyholder in the Pacific Mutual Life (see The Independent of May 24, 1915), he says:

I joined the order about the same time, thirty-four years ago, . . . at the age of twenty-one, and paid \$12 a year for \$2000 of insurance. This continued for twenty-four years, making the total outlay to me \$288, which you will admit was pretty cheap insurance. Of course, I realized that this could not continue and that eventually I would have to pay more. I moved to North Dakota during the year 1904, and transferred my membership to that jurisdiction, and in that year North Dakota changed from the old classified methods to a level rate. I was then forty-five years old and adopted that rate, which has cost me annually \$53.46 for \$2000, and which has a cash surrender value today of \$388, paid-up certificate for \$700, or extended insurance for ten years. I consider that if I were to drop out of the A. O. U. W. today with a paid-up certificate of \$700 after having the protection of \$2000 for thirty-four years with an actual net cost of \$60 I would feel kindly toward the institution that had protected me for all those years.

The point, as I take it, of this entirely reasonable address to my sense of fair play is that certain jurisdictions of the Ancient Order of United Workmen are now operating under a reserve system and that in discussing assessmentism as practised by that order, I should differentiate as between jurisdictions. I heartily concur in the suggestion; and it is convenient to observe right here that, as the result of an examination made of such meager data as are immediately accessible to me, the jurisdic-

**School for Nurses.** Three years learning profession without expense in California's beautiful city. Medical, Surgical, Maternity, Eye and Ear Departments. Illustrated booklet free. Write Medical Director. Also a few young men admitted to a two years course.

## Pacific Theological Seminary

Open to qualified students of both sexes and all denominations. Location and climate unexcelled. Thorough instruction and practical modern training for the ministry. University of California courses and library free.

Opens August 16th, 1915. Address

C. S. NASH, President, Berkeley, California.

## CONNECTICUT

**The Ely School for Girls** Ely Court, Greenwich, Conn.  
A country school. One hour from New York. Certificates to Vassar and the New England Colleges.

## The Gateway

A School for Girls of all ages

Miss ALICE E. REYNOLDS, Principal

St. Ronan Terrace New Haven, Connecticut

## THE SANFORD SCHOOL

Ridgewood, Redding Ridge, Conn. On a modern 300-acre farm. Varied life out-of-doors, as well as athletics. Individual attention under experienced teachers. Careful preparation for life as well as for all colleges. A summer session. D. S. SANFORD, A.M., Headmaster, Box B.

## THE WHEELER SCHOOL

A country school for boys and girls, offering college certificate privileges domestic science and general courses. Modern buildings, athletic fields, tennis courts, baseball diamond. Endowment permits low expense of \$350 a year. Address ROYAL A. MOORE, A.N., Principal, North Stonington, Conn.

## DISTRICT OF COLUMBIA

DISTRICT OF COLUMBIA, Washington.

**Chevy Chase Seminary** A school for girls in Washington's most beautiful suburb. Preparatory and finishing courses. Strong departments of Music, Art and Domestic Science. Campus of eleven acres and provision for all outdoor sports. Artesian water. Catalogue on request. Mr. and Mrs. S. N. BARKER, Principals.

## ILLINOIS

### "HOME-MAKING, THE NEW PROFESSION"

Is a 100-page illustrated hand-book; it's FREE. Cookery, diet, health, children; home-study *Domestic Science* courses. For home-making and well-paid positions.

American School of Home Economics, 529 West 69th St. Chicago, Ill.

## WESTERN MILITARY ACADEMY

Designated as "Honor School" by the War Department. the highest rating given. Prepares boys for College or Business. Work accepted by Colleges and Universities. Fire-proof Barracks. Supervised athletics. Swimming pool 20 x 60. Tuition \$500. For a copy of catalogue address

COL. A. M. JACKSON, A. M.  
Superintendent  
Box 99, Alton, Ill.

## Girton School For Girls

Winnetka, Ill. Chicago's Oldest Suburb

Select boarding and day school situated in a beautiful 20 acre park. College preparatory, General and Finishing Courses. Music, Art, Elocution, Domestic Science, Household Sanitation, and Physical Training. Certificate admits to Smith, Vassar and Wellesley. Special preparation for Bryn Mawr. Social life of the home refined and attractive. Catalogue on application.

Francis King Cooke, Principal, Box 80

## MONTICELLO SEMINARY

For Girls and Young Women. Rated a Junior College of Class "A" by University of Illinois. Domestic Science.

Music, Art. Certificate privileges. Gymnasium, tennis, archery, baseball, hockey. Modern buildings and equipment. 78th year opens mid-September. Two exhibits at Panama-Pacific Exposition. Catalog. Miss Martina C. Erickson, Prin., Godfrey, Ill.

## Frances Shimer School

(Of the University of Chicago)

A Home School for Girls and Young Women. Junior College two years with diploma. Advanced standing at colleges and universities. Four years academic work. Separate building for 1st and 2nd year academic students. Certificate privileges. Home Economics with Diploma. Music, Art, Expression, and Secretarial courses. 8 modern brick buildings. 35 acres. Golf, tennis, gym. 127 miles from Chicago. Pupils from 12 states. Founded 1853. Opens Sept 15th. Rate, \$400. Chicago Office, Fine Arts Bldg., 410 S. Mich. Ave., Mondays, August Rev. WILLIAM P. MCKEE, Dean, Box 623, Mt. Carroll, Ill.

## Illinois Woman's College

A STANDARD COLLEGE. GRANTS DEGREES

Scientific and classical courses leading to B. A. degree. College of Music grants B. M. degree. School of Home Economics grants B. S. degree. Also certificate courses. Strong academy course. School of Fine Arts. School of Expression. Expenses reasonable. Catalog. Address

WOMAN'S COLLEGE, Box 37, Jacksonville, Illinois

## NEW JERSEY

**The Pennington School** An efficient school at moderate cost. 75 minutes from N. Y., 50 from Phila. Prepares for College, Technical Schools or Business. Gymnasium. Strong faculty. Swimming pool, all athletics. Junior school with home care for boys 9 to 13. FRANK MACDANIEL, D. D., Headmaster. Box 80 NEW JERSEY, Pennington.

## AGENCIES

has good positions for good teachers with good records. Harlan P. French, Pres.; Vincent B. Fisk, Sec., 81 Chapel St., Albany, N. Y.

## Fisk Teachers' Agencies

Boston New York Washington Chicago  
Denver Portland Berkeley Los Angeles

tion of North Dakota seems to be in sounder shape from a life insurance viewpoint than that of any other in the order.

My correspondent has been fortunate, as he probably realizes. He had his protection for years at less than its value, for example, and he secured a reformation of his contract before it was too late. But there are tens of thousands of his brethren in other jurisdictions who remain unredeemed, if such statistics as I can readily consult are to be relied on. I find in the "Consolidated Chart," issued annually by the *Fraternal Monitor*, A. O. U. W. figures from thirteen jurisdictions only, to wit: Arkansas, Illinois, Iowa, Kansas, Massachusetts, Minnesota, Nebraska, New Jersey, New York, North Dakota, Oklahoma, South Dakota and Washington. Six of these are credited with reserve accumulations; seven seem to possess none. Excepting those of North Dakota and Washington, all of these reserves are of insignificant proportions, both as to themselves and as compared with the insurance in force. I find that the North Dakota reserve amounts to \$98.47 for every \$1000 of outstanding insurance; that of Washington at \$43.66; New Jersey, \$27.81; Massachusetts, \$3.69; Minnesota, \$2.56; and Nebraska, 30 cents. The jurisdictions of Arkansas, Illinois, Iowa, Kansas, New York, Oklahoma and South Dakota, with an aggregate of \$115,365,294 of insurance in force, seem to have no reserve accumulations at all. The total insurance for the thirteen jurisdictions is \$285,522,187, a part of which is supported by \$1,902,794 of reserves—or about \$6.66 per \$1000.

Contrast this condition of affairs with that of the old line companies as found in the 1915 report (just at hand) of the Insurance Department of Connecticut, where it is shown that the total insurance in force in the companies reporting to that department is \$18,119,633,362, against which there is a reserve of \$3,817,768,045, an average of \$210.69 per \$1000.

I am not arguing against the insufficiency of the North Dakota A. O. U. W. reserve. Its actuary certifies to its sufficiency, and that is acceptable to me; but measuring the other jurisdictions by that standard, we are bound to conclude that they are lamentably deficient. An examination of the figures cited induces the inference that in the jurisdictions which have adopted the level premium (reserve) method, the great, vast mass of the insurance in force continues under the old system. Observe Nebraska, with \$68,912,000 of outstanding insurance and a total accumulated reserve of but \$21,147. Necessarily, but a very trifling amount of that business is on the level premium plan. If the Nebraska reserve is in amount to the particular certificates it protects precisely in the same proportion as those of North Dakota, then we find that only \$215,000 of the Nebraska business carries reserves, while some \$68,700,000 is in the air, so to say.

In conclusion, it is but necessary to observe that there is no division whatever between my correspondent and me

## SCHOOLS AND COLLEGES

### RHODE ISLAND

RHODE ISLAND, Providence, 313 Hope St.

### The Misses Bronson's School

A home school for ten girls under sixteen at time of entrance. Circular.

### VIRGINIA

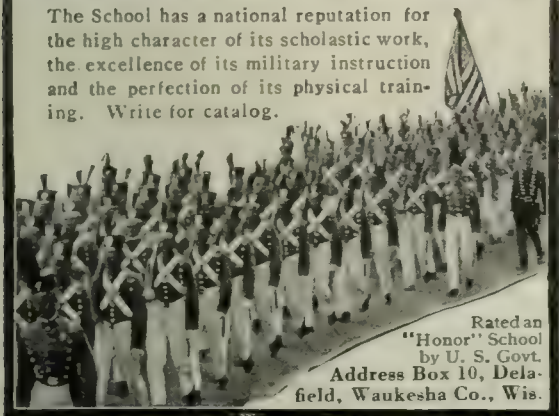

### Mary Baldwin Seminary For Young Ladies

Staunton, Va  
Term begins Sept. 9th, 1915. Located in the Shenandoah Valley of Virginia. Unsurpassed climate. Modern appointments. Students the past session from 48 States. Terms moderate. Pupils enter any time. Send for catalogue.  
Miss E. C. WEIMAR, Principal

### WISCONSIN

### St. John's Military Academy

The School has a national reputation for the high character of its scholastic work, the excellence of its military instruction and the perfection of its physical training. Write for catalog.

Rated an "Honor" School by U. S. Govt.  
Address Box 10, Delafield, Waukesha Co., Wis.

### NORTHWESTERN Military and Naval Academy

New fireproof home on shores of Lake Geneva. Modern sanitation, ventilation, heating, lighting. High scholastic standards; certificate privileges. Outdoor life emphasized. Fixed charge covering board, tuition, uniforms, pocket money. Address COL. R. P. DAVIDSON, Supt., Lake Geneva, Wis.

### CORRESPONDENCE SCHOOL

### WRITING THE PHOTOPLAY

A practical course of twenty lessons in the technique of the photoplay, taught by Arthur Leeds, Editor, THE PHOTOPLAY AUTHOR. 25-page catalogue free.

THE HOME CORRESPONDENCE SCHOOL  
Department 103, Springfield, Mass.

## The School

How can parents or guardians select from out of all the hundreds of schools the school that fits the boy or girl?

In the first place read the advertisements in this and other issues of The Independent. Send for the catalogues of those schools that seem to fit your needs. Use The Independent's Education Service, as a time-saver and short-cut in securing full and complete information.

See Page 477

over reserves. We both insist that they are essential to the safety and the practical fulfilment of the life insurance contract.

Mrs. M. A. R., Valedo, Kan.—The Homesteaders is a comparatively small fraternal insurance order on the assessment plan, a form of life insurance that is undesirable. The Central Life is a mutual old line company, small but sound, cost of getting business too high. It issues deferred dividend policies only—a plan I cannot recommend.

R. A. F., New York.—Cannot unqualifiedly recommend the company in the connection you mention. It is financially sound and will, I believe, eventually become a good average company for policyholders, but it is handicapped by an unfortunate past. An agent has plenty of work in selling insurance for a company with a good record. He cannot afford the time required to defend a poor one.

Miss C. C. R., Tannersville, N. Y.—The company mentioned is financially sound and its policies are fully protected by proper reserves. I am of the opinion that the single advantage you cite and like will be neutralized within a comparatively short period, and that the net cost to you will eventually exceed that in many other companies. However, the insurance offered is of standard quality.

J. R. McC., Fairmount, Ind.—A comparatively young company with a large capital, fully solvent and a good surplus. It writes non-participating policies only. The management is of average ability, content to do a moderate business which is conducted with conservatism and care. Such business as is transacted outside the United States must, necessarily, conform with the legal requirements of its home state and of such other states as permit it to operate within their jurisdiction.

A. H. C., Marathon, N. Y.—The two companies you name are among the best in the land. It is impossible to make predictions respecting future dividends, but companies of the class cited may be relied upon to pay all they can. There are two kinds of participating and non-participating companies: one is well managed and the other is not. There is little difference, measured by growth, between the skillfully managed of either class. In the state of New York a company may write only participating or non-participating—not both.

W. W. C., 6917 Bennett Ave., Chicago, Ill.—The form of policy, description of which you enclose, is ideal, for it devotes every dollar the policyholder invests as premium to building up the estate created in becoming insured. Its main feature consists in augmenting the reserve by leaving the dividends and their interest earnings to accumulate. In this way a Whole Life policy may be paid up for its face long before the tabular "expectation" is reached; the stipulated number of payments under a Limited-Payment policy may be reduced; and, in time, either of these forms may be transformed into a cash endowment. The company offering the policy is first class, over sixty years old, in splendid financial condition and managed with great ability.

M. H., Canon City, Col.—Your question uncovers a legal point as novel in life insurance as is the cause of its origin. While I cannot speak with authority, it is my opinion that no court in the United States would sustain a life insurance company in its effort to avoid payment for losses incurred thru the destruction of the "Lusitania." The policyholders on that vessel had violated none of the conditions of their contracts, they were non-combatants exercising only their undisputed rights in traveling on a peaceful merchantman. In doing this, they did not require permits from their insurers. They properly presumed that they were protected against the perils of belligerent by the provisions of international law and the usages of modern warfare. I cannot cite any cases similar to this, nor do I think any other such have ever occurred.

## SUMMER CAMPS

### DR. CHARLES A. EASTMAN (OHIYESA)

Author of "Indian Boyhood," etc., announces his SCHOOL OF THE WOODS, the Unique Summer Camp for Girls, on Granite Lake, near Keene, New Hampshire. Modern house with sanitary plumbing; three open fire places; out-door sleeping; resident physician. All land and water sports under expert supervision. # THE MOVING WORLD

## A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

### AMERICAN ANIMAL PICTURES

Edward A. Salisbury, who owns a thousand acre ranch in the far West where the wild animal life of America has suffered comparatively little from the professional hunter, has succeeded in taking over twelve thousand feet of pictures which constitute the most complete kinematographic course of American natural history yet made. In this work he has had the coöperation of the United States Biological Survey and was given free access to all the great federal game reserves. These pictures not only give a charmingly intimate view of wild animal life but they show the enlightened policy of conservation on the part of Uncle Sam.

Mr. Salisbury shows the rich and striking variety of game fish in the waters of California and portrays in detail the work of the hatcheries. The artificial fertilization of the spawn of such game fish as the rainbow trout and the steel-head trout is shown at very close range. After enabling us to watch the life of the fish from the egg until it is large enough to be distributed in the waters of the state, the author delights the heart of the sportsman and the lover of the beautiful in nature by showing picturesque trout streams and the angler's skill.

On those islands along the Pacific coast where millions of migratory birds pass and repass every year, Mr. Salisbury has managed to catch practically every detail of their domestic in-

timacies, the building of their nests and care of their eggs, the hatching of the young and their growth under the watchful eyes of the mother bird. The origin of the ancient superstition of the pelican feeding its young by tearing its own breast is demonstrated by the camera, which shows that the young pelicans dive down deep into the craws of their mother in their greed for food.

The scenes showing the hunting of the mountain lions and the lynx and various species of bear look well on the screen because the author has avoided all wounding or killing of animals and devoted his whole energies to recording their traits and characteristics.

### MORALS THRU THE MOVIES

A series of films designed for the purpose of impressing upon girls the importance of strict conformity with the moral code and the conventions is being brought out under the title of "Who Pays?" One of them illustrates the dangers of disregarding chaperonage. An-

other deals with race suicide, showing how "The Pursuit of Pleasure" may lead a woman to neglect her natural duties. The lesson is the old one of she who will not when she may, cannot when she will. But we fear that some sharp-sighted girls will extract another moral from it, that a father who does not let his daughter dance is to blame for her wanting to dance too much later in life.

The films bring out clearly the point that "who pays" for any deviation from the path of propriety is not the one most to blame, but that the disastrous consequences spread widely. The scenes are presented in such an inoffensive manner that no one would take exception to them except those who regard the depiction of such themes as intrinsically improper. (*Balboa films. Pathé.*)

### THE INDUSTRIOUS WORM

The manufacture of cellulose silk has not yet gone so far that we can dispense with the services of the humble silkworm. But the efforts to introduce sericulture into this country have not been successful and not many children, or grown people for that matter, have any clear idea of how silk is produced. For that reason the new release on *The Life History of the Silkworm* is a welcome addition to the list of educational films. On a mulberry leaf ten feet long it is easy to follow each step in the series of marvelous transformations. (*Edison, Orange, N. J.*)

BABY COUGARS WHO HAVE CUT THEIR TEETH  
From Salisbury's Wild Life Pictures

THE PILGRIMS ON THE MAYFLOWER

In this group of the Independents from Scrooby, photographed shortly before they landed on Plymouth Rock, our readers may pick out their respective ancestors. The drama of "The Landing of the Pilgrims," as filmed by Edison, follows in part Longfellow's "Courtship of Miles Standish"

## INDEPENDENT OPINIONS

Most of the letters we receive in re-  
gard to the attitude of the President in  
this crisis express the hope that he will  
not take such action as will involve the  
country in war.

Some say, what an opportunity our  
President missed when the armies of Ger-  
many brought desolation and wo to little  
Belgium, what an opportunity to utter a  
magnificent and strenuous protest in the  
name of humanity against the unspeakable  
outrage. And what, gentle reader, would  
have been gained, may we ask, by such a  
procedure, what indeed but to add fuel to  
that flame which already threatens to en-  
circle the world? How much more has  
America accomplished in that name of hu-  
manity, invoked in wisdom and not in  
folly, by her quick and generous response  
to Belgium's deepest needs? Is this not of  
more real value than to congratulate our-  
selves on the splendor of an empty protest?  
It is well indeed for our dear land in these  
days of serious danger that our ship of  
state is guided by a cool head and a steady  
arm.

JAMES W. JOHNSON  
*Spuyten Duyvil*

I believe that our President will never,  
personally, advise any hostile demonstra-  
tions, either toward Germany or Mexico.  
The aftermath of this vast European holo-  
caust will be more exacting in the needs,  
necessities and troubles of every individual  
in any nation, than all the present regretta-  
ble and strenuous conditions. America, un-  
fettered by war operations, will gradually  
evolve into a position of gigantic Samari-  
tanism, with capital and necessities and  
food products, raw or manufactured, for  
all.

JAMES EDWARDS  
*San Francisco*

When Mrs. Corra Harris on her re-  
turn to Georgia from the seat of war  
in France wrote to The Independent of  
May 3 "From the Peace Zone in the  
Valley," she probably did not expect  
this expression of her relief at the  
change of scene to be subjected to such  
rigid criticism from a geological and  
botanical standpoint as the following:

"Men make war, but they cannot make  
peace," she says. "Peace is." Further she

says, "All things work together for good-  
ness and peace, except greed and ambition,  
of which all the world is guiltless except  
man."

Her idea that all nature is at peace  
couldn't well be further from the truth.  
War is the law of all nature. Take the sea.  
A few submarines threaten lives and prop-  
erty, but in every river, lake, sea and ocean  
literally countless millions of devil-fish,  
swordfish, archerfish, boarfish, cutlassfish,  
sawfish, spearfish and sharks every minute  
are in deadly warfare, eating and being  
eaten.

Conditions on land are worse. Even the  
birds are hostile to each other and to lower  
forms of life. The whole animal world is  
engaged in frightful war. Lions, tigers,  
wolves, hyenas, jackals, crows, vultures—  
do these names suggest peace? Do not they  
fight for the same reasons that men fight,  
viz., to get food, for places to live and to  
protect their females and children? Yes,  
and some out of pure cussedness. Are all  
meetings in the jungle peace congresses?

Even in the vegetable world war is the  
rule. Weeds are constantly trying to choke  
out useful plants. Wonder if Mrs. Harris  
ever had a garden or, if she had, wonder  
if she witnessed no war between pusley,  
blue grass and milkweed, say, on the one  
side, and radishes, onions and sweet corn  
on the other side. Wonder if she ever saw  
a field of wheat fighting a draw battle  
with Canada thistles. Wonder if she ever  
saw a conflict between dandelions and grass  
in the lawn. Yet she gets off such a remark  
as "All the earth is guiltless except man."

"We reap the grass," she says, "and cut  
the trees, but they rise again. Flesh is the  
one transient thing." But it is not the same  
grass that rises again. The human race  
continues the same as plant life, not by the  
re-birth of the same individuals, but by  
descendants. Men who live now are grand-  
children of former men, so trees are grand-  
treeren of former trees.

J. EUGENE BARRY  
*Decatur, Illinois*

How Mrs. Harris would reply to this  
we would not venture to surmise, but  
we will content ourselves by quoting  
good old Dr. Watts:

Let dogs delight to bark and bite,  
For 'tis their nature to.  
Let wolves and lions growl and fight,  
For God hath made them so.  
But, children, you should never let  
Your angry passions rise;  
Your little hands were never made  
To tear each other's eyes.

In discussing "The Revival of the  
Pamphlet" in our issue of May 17, we  
called attention to the fact that in this  
country it was more customary for  
those who wish to influence public opin-  
ion in behalf of some cause or people  
to found a special periodical for that  
purpose instead of making use of  
pamphlets. As examples of this tenden-  
cy in American literature we specified  
*The Fatherland*, *Free Poland* and *The  
Day* as representing respectively the  
interests of the Germans, the Poles and  
the Jews in this country. In mentioning  
*The Day* in this connection we had no  
thought of implying that this news-  
paper was an advocate of either Ger-  
many or the Allied Powers. *The Day*  
was incorporated three months before  
the war broke out for the purpose of  
becoming "a constructive force in  
American Jewry in the greatest Jewish  
center in the world." It has maintained  
a neutral attitude in regard to the war  
and at the same time has done a public  
service in calling attention to the suf-  
ferings of the Jews in the territory de-  
vastated by the contending armies in  
eastern Europe.

# The TRIBUTE TO INITIATIVE

V

One year ago, the V-type principle as applied to automobile engines was practically unknown in America. ¶ Today it is the dominating influence in motor car development. ¶ Announcements already made and to be made indicate how profoundly the future course of the industry has been affected by the Cadillac V-type "Eight." ¶ In eagerness of demand, the Cadillac Company has never experienced anything like the existing conditions. ¶ More than 12,000 Eight-Cylinder Cadillacs have been delivered and orders are in hand from dealers for practically as many more.

THE measure of a man's success is the influence which he exerts upon other men. ¶ It is not merely in what he says, or thinks, or even in what he does. ¶ It is determined by the extent to which he moulds and models other men to his way of speaking and thinking and doing. ¶ When the public mind or conscience begins to pattern itself after the mind and conscience of an individual—that individual has begun to taste of true greatness. ¶ And in a different, and perhaps in a lesser sense, that which is true of the individual, is true of the business institution. ¶ The success of a business institution is in proportion to the influence which it exerts upon the industry of which it is a part. ¶ When a great industry begins to shape its policies, its principles and its product after the pattern set by a single business institution—that one institution has become vastly more than a mere money-making machine. ¶ It has developed into a creative and a compelling force. ¶ The great man does not merely bring other men to his way of thinking. ¶ He induces them to translate those thoughts into deeds and into conduct. ¶ He causes them to abate and set aside their own judgment and to substitute his clearer, better judgment. ¶ He persuades them to throw away something of their own and to substitute something of his which is better. ¶ The greatest of all victories is that bloodless triumph which comes of self conquest—the subjugation of self to that which is right and good. ¶ And its finest fruit is the peaceful conquest of other hearts and other minds. ¶ Again, in a different and maybe in a lesser sense, this is true of business institutions. ¶ They have begun to taste of true success only when they have induced a great industry to abate, to abandon, to throw away, to substitute, to conform. ¶ Consider what it means to conquer in turn, by the silent force of example, the intellect of the draftsman, the designer, the engineer, the executive, the directing boards of other great institutions. ¶ Consider the dead weight of opposition which must be overcome in an organization before it can persuade itself to follow the example of another. ¶ Confronted with such a problem in his affairs, the mind of the manufacturer must run the gamut of business emotions. ¶ He must subjugate his pride; he must fight off his fear; he must master his uncertainty; he must conquer his doubt—and stake his entire destiny on the decision. ¶ His engineers have been committed, perhaps, to other principles, and may be reluctant to adopt a new principle. ¶ His selling organization has been committed to the old product but must recast its policy to conform to the new. ¶ Capital, seeing hundreds-of-thousands in money needed for new machinery and other hundreds-of-thousands discarded in old machinery, wonders why the old, profitable, less progressive product is not good enough. ¶ Wherever he goes in his own institution, there is doubt and discouragement—but over against it the steadily shining beacon-light of that other great success. ¶ Its radiance is all around him. ¶ The pressure of public opinion pushes him persistently toward its emulation. ¶ So he resolutely pockets his pride, sets aside his own judgment, abandons the old policies and begins to build another product, patterned after ideals which are not his own. ¶ When that is accomplished, there is paid the highest tribute which intellect can pay to intellect. ¶ After that, the process goes on and on. ¶ Millions in money and tons of machinery are dedicated to the pursuit of the new inspiration. ¶ A hundred brains, as it were, accept the dictum of one brain. ¶ A score of business institutions tacitly admit the wisdom of one business institution. ¶ A dozen products endeavor to conform to the one product. ¶ Then indeed, is the tribute complete. ¶ A unit has indelibly stamped itself upon the whole. ¶ The industry crowns the individual institution. ¶ And the world adds the seal of unstinted endorsement.

NUMBER 3472

## THE RESIGNATION OF MR. BRYAN

**M**R. BRYAN'S resignation from the President's Cabinet is a deplorable event.

It is deplorable not primarily because of the loss that it means to the Administration, tho it is clear that the President, who should be the best judge of the matter, considers it a serious loss. Mr. Bryan, thru his fearless arraignment of Tammany Hall at the Baltimore convention, did more than any other single force to bring about Mr. Wilson's nomination. He brought to the Wilson administration a close touch with the plain people—and more particularly the rank and file of the Democratic party—which must have been a real asset. During the progress of the great legislative program of the past two years his influence in the party was beyond question of great assistance to the President in his dealings with the Democratic majority in Congress. His prominence in the peace movement and his earnest championship of the principle of the settlement of international disputes by arbitration and the application of reason and good will has done much to make the United States a leader among the nations in the world movement for the elimination of war.

There is no reason to believe that the President was not speaking with perfect sincerity when he said in accepting Mr. Bryan's resignation: "Our two years of close association have been very delightful to me. Our judgments have accorded in practically every matter of official duty and of public policy until now; your support of the work and purpose of the Administration has been generous and loyal beyond praise; your devotion to the duties of your great office and your eagerness to take advantage of every great opportunity for service it offered have been an example to the rest of us."

**B**UT it is highly deplorable that Mr. Bryan should have left that great office at just the time and for just the reasons that he did. There could hardly be imagined a time when a President would have more need of the wholehearted, loyal and unselfish support of every citizen of the nation, and how much more of each of those whom he had honored with a place in the close circle of his own personal advisers.

Mr. Bryan should have sacrificed everything but principle to the high duty of supporting his chief and the nation's head. And he and the President did not differ on a matter of principle. His letter and that of Mr. Wilson are in perfect agreement on the point that the disagreement was as to methods. No difference as to methods ought to be, as Mr. Bryan declared this one to be, "irreconcilable." That it was not utterly so is indicated by the fact that additions were made to the Amer-

ican note, and submitted to Mr. Bryan after his resignation had been offered and accepted but before it had taken effect or been made public, which decidedly softened the severity of its tone. In its final form this second American note was more moderate than either the note of February 10 or the note of May 15, both of which were signed by Mr. Bryan.

**M**R. BRYAN objected to the President's method of dealing with the matter in two particulars. First, he would have had the United States offer to submit the case of the "Lusitania" to the investigation of an international commission. In so proposing he does not seem to realize that it is not merely the single act of the sinking of that ship upon which we seek action from Germany. We are concerned with a deliberate and continuing policy on the part of Germany which there is no intimation that Germany intends to intermit or abandon. We have asked for assurances that Germany will put into practise the fundamental principle of civilized maritime warfare that "the lives of noncombatants cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unresisting merchantman."

Germany does not deny that this is the accepted rule of international law. She justifies her breaking of the rule, however, by her contention that England is preventing food and other non-contraband material from being brought to the civil population of Germany.

If Germany wants to refer to a judicial court or commission of inquiry the specific question whether the "Lusitania" was an auxiliary British war vessel, or whether the United States officials were guilty of dereliction of duty in clearing her as a merchantman, we can see no objection to such a reference provided Germany gives the customary assurances that in the meantime she will discontinue destroying the lives of Americans on the high seas without warning. But for us to arbitrate with Germany her individual right to break the law of nations at our expense and without our consent and that of the other nations, is as impossible as for the state of New York to arbitrate with the state of California the latter's right to change the Constitution of the United States without the consent of the other states.

Secondly, Mr. Bryan would have the President warn Americans against traveling on belligerent ships or ships carrying ammunition. It would unquestionably be the part of wisdom for every American in these troubled times to confine his travel, wherever possible, to American ships. Every American ought to be scrupulously careful not to put himself, except for the most weighty reason, into a position where injury to him would tend

to involve his country in the dread consequences of war. But for the Government to urge such a course upon its citizens at so critical a time as this in the negotiations with Germany would be not so simple a matter. To take such a course would be to admit a weakness in our contention for the basic principle in relation to the rights of noncombatants on merchant ships. No such warning would modify in the slightest degree the responsibility of the United States to insist that the rights of American citizens shall be respected in accordance with the usages of civilized warfare and the fundamental rights of humanity.

Mr. Bryan's earnest zeal for the prevention of war is highly to his credit. Any man might well be proud to have it the cause, as he has said and shown that it is, nearest his heart. But there can be no doubt that it is a cause quite as close to the heart of the President. And it is a serious question whether a mere difference about methods, however "irreconcilable," justifies a man in the position from which Mr. Bryan has just retired, in deserting his post in a crisis the acuteness of which only the event can measure.

It can only be a matter of the deepest regret that a man who in so many directions has been a militant power for good should curtail his own effectiveness by such an act at such a time. For it is increasingly clear as the days go by that the effect of Mr. Bryan's resignation is not to be any weakening of the popular support of the President or any division in the Democratic party, but rather a deplorable loss of influence on the part of Mr. Bryan himself.

## NOTHING LESS HIGH AND SACRED THAN THE RIGHTS OF HUMANITY

**I**N view of the expectations naturally aroused by the action of Mr. Bryan in resigning rather than sign the document, the second American note to Germany on the sinking of the "Lusitania" proves to be surprisingly moderate. It is irreproachable in courtesy and perfect in temper. There is not a word in it that could be looked upon as provocative by any nation desirous of doing justice and maintaining friendship.

But neither is there in it any sign of weakening or hint of withdrawal. It is the only logical sequel to the American note of May 15, just as that was the only logical sequel to the American note of February 10. If the German Government needed further assurance of the fact, there is left not the smallest room for doubt that the United States stands unalterably upon the rights of American shipping and of American citizens upon the high seas, as determined by the immemorial custom of nations and the inviolable rights of humanity.

The note meets the intimations and suspicions of the German Government with regard to the character and equipment of the "Lusitania" with official information that she was not in fact a British naval vessel, nor armed for offensive action, nor serving as a transport, nor carrying a cargo prohibited by the laws of the United States. It was the duty of officials of the United States to make certain that none of these things was true or to refuse the "Lusitania" clearance from an American port as a merchantman. This duty, the note assures Germany, was performed "with scrupulous vigilance." Such an official declaration should settle the

matter. Nevertheless the note, in a fine spirit of open-mindedness and fair play, expresses the sincere hope that Germany will submit any "convincing evidence" it deems itself to have that American officials did not perform this duty with thoroughness.

Thus does the Government of the United States effectively rebut German's defense of the sinking of the "Lusitania." Unless the German Government can afford convincing proof that American officials were flagrantly derelict in their duty, the German case is demolished. If Germany could afford such proof, the terrible responsibility might be transferred to the Government of the United States. For a country which should permit a naval vessel of a belligerent power, as Germany in effect asserted the "Lusitania" to be, to sail from its ports as a passenger vessel, carrying more than a thousand noncombatants, including a hundred of its own citizens, could hardly escape bearing the onus of her sinking at the hands of another belligerent. Such would be the situation if the facts were as Germany has asserted. But the United States is convinced that Germany is mistaken. Germany must prove that we are wrong or admit its full responsibility.

But a matter of even greater gravity than the destruction of the "Lusitania" is involved in our controversy with Germany. For nothing can bring to life the men, the women and the children who died when that ship was sunk. But there are other lives to protect; there are the rights of the living to be safeguarded.

It is of importance that we should be given such poor reparation as lies in Germany's power for the wrongs already committed by German submarines, but it is of vital importance that we should be assured of Germany's sincere intention not to continue to commit such wrongs from this day forward.

In the German note to which we are now replying there was ominous indication that Germany had no purpose to alter the policy which had resulted in the destruction of the "Lusitania." There it was said: "The German commanders are . . . no longer in a position to observe the rules of capture otherwise usual and with which they inevitably complied before this."

In resisting such a revolutionary alteration of the accepted rules and customs of maritime warfare as is displayed in the German note, and in the course of action of the German submarines both before and since the sinking of the "Lusitania," the United States, to use the President's words, "is contending for something much greater than mere rights of property or privileges of commerce." "It is contending for nothing less high and sacred than the rights of humanity, which every government honors itself in respecting and which no government is justified in resigning on behalf of those under its care and authority."

Among the acknowledged rights of humanity—acknowledged by the whole world until Germany made from the vulnerability and the limited capacity of her submarines an excuse for denying them—is to be found the principle "that the lives of noncombatants cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unresisting merchantman."

This principle needs no discussion. It admits of no debate. Questions of fact the United States is ready to discuss with patience, reasonableness and good will. The application of the principle to specific cases it is ready

to debate. But on the question of the principle itself the United States must and will stand firm.

In the closing words of the American note, "The Government of the United States deems it reasonable to expect that the Imperial German Government will adopt the measures necessary to put these principles into practice in respect of the safeguarding of American lives and American ships, and asks for assurances that this will be done."

More than this simple act of justice we have never asked. Less than this Germany cannot in fairness and good conscience offer.

## EXPEDIENCY AND MORALS IN WAR

IT has been the effort of the conferences at The Hague to save in war what little of morals war can be made to allow. War is cruel, but any degree of cruelty not necessary in war The Hague would prevent. So snub-nosed bullets are barred.

In his book on *Morals*, Cicero discusses in one chapter this question of the conflict between expediency and morals, and denounces the cruelty of the Athenians in decreeing that the Æginetans, whose strength was in their navy, should have their thumbs cut off so that they could not row in their galleys. It is "thru a specious appearance of expediency," he says, that "wrong is very often committed in transactions between state and state, as by our own country in the destruction of Corinth." He lays down this general principle:

No cruelty can be expedient; for cruelty is most abhorrent to human nature, whose leadings we ought to follow. They, too, do wrong who debar foreigners from enjoying the advantages of their city, and would exclude them from its borders. . . . To debar foreigners from enjoying the advantages of the city is altogether contrary to the laws of humanity.

It was not a Christian who said that even in war a state should not out of expediency be guilty of cruel acts which are thereby essentially immoral; he was a pagan, a worshiper of the gods that are no gods; but he could, and still does, teach morals to Christian nations. President Wilson's communication to Berlin is based on just this principle that cruelty is abhorrent to nature and contrary to the laws of humanity.

There have been deeds done in this war, new to warfare, utterly and outrageously cruel, defended on the score of expediency, called necessity. Such is the promiscuous dropping of bombs on a city, or the use of poisonous gases, or, to mention so conspicuous a case, the massacre of the unwarned passengers on the "Lusitania." Once Themistocles told the Assembly of the Athenians that he had in mind an advantageous plan for strengthening the state in a case of war, but that it was not politic to let it be generally known, and he asked that they would select some man whom he might consult about it. They chose Aristides, surnamed "the Just." It was a plan secretly to set on fire the Spartan fleet drawn up on shore at Gytheum. Aristides heard the plan and reported to the Assembly that it was highly expedient but not morally right, whereupon the Assembly decided that what was not morally right could not be expedient. But such pagan morals are quite too ideal for these days, when a Christian power can calmly decide, for the sake of expediency called necessity, to invade and crush Belgium, and to blow up merchant vessels of whatever nation without warning.

## TOURISTS' RIGHTS

TOURISTS are unchristian animals. They deserve, no doubt, to be warned not to pick the flowers nor finger the paintings. They have only themselves to blame if ice-cream cones are sold under the noses of famous statues. They need occasionally to be confronted with a broadly suggestive sign like the one just outside the San Diego fair grounds: "This is a private house, not a bureau of information. No concessions, no rooms to let. Please keep off the grass."

But they have some rights.

When the thoughtful curators of the charming old Spanish house, in the same city, called Ramona's Marriage Place provided penny-in-the-slot-and-pull-the-knob drinking cups as an adjunct to the fine, broad-brimmed stone well, ancient and alluring, they violated the cardinal privilege of tourists: to have harmless antiques preserved untainted. Safety first! An admirable sentiment! But must we rewrite "The Old Oaken Bucket" about the virgin form of a paraffin cup?

## AVOCATIONAL EDUCATION

IN these days when vocational training is all the rage it is more than ever necessary to emphasize the importance of the opposite kind of education, that which deliberately aims to lead the attention away from the drudgery of everyday life into the neglected fields of history, literature, art, science and religion. True efficiency in the art of living is not to be attained by confining one's thoughts to the immediate job in hand. We should occasionally raise our eyes from our work and rest them on the wide horizon.

To hundreds of thousands of Americans in the past forty years Chautauqua has afforded such an outlook. To the farmer's wife of rural New England, to the ranchman of the western plains, to the village communities which form the heart of the nation as well as to the inhabitants of our largest cities it has brought the opportunity and the incentive for pursuing a systematic course of reading which has led them all around the world and out into stellar space. It has opened the gates that lead back to Greece and Rome. It has handed them the keys to science and philosophy. It has introduced them to contemporary Europe and given them an interest in the problems of our industrial and social life.

There has been no neglect of the practical side of life in the Chautauqua scheme of things. At Chautauqua Institution she who will may take lessons in domestic science, but she who won't may pass on to the Hall of Philosophy and listen to Maeterlinck. Man shall not live by bread alone nor woman by the making of it. A trip to Mars is just what a bookkeeper needs in the evening after he has bent his near-sighted eyes over the ledger all day long. The housewife who has spent twelve hours dusting and scrubbing and putting things to rights does not want to go to a club and discuss "Municipal Housecleaning." No, it is a normal and a wholesome instinct that leads her to Botticelli or the Yosemite instead. Still there are those who sneer at it as an affectation of culture, holding that real culture is a monopoly of the leisure class and all others are imitations. There is manifest, too, an increasing disposition on the part of business men to bring pressure to make the public schools curtail their curriculum and

restrict it to the practical, that is, to what they can use in their business, accurate spelling and quick figuring. They would restrict children to the three R's, reading, 'riting and 'rithmetic, as the Kaiser would restrict women to the three K's, *Kirche*, *Küche* and *Kinder*. Against all limitations of educational aspirations, whether due to class, sex, cost or locality, the Chautauqua Literary and Scientific Circle is a standing protest. And not merely a protest, but a remedy by its unique system of self-education.

Self-education. Is there after all any other kind of education? And do big libraries and fine buildings and well-equipped laboratories always stimulate and never stifle it? The printing press and the postage stamp have enlarged the lecture room to the limits of the language. They have brought within the range of the teachers of this generation all who have the alphabet and the disposition to use this key to all knowledge for their own delectation and advantage.

It is just a year ago since Chautauqua and The Independent joined forces. The alliance was a natural one, for both were engaged in popular education on the widest possible scale. It has proved a profitable one for both parties, since it has given to The Independent the class of thoughtful, earnest readers we most desire to reach, and it has given to the members of the C. L. S. C. a periodical which, as we are glad to learn, they highly appreciate.

## AMERICAN SHIPS AND THE FOREIGN TRADE

"I AM perfectly clear in my judgment," said President Wilson, "that if private capital cannot soon enter upon the adventure of establishing these physical means of communication, the Government must undertake to do so." He was speaking of lines of steamships for service between our ports and those of South America, and his opinion was thus exprest only a few days after the Pacific Mail Company had given notice that it would withdraw its ships from the route across the Pacific in November next, when the new Seamen's act will go into effect. That act, the company's officers say, will increase the cost of operation on the Pacific route by \$650,000 a year.

If American capital could speak, and if it should be asked to explain why it does not gladly enter upon the adventure, probably it would say that it could not, in normal times, operate steamship lines under the American flag in the foreign trade, in competition with those of the world's maritime nations, without continuous loss.

It would point to the ships recently coming under our flags, ships whose officers and men at once demanded that their wages be increased by forty or fifty per cent, and thus raised to the American scale.

It would say that the difference in wages is less on the Atlantic than on the Pacific, where the Japanese rates prevail, and where, the Pacific Mail Company's officers say, the withdrawal of their boats will leave the Japanese in practicaly undisputed control.

It would add that, with much higher cost of operation it would also be required to contend against the large annual subsidies granted by European nations and Japan to steamships with which it must compete. It can obtain no such subsidies from our Government.

It might also say that it has recently been restrained by the menace of Government ownership and operation—a menace because the Government would not be compelled to run its ships profitably, but could make low and unprofitable rates, collecting the loss from taxpayers, as the Post Office Department will make good its deficit of \$6,500,000 for the last six months. And, like the Pacific Mail's officers, it might cite the Seamen's act as evidence of an inclination in Congress to make heavier the burden imposed by a difference in wage rates and a lack of subsidies.

These remarks, which probably would be drawn from capital if capital could talk, deserve consideration and should have some weight in the discussion about putting new American ships into the foreign trade.

## STONEHENGE FOR SALE

COLLECTORS of curios should take notice that in September they will have a chance to bid on a choice bit of bric-à-brac, for Stonehenge is then to be put up at auction. It is, to be sure, not the sort of thing one would want to keep on a what-not or cabinet. Even the Metropolitan Museum would have difficulty in disposing of it. It is not exactly beautiful, nor has any one been able to find out what it was built for. But the zeal of the born collector for a unique specimen is stimulated rather than checked by inconvenience or lack of beauty and practicality. Why should not the United States Ancient Order of Druids buy it in and transport it, like Cleopatra's Needle, to New Orleans, or wherever the Supreme Arch may reside? Of course, the connection of the original Druids with Stonehenge is shadowy, but so also is their connection with the A. O. D.

The outcry that was raised ten years ago in England when Sir Edmond Antrobus first tried to sell the property was in part due to the fear lest it should fall into the hands "of one of these b—y Americans," who, if he did not remove it, would at least commercialize it. He was denounced as a traitor and a Vandal. But let the reader ask himself what he would do if he had inherited a neolithic cromlech of eighty-nine pieces. Sir Edmond offered it to the British Government for \$750,000 and finally came down to \$600,000, but the Government quite wisely preferred to put its money into dreadnoughts rather than Druidic remains. Then, when no American Mæcenass appeared on the scene, he tried to get a little revenue out of his three-quarter-million investment by putting a barb-wire fence around it and a postcard shop at the entrance. This roused the wrath of Chesterton, who criticized it in this fashion:

Now if you protest against this, educated people will instantly answer you, "Oh, it was done to prevent vulgar trippers who chip stone and carve names and spoil the look of Stonehenge." It does not seem to occur to them that barbed wire and a policeman rather spoil the look of Stonehenge. The scratching of a name, particularly when performed with a blunt penknife or pencil by a person of imperfect School Board education, can be trusted in a little while to be indistinguishable from the greyest hieroglyphic of the grandest Druid of old. But nobody could get a modern policeman into the same picture with a Druid. . . . It seems to me curious to preserve your lady's beauty from freckles by blacking her face all over; or to protect the pure whiteness of your wedding garment by dyeing it green.

But now that Sir Edmond Antrobus is dead he can do what he could not while living, and the unique stone circles are to go to the highest bidder next fall.

# THE PRESIDENT'S SECOND NOTE TO GERMANY

"THE SINKING OF PASSENGER SHIPS INVOLVES PRINCIPLES OF HUMANITY WHICH THROW INTO THE BACKGROUND ANY SPECIAL CIRCUMSTANCES OF DETAIL"

DEPARTMENT OF STATE

WASHINGTON, June 9, 1915

THE Government of the United States notes with gratification the full recognition by the Imperial German Government, in discussing the cases of the "Cushing" and the "Gulflight," of the principle of the freedom of all parts of the open sea to neutral ships, and the frank willingness of the Imperial German Government to acknowledge and meet its liability where the fact of attack upon neutral "ships which have not been guilty of any hostile act" by German air craft or vessels of war is satisfactorily established, and the Government of the United States will in due course lay before the Imperial German Government as it requests, full information concerning the attack on the steamer "Cushing."

With regard to the sinking of the steamer "Falaba," by which an American citizen lost his life, the Government of the United States is surprised to find the Imperial German Government contending that an effort on the part of a merchantman to escape capture and secure assistance alters the obligation of the officer seeking to make the capture in respect of the safety of the lives of those on board the merchantman, altho the vessel has ceased her attempt to escape when torpedoed. These are not new circumstances. They have been in the minds of statesmen and of international jurists thruout the development of naval warfare, and the Government of the United States does not understand that they have ever been held to alter the principles of humanity upon which it has insisted. Nothing but actual forcible resistance or continued efforts to escape by flight when ordered to stop for the purpose of visit, on the part of the merchantman, has ever been held to forfeit the lives of her passengers or crew. The Government of the United States, however, does not understand that the Imperial German Government is seeking in this case to relieve itself of liability, but only intends to set forth the circumstances which led the commander of the submarine to allow himself to be hurried into the course which he took.

Your Excellency's note, in discussing the loss of American lives resulting from the sinking of the steamship "Lusitania," adverts at some length to certain information which the Imperial German Government has received with regard to the character and outfit of that vessel, and your Excellency expresses the fear that this information may not have been brought to the attention of the United States. It is stated that the "Lusitania" was undoubtedly equipped with masked guns, supplied with trained gunners and special ammunition, transporting troops from Canada, carrying a cargo not permitted under the laws of the United States to a vessel also carrying passengers, and serving, in virtual effect, as an auxiliary to the naval forces of Great Britain.

Fortunately these are matters concerning which the Government of the United States is in a position to give the Imperial German Government official information. Of the facts alleged in your Excellency's note, if true, the Government of the United States would have been bound to take official cognizance in performing its recognized duty as a neutral power and in enforcing its national laws. It was its duty to see to it that the "Lusitania"

was not armed for offensive action, that she was not serving as a transport, that she did not carry a cargo prohibited by the statutes of the United States, and that, if in fact she was a naval vessel of Great Britain, she should not receive clearance as a merchantman; and it performed that duty and enforced its statutes with scrupulous vigilance thru its regularly constituted officials. It is able, therefore, to assure the Imperial German Government that it has been misinformed. If the Imperial Government should deem itself to be in possession of convincing evidence that the officials of the Government of the United States did not perform these duties with thoroughness, the Government of the United States sincerely hopes that it will submit that evidence for consideration.

Whatever may be the contentions of the Imperial German Government regarding the carriage of contraband of war on board the "Lusitania," or regarding the explosion of that material by the torpedo, it need only be said that in the view of this Government these contentions are irrelevant to the question of the legality of the methods used by the German naval authorities in sinking the vessel.

But the sinking of passenger ships involves principles of humanity which throw into the background any special circumstances of detail that may be thought to affect the cases; principles which lift it, as the Imperial German Government will no doubt be quick to recognize and acknowledge, out of the class of ordinary subjects of diplomatic discussion or of international controversy. Whatever be the other facts regarding the "Lusitania," the principal fact is that a great steamer, primarily and chiefly a conveyance for passengers, and carrying more than a thousand souls who had no part or lot in the conduct of the war, was torpedoed and sunk without so much as a challenge or a warning, and that men, women, and children were sent to their death in circumstances unparalleled in modern warfare. The fact that more than one hundred American citizens were among those who perished made it the duty of the Government of the United States to speak of these things, and once more, with solemn emphasis, to call the attention of the Imperial German Government to the grave responsibility which the Government of the United States conceives that it has incurred in this tragic occurrence, and to the indisputable principle upon which that responsibility rests.

The Government of the United States is contending for something much greater than mere rights of property or privileges of commerce. It is contending for nothing less high and sacred than the rights of humanity, which every government honors itself in respecting, and which no government is justified in resigning on behalf of those under its care and authority. Only her actual resistance to capture, or refusal to stop when ordered to do so for the purpose of visit, could have afforded the commander of the submarine any justification for so much as putting the lives of those on board the ship in jeopardy. This principle the Government of the United States understands the explicit instructions issued on August 3, 1914, by the Imperial German Admiralty to its commanders at sea to have recognized and embodied, as do the naval codes of all

other nations, and upon it every traveler and seaman had a right to depend. It is upon this principle of humanity, as well as upon the law founded upon this principle, that the United States must stand.

The Government of the United States is happy to observe that your Excellency's note closes with the intimation that the Imperial German Government is willing, now as before, to accept the good offices of the United States in an attempt to come to an understanding with the Government of Great Britain by which the character and conditions of war upon the sea may be changed. The Government of the United States would consider it a privilege thus to serve its friends and the world. It stands ready at any time to convey to either Government any intimation or suggestion the other may be willing to have it convey, and cordially invites the Imperial German Government to make use of its services in this way at its convenience. The whole world is concerned in anything that may bring about even a partial accommodation of interests or in any way mitigate the terrors of the present distressing conflict.

In the meantime, whatever arrangement may happily be made between the parties to the war, and whatever may, in the opinion of the Imperial German Government, have been the provocation or the circumstantial justification for the past acts of its commanders at sea, the Government of the United States confidently looks to see the justice and humanity of the Government of Germany vindicated in all cases where Americans have been wronged or their rights as neutrals invaded.

The Government of the United States, therefore, very earnestly and very solemnly renews the representations of its note transmitted to the Imperial German Government on the 15th of May, and relies in these representations upon the principles of humanity, the universally recognized understandings of international law, and the ancient friendship of the German nation.

The Government of the United States cannot admit that the proclamation of a war zone from which neutral ships have been warned to keep away may be made to operate as in any degree an abbreviation of the rights either of American shipmasters or of American citizens bound on lawful errands as passengers on merchant ships of belligerent nationality. It does not understand the Imperial German Government to question those rights. It understands it also to accept as established beyond question the principle that the lives of non-combatants cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unresisting merchantman, and to recognize the obligation to take sufficient precaution to ascertain whether a suspected merchantman is in fact of belligerent nationality or is in fact carrying contraband of war under a neutral flag. The Government of the United States deems it reasonable to expect that the Imperial German Government will adopt the measures necessary to put these principles into practise in respect of the safeguarding of American lives and American ships, and asks for assurances that this will be done.

ROBERT LANSING,  
Secretary of State ad Interim.

# THE STORY OF THE WEEK

## Secretary Bryan Resigns

About twenty-four hours before President Wilson's note to Germany was forwarded, and two days before the publication of it here, Secretary Bryan resigned. In his letter of resignation, dated the 8th, he began by expressing to the President sincere regret that he must go. "Obedient to your sense of duty, and actuated by the highest motives," he continued, "you have prepared for transmission to the German Government a note in which I cannot join without violating what I deem to be an obligation to my country, and the issue involved is of such moment that to remain a member of the Cabinet would be as unfair to you as it would be to the cause which is nearest my heart, namely, the prevention of war." Both, he said, desired to reach a peaceful solution of the problems arising out of the use of submarines against merchantmen, but found themselves differing irreconcilably as to the methods which should be employed. "It falls to your lot to speak officially for the nation; I consider it to be none the less my duty to endeavor, as a private citizen, to promote the ends which you have in view by means which you do not feel at liberty to use." In conclusion he acknowledged the profound satisfaction caused by his association with Mr. Wilson in important work, and expressed his heartiest good wishes for the President's personal welfare and the success of his Administration.

Promptly replying, Mr. Wilson said that he accepted the resignation only because Mr. Bryan insisted upon acceptance of it; and he accepted it with much more than deep regret—with a feeling of personal sorrow. "Our two years of close association," he continued, "have been very delightful to me. Our judgments have accorded in practically every matter of official duty and of public policy until now; your support of the work and purposes of the Administration has been generous and loyal beyond praise; your devotion to the duties of your great office, and your eagerness to take advantage of every great opportunity for service it afforded has been an example to the rest of us; you have earned our affectionate admiration and friendship. Even now we are not separated in the object we seek, but only in the method by which we seek it. Our objects are the same and we ought to pursue them together. I wish you Godspeed in the parting. We shall continue to work for the same causes even when we do not work in the same way."

## His Reasons Given

In a statement given to the public on the following day, Mr. Bryan said that the President and himself differed on two points: first as to the suggestion of investigation by an international

commission, and, second, as to warning Americans against traveling on belligerent vessels or with cargoes of ammunition. He thought we should say to Germany that we were willing to apply in this case the principle which by recent peace treaties we are bound to apply in disputes with thirty nations, three of which are Great Britain, France and Russia. Germany had expressed approval of the plan, which provides for investigation by an international commission, with one year for inquiry and a report. Why, he asked, should an American citizen be permitted to involve his country in war by traveling on a belligerent ship in a danger zone? Our Government should go as far as it could to prevent this. And American passenger ships should be forbidden to carry ammunition. An attempt to prevent citizens from incurring such risks was entirely consistent with an effort to prevent attacks from submarines. But the President did not feel justified in suggesting investigation by a commission or in warning citizens against traveling on belligerent ships. As a private citizen, he (Mr. Bryan) was free to urge both propositions and to seek such an expression of public sentiment as would "support the President in employing these remedies, if, in the future, he finds it consistent with his sense of duty to favor them."

## Other Statements

Following the publication of the note to Germany, Mr. Bryan issued a statement addressed to the American people, whom he asked to sit in judgment on his action. Repeating what he had said about the irreconcilable difference with the President, he asserted that the real issue was not between persons, but between systems. Governments in dealing with each other used force which represented the old system, which must pass away, or persuasion, representing the new sys-

tem, which had been growing slowly for 1900 years. Of the old system war was the cornerstone. The note to Germany conformed to the standards of the old system. Every ruler engaged in the war was seeking peace according to the old system's rules, by "firmness," and never before had the frightful follies of that fatal system been so clearly revealed. This was what "firmness, supported by force," had done in the Old World. As an humble follower of the Prince of Peace, he begged to be counted among those who favored a course which would show our Government's willingness to continue negotiations with Germany until, the stress of war over, we could appeal from Philip drunk with carnage, to Philip sobered by memories of a historic friendship and by recollection of the innumerable ties of kinship that bind the fatherland to the United States. "Some nation must lead the world out of the black night of war into the light of that day when 'swords shall be beaten into plowshares.' Why not make that honor ours?"

A day later he published a long statement addressed "to the German-Americans." He had confidence in their patriotism, he said, and he urged them to believe that Mr. Wilson was truly neutral. It would be a violation of neutrality to change international rules during war by forbidding the exportation of arms. He believed that if we should be at war with Germany, the German-Americans would enlist as promptly as any other citizens. He asked them not to suspect Mr. Wilson of lack of friendship toward the German Government and people. They should strive to convince the German Government that the President desired peace, and should not connect the German negotiations with those affecting Great Britain. He had opposed delay in sending a note to the British Government and was confident that eventually it would be sent. He hoped Germany would acquiesce in the demands of our note, and that there would be an international agreement excluding passengers from ships carrying ammunition or contraband.

In another statement he said he had feared that our recent note to Germany would cause Germany to sever diplomatic relations and thus create a situation that would lead to war. After his resignation had been submitted but before it took effect, a paragraph softening the note had been added, but the change was not sufficient to affect his decision.

It would be impossible to summarize briefly the comment excited by Mr. Bryan's action. As a rule, the President is supported. Democrats active in politics say there is to be no party division. The attempts of Congressman Buchanan, a labor leader, to promote a labor protest against war have thus far been

MR. BRYAN'S HAND

From the mask made by Gutzon Borglum at the same time as the life mask opposite

unsuccessful. Mr. Bryan's appeal to German-Americans was coldly received by the greater part of the German-American press. Mr. Roosevelt applauds the President and pledges to him his heartiest support in all the steps he may take to uphold the honor and interests of the United States. Robert Lansing, counsellor of the State Department, and now Acting Secretary, may be Mr. Bryan's successor.

**Labor Controversies** At midnight on the 13th, 14,500 employees on the elevated and surface street railways in Chicago went on strike for higher wages. The car service was discontinued, altho the elevated lines prepared to use 1000 strike-breakers imported from Eastern cities. Officers of business companies provided lodgings for their employees near the places where they were working, or hired automobiles to carry them to their homes in the suburbs. The number of trains on the steam roads was increased. Arbitration had been offered to the strikers, but they rejected it because they were dissatisfied with an arbitration award made three years ago. Mayor Thompson warned them that they could not afford to reject such an offer.

The nine sheriff's deputies recently

#### WILLIAM JENNINGS BRYAN

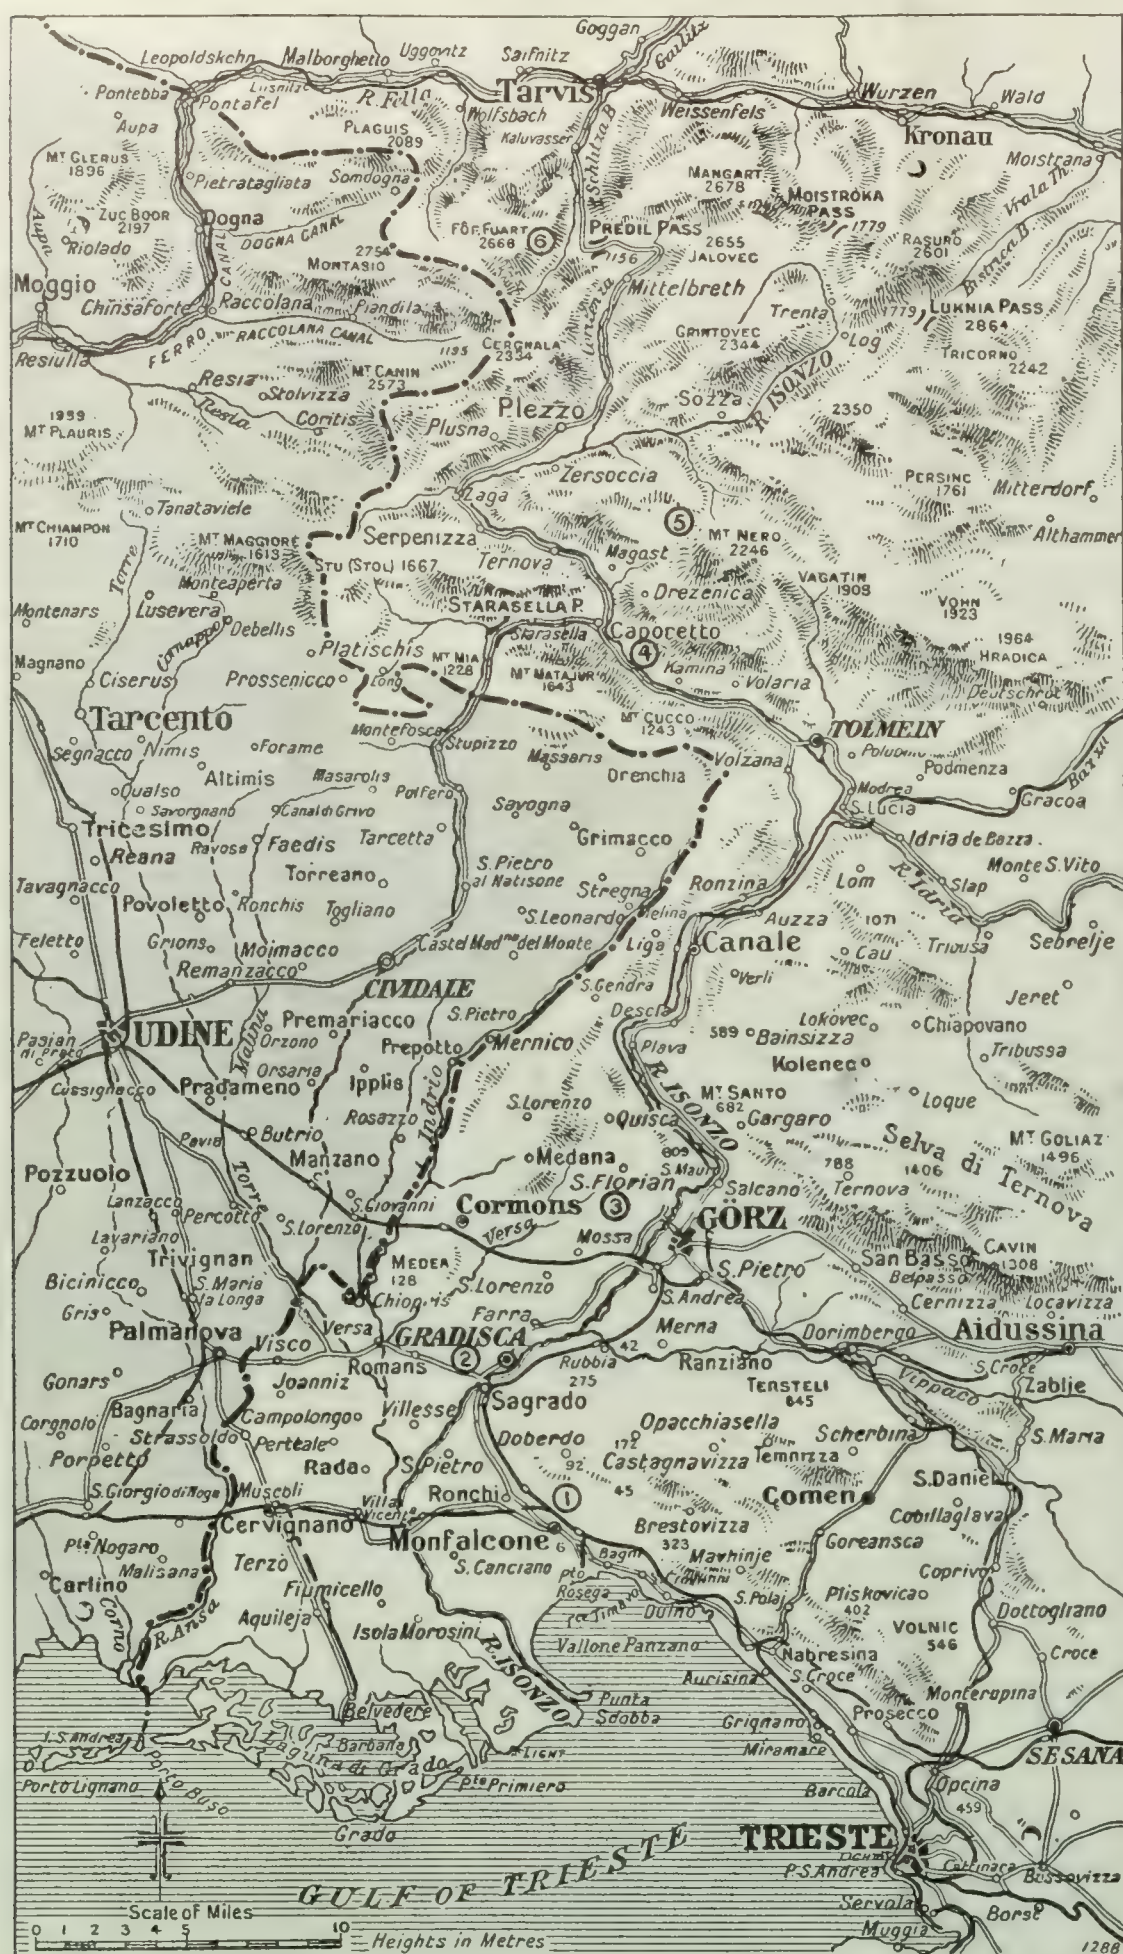

*This photograph of Gutzon Borglum's life mask of the Great Commoner, William J. Bryan, was taken in Mr. Borglum's studio expressly for The Independent on the day his resignation took effect and is published, with Mr. Bryan's permission, for the first time. Mr. Borglum, who is one of the most distinguished sculptors in America, affirms that the life mask is the best and most authentic human document obtainable, and that in the case of Abraham Lincoln, whose bust in the capital at Washington is one of Mr. Borglum's greatest works, he gained more knowledge and inspiration from a life mask than from any other single portrait or description. This life mask of Mr. Bryan was made at Washington only a few weeks before his resignation. A mask of the hand, which appears on the opposite page, was made at the same time.*

convicted of manslaughter in New Jersey, where they attacked a party of strikers in the town of Roosevelt, killing two of them, have been sentenced to be imprisoned for from two to ten years. They came from a detective agency and were sworn in as deputies by the sheriff of the county. With fifteen of their associates they are to be tried again, for the killing of the second of the two strikers who lost their lives.

#### The Situation in Mexico

Villa was defeated by Carranza's army, but at the cost of the Carranza commander's life. General Alvaro Obregon, leader of the army which drove Villa northward, had his right arm taken off by a shell in the course of the five days' battle. He died on the 13th at a hospital in Leon. Carranza thus suffers a great loss. Two or three weeks ago Obregon was regarded by many as the "coming man" in Mexico. His successor is General Benjamin Hill, whose grandfather was an Englishman. There is no longer any room for doubt as to the complete defeat of Villa, who has retreated northward 120 miles. Zapata's men, who hold the capital, are preparing to retire before the advancing Carranza forces, led by General Gonzales. They have sent delegates to

#### THE AUSTRO-ITALIAN FRONTIER

This map, which we borrow from the London Times, is especially useful in that it locates all of the towns in the present and prospective scene of conflict and gives the heights in meters at various points, thus showing their strategic importance. The shaded area to the left of the boundary is Italian territory. The fighting has been altogether on the Austrian side of the line and chiefly at the points marked by the numbers in circles. (1) The Italians advancing along the coast toward Trieste have occupied Monfalcone and Porto Rosoga. (2) The Italians have taken Gradisca and therefore control the river and the railroad from here to the Gulf. (3) From Udine they have followed the railroad to Cormons and have now their artillery in position for the bombardment of the fortifications of Görz (Gorizia). Further north they have crossed the Isonzo River at Caporetto (4) and gained the heights of Monte Nero (5), which command Tolmino (Tolmino). An Italian force is also reported to have entered Predil Pass (6).

Gonzales, proposing an armistice. The sessions of what is called the convention have been marked by wild disorder and disturbed by mobs crying for bread. Garza, provisional President, has been deposed. His successor is Francisco Chazaro, a supporter of Villa from

Chihuahua. More than 500 refugees have been carried to Vera Cruz. They will be brought to this country on an army transport.

Villa's reply to President Wilson's warning is on its way to Washington. He has asked Carranza to provide neu-

tral territory in which a conference may be held, for agreement and a burial of differences. A proclamation issued by Carranza, however, indicates that he will reject the proposition. Carranza is so confident of victory that he virtually asks our Government for recognition and publishes a program of the reform work which his Government is soon to undertake. There are 17,000 United States soldiers on the border, and orders were given last week that they should remain there for the present. From all parts of Mexico come stories of destitution and suffering.

Along the Isonzo River, after entering the war, the Italians have, three weeks after entering the war, gained more territory than the Austrians were willing to concede in the ante-bellum negotiations. They have already crossed at several points the Isonzo River, which the Austro-Hungarian Government offered to make the boundary line if Italy would remain neutral. Their most important success is the capture of Monfalcone, a town near the coast ten miles east of the frontier and about fifteen miles from Trieste. At Monfalcone are located the electrical works which supply light and power to Trieste. The shipyards of Porto Rosoga, three miles from Monfalcone, have also fallen into the hands of the Italians. This gives them a harbor on the Gulf of Trieste from which to attack the city on the opposite side.

The capture of Gradisca on the Isonzo River is likewise an important gain, for this town, like Monfalcone, is on the railroad running from Görz to Trieste so the Austrians are now deprived of the use of the line which parallels the frontier. Among the Italian troops taking Gradisca were some soldiers who were born there and they, as they entered, knelt and kissed the soil of their native town, now a part of "Italy Redeemed."

In order to prevent the crossing of the Isonzo the Austrians had destroyed the bridges and flooded the valley. But the Italian cavalry swam their horses over and cleared the enemy from the other bank while pontoons were constructed behind them for the infantry.

In crossing the river further north, near Caporetto, the Italian cavalry got into a tight fix from which they were able to extricate themselves only by an act rivaling the charge at Balaclava in boldness and surpassing it in achievement. The bridges here had not been destroyed but after three regiments had crossed they were blown up by the Austrians who then opened fire upon the Italians from four batteries of their biggest guns. Before pontoons could be put together and reinforcements brought over the two regiments on the Austrian side would have been wiped out. So their commander, without waiting for instructions from his superior, ordered the cavalry to charge the guns. With wild cheers they dashed up the slope and sabered the gunners in all the batteries, altho half their saddles were emptied in the rush.

In the Trentino the Italians are also reported to be making satisfactory progress tho no details are allowed to transpire. The attack here is directed toward Rovereto, and the Italians are within a few miles of it on the east and south.

**Fighting on the Dniester** The Dniester, which Ruskin called "the moat river of Europe," now separates the opposing armies in Galicia. Altho the Russians despair of holding Lemberg much longer, they are offering a stout resistance to the armies which are closing in upon the capital from three sides. In fact, they turned tables on their pursuers south of Lemberg and inflicted a severe defeat upon the Austro-German forces which had advanced down the Stryi River to its junction with the Dniester. The Russian offensive seems to have taken them by surprise and those who had crossed the Dniester were driven back or captured. The Russians took here some seven thousand men, including an entire company of the Prussian Fusilier Guards, and one of the Seventy-ninth Austrian regiment.

Both to the east and the west of this point, however, the Teutonic forces have maintained their positions on the northern side of the Dniester as well as all along the southern. The army which came from the west and captured Przemyśl has now joined with the army which came from the south thru Bukovina. The capture of Stanislaw closed the gap between the two forces and completed the semicircle about Lemberg. By the capture of Stanislaw the Austro-German forces not only secured an important railroad center but took 5,570 prisoners.

Still further to the east General Pflanzer has driven the Russians altogether out of Bukovina and back into their own territory. In dislodging the Russians from their possessions on the Pruth he took five thousand prisoners.

In the capture of Przemyśl the Teutonic allies obtained seven thousand prisoners as well as thirty-one cannon and thirty machine guns. The garrison had been ordered to hold the fortress to the last man, but the guns brought to bear upon it were so many and so heavy that they were obliged to evacuate within four days. In this bombardment the Austrians made use of the giant howitzers recently manufactured by the Skoda works. These, like the Krupp howitzers, whose existence was kept secret till the war began, are of forty-two centimeter (16.5 inch) caliber. Each is carried with its bed, training gear, cranes and ammunition, on a special train, and can be mounted ready for action in two days. The discharge is too dazzling to be borne by the eyes but does not pain the ears so much as the higher pitched report of the smaller guns. It can be fired at the rate of a shot every two minutes and with remarkable accuracy. The funnel-shaped holes which the shells dig in the ground are some fifty feet in diameter, but their rims are only a few yards apart.

#### A Deadlock on Gallipoli

In spite of the continuous reports of successes on both sides and of terrible slaughter on the other it is obvious that neither is making much progress on the Gallipoli peninsula. The situation is very disappointing to the British, who confidently expected that by Easter Constantinople would be taken and the Black Sea opened so that Russia could export her wheat and obtain munitions. It is now acknowledged that the attempt to force the Dardanelles by the fleet alone was not only a failure but a blunder, and Winston Churchill, who as First Lord of the Admiralty, was officially responsible for the undertaking, has lost his office largely on account of it.

But the later attempt to reach Constantinople by land has proved more costly and so far no more successful. It is said that forty thousand wounded British soldiers have been sent back to Alexandria on the hospital ships. How far the British have got in the conquest of the Gallipoli peninsula cannot be ascertained from the vague official dispatches, but it is evident that the Turks still hold Sedd el Bahr, which is at the very entrance to the Dardanelles and was reported demolished as long ago as February 20, when it was first bombarded. It was then supposed that this action proved that forts were powerless against long-range fire and the claims of Constantinople that they had been little injured by the hail of shells were received with incredulity. Now it appears that the Turkish account was more accurate than the English and that advantage still lies with a land as against a sea battery. A neutral army officer who observed the action when the British fleet attempted to force the Narrows last March, estimates that shells fell in Chanak at the rate of two thousand an hour, yet there were only twenty-six men killed and twice that number wounded in the forts there.

In the land fighting, however,

the Turks have lost heavily, over a hundred thousand, it is estimated. The hospitals of Constantinople are overcrowded with wounded. The Turks were short of ammunition for a time, but that seems to be overcome by the establishment of a branch of the Krupp works at Constantinople employing, it is said, four thousand German workmen. The nitric acid necessary for the explosives is made from the air by means of the spark discharge of electricity, for this invention has made Germany independent of the Chile saltpeter beds. Two hundred more German officers and engineers have arrived in Constantinople to take charge of the fortifications and the manufacture of munitions for Germany's Turkish allies.

Much as Russia needs an open door, the Russian Black Sea fleet, which was expected to force the Bosphorus while the British and French came up the Dardanelles, seems to have accomplished nothing at all except to have shut off the supply of coal and flour from Constantinople.

Bain

#### THE MAN WHO RECEIVES THE AMERICAN NOTES

Germany's replies to the communications of the American Government and the German diplomatic communications which figure in the various Blue, Grey, White, Orange, Yellow and Green Books, emanate officially from Gottlieb E. G. von Jagow, Imperial Secretary for Foreign Affairs under the Chancellor. He was born in Berlin in 1863 and entered upon a bureaucratic career at the age of twenty-three.

#### THE HERMITS OF THE REGATTA

Weeks of strenuous drill and wearing idleness, with The Race as the ruling motive for every detail of the day's routine, will come to an end when Harvard meets Yale on the Thames, near New London, on June 25, and Columbia, Cornell, Pennsylvania, Syracuse and Stanford row at Poughkeepsie on June 28. Here at the Harvard camp at Red Top the coxswain is furnishing vicarious diversion on "Launching Day"

#### Four Thousand Miles Under the Sea

When the British battleships "Majestic" and "Triumph" were sunk in the Dardanelles it was supposed that they fell victims to a Turkish submarine. It is now known that the submarine did not come from Constantinople but from Wilhelmshaven, a distance of over four thousand miles. This feat, which almost rivals Jules Verne's famous romance, was accomplished by Captain Herzing in the "Unterseeboot No. 51." He left the German North Sea base on April 25 and arrived safely in Constantinople on June 10. When the thirty-three men came up out of their cramped and stifling quarters they could hardly walk, for most of them had not put their heads above the water for forty-two days. Altho the vessel ran most of the way on the surface they could not go on deck. In passing thru the Mediterranean, Captain Herzing stayed for fifty-two hours at the periscope.

Several times the "U-51" was fired upon by destroyers, once off the coast of England and a second time a hundred miles outside Gibraltar. She passed thru the Strait of Gibraltar one morning early in plain view but without being noticed. Twice attacked in the Mediterranean, the submarine escaped by diving, and reached the entrance of the Dardanelles in just a month from Wilhelmshaven. The rest of the story may be best given in Captain Herzing's own words:

In the early morning light we saw the "Triumph" and "Majestic" lying off the coast, constantly encircled by destroyers. Thru the periscope I saw a destroyer coming directly for us. We dived and the destroyer passed immediately over us with a sound like that of a motor car.

We came up immediately. I took aim thru the periscope, prest the button, automatically firing the torpedo, and the projectile slipt noiselessly into the water. We

dived again. The explosion which followed was as terrific as tho it had been in the forepart of the submarine itself.

Then we lay hidden two days and a half, after which we came up again in the midst of the British ships. Just before noon looking thru the periscope I saw the "Majestic," surrounded by ten ships steaming around her in a constant circle for her protection. I could see the "Majestic" sailors on the deck taking their noonday nap. "Shall I disturb them?" I thought. Then seeing a welcome space between the encircling ships I prest the electric button and the torpedo was going. It caught the "Majestic" a little to the rear of amidship. We dived again in silence.

We remained submerged for several hours and then came to the surface to find that the British had disappeared, and all search for them was in vain. We came to Constantinople, arriving yesterday morning, having spent forty-two days in the submarine without rest or let up.

#### In the Labyrinth

About the beet sugar factory of Souchez and in the tangle of trenches south of it known as the Labyrinth the battle still rages. The gains are slight,

but the progress is continuous. At the end of each week a few hundred yards of German entrenchments are reported taken and held against the furious bombardment and counter-attacks which always follow. The principal achievement of the past week is the capture by the French of the village of Neuville St.-Vaast, a few miles north of Arras. This has been the center of the most intense conflict for many weeks and it was only after all the houses had been literally reduced to stone heaps and the land plowed deep with explosive shells that it was taken. The losses here are reported to be among the heaviest of any single engagement. A thousand bodies and a large amount of booty were found in cellars and under debris.

Along the Aisne also the French have made local attacks with success. They have adopted a weapon previously used by the Germans, that is, flaming oil, which is sprayed upon the enemy's trenches. A renewal of activity may be expected about Ypres, as it is reported that several hundred thousand German troops have passed thru Belgium. These are in part new recruits and in part veterans who have been withdrawn from the eastern frontier since the defeat of the Russians in Galicia.

South of Arras in the neighborhood of Hebuterne, the French have followed up their gains of a few weeks ago by further advances. A charge along the front of twelve hundred yards carried two lines of German trenches which have since been held altho the Germans quickly brought troops in automobiles to the spot and made persistent counter-attacks. If the continuous pounding of the French in the vicinity of Arras should break the German line it would compel a withdrawal from the sharp angle which has for nine months been directed at Paris.

#### THE GREAT WAR

June 7—French gain ground near Arras. German submarines sink six small vessels.

June 8—Italians take Gradisca. Teutonic forces take Stanislaw in Galicia.

June 9—Italians take Monfalcone. French take Neuville St. Vaast.

June 10—Russian victory at Zuravno on Dniester. Germans and Russians battling about Shavli, south of Riga.

June 11—Russian destroyer engages cruiser "Midullu" (formerly "Breslau") in Black Sea. Italians take Porto Rosega, near Monfalcone.

June 12—Italians closing in about Rovereto in Trentino. Pola arsenal bombarded by Italian airmen.

June 13—Italians shell fortifications of Görz. Germans renew offensive in central Poland.

## A PLAYGROUND WORTH WHILE

BY MABEL S. C. SMITH

"WE are limited to America in any case," grieved the Mother of the family as she laid before her spouse the atlas and a pile of railway folders.

"I'm not sorry," Father declared firmly. "This will be just the time to go to the Maine woods and try the fishing."

"The Maine woods!" cried Mother in a tone of apprehension. "That's all very well for you and Tom—even Gerald is old enough to rough it now—but I'd like to have you tell me what pleasure there would be in the Maine woods for Ethel? And where would there be any children for Katharine to play with? And what in the world should I do if little Mary or the baby should be taken ill?"

"Probably you're right," Father assented regretfully. "What do you suggest?"

"Why not the Springs?" inquired

Mother eagerly. "Ethel would enjoy herself there and Katharine would find friends, and there's a good doctor in case any of us fell sick."

Father rubbed his head with a disapproving hand.

"What on earth should I do at the Springs? And Tom? And Gerald?" he demanded searchingly. "And I think I see you dozing against the wall of the ballroom until Ethel is thru dancing! And worrying for fear Katharine's supply of white dresses won't hold out! What a life! There's nothing in it!" and his tone was so filled with disgust that Mother in her turn yielded the point.

"Where, then?" she asked, and at that moment began the search that lasted until some one told them about Chautauqua, New York.

"Which seems to be different from all other summer resorts on the planet," Father remarked drily when

the decision to go there had been made. "The trouble with the others is that there isn't fun enough to go round the family; at Chautauqua there isn't family enough to go round the fun!"

What is this Chautauqua that offers entertainment for the seven ages of all sorts and conditions of men?

The name has gone round the world. It advertises manufactures; it designates apartment houses and sleeping cars and ferryboats; it is applied to a geological division of the Devonian period; it is given to a sort of intellectual picnic that flourishes all over the United States every summer. But, according to Bishop John Heyl Vincent, from whose brain was born the Chautauqua plan, Chautauqua is a *place*, an *idea*, and a *force*.

The *place* is a spot in western New York on Chautauqua Lake. Forty-

GOLF IS A NEWCOMER AT CHAUTAUQUA, BUT THERE IS NOW A GOOD NINE-HOLE COURSE

CHAUTAUQUA—WITH STORY-TELLERS AND SAND-PILES AND PLAYGROUNDS—IS A CHILDREN'S PARADISE

two years ago Dr. Vincent and his followers took possession of it and held classes and lectures and concerts. Today their tents have gone, but the same fine trees shade a village of several hundred houses, with the streets, electric lights, fuel gas, water supply and sanitation of a well-appointed town. The few score people who came for a fortnight in 1874 have increased to some fifty thousand who come and go thru a season of sixty days, and who enjoy themselves so much that many of them add on a month at each end.

The village belongs to Chautauqua Institution, for there is a corporate body back of this million dollar plant which is so different from other million dollar plants that a description of its physical delights almost invariably wanders off into a discussion of the Chautauqua philosophy of living.

Chautauqua Institution is chartered by the State of New York for educational purposes. It is not run for gain. The activities of the Institution are threefold—The Assembly, which gathers for July and August and has the finest platform program in the world; the summer schools, which are in session for six weeks of the Assembly season; and the Home Reading Course, which is in operation all the year round.

"For most people the Chautauqua platform is 'Chautauqua,'" asserts

Father, who has been talking about it with his friends. "It was the educational entertainment end of Chancellor Vincent's idea that seized the popular fancy and produced the thousands of Chautauquas—none of them connected with the Chautauqua Institution—which cover the country every summer."

"Here are some of the season's 'living questions,'" contributes Tom, looking up from his copy of the *Advance Program Quarterly*. "Here's a whole week devoted to 'The Remaking of Contemporary Europe.' That ought to bring out interesting discussion. And here's another on 'Community Service' and one on 'Administration of Justice.'"

Truth to tell, new Chautauquans need to be "schooled in restraint," for where so rich a feast is spread discretion must temper appetite. The Sunday school teachers for whom the Assembly originated, for example, now must choose from the many offerings that they may thoroly enjoy the few. At ten o'clock every morning there is a Devotional Hour in the Amphitheater. No one can tell from the sermons preached there to what denominations the speakers belong, and no one cares, for they are united in the essentials of love and service to their fellows. Such men as Dr. Samuel McCormick, of Pittsburgh; Bishop Francis McConnell, of Denver; Dr. Frank Gunsaulus, of Chi-

cago; Bishop Charles Williams, of Michigan—Presbyterian, Methodist, Congregational, Episcopalian—are preachers of distinction; they are also teachers, and during each one's week of service he will conduct classes in Dean Shailer Mathews' Department of Religion and give addresses at the headquarters of his own denomination. An Institute on Home Missions and one on Foreign Missions will link local with field and international work.

There is one feature that he never neglects, no matter how prest he may be. That is the talks which Dr. Jesse Lyman Hurlbut illustrates by the model of Palestine built down by the pier, with the lake as the Mediterranean and the hillock that conceals the pumping station as Mt. Hermon. What child who has sailed a boat on the Dead Sea, what grown-up who has hunted out Jerusalem and Bethlehem from among the little concrete cities on the heights above the Jordan but will listen with greater interest to the history of this part of the ancient world which he has visualized on a small scale?

Visitors to Chautauqua, New York, always have been fortunate in hearing from its platform men and women whose vision is far reaching and clear. They are "talking shop" for the entertainment and benefit of the thousands who keep different sorts of shops. This summer Dr. Lin-

THE CHAUTAUQUA PLAYERS IN STEPHEN PHILLIPS' "ULYSSES"

coln Wirt, investigator for the World Peace Foundation, will voice his conclusions on the lessons the present war has for America. O. H. Benson, of the Federal Department of Agriculture, will explain the new means by which the Government is interesting country boys and girls and educating them for life. So is Leon Vincent, in his lecture on literature, for he is a writer as well as a critic.

Mary Antin, that immigrant who sees American ideals thru unclouded eyes; John Lind, President Wilson's special representative to Mexico; Melville E. Stone, general manager of the Associated Press—these are some of the speakers who will stand before the most discriminating audiences in this country and speak on the topics that lie closest to their hearts.

Keeping up with the very latest twists in education and telling other people about them is Earl Barnes's vocation. This year he has selected for explanation a group of "Promising Educational Experiments," among them the Gary system, vocational bureaus, the training of youthful delinquents, and intensive education as illustrated in the twentieth century wonder-children, Boris Sidis and Winifred Stoner.

Mr. Barnes's work deals with to-day in its latest moments; Professor Samuel Schmucker's story of the

"Ascent of Man" begins in far away eons and ends with the "Arrival of Man"—which was not yesterday! What better than such a series to make "Time and Eternity seem to be what they are—parts of one noble and everlasting whole?" to quote Chancellor Vincent, who insists that whatever brings that to pass is embraced in the Chautauqua *idea*.

Of entertainment pure and simple there is plenty on the Chautauqua platform. Every evening sees the Amphitheater filled five thousand strong for an illustrated travel lecture, "movies" of quality, a recital by such artists as Charles Rann Kennedy and his wife, Edith Wynne Mathison; a play by the skilled amateurs called the Chautauqua Players, an exhibition by students of the School of Physical Education, a concert or a popular address.

Then there are the great occasions of the season: the Spelling Match, which dates from the original assembly and proves quite as thrilling now as in those simpler days; Old First Night, when the roll call brings to their feet at least twenty or thirty who were present on August 4, 1874; National Army Day, when a thinning line of veterans, Grand Army men and Confederates, winds thru the grounds behind a band playing spirited airs, and listens to an appropriate address; Grange Day, when the country folk

of all Chautauqua County are entertained by the Institution and hear good music and a speaker chosen especially to interest them; Federation Day, when representatives of women's clubs from every state in the Union, and nearly all of them members of the Chautauqua Woman's Club, will have the pleasure of hearing an address from the president of the General Federation, Mrs. Pennypacker.

Most spectacular of all the season's events is Recognition Day—the day when representatives of the Chautauqua Literary and Scientific Circle, who have just finished a four years' course of prescribed reading, are "recognized" by the Chancellor and receive diplomas for their work. The cycle consists of a year of American subjects, one of Continental European, one of English and one of classical. The backgrounds are the same, the books different. This accounts for the chronic Chautauquans who began to read in 1878 and never have stopped.

A year's work consists of the reading of four books and of the current events department of The Independent—the Story of the Week. The coming reading year—1915-16—is American Year.

From the few normal classes of the first Chautauqua season has grown the present set of summer schools, fourteen of them, with a

faculty of eighty drawn from country-wide institutions. These educators offer some 200 courses of study to over 3,300 students. Most of the people of the enrollment are teachers who want to refresh themselves in their subjects, or to learn the latest pedagogic wrinkle in the department headed by Earl Barnes, but there are also laymen of all kinds. Tom, for instance, who was laid up for several weeks last winter with a broken leg, is going to take some work which will earn for him the credits that he needs to square himself at college. Grandfather, who is clever with his fingers, has been discovered by his wife in a state of rejoicing because at last he would have a chance in the Arts and Crafts Studios, supervised by Henry Turner Bailey, to learn something about bookbinding and wood carving.

Grandmother, determined not to be outdone, has decided that she will study in the School of Expression under Professor S. H. Clark, of Chicago University. Mother has learned that she can secure a trained kindergartener to look after the baby or she can leave him in the Little Children's Playroom under competent supervision, and that she can also establish little Mary in the Playground. There she has simple apparatus to exercise on and a shallow brook to paddle in and student teachers to look after her. With both small children off her hands Mother will have freedom to take the course

on "The House and Its Care" in the School of Domestic Science, which is managed by Miss Anna Barrows, of Teachers' College, and Mrs. Alice Norton, of Chicago. Beside that she can obtain the information about parliamentary law which she is constantly needing in her club work.

Father has found himself interested in the announcement of classes and lectures on social science and community problems.

"Scott Nearing is a dynamic young man, in my opinion," he asserts, "and I'm going to hear him every time he talks. As for E. J. Ward's course on social center development, I propose to inform myself on the duties of a social center director, so that I shall know whether we're getting what we're paying for when we open the schools of our town to the people and put some one in charge.

"I can get a visitor's ticket for single classes or a book of five or ten tickets; but the charge for a full course is only \$6 and there is a reduction if you take more than one course."

"You certainly get a lot for your money at Chautauqua," nods Grandfather, and he points out that his study of the advance bulletin has shown him that a season's gate ticket at \$8 admitted its holder to all the public lectures and concerts—to everything outside of the Summer School classes—at the rate of thirteen cents a day.

"That can't possibly include the three concerts a week in the Amphitheater and the whole week of concerts by the Russian Symphony Orchestra!" exclaimed Ethel, who has friends who are going to enter the School of Music and have told her about its piano department under Ernest Hutcheson, of Baltimore and Berlin; its voice work under William Wade Hinshaw, of the Metropolitan Opera Company of New York; its violin school under Sol Marcossin, of Cleveland, and its opportunities to study organ, harp and orchestral instruments, as well as to listen to descriptive lectures

on interpretation, and to sing in the Chautauqua choir.

But it does, and Father has also discovered that he may live at Chautauqua in almost any fashion he pleases or his pocketbook permits. He has hired a pretty, well-equipped cottage to house the members of his flock. Mother is quite likely to meet at the hotel some of the people who were on the steamer "going over" last summer. Grandmother's friends are sure to keep turning up at different boarding houses. Aunt Mary already knows of some teacher acquaintances who are going to do light housekeeping in rooms made convenient for that way of living. Tom and Ethel will constantly come across college men and girls who are earning their food by waiting on table at some of the boarding houses and their shelter by a variety of work whose doing brings them reward in money and in respect.

"In respect" because Chautauqua is essentially democratic. Social democracy is a part of the *idea* that sees possibilities for growth in every one, no matter what his previous opportunities; social democracy is a part of the *force* that urges every individual to develop his powers for the better serving of his fellowmen. Social democracy is an essential of the "Chautauqua Spirit," that intangible yet clearly felt trinity whose other members are kindness—to all who need it—and loyalty—to the ideals of Chautauqua.

ON CHAUTAUQUA'S "ALMOST INCOMPARABLE" LAKE

## A CROSS-SECTION OF AMERICA AT PLAY

BY F. H. BLICHFELDT

**I**F there were nothing at Chautauqua, New York, but opportunities for recreation, with its almost incomparable lake and its 1400 feet of altitude to give the best climate Chautauqua would still be one of the notable resorts of the country. In fact, neither play, nor study, nor religion, nor music, nor political oratory, nor any one interest can be said to dominate this remarkable summering place. Nowhere else except around a mighty metropolis can equal variety of provision be found for legitimate gratification of personal interests; and not even the metropolis could make equal variety equally accessible. One strenuous day's list of diversions at Chautauqua, of which a swim and a set of tennis before breakfast was the beginning, could scarcely be duplicated in and about New York in less than a week. While two or three thousand persons watch a ball game on "the Overlook," five to eight thousand may be listening to an address at the amphitheater, while a hay ride for the little folks, a cruise of the Boys' Club, and various other affairs like classes in the schools go on without reference to either baseball or eloquence. Chautauqua is many sided; yet it is interesting at times to single out some one aspect of this community life—say the play aspect.

"A summer city in the woods," and

with the allurements of a historically interesting and physically beautiful twenty-mile lake at its feet, Chautauqua from the beginning found it easy to develop a sane and vigorous outdoor life. The climate, tho cool, is equable; and there are as few strictly indoor features as may well be. The buildings used for lectures are halls without walls, consisting each of a roof with its necessary supports.

Recreations in variety to suit almost all tastes, temperaments and conditions, offer themselves, on land and water. Some enterprising members of the Boys' Club, indeed, spent the odd hours of a summer in building a vessel for the upper realms, but their craft made only one voyage; and the only aerial sport at all common at Chautauqua is the flying of kites. We are careful, therefore, to specify only land and water activities. From checkers on the veranda for those whose strenuous days are past, to pail-and-shovel movements in the sand-pile for those whose "heavy work" is still ahead, the range is so wide that almost everybody's hunger for outdoor sport is appeased. Fishing, boating, canoeing, sailing, swimming, baseball, tennis, roque, bowling, quoits, track sports, horseback riding, automobil- ing, each has its enthusiasts. The fisherman who has dedicated two or three summers to earnest pursuit of

the Chautauqua Lake muscallonge will declare that there is no other inland fish to be compared with it, sometimes over forty pounds in weight and always a fighter.

The one unifying idea in all this diversity is that the margins of time, the spare hour, the vacation weeks, should by some means contribute to the enjoyment and the growth of the individual.

There was always play at Chautauqua. Whatever was not play was made to wear some semblance of it. An important element in Bishop Vincent's genius was the instinct by which he gave over part of the time to amusements and disguised the activities of the rest of the time so that they almost passed for amusements.

Bonfires and Athenian torches, pageants and processions, ceremonies, group rivalries, pomp and circumstance were used to entice the early Chautauqua readers along the paths of learning. Doggerel rimes droned the names and dates of "sacred" and secular geography and history into thousands of adult memories. The model of Palestine, which has still been preserved, the tabernacle, an Oriental house, a miniature modern Jerusalem, the daily wearing of Oriental garb by those who were pursuing certain studies, the muezzin call to prayers at regular times—these and a great deal more of "fan-

tastic nonsense" the early management at Chautauqua was wise enough to introduce, knowing that to enlist grown-ups in study would be easy if they came to view it as "having fun with their minds." The proof of the wisdom of it is that it succeeded, not moderately but enormously, spontaneously and unfailingly. Adaptations to new times have of course taken place.

Not till 1914 did anything so serious, complicated and expensive as golf find its way to Chautauqua. Now a nine-hole course invites the devotee to cultivate the game in all these excellencies. In 1874 the nearest approach was perhaps the pitching of horseshoes. Even in 1914 this was the more popular amusement of the two if numbers are an index. No one recreation any longer claims any monopoly now, for so many are represented. Few of the old ones have disappeared; but the roller coaster is no more. For the croquet of the 70's, Chautauqua has now the best roque courts in America, and the old sailboats have given place to more refined and smarter craft. The fundamental fact is that now, as always, outdoors at Chautauqua is larger than indoors.

A sign was put up in one of the little parks one summer—probably on new seeded lawn, as the warning is unusual at Chautauqua, "Please keep off the grass." A tot of two years went wobbling over toward where robins were hunting the succulent angle worm. "Come back heah, Honey," called the mammy in charge. "I

reckon you an' de robins cyain't read."

Chautauqua makes liberal allowance for the children. Its well-equipped playground is under highly expert management; and indeed teachers of playground work from all parts of the country are drawn here by the normal courses offered them at Chautauqua. Of this the children are oblivious. Sand-piles, day nursery, boys' and girls' clubs, children's choir—saying nothing of the freedom that Chautauqua affords them to busy themselves in their own way, without detriment to their elders—make an Elysian city within whose gates no automobile goes up and down seeking whom it may devour. Chautauqua is a children's Paradise.

Chautauquans have learned to recognize the drama as among the meanings of the word play, tho it must be confest the early tolerance extended only as far as "dramatic" readings. Francis Wilson gave the idyl, "The Little Father of the Wilderness" there in 1910, his appearance being rendered specially innocuous by the fact of his having been a Chautauqua reader years before and having made of his troupe a Chautauqua reading circle of which he was leader. The innovation was so successful that it led to engagements of the Coburn Players, who presented classic dramas in 1911 and 1912, and finally in 1914 to the organization of a special company of professional actors, "The Chautauqua Players," under the direction of Benedict Papot, who has had some notice of

late as director of the House of Play Foundation at St. Mark's in the Bouwerie, New York. The Chautauqua Players announce for 1915 six major plays in the Amphitheater and as many minor productions.

Democracy in sport as in everything has characterized Chautauqua from the beginning. There is entire catholicity toward the fellow who brings his silver-mounted roque mallet or goes in thoroly for golf or automobiles or motor-boats, but he makes a mistake if he tries to vaunt himself over the rider of a 1912 model bicycle or the proud skipper whose vessel is suitably named the Rubey-Yacht. It is precisely because he can indulge his own favorite pastimes and intellectual interests while brushing elbows on terms of good fellowship with so many other varieties of clean-living Americans, that he prefers Chautauqua to more exclusive resorts. In play as in other departments of Chautauqua life, what Edward Everett Hale said in his *Tarry at Home Travels* is appreciated: "If you have not spent a week at Chautauqua you do not know your own country. There and in no other place known to me, do you meet Baddeck and Newfoundland and Florida and Tiajuara at the same table, and there you are of one heart and one soul with the forty thousand people who will drift in and out—people all of them who believe in God and in their country." Along with whatever aspects of thoughtfulness it may have, Chautauqua presents a cross-section of America at play.

THE WELL EQUIPPED PLAYGROUND IS UNDER EXPERT MANAGEMENT—BUT THE CHILDREN DON'T CARE

## UNDER THE BIG TENT

BY W. FRANK McCLURE

**T**HE Measure of a Man" was the subject. It was at a Chautauqua in an Oklahoma town. A young man came up to the lecturer at the end of the evening and said that he had been attending college in one of the state schools for two years, and that he had quit school at the end of the second year and did not intend to return. "But," said he, "after hearing your lecture, and the emphasis you placed on preparation and efficiency, I wanted to tell you that I have changed my mind. I am going back to college and finish my education. I am going to prepare so that when I go out into the world and take my place in its activities, I may be equipped to render a service with efficiency."

That is a sample of what is going on under the big tent. This year there will be 2400 communities where this influence is felt—and nine years ago the circuit Chautauqua was unknown.

By the traveling or circuit plan the Chautauqua is actually taken to the people, the khaki colored tents being located close to the heart of each community's activities and within reach of thousands who would not otherwise avail themselves of Chautauqua advantages, without the purchase of a single acre of ground or the erection of a building, a town may become a real Chautauqua center and unite its influence with that of other Chautauqua centers in far reaching effects. Indeed, Frank J. Cannon, formerly United States senator, makes the statement that the Chautauqua and Lyceum states largely control legislation at Washington today, along the lines hammered out on the platforms, and

considered, improved, defined, determined and enforced by Chautauqua and Lyceum audiences.

And the influence has not stopped growing. The late Bishop Robert McIntyre made the prophecy that this movement is in its chubby-cheeked youth and that it yet will go up and possess the whole land.

If Chautauqua is to possess the land, aside from the spread of the Chautauqua Idea from the original institution and the other great permanent summer assemblies such as those at Winona Lake, Indiana, and Bay View, Michigan, the circuit Chautauquas with their notable economies of operation must play a great part in the conquest.

Under this plan the same big tent, seating 1000 to 2500 people, forms the auditorium for Chautauqua oratory, music and entertainment in perhaps twenty different Chautauqua towns in a single season. Each traveling equipment is in charge of an experienced superintendent and a crew of four college boys.

The Chautauqua, duly advertised in advance by banners, streamers, auto pennants and in the local newspapers, remains seven days in a place and then moves on, the average railroad jump being less than 100 miles. Seven of these Chautauquas are in operation simultaneously in seven different communities, one opening and one closing every day. The first day's program in one town moves on to become the first day's on the second Chautauqua of the circuit, and each succeeding day's program moves likewise. When the last day's program has passed in like manner, then the tent moves too.

There are about twenty manage-

ments in this country, operating the 2400 circuit Chautauquas. The Chamber of Commerce and other local agency agrees to dispose of a stipulated number of season tickets, and with this accomplished its financial responsibility ends. This number is usually one thousand or less. All advertising is done by the Chautauqua management. The fact that every attraction on the program appears each day, thus without any open dates, the short railroad hauls, and the printing of vast quantities of advertising for an entire circuit at one time, represent some of the chief economies of this plan. A ticket to all the events of an entire week and three sessions a day can usually be secured for \$2 to \$2.50. Even towns as small as 2000, if they are in the midst of a good rural constituency, may boast of a circuit Chautauqua.

While the number of circuit Chautauquas has not increased materially since a year ago, owing to the uncertain financial and commercial conditions of the country, there are new developments nevertheless.

For the first time in the history of the traveling Chautauqua, an attempt is being made to eliminate the Sunday program, which has long been a problem in certain sections of the country. Harry P. Harrison of Chicago, owner of the Redpath Chautauquas, which travel all the way to Florida, is closing each of the Chautauqua tents on this big circuit on Sunday. The new plan means the sacrifice of more than \$20,000, it is estimated. Thus for the first time circuit Chautauqua lecturers, entertainers and musicians are enjoying one complete day of rest in seven. Already the plan has

been proved advantageous and it is definitely announced that it will be continued.

Another innovation has been the introduction of a modern drama, "The Servant in the House," on a circuit Chautauqua program. Heretofore, Chautauqua productions have been chiefly Shakespearean, and the modern drama has been looked on askance. This experiment, too, has been successful. Mr. Charles Rann Kennedy, the author of "The Servant in the House," believes that the Chautauqua holds in store a great future for the playwright who is dealing with the problems of our times.

The introduction of this play does not mean that the Chautauqua is entering the theatrical business. It will take over none of those properties of the theater which have been so long a subject of censure. It will present no play that does not in itself carry a great message. It will be the policy to place upon the Chautauqua platform no actors except those who are as clean and wholesome morally as our lecturers, musicians and entertainers. In the beginning the drama was the handmaiden of the church. Some of the greatest exponents of the church today recognize the drama's power and force for good when rightly directed and look forward to the time when it will again come into its own.

The five months' Chautauqua tour of so noted a star as Miss Alice Nielsen, prima donna soprano of the Metropolitan and Boston Opera Companies, has caused wide comment in musical circles as an innovation which will open new and broader fields to the greatest musical talent. Miss Nielsen is at present in the South, where she is being greeted by great crowds. Prior to her recital, which is on the last night of each Chautauqua, a special preparation is applied to the tent which makes a sounding board of the roof. The appearance on another circuit of so notable a musical attraction as Creatore and his band, for the first time on circuit Chautauquas, is likewise causing much favorable comment.

The development of the circuit Chautauqua, like that of the independent Chautauquas, was first chiefly in the Middle West. Opie Read, the well known author, in commenting recently on the effect of this movement on this particular section of the country, said: "Thinking men have come to recognize the truth that out of the Chautauqua movement in the Middle West has arisen the political, moral and literary progress of this great section," and

he adds that publishers of books and magazines of the higher class have learned that their sales in Chautauqua communities are far in advance of sales in neighborhoods where Chautauqua spirit has not been developed.

But the last three or four years have seen a wide extension of the circuit Chautauqua movement. It has gone into the far West and to the Pacific coast. The South is now becoming one of its richest fields, and New York, New Jersey and Pennsylvania have come to the front within the last three years.

The Chautauqua is also coming to be looked upon as a constructive, a community building, and a business force. The *Merchants' Trade Journal*, of Des Moines, Iowa, in commenting on the Chautauqua recently, said: "Business, real, true, fundamental business, consists of more than stores and stocks of goods, manufacturing plants, railway systems and wholesale houses. After all, the very foundation of all our business is the men and women in it, and when these men and women have been aroused and inspired and lifted up and made to appreciate themselves more fully and to recognize their own individual responsibility, that community has been bettered."

"But it has not been made merely a better community morally and intellectually. It has been made better in a business way also. These things work together, and it is impossible to better a community intellectually and morally and not at the same time better that community commercially. The man who is made to think more of himself, to appreciate his own individuality more, is bound to want to take better care of himself, to clothe himself better, to

build a better house to live in, to ride in a better carriage or automobile, and as he does these things he will also think more of his family, more of his children, more of his neighbors and his community, and when he does these things he becomes worth more to himself, his family, his business, his community and his country. We challenge exception to this rule. Go into any community where a force of this kind has been working for a number of years, and you will find that the whole appearance of that community is changed."

Children have a special share in the circuit Chautauquas, as for years they have had in the independent Chautauquas. Young women trained in the art of story telling and playground work meet with the children daily. They also address the parents on such subjects as "The Place of the Story in the Education of a Child," and "The Value of Play in the Moral Development of Children."

The morning hour lecture on literary, scientific, economic and sociological topics is being emphasized on the circuit Chautauqua and is meeting with a hearty reception from those able to attend a morning session.

Strictly political discussions are rarely heard now from the Chautauqua platform. Muck-raking has had its day. Problems of the home and school, civic beauty and civic righteousness are to the front on nearly all programs. Constructive talks on commerce and business by experts, also sanitation, public health and child welfare are being accorded increasing prominence, while the interpretation of modern books and plays finds ready response everywhere. Judge for yourself by the typical subjects: "Humanizing the Prisoner," "Our Nation, Its Problems and Progress," "The City of Tomorrow," "Sources of Social Progress," "The Place of the Bible in Modern Thought," "How the Other Half Ought to Live," "Reform in Legal Procedure," "The Divine Rights of the Child," "Political Patriotism," "How to Live One Hundred Years," "Representative Government," "Christian Citizenship," "Community Housekeeping," "How to Improve the Home Town."

How big a thing is the Big Tent? Ex-Governor Adolph O. Eberhardt of Minnesota undoubtedly expressed a feeling in the hearts and minds of thousands of American citizens when he said: "If I had the choice of being the founder of any great movement the world has ever known, I would choose the Chautauqua Movement."

OPINIONS CLASH AT CHAUTAUQUA

# THE CHAUTAUQUA IDEA

"THE MOST AMERICAN THING IN AMERICA"

CONDUCTED BY FRANK CHAPIN BRAY

TWENTY - ONE University Chautauquas are to be conducted in July by the Extension Division of the University of Wisconsin. The announcement using the Chautauqua

label brings clearly to public attention one among several kinds of adaptation of the Chautauqua Idea which universities have been making from year to year. Wisconsin University Chautauqua paraphernalia is that of the Circuit Chautauquas, but the university sets a standard of program. Paul F. Voelker, secretary of the University Department of Instruction by Lectures, describes the details thus:

"Each community pays the university \$1000 for its program. For this payment of \$1000 the university will send to the community a large sized tent, with platform, chairs and electric lamps; a smaller tent for housing an educational exhibit; a canvas fence to enclose the two; a corps of four workers to remain in the community for six days and give platform talks, conduct round tables and lead in community singing, display educational motion pictures, tell the children stories and teach them games; and two popular programs every day for six days, each program preceded with a musical or literary prelude. Each community will be amply supplied with advertising matter. . . . Every day in the week is filled by the speakers and musicians, the Sunday programs being especially adapted to the occasion. Three towns out of twenty-one will have no Sunday program. Altogether we are furnishing service for which a commercial agency would have to charge almost twice as much, if indeed any commercial agency would build and deliver a program of such high quality."

Four years ago a circuit of "University Weeks," a modified Chautauqua, was inaugurated by the University of Minnesota, under President George E. Vincent, who is also president of Chautauqua Institution. The number of towns which secured this Chautauqua form of university visitation increased to twenty-four last summer. Programs include lectures by members of the faculty on many subjects, concerts by the glee club, debates by members of the debating societies, plays by the dramatic club, talks to business men at luncheon and women's clubs in the afternoon. The cost of this program to the towns is about \$300, which is usually met by sales of week tickets for the evening entertainments at \$1.

The advent of the university as a

Lyceum and Chautauqua provider is doubly significant, as a recognition of the value of the Chautauqua Idea of lecture-education for adults, and as an attempt to shape educational tendencies in its promotion. In simplest form the endowed state university merely adds to its established extension service a booking bureau for approved "talent" and attractions for local Lyceums and Chautauquas within its geographical territory. The lecture fee charged, with few exceptions, is \$15 and local entertainment of the speaker, traveling expenses being included in the fee, so that distance from the university shall not handicap any community. The university further undertakes the service of supplying any community in the state with approved lectures, readings, recitals, dramatic entertainments and concerts suitable for lyceum courses, at cost, "eliminating the profits of the agent and the middleman."

The university lyceum list just mentioned is the result of a coöperative arrangement between the extension divisions of four state universities, Minnesota, Wisconsin, North Dakota and Indiana. The university stands sponsor for the merit of the service offered.

The spread of University Extension work thru lectures in the United States has been remarkable, and the relation of the Chautauqua movement to it is sometimes overlooked. Originating in 1874 Chautauqua discovered and voiced the popular democratic demand for educational advantages for adults, and has constantly asked for and drawn upon established educational institutions for leadership and guidance. In many ways influences have been reciprocal. The English system of University Extension was transplanted about 1887. By 1892 at the University of Chicago President Harper (who had highly developed the Chautauqua Summer Schools and collegiate correspondence instruction) took the lead in organizing Extension work there, and Wisconsin also organized what has become probably the most widely known "extra-mural college."

Recall that the early Lyceum was an unconventional coöperative device for education of men and women. Recall also that the Chautauqua Idea unconventionally set up popular devices for contact between out-of-school adults and the best available educational resources. The cumulative effects of the Chautauqua Movement during more than forty years upon the attitude of conventional educational institutions in the United States would be difficult to overestimate. Hundreds of established Chautauquas have constantly drawn upon neighboring college or university for

sustained strength of program. The permanent educational mission of Chautauqua consists in fostering such co-operation for the benefit of the many, not the few.

At the twenty-second annual assembly of The Jewish Chautauqua Society, Chancellor Henry Berkowitz of Philadelphia asserted that the mission of the modern Jew was to shift the emphasis of education from the practical to the moral and spiritual phase, to the building up of manhood as well as men. He urged that it was the emphasis of material values in education that was responsible for the increasing number of Jews in penal and criminal institutions. "Mere education is not knowledge. The cultural studies, vocational training, technical, mechanical, and utilitarian studies are not education from the Chautauqua point of view unless they are all subservient and contributory to the building of character. Our failures are due to the false values and standards which have made all other subjects of importance and have set religious education aside. Our religious schools and Sunday schools of all denominations are a joke. . . . The hallowing of knowledge has been the characteristic of Jewish education from the earliest times. Study among us was as much a form of religion as prayer. The Chautauqua societies are the evidence of a reformatory movement now on foot to bring religious education to the efficient plane of secular education and to infuse that education with much needed moral force."

"A City Chautauqua" is the term used by Carl Beck, directing secretary of the East Side Forum, in describing the activities centering at Public School 62, Hester and Essex streets, New York City. Here the East Side Neighborhood Association has conducted a Sunday night open forum, non-partizan, non-sectarian, educational. "Unemployment Night," "Police Night," "Lincoln Night," "Literary Night," "City Government Night," "Concert Night," are typical, with speakers like Frank P. Walsh of the United States Commission on Industrial Relations, Police Commissioner Woods, Mayor Mitchel, City Chamberlain Bruère. Three-quarters of an hour is allowed for questions from the audience.

A list of about 1500 Chautauquas, with name of local officer in charge or bureau management responsible for the program, is compiled and frequently revised by the offices of Chautauqua Institution. It may be secured for \$1.

# WAR AND BRIDES IN JUNE

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "EVE'S SECOND HUSBAND," "IN SEARCH OF A HUSBAND"

THINGS are not so bad, all told. It is true that the old world has nearly disappeared from civilization in the smoke of a thousand battles. That the Germans are fighting seven nations, and that it requires seven nations to fight the Germans. That while we are neutrals, we are not pluperfect neutrals, and no one knows this day for certain that we will not also become involved in the terrible crime. Mr. Bryan has just resigned as Secretary of State because he belongs to the Peace Party over and above being a Democrat. Mr. Bryan may be a practical humanitarian and an impractical statesman. Mr. Wilson may be right. It depends upon how near the seven nations can come to whipping Germany before she makes up her mind to answer that note.

But, whichever way the wind blows there is one party in this country which is making no mistakes. You do not hear as much about them as you do about the Republicans and the Democrats, the Progressives or the Socialists or the Suffragists. But the little June brides are going blind right. They are standing upon the one plank platform of marriage, and they are living up to it and they are being elected by the right vote.

We may need a merchant marine. We may not have so large and powerful a navy as we ought to have. Our exports may be too highly explosive to ratify and confirm neutrality, our imports may be falling off, finances may wither like grass that is cut down. It may be a bad crop year, and we may have more refugees to feed, but one thing is certain, the brides never fail us.

They go right on getting married in the face of poverty and every adverse circumstance. They do not know how they will live. They only know how they will love. They believe everything they want to believe and they do not know much. But they are in the right place, repairing and replenishing life and love. They are the Peace Foundation of the future, our hope for the years to come. No lasting harm can befall us so long as enough brides join the colors of Love in June. They are the bravest of the brave without knowing it. They are our bonds for title to the next generation. They inspire energy, hope, thrift, ambition, every good thing required to make a home and a nation. But for their faithfulness presently there could be no inheritance, or honor or fortune.

The wonder is that they have the courage in the face of all the odds all the facts to keep on marrying with such joyful confidence. But, usually last year's brides do not attend this year's weddings. And if they did, it would not make any difference. Love is not blind, it is too wise to see.

Every man who deserts his wife, every woman who goes into a divorce court, joins the belligerents against the brides. But if every bride-to-be knew of every divorce, would it make any difference to her? Not any; except possibly to hasten her wedding. This hideous dissolution of love, it would alarm her. She would be in a hurry to prove love again—to herself, to her husband. Marriage may be a contract, but it is also a miracle which all the skepticism and vice in the world cannot destroy.

When a girl becomes a wife, she deliberately joins a class which is the object of ridicule from one end of the country to the other. There is not a vaudeville stage, not a musical comedy, not a humorous moving picture show in New York where the wife is not the joke. The libertine-by-suggestion clown in the performance always bids for a laugh from the audience with a skit on his wife, and he always gets what he bids for. The most popular "hit" is always made at the expense of the wife. Her virtues are caricatured; to make her appear unlovely, odious, is always one of the aims of humor on the stage. Would any civilized country permit its soldiers to be so traduced? Yet women who marry are also soldiers enlisted for preservation and defense.

June brides go to the comic operas even if they never go anywhere again. And they smile at this spit-ball wit, sublimely unconscious of its application to them. Of course they love their husbands, of course they would be jealous, of course they want to know where he is when they do not know where he is. Still, nothing which the clown says applies to them. They are enchanted. Nothing can touch them, nor sully their shining happiness. They do not belong to a musical comedy. They belong to love. And they are right about that. Love is a fortress which has never been taken. The only reinforcement you need there is more and more love.

With enough brides believing that and living that, things are not so bad even if everything else goes wrong.

*The Valley, Georgia*

## TO A PAINTER

BY LOUISE DUNHAM GOLDSBERRY

They are fair, I grant you, supernally fair,  
These women ye paint;  
With the red blush, the wide eyes, the glorified  
hair,  
But the faces—are paint!

But paint me, O painter of women's young  
eyes,  
The sweetness that's hid;  
And paint me the uttermost language that lies  
Past eyelash and lid.

Can ye paint me, O poet of painters, one kiss  
That the live lips know?  
One heart-beat, one quick breath, one blind moment's  
bliss  
Of life's passion show?

Dip brush in God's sunshine and rainbow and light  
And out of the whole,  
Love-lipped, sun-hearted, eyes of His starred  
night,  
Paint a woman's bright soul!

*Paul Thompson*

### TIGHTENING HER GRIP ON RUSSIAN POLAND

A column of riflemen on the march over mud-rutted roads near Prudziski. The Germans have resumed their offensive in Central Poland and threaten to drive the Russians out of Galicia back over their southern frontier

*Paul Thompson*

### THE SOLDIER OVERTAKES THE MANUFACTURER

Before the war Germany had already filled Poland with her manufactures. These soldiers operating a captured saw-mill find German machinery ready to their hand, as the name-plate indicates

# THE WORLD OVER

## A Dignified Setting for the Spellbinder

In order to provide a gathering place for street speakers at a point where traffic would not be blocked by the crowds about the orators, the city of Los Angeles has constructed two concrete platforms at the old Plaza. Each

A CIVIC SOAP-BOX

forum is an artistic and massive work about seven feet long, three feet high and the same width. It resembles roughly a park bench except for the fact that what would be the seat of the bench is only about eight inches above the sidewalk, and is considerably deeper. A broad ledge runs about the speaker's stand, forming a convenient rest for papers or other references, and providing something to pound with the fists in the impassioned moments of the oration.

## Second-Hand Engines and Cars

What becomes of all the old locomotives and railway cars and those that have outlived their usefulness? They are sold to small roads and to contractors, and the market for them is world-wide.

When some one in India or Africa wishes to build and equip a railway cheaply and quickly he communicates with an agent in New York, and the rest is easy. There are a number of dealers in second-hand railway equipment in this country. The advertisements of their stock appear in the trade journals. Negotiations are concluded quickly and it is not long before a big tramp steamer, loading at a New York dock, has a consignment of hundreds of tons of railway cargo stowed in its hold to be unloaded at some port at the world's end.

When, some years ago, the motive power of the New York Elevated Lines was changed from steam to electricity, there was sent out one of the largest lots of second-hand railway material ever put on the market—340 engines and 134 cars. So Americans traveling in strange places frequently encounter these old Elevated engines. Some are in Africa, some in India; they are scattered all over South America. In Mex-

ico they are used by mining companies that have their own branch lines running to the government roads.

In Japan, when the Emperor's troops started off for Manchuria at the time of the war with Russia, many of the troop-trains were hauled by these small-nosed engines with the word "Manhattan" still painted on them. Some of these engines were used on the Mukden railroad in the war.

These tiny locomotives cost \$5000 apiece when new; second-hand they fetched from \$2600 down. The cars were sold at from \$400 to \$600 each.

Cars and engines that have been used on steam railroads of standard gauge bring much higher prices. Practically no freight cars are shipped entire, altho there is a good demand for passenger cars. The consumption of these cast-offs of the big railroads is mostly among the logging roads of the country. The railroad, as a rule, clings more tenaciously to its cars than to its engines.

## Cutting the Red Tape

In the State of Kansas the law provides for what is known as the Small Debtors' Court in which wage claims and other litigation for amounts of twenty dollars or less are settled without court costs, attorney fees or any charge whatever. While the sittings of the court are quite informal and usually lead up to an early and friendly settlement, yet its decisions are quite as binding and may be as strictly enforced as any decision of a higher court. The system is a very valuable incentive to would-be deadbeats to pay their just debts, as many small accounts are not taken into court in other states simply because the legal expenses amount to more than the sum involved. Hence the creditor loses, and in the case of small tradesmen or wage-earners the loss of a few dollars may be a real calamity. The photograph is typical of the many

petty cases that occur in the course of a year. It shows Judge Kemper of the Topeka Small Debtor's Court, awarding forty-five cents for labor claims to the small boy (who needs the money). Sometimes the obdurate debtor is merely called up on the 'phone, and brought to a settlement without further formality.

## Breathing by Fermentation

It has been known for a long time that the red pigment of the blood corpuscles is the "carrier" of oxygen between the breathing surfaces of an animal (such as the lining of the lungs or the surface of gills) and the internal tissues. It has also been known that this pigment, known as *hemoglobin*, combines chemically with oxygen at the breathing surface and gives up the oxygen when in the neighborhood of active tissue cells. But it has not been known just what it is that determines the reduction or removal of oxygen from the oxy-hemoglobin.

Recent studies made by two physiological chemists, Dr. Harris of Canada and Dr. Creighton of Swarthmore, point to the presence of a ferment in the tissues that causes the separation of the oxygen from the "carrier." The juices of the liver of mammals, birds, batrachia and fish were found to have the greatest reducing power, the liver juice of the pigeon being the most active of those studied, and the muscle juice of the cat the least active.

The ferment that brings about this removal of oxygen from the oxygen-hemoglobin compound is called "reductase" and acts as a reducer on substances other than hemoglobin, as for example Prussian blue, which is turned to a white compound on the removal of oxygen. The reductase from the tissues of one animal will reduce the blood of any other.

That the chemical change is in

THE SMALL DEBTORS' COURT AWARDING A TYPICAL CLAIM

the nature of a fermentation and not a result of the varying amounts of oxygen or carbon dioxide present (as has been assumed by many of the older physiologists) is shown by the fact that while the rate of reduction increases between 50° Fahrenheit and 104° (the temperature of a bird's blood), it rapidly decreases with the rise of temperature beyond this point.

These investigations establish a "ferment" as one more link in the chain of steps involved in breathing—the filling up of the air-sacs of the lungs during "inspiration," the passing of oxygen thru the blood-vessel walls, the combining of oxygen with the hemoglobin of the blood, the dissociation of the oxygen, the diffusion of the oxygen from the blood into the tissues, the oxidation within the cells. The last named process has been known for years to result from the action of ferments.

The new researches, however, raise new questions, as for instance, what determines at any given point whether the reductase or the oxydase shall have the upper hand?

### The Vacuum Cleaner for Horses

We have all heard of milking cows by machinery. Now comes currying horses by machinery. The Park Department of New York City, which one would hardly expect to be engaging in such innovations, is the successful experimenter along this line.

Instead of the groom with his curry comb, brush and peculiar hissing accompaniment, we now have the music of the vacuum cleaner flying over the equine body. Not only is the dust, scale and dandruff more thoroly removed, but the machine cleans several horses in the same time the old currycomb cleaned one.

What the horses think of the new massage we are not told. The Park Department steeds, being of a peaceable and philosophical temperament, have doubtless made no objections. What some of their more high-strung and high-bred relatives would do under the unexpected tickling of the suction tube is neither difficult nor wholly pleasurable to imagine.

### A Portable Church

A church building that goes from place to place is a feature of Los Angeles religious life. The building can be bolted together in a day and taken apart and loaded on a truck in the same time, and the use to which it is put is that of affording a temporary home for worship in newly settled neighborhoods of the city. The free use of a vacant lot can be secured, as a rule, and the new congregation meets in the little structure until sufficient members have been secured to raise a building fund for a permanent structure. When this is accomplished, the little church has served its purpose, and is taken down and moved to some other site where it can be used in the same way. Half a dozen permanent churches originated in this little portable structure.

## VISIT THE California Expositions

An educational and entertaining trip to the two mammoth Expositions, where exhibits from more than forty nations portray the achievements of the world.

### TRAVEL VIA THE Northern Pacific Railway

The cool Northern route "Over the Scenic Highway" in through daily trains from Chicago, St. Louis and Kansas City, connecting with steamship lines at Seattle, Tacoma, Portland, Great Northern Pacific S. S. Co. at Astoria or "Shasta Route" to San Francisco. Choice of routes via Puget Sound or along the Columbia River from Spokane.

#### Stop at GARDINER GATEWAY for a tour of Yellowstone National Park

## Realism and Romance in Doran Books

### THE VALLEY OF FEAR

A. Conan Doyle

This new story of Sherlock Holmes has now for months been the most popular romance of the spring—it has delighted the thousands who have so long and eagerly awaited the return of Holmes. Color illustrations by Arthur I. Keller. **Net \$1.25**

### A BRIDE OF THE PLAINS

Baroness Orczy

The world-famous author of "The Scarlet Pimpernel" has at last told the blood-quicken story of her own beloved homeland, in Southern Europe, where passion runs high, where sturdy men and girls of gipsy blood dance at high noon in between the leagues of wheat. **Net \$1.35**

### THE EAGLE OF THE EMPIRE

Cyrus Townsend Brady

"An important contribution to historical romance, and easily the best of the author's creations."—*Philadelphia Record*. "As a contribution to Napoleonic literature could not have been spared; and its romance is one of thrills and tenderness."—*N. Y. Times*. Color illustrations by The Kinneys. **Net \$1.35**

### THE TAMING OF ZENAS HENRY

Sara Ware Bassett

Introducing to the public a new author of charm, gaiety, tenderness. A Cape Cod romance that delights and wins the heart—the perfect book for vacation time. **Net \$1.25**

### THE RAT-PIT

Patrick MacGill

The navvy-genius whose "Children of the Dead End" startled all Britain shows a greater understanding of life, a deeper feeling, and equally faithful realism in this story of Norah Ryan, from the rocky coast of Donegal, whose slender feet trod the hard road of the poor, but whose chin and eyes were held proud and high. **Net \$1.25**

### THE INVISIBLE EVENT

Completing the Jacob Stahl Trilogy

J. D. Beresford

The trilogy of Jacob Stahl is now complete in three volumes, "The Early History of Jacob Stahl," "A Candidate for Truth" and the eagerly awaited third volume, "The Invisible Event." It has been hailed by the most faithful critics as ranking with "Jean Christophe" and "Clayhanger" for the truth and incisiveness of its picture of a young man of today. The three in set, boxed, **Net \$2.50**. Each volume separately. **Net \$1.35**

### OF HUMAN BONDAGE

W. Somerset Maugham

This, with the four books in the two items above, gives startling evidence of the power of realism today. Here again is the young man of today—in business, in medical college, in love; told with unscanted detail and the power of real life. This is not a mere "publishing incident"; it is a literary event. **Net \$1.50**

### RED FLEECE

Will Levington Comfort

What does the Great War mean to living men and women? The American genius shows. **Net \$1.25**

### THE MIRACLE OF LOVE

Cosmo Hamilton

Could you sympathize with a duke, young, charming, handsome, who deliberately came to America in search of an heiress? But you do in this lively yet deeply feeling story by the author of "The Blindness of Virtue." **Net \$1.25**

### TENNIS AS I PLAY IT

Maurice E. McLoughlin

*By all odds the most important out-door book of the year*

The world's most popular tennis-player here tells frankly what by experience he has found best in tennis—courts and equipment, grips and strokes—with invaluable suggestions to all lay players about the mental attitude necessary in tennis, and interesting anecdotes from his own tournaments from Europe to the Fiji Isles. Over seventy illustrations with elaborate comments on them by the author. 8vo. **Net \$2.00**

### THE LIE

Henry Arthur Jones

Miss Margaret Illington's great stage-success, in a reading edition specially prepared by the author. Many photographs of Miss Illington in the climatic scenes. **Net \$1.00**

### THE MIND OF THE RACE

Introduction by H. G. Wells

Reginald Bliss

A literary salad, with burlesques on the most interesting authors of today, from Hugh Walpole to Henry James; sauced with piquant observations on the hurly-burly of politics today. **Net \$1.35**

### WHEN BLOOD IS THEIR ARGUMENT

Ford Madox Hueffer

"The most incisive analysis of Prussian culture."—*British Weekly*. **Net \$1.00**

### TAHAN

Chief Tahan

The autobiography of an American Indian, reared on the plains, fighting with the warriors, becoming a Salvation Army captain, then a minister, then one of the most popular lecturers on the Chautauqua circuit. A story equally interesting in its real-life thrills and its stirring example of a climb from barbarism to civilization. Many illustrations. **Net \$1.25**

# The New Books

## THE RAGGED EDGE OF INCOME

The high cost of living is considered by John Corbin, in *The Edge*, as responsible for the waste of the best in life, the coming of children to parents young enough to be educated by their babies. The book is not so much a novel, altho cast in the form of fiction, as a series of episodes in the life of a fashionable couple whose sophistication gets in the way of simple, human, domestic experience. Their courage is not equal to the sacrifice of their accustomed circle for the sake of parenthood. Mr. Corbin finds hope for a better social life in a regenerated church obedient to the Law of Christ alone, which he calls the "Church of the Vital Law." He sharply distinguishes between Paul's interpretation of Christianity with its decided reaction against the Hebraic Law, and the selective teaching of Christ "which expanded Judaism and spiritually ennobled it." A new and saner eugenics, with the added appeal to the religious nature of men and women—Mr. Corbin calls it "seven-day Christianity"—is the solution of the difficult problem of rearing a family on a limited income.

*The Edge*, by John Corbin. Duffield & Co. \$1.35.

## A COMPOSITE AMERICAN HISTORY

*The Riverside History of the United States* is another such excellent popular series as Professor A. B. Hart's *American Nation*, and, while not superior to the earlier studies in scholarship or perspective and far from being so full in matters of detail, will by its greater brevity and compactness be better able to secure a place in the small private library. The four volumes of the *Riverside History* are designed rather to supplement than to supplant the ordinary text-book. Each of the authors has boldly omitted or minimized much traditional information and has devoted the space thus secured to a full development of topics which had for him the greater interest. This is especially evident in the first of the volumes, *Beginnings of the American People*, by Professor Carl L. Becker. The European background of the age of exploration is treated at length from the ninth century onward, but the actual story of the discoveries is extremely condensed and not even a passing reference is made to the pre-Columbian voyages of the Norsemen to America. The American Indian is barely mentioned, but the growth of the New England theology and church discipline is accorded many pages. Everywhere in the book narrative is subordinated to discussion, but this can only

be considered a disadvantage if the reader has not already studied the outlines of American colonial development as presented in any good school history.

The other books in the series are slightly more orthodox in character. Professor Allen Johnson in *Union and Democracy* tells the story of national consolidation from the end of the Revolution to the rise of Jackson. A valuable feature of this and of the succeeding volumes is the large number of maps showing the congressional vote of the representatives of different sections of the country on important pieces of legislation. Professor William Dodd's *Expansion and Conflict* carries the narrative thru the Civil War. Almost one-third of the book is devoted to the Jacksonian period. The author holds the balance very fairly in his judgment of the quarrel of the North and the South, altho he is quite hostile to the radical abolitionists. The last volume of the series, Professor Frederic L. Paxson's *The New Nation*, is decidedly the best. Its particular merit is its able analysis of the interactions of business and politics in recent decades. Professor Paxson justifies the title of his book by showing how the hostile sections of reconstruction days were welded into the present harmony by the rise of overshadowing economic issues occasioned by the advance of the new industry into every part of the country. The volume and the series conclude with the congressional election of 1914. Many will be attracted by the excellent make-up of the books and the richness of the flexible leather binding.

*Beginnings of the American People*, by Carl L. Becker. *Union and Democracy*, by Allen Johnson. *Expansion and Conflict*, by William E. Dodd. *The New Nation*, by Frederic L. Paxson. Boston: Houghton, Mifflin Co. \$1.75 each.

#### TWILIGHT SLEEP

The fear of pain has had a more profound influence upon the expectant mother than has been openly recognized, and it is only within our own time that the psychologists have attempted to analyze and the physicians to mitigate it in a comprehensive way. This is true in general notwithstanding the experiments in the use of chloroform some seventy years ago, and notwithstanding the fact that at a recent international congress on gynecology the subject of eliminating pain from childbirth had no place on the official program. In the book *Painless Childbirth* the authors give a fairly complete and reliable account of the various attempts that have been made to reduce the suffering associated with the ushering in of babies, from the anesthetics and hypnotism of the earlier experiments to the analgesics and surgical methods of later years. Most of the book is devoted, as may be expected, to the experiments and results of the skopolamin-morphine method, or the "twilight sleep" of Dr. Gauss and Dr. Krönig of Freiburg. The eagerness of the lay mind to seize every suggested advantage in new methods and the conservatism of the specialist are well brought out in the history of

# The Wonderful Mission of the Internal Bath

By C. G. Percival, M. D.

**D**O you know that over three hundred thousand Americans are at the present time seeking freedom from small, as well as serious ailments, by the practice of Internal Bathing?

Do you know that hosts of enlightened physicians all over the country, as well as osteopaths, physical culturists, etc., etc., are recommending and recognizing this practice as the most likely way now known to secure and preserve perfect health?

There are the best of logical reasons for this practice and these opinions, and these reasons will be very interesting to every one.

In the first place, every physician realizes and agrees that 95 per cent. of human illnesses is caused directly or indirectly by accumulated waste in the colon; this is bound to accumulate, because we of today neither eat the kind of food nor take the amount of exercise which Nature demands in order that she may thoroughly eliminate the waste unaided—

That's the reason when you are ill the physician always gives you something to remove this accumulation of waste before commencing to treat your specific trouble.

It's ten to one that no specific trouble would have developed if there were no accumulation of waste in the colon—

And that's the reason that the famous Professor Metchnikoff, one of the world's greatest scientists, has boldly and specifically stated that if our colons were taken away in infancy, the length of our lives would be increased to probably 150 years. You see, this waste is extremely poisonous, and as the blood flows through the walls of the colon it absorbs the poisons and carries them through the circulation—that's what causes Auto-Intoxication, with all its perniciously enervating and weakening results. These pull down our powers of resistance and render us subject to almost any serious complaint which may be prevalent at the time. And the worst feature of it is that there are few of us who know when we are Auto-Intoxicated.

But you never can be Auto-Intoxicated if you periodically use the proper kind of an Internal Bath—that is sure.

It is Nature's own relief and corrector—just warm water, which, used in the right way, cleanses the colon thoroughly its entire length and makes and keeps it sweet, clean and pure, as Nature demands it shall be for the entire system to work properly.

The following enlightening news article is quoted from the New York Times:

"What may lead to a remarkable advance in the operative treatment of certain forms of tuberculosis is said to have been achieved at Guy's Hospital. Briefly, the operation of the removal of the lower intestine has been applied to cases of tuberculosis, and the results are said to be in every way satisfactory.

"The principle of the treatment is the removal of the cause of the disease. Recent researches of Metchnikoff and others have led doctors to suppose that many conditions of chronic ill-health, such as nervous debility, rheumatism, and other disorders, are due to poisoning set up by unhealthy conditions in the large intestine, and it has even been suggested that the lowering of the vital-

ity resulting from such poisoning is favorable to the development of cancer and tuberculosis.

"At Guy's Hospital Sir William Arbuthnot Lane decided on the heroic plan of removing the diseased organ. A child who appeared in the final stage of what was believed to be an incurable form of tubercular joint disease, was operated on. The lower intestine, with the exception of nine inches, was removed, and the portion left was joined to the smaller intestine.

"The result was astonishing. In a week's time the internal organs resumed all their normal functions, and in a few weeks the patient was apparently in perfect health."

You undoubtedly know, from your own personal experience, how dull and unfit to work or think properly, biliousness and many other apparently simple troubles make you feel. And you probably know, too, that these irregularities, all directly traceable to accumulated waste, make you really sick if permitted to continue.

You also probably know that the old-fashioned method of drugging for these complaints, is at best only partially effective; the doses must be increased if continued, and finally they cease to be effective at all.

It is true that more drugs are probably used for this than all other human ills combined, which simply goes to prove how universal the trouble caused by accumulated waste really is—but there is not a doubt that drugs are being dropped as Internal Bathing is becoming better known—

For it is not possible to conceive, until you have had the experience yourself, what a wonderful bracer an Internal Bath really is; taken at night, you awake in the morning with a feeling of lightness and buoyancy that cannot be described—you are absolutely clean, everything is working in perfect accord, your appetite is better, your brain is clearer, and you feel full of vim and confidence for the day's duties.

There is nothing new about Internal Baths except the way of administering them. Some years ago Dr. Chas. A. Tyrrell, of New York, was so miraculously benefited by faithfully using the method then in vogue, that he made Internal Baths his special study and improved materially in administering the Bath and in getting the result desired.

This perfected Bath he called the "J. B. L." Cascade, and it is the one which has so quickly popularized and recommended itself that hundreds of thousands are today using it.

Dr. Tyrrell, in his practice and researches, discovered many unique and interesting facts in connection with this subject; these he has collected in a little book, "The What, the Why, the Way of Internal Bathing," which will be sent free on request if you address Chas. A. Tyrrell, M. D., 134 West 65th Street, New York City, and mention having read this in *The Independent*.

This book tells us facts that we never knew about ourselves before, and there is no doubt that every one who has an interest in his or her own physical well-being, or that of the family, will be very greatly instructed and enlightened by reading this carefully prepared and scientifically correct little book.

ADVERTISEMENT

the development of this method. We are also warned of the necessity of suspending judgment until reliable expert analysis is available; for in spite of what one may say about professional jealousy and special interests, the fact remains that the layman is usually not competent to form judgment on technical matters. This book is therefore an unusually well-balanced statement of a subject that has been obscured from several different directions. Of the books on the subject now before us, it appears to be the one most worth considering. The reader will care more for the reported experiences of German and American women who have themselves given birth to children with the aid of the twilight sleep than they will for the references to technical papers on the subject—most of which are in German or French.

*The Truth About Twilight Sleep* is an attempt to be fair in the presentation of the controversies about the merits of the method, but it is too obviously biased. The special pleading is good, but does not give the impression of being based either on technical knowledge or on an understanding of the methods necessary for establishing the claims made for a scientific discovery. The Dämmerschlaf method is by no means an "accepted and perfected institution," altho the technique and materials have been more and more standardized in the last half dozen years. Reprinting the statements of physicians and chemical formulæ gives the book an air of being "scientific" that is not supported by the method of the argument.

The little book, *Twilight Sleep*, is a more simple and more direct statement of the problem and of the methods followed in solving it than either of the others. Dr. Williams gives much attention to the ethics of attempting to eliminate pain, and he tries to make those readers who may happen to be ignorant in the matter realize just what it means to be a woman, especially in places far from the centers of modern institutions. There is a strong plea for the extension of hospital facilities and for further experimentation along the lines of reducing physical suffering in connection with childbirth, and with disease in general.

*Painless Childbirth*, by Marguerite Tracy and Mary Boyd. New York: Frederick A. Stokes Co. \$1.50. *The Truth About Twilight Sleep*, by Hanna Rion (Mrs. Frank Ver Beck). New York: McBride, Nast. \$1.50. *Twilight Sleep*, by Henry Smith Williams. New York: Harper Bros. 75 cents.

## THE CALL OF THE SOIL

Most of us have felt at some time or other an instinctive yearning for a more out-door life. Farming has a never-failing fascination—especially for the city man. So we find a charm in *The Idyl of Twin Fires* by Walter Prichard Eaton, a delightfully human story of one man's answer to this call of nature, in which Mr. Eaton gives us the homely New England atmosphere with its genuine sentiment and humor.

Doubleday, Page. \$1.35.

## STABILITY IN SOUTH AMERICA

"The heroic age is over for the Argentine." Hence, neither caudillo, gaucho, nor picturesque landscape supplies the fascination of the new American edition of Martinez and Lewandowski's *The Argentine in the Twentieth Century*, which appears in

the Modern World Series. Student and investor will find here a mine of recent and pertinent information regarding agricultural and pastoral resources, industries, and the financial system and administration of the most progressive of the Latin Republics. Scribner. \$1.50.

#### AN ENGLISH POET IN AMERICA

There is power as well as feeling in some of W. J. Dawson's verses in his new volume, *America and Other Poems*, notably in the ballad "Blake's Homecoming," "Emmaus" and "Heaven." A conventional verse form seems rather to rule the idea, but in free meters the poet is the master.

Lane. \$1.25.

#### BABYLONIAN WRITINGS

Dr. William M. Nesbit has published in the Columbia University oriental studies a neat volume of *Sumerian Records from Drehem* with plates, transliterations, translations, sign list and introductory matter. Thirty tablets are thus given to the public and are added to our valuable sources for reconstructing the history and social life of the ancient world.

Columbia University Press. \$2.

#### DRAMATIZING THE LITTLE MERMAID

With doubtful success the delightful Little Mermaid of Hans Anderson has been transposed by Edward Sheldon into drama as *The Garden of Paradise*. With imagination nimbler than his pen Mr. Sheldon has sought a story essentially poetic and fanciful, but unfortunately he overwhelms its frail structure with the grotesqueness of his similes and the heaviness of his prose.

Macmillan. \$1.25.

#### DEBATING

The recent issues of the Debater's Handbook Series are on *Single Tax* and the *Monroe Doctrine* and new editions of *The Recall* and *Federal Control of Interstate Corporations*. These useful little books give affirmative and negative briefs; bibliographies of the important books and articles; maps, diagrams and a selection from notable speeches, commission reports, etc. They are models of concise information and as welcome to any searcher for data on public questions as to the formal debater.

Wilson. \$1 each.

#### TODAY'S SAMARITAN

With hard-hitting arguments and descriptions, goads to thinking on the part of the reader, Herbert Kaufman has answered for us again the perennial question, "Who is my neighbor?" In his collection of virile, colorful essays of everyday life, *Neighbours*, Mr. Kaufman suggests unmistakably—for he is far too wise to preach—his strong, optimistic philosophy of helping the other fellow; and he drives his ideas home with character studies of the "other fellows" we may help.

Doran. 75 cents.

#### FILM FICTION

Mr. Wells is unfailingly delightful in his lighter mood; the mood that produced Mr. Polly and Mr. Kipps of delectable memory. *Bealby* is pure fun; a wellspring of joy! Young Bealby is not satisfied with the station in life to which he is called, that of a house-servant, and his desperate flight from service and his subsequent adventures make diverting reading. We have hopes for Bealby's future after his cinematographic experiences, which would reel off remarkably well in a moving picture play.

Macmillan. \$1.35.

#### WHERE THERE'S A WILL

A novel that is mostly heroine—and a heroine with the full courage of her decidedly individualistic convictions at that—is *Fidelity*, by Susan Glaspell, which presents an interesting study of life from one woman's point of view and a remarkably true characterization of the several types of people who understand and fail to understand her. The atmosphere of the ordinary small town is cleverly suggested and the triumph of one will over petty conventions carried to its logical conclusion.

Small, Maynard. \$1.35.

## NIAGARA TO THE SEA

Miss Canada  
as she appears  
in picturesque  
Quebec

### Come—Visit This Quaint Little Lady, in Her Quaint Old Home

Europe itself is not more "old-world" in atmosphere than Quebec. Venice is not more delightful in scenery than the Thousand Islands of the St. Lawrence. The sea-side is tame compared with a trip down this beautiful river. It's an enchanted river; and the Saguenay is equally interesting in a different way. Both are included in the wonderful trip, "Niagara to the Sea," that costs only \$34.55 (return fare, Niagara Falls to Saguenay River).

Our beautiful book of views will help you to decide where to go this summer. Have you written for a copy of it yet? Send 6c. in stamps to cover cost of mailing.

## DANISH WOMEN WIN

BY IDA HUSTED HARPER

AUTHOR OF "THE LIFE AND WORK OF SUSAN B. ANTHONY"

IN the midst of the crushing sorrow which a world-wide war has inflicted on the women of Europe, those of one country are happy, for on the 5th of June the King signed the new Constitution which gives suffrage and eligibility to office to the women of Denmark on the same terms as to men. The women of all Scandinavia are now fully enfranchised except that in Sweden they lack the vote for members of Parliament. This awaits only the same political revolution as has just taken place in Denmark, namely, the replacing of the "privileged" vote that elects the upper house of the Parliament with a universal franchise. The King has recommended woman suffrage and a bill has several times passed the lower house by a large majority, but met defeat in this upper chamber.

The most satisfactory feature of the victory in Denmark is that it was won without any animosity between men and women. The situation for the past half-dozen years has been rather peculiar. All political parties were in favor of granting woman suffrage, there was no objection from the majority of the Cabinet and the King was willing to give his assent, but it was inseparably bound up with certain political reforms which the Liberals and Socialists were determined to effect. The Constitution provided that the upper house of the Parliament should consist of twelve members appointed by the King for life, the majority of the other fifty-four to be elected by large taxpayers. The women urged that they might be enfranchised even on these terms, but the Liberals and Socialists, who were in control of the lower house, would adopt no measure that did not reduce the age, eliminate the tax and secure universal suffrage for the upper house. The latter vetoed every bill containing these provisions and so suffrage for women always went down with the rest.

This deadlock has continued for years and has prevented much needed legislation, especially that for the defense of the country. Probably the war has contributed to an agreement between the houses, for the new Constitution, with all the desired reforms, has been hurried thru a Parliament elected last year and one recently assembled for this special purpose. The King signed it on the sixty-sixth anniversary of the signing of Denmark's first Constitution.

The women of Denmark have not worked as long for the suffrage as the women of some other countries, but their effort has been quite as vigorous. They began organizing in 1888 and received their first real stimulus when they affiliated with the International Alliance, which was formed in Berlin in 1904. The first congress of the Alliance, held in Copenhagen in 1906, gave

"Finest Coastwise Trips in the World."

a strong impetus to the movement in Denmark which has never slackened.

The following year—1907—the Danish Parliament granted to women a vote and eligibility for all public boards, and in 1908 it conferred the municipal suffrage on the same terms as possess by men, wives being able to vote on the taxes paid by husbands. Then followed the long deadlock.

There has been much that was pleasant in the Danish women's quest for the vote compared to the experience in other countries. While often disappointed they have never been deceived, betrayed or badly treated. They have had their enemies among the ultra-conservatives, but public men in general have stood by them.

The women themselves have done their part. Knowing how easy it is for women to be forgotten, they have increased their organization until a larger proportion have been enrolled than in any other country. They have hundreds of societies, with tens of thousands of members, and have distributed hundreds of thousands of leaflets. One of the oldest organizations held five hundred meetings last year. When their bill has been up for discussion they have crowded the galleries in the House of Parliament; they have kept their question constantly before the public and have managed it with tact, discretion and dignity. They have also won favor by using the suffrage they possess, an average of about seventy per cent voting at municipal elections, and a large number are serving on councils and public boards. It is not yet known how many women are enfranchised, but Denmark has a population of 2,586,000 and probably more than a fourth are women over twenty-one years of age. In Iceland, a dependency of Denmark with its own Parliament, women have the full suffrage.

The Parliament of Norway gave the municipal vote to women in 1901 with a small tax-paying qualification, and in 1907 the complete franchise on the same terms. In 1910 it abolished the tax requirement for the former and in 1912 for the latter. Women are eligible to all offices, one has been elected to Parliament and possibly a hundred or more to city councils. There is scarcely a parliamentary session that does not in some way increase the political rights of women.

The Scandinavian countries have progressed steadily on this question and offer unimpeachable testimony to the value of woman suffrage by its continued extension. For more than a generation the universities have been open to women and they have been free to enter all industrial occupations and most of the professions. In no other country of Europe are the laws so favorable to women in respect to property, inheritance, divorce, etc. They have long served on public boards and filled public offices and government positions, and have had almost entire liberty of action. Now in granting the supreme privilege of the suffrage Scandinavia has only followed her consistent policy of doing justice to women.

T. W. MOFFAT, Secretary

## THE MARKET PLACE

### SHIPPING AND THE SEAMEN'S LAW

A bill proposed and carried to enactment by Senator La Follette at the recent session of Congress was called, in its title, one to "promote the welfare of American seamen." This Seamen's Act now promises to decrease the number of American seamen in service, to cause the retirement of all American ships now doing business on Transpacific routes, and to end the existence of many useful commercial treaties. It goes into effect, so far as ships under the American flag are concerned, at the beginning of November next. The Pacific Mail Steamship Company has given notice that it will then discontinue the service of its ships on the route from San Francisco across the Pacific. On this line it has five ships. It owns in all thirteen ships, valued at \$11,298,000. Probably the company will be dissolved, and these ships will be sold. The company's business along the coast southward from San Francisco has been affected by the exclusion of its ships from the Panama Canal route. They were excluded because the company itself is controlled by the Southern Pacific Railroad Company. Compliance with the requirements of the Seamen's Act would increase the cost of operation on the Pacific route by at least \$650,000 a year.

With the Pacific Mail's boats, and for the same reason, will be taken from the Pacific service the "Minnesota," the largest American freight carrier on that ocean. Her last trip from Puget Sound to Vladivostok will be made in July. Compliance with the new law would increase her expenses of operation by \$130,000 a year.

While there are other provisions of the new statute to which objection is made, the one which especially affects cost of operation is that which says that not less than 75 per cent of the employees in any department on a ship must be able to understand any order given by one of the ship's officers. This prevents the employment of the Chinese or Japanese now in the service. Nearly all of the men on the "Minnesota" are Chinese. Wages and the cost of food are involved. It is said that the wages paid at European or American rates on ships going out of our Pacific ports are five times the Oriental rates, and that the cost of meals served differs in about the same proportion. American ships using Oriental labor are in competition with subsidized Japanese ships employing similar labor. The approaching withdrawal of the ships we have mentioned will, it is asserted, give full control of the field and traffic to the Japanese.

The new law is designed to affect the

ships of other nations as well as those under our flag. The same requirements are imposed upon ships of other nationalities entering or departing from our ports. Seamen on such ships are empowered to make demands which may be in violation of contracts signed abroad. Great Britain, Spain, Italy, Austria and the Netherlands have submitted protests against several provisions of the statute. Other nations intend to take similar action. They point out that these provisions are at variance with treaties.

Because this is true, our Government has formally given notice of its intention to terminate those parts of our commercial treaties with twenty-one nations that are in conflict with the Seamen's Act. In the past, however, the whole of a treaty, and not a part of it, has been terminated when objection to the agreement was raised. It is by no means clear that the twenty-one nations will consent to the abrogation of parts. Many expect they will say that if parts must go, the entire treaties must be cancelled. But these treaties are agreements of an important character, covering a broad field, which includes the settlement of estates, transfer of property, consular functions, diplomatic immunities, customs and port charges, and scores of other subjects under the general heads of commerce and navigation. The abrogation of them would be a misfortune of considerable dimensions. But the protesting nations are quite unwilling that our Congress shall dictate to them concerning the conduct of their shipping business, the composition of their ships' crews, and their wage agreements with seamen.

We do not see that American seamen are going to gain anything, on the whole, from the new law. It is quite clear that its effect upon the American merchant marine must be unfavorable and that, so far as the treaties are concerned, it may cause much inconvenience and possibly some loss.

### ABUNDANT CROPS

The highly favorable crop report issued by the Government last week must be regarded with much satisfaction because it indicates continued strength in fundamental conditions. Last year, a year of war in Europe, where there was at the same time a reduction of the wheat output, we produced the largest crop of wheat known in our history, a crop exceeding by 16 2/3 per cent the greatest of those that had preceded it. Our exports from this crop have been very large, and the selling price has been high. It is expected that the total shipped abroad in the year ending with this month will be about 340,000,000 bushels, or 100,000,000 more

**THE INDEPENDENT**

than the best record made in any previous year. And now, when it is admitted that Europe's demands in the coming twelve months will exceed those of the year now ending, because her acreage has been decreased by war, and for the additional reason that the number of available farm laborers has been greatly reduced, we have the promise of a wheat crop even larger than last year's.

Very little loss has been caused by the Hessian fly and the chinch bug, although there had been pessimistic predictions that their ravages would call for a reduction of the May estimate by 100,000,000 bushels. In thirty days the condition of winter wheat declined from 92.9 to 85.8, but the official estimate of yield is 676,000,000 bushels, against 693,000,000 a month ago. Owing to an acreage increase of 11½ per cent, the crop will be almost equal to last year's, which was 684,000,000. In this report spring wheat appears for the first time. Last year's spring wheat crop (206,000,000 bushels) was much below the average. This year, with an acreage increase of nearly 10 per cent, and the high condition of 94.9 on June 1, a yield of 274,000,000 bushels is indicated. The full crop promised by the report is, therefore, 950,000,000, or 59,000,000 more than the quantity harvested last year, when the total exceeded by 128,000,000 bushels the highest record made in the past. The greater part of the spring wheat is grown in the Dakotas, Minnesota and Washington. Since June 1 the weather has been favorable for nearly all the wheat fields, and it is possible that even 1,000,000,000 bushels will be harvested. A crop of 950,000,000 bushels will permit the exportation of 385,000,000. Europe will need, it is expected, nearly 600,000,000. But the surpluses of India, Argentina and Canada must be taken into account. Russia may be able to sell a considerable quantity. Canada has increased her acreage this year by 14 per cent. The course of prices cannot be foreseen. Prices have fallen in this country more than thirty cents a bushel in the last month. Last week the net loss was about six cents.

We are also to have a very large crop of oats. With an acreage increase of 4½ per cent, the conditions point to a yield of 1,288,000,000 bushels. Last year's was 1,141,000,000. Canada has enlarged her oat acreage by 10 per cent. A barley crop of 197,000,000 bushels is indicated, or 2,000,000 more than last year's. Probably the yield of rye will be substantially unchanged. The condition of the growing hay crop, 97.8, is exceptionally high, and a similar report about pastures is made. But this is not a good apple year. Last year's crop was 253,000,000 bushels. The Government can see only 191,000,000 in 1915. This quantity, however, is above the ten years' average.

The following dividends are announced:  
American Brake Shoe and Foundry Company, preferred, quarterly, 2 per cent; common, quarterly, 1½ per cent, both payable June 30.  
Baldwin Locomotive Works, preferred, semi-annual, 3½ per cent, payable July 1.  
Manila Electric Railroad and Lighting Corporation, quarterly, 1½ per cent, payable July 1.

**\$2.50 a Box**

**Three shirts and handsome tie for less than you pay for shirts alone**  
**Duro Shirts—guaranteed not to fade, shrink, or rip in six months or new shirts free.**

Made of the famous Harmony percale, white background with neat stripes of blue, black and lavender. One of each color to the box. Coat style, cuffs attached, hand laundered and very fashionable. Address Mrs. Frank Chapin Bray, Chautauqua, N. Y.

## 1915 Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....\$27,964,578,109.00  
Received premiums thereon to the extent of.....287,324,890.99  
Paid losses during that period 143,820,874.99  
Issued certificates of profits to dealers.....90,801,110.00  
Of which there have been redeemed.....83,811,450.00  
Leaving outstanding at present time.....6,989,660.00  
Interest paid on certificates amounts to.....23,020,223.85  
On December 31, 1914, the assets of the company amounted to.....14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board  
CORNELIUS ELDERT, Pres.  
WALTER WOOD PARSONS, Vice-Pres.  
CHARLES E. FAY, 2d Vice-Pres.

## Insurance

Conducted by

W. E. UNDERWOOD

### FACTS FURNISHED BY ONE COMPANY

A reader writes asking me if I do not regard the Bankers Life Company of Des Moines, Iowa, an exception to the general rule that the cost of life insurance on the assessment plan tends to become prohibitive. Admitting knowledge of the mathematical objections to the plan, he states that his father has held a \$2000 certificate in the Bankers Life for twenty-five years and that the maximum cost has never exceeded \$16 a year; while, on the other hand, my correspondent himself has been carrying a policy of \$1000 in an old line company at about the same annual premium. Unless something radically different in the way of experience occurs in his father's case, is it not probable, he asks, that the cost of the assessment insurance will, at the worst, be as low as the old line policy? Would it be wise in the holder of the certificate to exchange it for an old line policy?

I should say that the proper answer to that question is largely dependent on the age and present physical and financial condition of the insured under the assessment certificate. If the first two combined indicate an abridged life tenure, it would be better to permit present conditions to continue. But I will discuss the question.

While I cheerfully admit that the assessment history of the Bankers Life has been clean, energetic and economical, and thru those qualities it has achieved comparative wonders for its members, I was not prepared to learn that any of its insured during a period of twenty-five years had enjoyed its benefits at an average cost of \$8 a year per \$1000. Under the American Table, the average death cost from age thirty to age fifty-four is \$11.14. True, there is usually a saving on these figures in an active, going company, but cutting it steadily thirty per cent a year, every year for a quarter of a century, would seem to be hugging the verge rather closely.

Can this condition continue? Certainly not. The management of the Bankers Life answered the question when, several years ago it reorganized on a level premium, reserve basis. During the next ten years, from age fifty-five to age sixty-four the total bill for mortality will be \$265.21—an average annual cost of \$26.52. Aside from the deposit originally made with the company's guarantee fund, this certificate has not a penny to its credit by way of offsetting the increasing mortality. Assuming that a saving of thirty per cent can be made again, the net cost between ages fifty-five and sixty-four will be \$18.56 per

## Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

### HOME LIFE INSURANCE COMPANY

256 BROADWAY NEW YORK

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

50 Leading Boat Builders have joined with the Gray Motor Company in issuing a catalog showing the specialties of each, which includes fishing launches complete from \$125 upward to mahogany finished express launches with Self-starting 6-Cylinder, 4-Cycle Gray Motors for \$2500. Cruisers from \$450 up. This book helps you select just the model of boat you have been looking for and tells you where to buy it and what it will cost. Send for this big Boat Catalog today. Free. Also Gray Marine Engine Catalog showing full line of 2 and 4 cycle marine motors from \$55 upwards, one to six cylinders. Gray Motor Co., 356 Gray Motor Bldg., Detroit, Mich.

\$1000, yet with nothing in the way of accumulation to the credit of the certificate.

As I understand the terms of the Bankers Life reorganization, thru which it was transformed from a pure assessment concern into an old line reserve company, its members—all of them then holding assessment certificates carrying one-year term insurance—have the privilege of exchanging their contracts for level premium policies without physical re-examination, under either of the following options:

First—The new policy may be taken at the level premium rate at the insured's age at entry, on payment of the difference between the total of such premiums for the time which elapsed, and the total of all assessments paid on the certificate.

Second—The new policy may be taken at the premium shown for the attained age.

Let us see how this would work out with the case in hand, assuming the original age at entry to be thirty. The Bankers old line premium per \$1000 at that age is \$22.69. The existing certificate is for \$2000; therefore, the premium would be \$45.38. This is to be multiplied by twenty-five, the number of years since the certificate was taken. This equals \$1134.50. From this we deduct \$400, the total amount paid in twenty-five years on the certificate, which leaves \$734.50 to be paid the company, after which the member holds an old line policy for \$2000, on which his annual premium will be \$22.69.

Now consider the second option. The member may drop his certificate, abandon all he has paid under it, and take a \$2000 policy at the rate for age fifty-five, which is \$58.25 per \$1000 or \$116.50 a year.

We have been discussing the cost of life insurance on the assessment and level premium plans in the same company. We have used its rates only in both instances. May we conclude that it can furnish insurance commencing at age thirty at \$8 per \$1000? Was it not mistaken originally in attempting to do it? If, safety and permanence considered, it is worth \$22.69 per \$1000 at age thirty, was not the member who paid \$8 getting it for less than he should, and in doing so, did he not actually inflict an injury on himself? Again, if the assessment plan is correct, safe, "reasonable" in price and a prudent one for the insured, why did the Bankers Life Company, one of the best managed of its class, abandon it after thirty-two years for the old line level premium system? Because its management knew the scheme was a fallacy, that it attempted the construction of an imposing and heavy edifice on a foundation of shifting sand.

I have discussed this particular case at length because there are hundreds of thousands of young men in good physical condition who, mistakenly, are pinning their faith to the apparently low, but really high, cost of reserveless assessment insurance. They are in a position to retrieve themselves by securing level premium policies while the pre-

## This picture is all wrong!

Yes—but it's a real picture of offices where they still cling to the inefficient, wasteful, costly, shorthand system.

Business men everywhere are fast waking up. They find it's mighty poor business to write letters twice—once in shorthand and once on the typewriter, to say nothing of expense and wasted time. They don't pay for shorthand sessions at some man's desk, with other men waiting to dictate. They don't pay for typewriting machines standing idle a good part of the day. They get their money's worth—steady production of finished typewriting—with dictators dictating when they want.

They dictate to the Dictaphone.

Just reach for your phone—now—while you think of it, and arrange for a demonstration. If you do not find that name in the book, write to the

mium cost is as low as it will ever be. What they invest in excess of the assessment cost the first ten or fifteen years, they will more than recover thereafter.

The facts have been briefly stated. My correspondent should have no trouble in making a choice. He knows all the conditions at his end and is in a position to decide whether it would be more judicious to continue the assessment certificate, risking a sharp rise in cost, or to choose one of the options quoted.

## THE BATTLE OF WATERLOO

June 18, 1815

LORD BYRON'S GREAT POEM

There was a sound of revelry by night.  
And Belgium's capital had gathered then  
Her Beauty and her Chivalry, and bright  
The lamps shone o'er fair women and  
brave men:  
A thousand hearts beat happily; and when  
Music arose with its voluptuous swell.  
Soft eyes looked love to eyes which spake  
again,  
And all went merry as a marriage bell:—  
But hush! hark! a deep sound strikes  
like a rising knell!

Did ye not hear it?—No; 'twas but the  
wind.  
Or the car rattling o'er the stony street;  
On with the dance! Let joy be unconfined;  
No sleep till morn, when Youth and  
Pleasure meet  
To chase the glowing Hours with flying  
feet—  
But hark!—that heavy sound breaks in  
once more,  
As if the clouds its echo would repeat;  
And nearer, clearer, deadlier than before!  
Arm! Arm! it is—it is—the cannon's  
opening roar!

Ah! then and there was hurrying to and  
fro,  
And gathering tears, and tremblings of  
distress,  
And cheeks all pale, which but an hour ago  
Blushed at the praise of their own love-  
liness;  
And there were sudden partings, such as  
press  
The life from out young hearts, and  
choking sighs  
Which ne'er might be repeated; who could  
guess  
If ever more should meet these mutual  
eyes,  
Since upon night so sweet such awful  
morn could rise!

And there was mounting in hot haste; the  
steed,  
The mustering squadron, and the clatter-  
ing car,  
Went pouring forward with impetuous  
speed,  
And swiftly forming in the ranks of  
war;  
And the deep thunder peal on peal afar;  
And near, the beat of the alarming drum  
Roused up the soldier ere the morning star;  
While thronged the citizens with terror  
dumb,  
Or whispering, with white lips—"The  
foe! they come! they come!"

And Ardennes waves above them her green  
leaves,  
Dewy with Nature's teardrops as they  
pass,  
Grieving, if aught inanimate e'er grieves,  
Over the unreturning brave—alas!  
Ere evening to be trodden like the grass  
Which now beneath them, but above shall  
grow  
In its next verdure, when this fiery mass  
Of living valor, rolling on the foe  
And burning with high hope, shall  
moulder cold and low.

Last noon beheld them full of lusty life.  
Last eve in Beauty's circle proudly gay.  
The midnight brought the signal-sound of  
strife.  
The morn the marshalling in arms.—  
the day  
Battle's magnificently stern array!  
The thunder clouds close o'er it, which  
when rent  
The earth is covered thick with other clay.  
Which her own clay shall cover, heaped  
and pent,  
Rider and horse—friend, foe—in one red  
burial blent!

*Childe Harold's Pilgrimage.*

### VICTOR HUGO'S DESCRIPTION

The rout behind the Guard was melau-  
choly. The army yielded suddenly on all  
sides at once. . . . The cry "treachery"  
was followed by a cry of "save yourselves  
who can!" Any army which is disbanding  
is like a thaw. All yields, splits, cracks,  
floats, rolls, falls, jostles, hastens, is pre-  
cipitated. The disintegration is unprec-  
edented. . . . Men are crushed, trampled  
down, others walk over the dead and the  
living. Arms are lost. A dizzy multitude  
fills the roads, the paths, the bridges,  
the plains, the hills, the valleys, the  
woods, encumbered by the invasion of  
40,000 men. Shouts, despair, knapsacks and  
guns flung among the rye, passages forced  
at the point of the sword, no more com-  
rades, no more officers, no more generals,  
an inexpressible terror. Zieten putting  
France to the sword at leisure. Lions con-  
verted into goats. Such was the flight. . . .  
Alas! and who, then, was fleeing in that  
manner? The Grand Army.

This vertigo, this terror, this downfall  
into ruin of the loftiest bravery which ever  
astounded history—is that causeless? No.  
The shadow of an enormous right is pro-  
jected athwart Waterloo. It is the day of  
destiny. The force which is mightier than  
man produced the day. Hence the terrified  
wrinkle on those brows; hence all those  
great souls surrendering their swords.  
Those who had conquered Europe have  
fallen prone on the earth, with nothing  
left to say nor to do, feeling the present  
shadow of a terrible presence. *Hoc erat in  
fatis.* That day the perspective of the hu-  
man race underwent a change. Waterloo is  
the hinge of the nineteenth century. The  
disappearance of the great man was nec-  
essary to the advent of the great century.  
Some one, a being to whom one replies not,  
took the responsibility on himself. The panic  
of heroes can be explained. In the battle of  
Waterloo there is something more than a  
cloud, there is something of the meteor.  
God passed by.

At nightfall, in a meadow near Genappe,  
Bernard and Bertrand seized by the skirt  
of his coat and detained a man, haggard,  
pensive, sinister, gloomy, who, dragged to  
that point by the current of the rout, had  
just dismounted, had passed the bridle of  
his horse over his arm, and with wild eye  
was returning alone to Waterloo. It was  
Napoleon, the immense somnambulist of  
the dream which had crumbled, essaying  
once more to advance.

*Les Miserables*

# What's the Answer to the Touring Question?

But they can't give you the greatest enjoyment—the most comfort—and freedom from excessive tire bills—unless they're on your car.

**I**F ALL roads were smooth as billiard tables: if there were no ruts or thank-ye-ma'ams—no tracks, cobble stones or rough streets to jolt and jar: if all roads were ideal it would not be necessary to equip with strong, sturdy and rugged Miller Tires.

But roads are far from being ideal. The man who wants the most pleasure from his car must select the tire built to give him the utmost in mileage, safety and service under all road conditions.

## All Roads look alike to Miller Tires

because the exclusive Miller Method of building tires does not cook the life out of either fabric or rubber in vulcanizing! Life in the cotton fabric means miles on the road. The Miller Method retains the natural vegetable wax and oil in the cotton fibre for wear in your tire.

This natural lubricant carbonizes at 240 degrees. The old method of vulcanizing requires about 287 degrees to properly vulcanize a tire. And a brittle and lifeless fabric, with the power of resistance gone, results in short mileage on the road.

But the Miller Method of vulcanizing with a low degree of heat—overcomes all that.

And just as this exclusive Method retains the natural vegetable wax and oil in the fabric, so does it conserve all the toughness and wearing qualities in the rubber. Thus it makes a rugged unit of both rubber and fabric—without carbonizing the wax and oil in the fabric—or cooking the native endurance out of the rubber.

The result is a tire that insures practical immunity from blowouts and irritating road-side repairs.

Get yours from the Miller dealer to-day, and make touring what it should be—a constant pleasure.

*If you don't know the Miller Dealer in your town, it will pay you to write us.*

**The Miller Rubber Co., Akron, U. S. A.**

*Distributors in the Principal Cities*

### Miller Geared-to-the-road

Tires gear your car to the road through mud, sand or slush.

With Miller Tires on your car you're in control. Its tread is an integral part of the tire and retains its safety features until the entire tire is worn out. The greater mileage you get from them, will make your choice of Miller Tires an economy, as well as a permanent safeguard.

**MILLER TUBES**  
answer the tube question.

NUMBER 3473

## A LEAGUE TO ENFORCE PEACE

**T**HROUGHOUT five thousand years of recorded history peace, here and there established, has been kept, and its area has been widened, in one way only. Individuals have combined their efforts to suppress violence in the local community. Communities have coöperated to maintain the authoritative state and to preserve peace within its borders. States have formed leagues or confederations or have otherwise coöperated to establish peace among themselves. Always peace has been made and kept, when made and kept at all, by the superior power of superior numbers acting in unity for the common good.

Mindful of this teaching of experience, we believe and solemnly urge that the time has come to devise and to create a working union of sovereign nations to establish peace among themselves and to guarantee it by all known and available sanctions at their command, to the end that civilization may be conserved and the progress of mankind in comfort, enlightenment and happiness may continue.

We, therefore, believe it to be desirable for the United States to join a league of nations binding the signatories to the following:

*First: All justiciable questions arising between the signatory powers, not settled by negotiation, shall, subject to the limitations of treaties, be submitted to a judicial tribunal for hearing and judgment, both upon the merits and upon any issue as to its jurisdiction of the question.*

*Second: All other questions arising between the signatories and not settled by negotiation shall be submitted to a Council of Conciliation for hearing, consideration and recommendation.*

*Third: The signatory powers shall jointly use forthwith both their economic and military forces against any one of their number that goes to war, or commits acts of hostility, against another of the signatories before any question arising shall be submitted as provided in the foregoing.*

*Fourth: Conferences between the signatory powers shall be held from time to time to formulate and codify rules of international law, which, unless some signatory shall signify its dissent within a stated period, shall thereafter govern in the decisions of the Judicial Tribunal mentioned in Article One.*

**T**HE eminent Americans who assembled in Independence Hall, Philadelphia, on June 17, and issued the above Declaration of Interdependence, have launched an idea which is bound to be accepted with increasing favor and fervor until it is finally adopted by mankind.

Peace is the outcome of justice. Justice is the outcome of law. Law is the outcome of political organization. This is the first concerted attempt by responsible and representative men to organize the nations of the world on a basis of reason and law, enforced by might. It is the theory of the state applied to the globe. It is the only way to peace.

The four proposals finally agreed upon are essentially the same as the tentative draft adopted by the Committee of One Hundred and Fifteen, and published in The Independent two weeks ago. Of the three suggestions of possible improvement we then made, two have been adopted. The conference agreed that the League should not be limited to the *great* nations, and that it should use economic as well as military pressure against any member that makes war on another before the question is submitted to due process of law.

The question of the use of economic pressure was believed by some to be an acceptable alternative for force. But President Lowell, who was Chairman of the Reso-

lutions Committee, completely demolished that argument by pointing out that if the members of the League had to meet after a nation had become recalcitrant to decide whether economic or military pressure should be exerted, delay might follow and intrigue be resorted to and the guilty nation escape punishment. The fact that military force would descend immediately and inevitably upon the law-breaking nation is the one reason that will prevent it from waging a wanton war. The Committee on Resolutions therefore decided that it would not be wise for the League to exert its economic or military forces against a recalcitrant member, but its "economic and military forces," thus strengthening instead of weakening the military appeal.

There are four stages in the development of world organization, as Mr. Marburg pointed out in our issue of June 14. These are, first, the creation of international institutions to do the international business; second, the agreement to use these institutions; third, the exercise of force to compel a reference of all disputes to these institutions, and fourth, the carrying out the decrees of these international courts and legislatures by force.

The two Hague conferences have taken the world thru the first stage. The conference last week at Independence Hall would take the world to the third stage. But who doubts that once the League of Peace is established, the

enforcement of the decrees of its court and legislature by its executives will follow?

We therefore look upon the action taken by the gentlemen last week at Independence Hall, Philadelphia, as having greater possibilities for peace than anything that has happened since the Czar called the first Hague Conference, in 1898.

### AN ALL-AMERICAN CABINET

THE success of France, Belgium and Great Britain in bringing the strong men of all parties into the government naturally suggests the possibility of some such action in the United States. Why should not a nation in time of peace as well as the nations at war get the advantages of a coalition cabinet?

The suggestion will doubtless seem absurd to some and premature to many others, but at any rate it would be interesting to consider how such a cabinet could be constructed. Who are the men whom the American people, if freed from party restrictions, would call to take charge of the affairs of the nation? It has often been alleged as a fault of our political system that it fails to enlist the ablest men in the service of the public. Well, suppose this defect removed, what individuals ought to be in the Government if its business is to be conducted with the efficiency and energy of our private enterprises? A dozen names come into our mind, but we will not mention them because we want to get the independent opinions of our readers. We wish that every one who sees this would send in a list of his nominations for this All-American team, this All-Star cast, this "ministry of all the talents." Here are the offices to be filled. Copy the list, put in the names of the best candidates you can think of and send it in to us promptly. We will publish the results of the referendum if enough of our readers respond to make it worth while.

Secretary of State \_\_\_\_\_  
 Secretary of the Treasury \_\_\_\_\_  
 Secretary of War \_\_\_\_\_  
 Secretary of the Navy \_\_\_\_\_  
 Secretary of the Interior \_\_\_\_\_  
 Secretary of Agriculture \_\_\_\_\_  
 Secretary of Commerce \_\_\_\_\_  
 Secretary of Labor \_\_\_\_\_  
 Attorney General \_\_\_\_\_  
 Postmaster General \_\_\_\_\_

In making out the list no regard should be paid to party affiliations except to see that all the leading parties are represented. It is customary in organizing a coalition cabinet for all members of the existing government to hand in their resignations, so we may start with a clean slate and, without implying any criticism of the present incumbents, consider them on the same footing as outside candidates.

In reorganizing the British Cabinet it has been found necessary to add a new department, the Ministry of Munitions, to take charge of the manufacture of all Government supplies. In the United States some such official would be found essential in time of war and useful in time of peace. Other desirable departments have been from time to time suggested: for instance, a "Secretary of Research" who should mobilize the scientific forces of the nation and direct the investigations on which our Government is now spending many millions a year; a "Secretary for Peace" who should devote his efforts to the promotion of international amity and

the removal of causes of friction; a "Secretary for Health" who should have charge of quarantine and national sanitation. If any of our readers feel moved to suggest names for these or other non-existent offices, we should be pleased to consider them.

The cabinet is fortunately a flexible thing, with no constitutional restrictions on its size, duties or powers. Cabinet making on paper has been one of the favorite amusements of editors. Now is the chance for the public to take a hand in the pastime. What do our readers say?

### WHY IS AN EXPOSITION BEAUTIFUL?

PAINTING, sculpture, music, formal garden and fairyland architecture—the trimmings which we associate with an exposition, and which both California fairs supply so generously—what is their real relation to the soda-biscuit and locomotives and other products of industry which lie at the heart of the Exposition? Are they a very splendid modern equivalent of the pageantry with which the medieval guilds surrounded themselves, a valiant declaration that trade and manufacture are beautiful in their essential meanings, in spite of uglinesses which we all can see? Or are they merely advertising adjuncts, subtly assaulting the esthetic sensibilities of potential buyers? Or can they be traced to that half-recognized municipal function of furnishing beauty to the people—a duty which San Francisco observes in the fine civic center she is building?

It hardly matters. Civilization is an affair of social by-products, anyway. Only the savage is content to kill one bird with one stone. It is our capacity to surround the main tent of life with all sorts of surprising side-shows that has built up the modern world which the Expositions attempt courageously to epitomize. Whether the beauty they offer is the servant or the symbol of industry it will be for many visitors to California the essential thing.

### KANT ON THE PRESENT WAR

WE can hardly conceive that those of German or Austrian birth still surviving among us who had experience or memory of the revolutionary attempts of 1849, and who escaped to this country with Carl Schurz and General Sigel, should have sympathy with the Cæsarism which has brought on the present sad war. One of them—a patriotic American citizen, who, after a long and honorable business career, has retired to give his last years to the study of philosophy—calls our attention to a manuscript by Emmanuel Kant, not heretofore known, which was published a few months ago, in which he anticipates in a remarkable way the present experience of Germany and the nations. It is a single loose sheet, apparently a hurried sketch, with the title, "What are the Conditions for the Betterment of the Human Race?"

Among the causes that tend toward evil and the deterioration of communities, he looks upon war as the most potent. As civilization advances it strengthens the desire of states to aggrandize themselves at the expense of others thru cunning and force. This leads to the introduction of large, well-disciplined armies, supplied by the latest and most efficient armaments. As a result there is a steady increase in the taxation and corresponding advance in the cost of the necessities of life.

Peace does not last long enough to allow sufficient savings to accumulate to pay for the next war. The device of creating state debts, however ingenious, is self-destructive, so that a time must come when weakness leads to collapse. When this stage has been reached a readjustment of the power of government must ensue, and the people will take matters into their own hands and thereafter decide such momentous questions as war for themselves, and not leave them to the selfish interests of rulers who share but slightly in the hardships and dangers and have little to lose and everything to gain by such struggles.

After such internal reorganization of the leading states has been accomplished, he expects them to combine into one large confederation to whose authority all the individual states will voluntarily submit.

In discussing the larger question whether there is a progressive moral advance of mankind, he argues that such a problem cannot be decided by mere speculative thought, but that we must look to historical data for proof of such a tendency, and this he finds in the French Revolution. This event, whatever the results of the movement may ultimately turn out to be, must be looked upon as a great moral uprising unequalled in its consequences. Its object has been to establish the principle that a people has the right to adopt such form of administration as seems just and desirable to it. In founding such a government and in striving for the highest good, care must be taken to make all wars of aggression impossible (being the source of all evil and corruption), and that can only be attained under a system of republican institutions. This is the train of his thought in outline. He lived under Frederick the Great, saw him pounce upon Silesia and wage a seven years' war to secure his robbery. He then witnessed the repeated partition of Poland and also the Ancien Régime and the conditions in France that led to the Revolution. It is not astonishing that a man of his moral fervor was moved to the utmost.

Thanks to his advocacy these views seem commonplace, almost trite, to us today. But it was quite different in his time. Goethe never fathomed nor grasped the importance of the French Revolution and was thoroly reactionary in his political aims. Schiller was imbued with a broad feeling of human sympathy, but lost heart after the Reign of Terror. Kant stands out as the great thinker overtowering his contemporaries, the intellect that almost intuitively realizes the whole problem, both in theory and practice, as a beacon light for generations to come. What a contrast to the Germany of today, initiating a terrific aggressive struggle, seeking conquest, glorifying war for its own sake, under the delusion that it tends to develop and to display the noblest manly virtues!

#### A BIRTHDAY EDITORIAL

WE, the editorial associates of Dr. Ward, have insisted that he celebrate his eightieth birthday by doing what he has done almost every day for nearly fifty years, that is, write an editorial for *The Independent*. Only in this case he is to sign it. He still persists, however, in refusing to comply with our frequent request to tell of his own active and varied life and of the interesting people and events he has known. Altho he has reached the age where most men like to look

backward, he keeps his face turned forward as tho he had an endless future ahead of him—and he is firmly convinced that he has. Why he believes it he has during the past year explained to our readers.

But since he declined to say anything about himself we shall have to give a few facts for the benefit of our new subscribers. William Hayes Ward was born in Abington, Massachusetts, June 25, 1835. He has always been a pioneer of one sort or another, in lands new and old, in studies ancient and modern. He went as a member of the "Andover band" to Kansas in 1859. He went as director of the Wolfe Archeological Expedition to explore the ruins of Babylon. He has always been quick to pick up the latest discovery in science. He was one of the first to bring to light that forgotten people, the Hittites. And now in his hillside home at South Berwick, Maine, his garden is a formidable rival of his study, and it is hard to tell in which he takes most delight—the excavation of an early radish or an Assyrian seal, the discovery of a new pansy or of a new poet.

#### EIGHTY YEARS LATER

IN anticipation of my eightieth birthday the editor of *The Independent* has asked its former editor, not to look backward eighty years and reminisce, but to look forward as far. Autobiography with its personal quality is interesting to the reader, and seems a natural task for one who has been in public life and has reached the retired and retrospective age, has kept a diary or preserved correspondence, and has not allowed himself to forget yesterday in the anticipation of tomorrow. But such a service I must leave to those "That some more timely-happy spirits endueth."

This is a very different world from that of eighty years ago. It is a new civilization, for civilization depends on intercourse more than on anything else, and intercourse was slow then, for we traveled on the water with sails and oars, and on land with horses or on foot. Then, had the Panama-Pacific Exposition been conceivable, it would have taken a year to make the journey from the Atlantic coast to San Francisco.

The one great invention which has made modern civilization possible is that of printing, and that invention was nearly four centuries old, and the power of steam to make intercourse easy was just being anticipated. In the latter half of this period the age of electricity has almost supplanted the age of steam, as seen in the telegraph, the telephone, and traction, so that it is not easy to conceive what more comforts science and invention can add to those which now any countryman can enjoy.

Human thought has changed during these eighty years. Sociology was a word unfamiliar at the beginning of that lustrum. We had laws commanding and forbidding, but about the only service of Government for the comfort of the people was the post office and highways and the district school—no insurance, no free high schools or state universities, no public hospitals and trained nurses, no asylums for the blind or insane. A multitude of comforts and conveniences which we now think Government must supply abundantly or must supervise were then unknown or were in their beginnings, for socialism had not been heard of. Things which we now think that we must do for ourselves or the Govern-

ment must do for us, such as sanitation, we did not then know or think of, or left them to the mercy of God, for God was perhaps nearer to us then than he is now when we have learned more of the laws of Nature, and the process of the stars; nearer when we thought more of God acting directly in creation or in common life, while now we rest more on evolution and the physical forces which we can ourselves command; even as to the old worshipers of the gods and genii of fountains and forests and seas and mountains the superior presence seemed lifted further away when we were taught that there was but one God and He in the heavens. So, I think, with our thought of His intermediary laws, God seems not quite so near, and we trust more in these laws and less in special providences, and we pray less, even if we believe in him just the same.

I am no prophet; but when I see a train from New York moving westward, I gather that in time it will reach Chicago and Seattle. So the direction of the past points to the destination of the coming future. Beyond question there are forces and laws of Nature yet undiscovered and unutilized, and there is no reason why the next eighty years may not surprise us as much as have the past eighty; and there are needs yet in anticipation. One of the first of these is a new source of heat, as we are approaching the exhaustion of our supplies of wood and coal; and there are possible sources of heat in plenty going to waste. The transport of coal is bulky and burdensome, and heat can be carried cheaply by wire as electricity, if we could only get it on the wire in some convenient way. Tides, winds, the useless heat of summer in the tropical deserts will one of these days (and why not in the lifetime of the man born today?) be stored up to be used in our winters. Why not learn one of these days to warm a house with a windmill? Archimedes set hostile galleys on fire in the harbor of Syracuse with a combination of mirrors, and better ways may be found to concentrate and transport to Europe the superfluous heat of the African deserts. But there may be boundless sources of heat nearer at hand, waiting discovery. Every chemical combination stores heat which might be released by direct dissociation, or, as radium has shown us, by the reduction of an element to one of less complexity by the loss of some of its electrons. It is not inconceivable that we may learn how with the disintegration of a substance no bigger than a walnut to keep a house warm all winter. Our imprisoned chemical forces might blow up the world. And all this is apart from the sure succession of ordinary discoveries, like the synthetic production of india rubber, and the new applications of electricity which are sure to continue. Other things are likely to develop, which we cannot anticipate but which are suggested by the fact that at present we have no knowledge and make no use of that long series of the vibration of atoms which intervenes between the slower and the most rapid.

I believe that the next eighty years will show a great advance in the direction of socialism. Absolute and complete socialism can never come, with all things for all men, as where wedded love was the

sole propriety

In Paradise of all things common else,

but a long step that way is probable. During the present war the nations that most hate socialism have in extraordinary ways adopted socialistic meas-

ures in both agriculture and manufactures; and this can hardly fail to help socialism in time of peace. Our Government will before long own railways and telegraphs and telephones and mines and probably control those major manufactures such as iron, and direct all other factory labor so as to put an end to quarrels between capital and labor and the consequent strikes. The pension system will be greatly extended, in such a way as to transfer to the Government the service of insurance companies and the multitude of benefit organizations. I do not believe that in the next eighty years, nor for many years after, private property in land will cease.

Within ten years I believe that war will have ceased to curse the nations; it will have died of its own enormity. The nations of the earth, now battling or now at peace, will have agreed that disputes between nations shall and must be settled without fighting, and any nation that dares to attack another will be suppressed by main force. Then will follow the decades of peace in which the ravaged countries will recover their losses in population and wealth, and find means and energy for new discoveries, new inventions, new devices for the benefit of the people, new advance in arts and literature, and the creation of a nobler world. Then all nations will be neighbors inviting friendship, their border fortresses rusty and rotten, their tariff walls forgotten, their limits traversed freely by flight or flood, for travel or commerce, without fear or jealousy. Each continent will be, as it were, one nation, and China will no more harbor suspicion or revenge against Russia or Japan.

Possibly men eighty years hence will know less about God than they do now, but they will believe far more than they do now in the supremacy of goodness, to which they can hardly fail, any more than do we, to annex personality and add sanctions. The great religions of the world will come closer and closer together—we already see the process—by dropping their excrescences and absurdities and interpreting their excellences after the model given by Jesus Christ. In the language of each nation and religion the one God and the one law of duty and love will be the same, taught by a multitude of self-denying preachers of the purest and best. It will be a better world to live in, yet neither commonplace or tame; but I am glad that I have lived in this period of transition, of struggle against ancient wrong, of victory achieving, not achieved, of the last supremest outbreak of force against reason; that I have seen by the ministry of steam and electricity local interests change to a world-sympathy, and the missions of religions as well as of commerce bringing the best of both faith and service to the lowest. The past history has been grand. In my boyhood I heard Daniel Webster plead for the unity of the republic, and, better still, John Quincy Adams for the right of free petition against slavery; and in my young manhood I saw slavery abolished by the signature of Abraham Lincoln; and now in these later days I see the sure prophecy of the reign of peace and the unity and victory of the Christian Church. There will come to my successors greater statesmen, more inspired poets, a grander civilization, a world brotherhood; but will they feel the spur and challenge of these last eighty years? Yes, why not? for I have not seen the end of all perfection, and never shall they reach it who come after.

WILLIAM HAYES WARD

# THE STORY OF THE WEEK

**Fighting at High Altitudes** The Italian Alpine troops, trained for climbing and marching at double-quick, are proving their value, for at every point they have scaled the mountain barrier which encloses Italy on the northern end. Ignoring the passes thru which they were expected to come they have climbed cliffs deemed insurmountable by tying themselves to long ropes like the Swiss guides. They surprised one Austrian stronghold by taking off their shoes and so creeping up to it silently in the night, and the defenders did not perceive them until they were within six feet of the rampart.

On the Trentino side an expedition from Cortina has occupied the peak of Sasso di Stria, 8125 feet high, and secured control of the passes leading to Bozen. On the eastern frontier the Italians have possession of Monte Nero, 7480 feet, which dominates Tolmein (Tolmino). On the northern frontier they have established their batteries on Plaguis, 6500 feet high, which enables them to bombard Maborghetto, three miles to the north and on the other side of the Fella River.

All of the points gained, however, are within five or ten miles of the boundary. In this respect the opening of the Italian campaign is very different from the others. Within a month after the declarations of war last August the Germans were half way to Paris, the French had occupied a large part of Alsace, the Austrians were well inside Poland and the Russians had taken more than half of East Prussia. It has now been a month since Italy

## THE GREAT WAR

*June 14*—British Government obtains war credit of a billion and a quarter dollars. Germans take 16,000 Russian prisoners in Galicia.

*June 15*—Zeppelin raid on northeast coast of England, killing 16 and injuring 40. Karlsruhe bombarded by 23 French aeroplanes, killing many civilians.

*June 16*—Heavy fighting about Souchez, north of Arras. French gaining on Fecht River, Alsace.

*June 17*—Germans take Tarnograd, Poland. Italian submarine sunk by Austrian submarine.

*June 18*—Italians bombard Maborghetto on Austrian frontier. British and Belgians renew conflict about Ypres.

*June 19*—French take Metzeral, Alsace. Russian line at Grodek, west of Lemberg, broken.

*June 20*—Germans repulse Russian attacks at Shavli, Courland. Italians capture Plava on left bank of Isonzo River.

the interior and have concentrated their forces for the defense of Tolmein and Görz to the north and the naval base of Pola to the south of Triest. It is now rumored that part of the Anglo-French fleet will be withdrawn from the Dardanelles and used to support the Italians in an attack on the Austrian coast of the Adriatic. It must be something of a disappointment to the Allies that the entrance of Italy into the war has made so little difference in the state of affairs. Italy might have been expected to take the offensive with some vigor, since nine months were spent in preparation for the conflict with the aid of the Allies. It is reported that the sum advanced to Italy by Great Britain alone amounts to \$600,000,000.

**Closing in on Lemberg** The Austro-German armies pursue their victorious march toward the Galician capital. The campaign covers the same ground as that in September, but in the reverse direction. At that time the Austrians, defeated east of Lemberg, evacuated that city and tried to make a stand at Grodek, about fifteen miles west of Lemberg. Driven from this position they were forced to retreat on west past Przemysl and Tarnow toward Cracow. Now the movement is in the other direction. The Russians driven back from Tarnow have been forced to evacuate Przemysl and have tried in vain to make a stand at Grodek in defense of Lemberg.

Grodek is in a lake and swamp region similar to that of Mazuria which has afforded protection to East Prussia

declared war and as yet there is no evidence of a serious attempt at invading territory, in spite of the fact that most of the Austrian troops are engaged elsewhere and the resistance on the frontier has not been very strenuous, as the Italian official reports admit. It was generally expected that before this the Italians would have taken Triest, for the army and navy can both be brought to bear upon this port and it does not appear to be strongly defended. The Austrians themselves seem to have anticipated the loss of Triest, for they have removed the archives into

New York Sun

TORPEDOING THE REMNANT

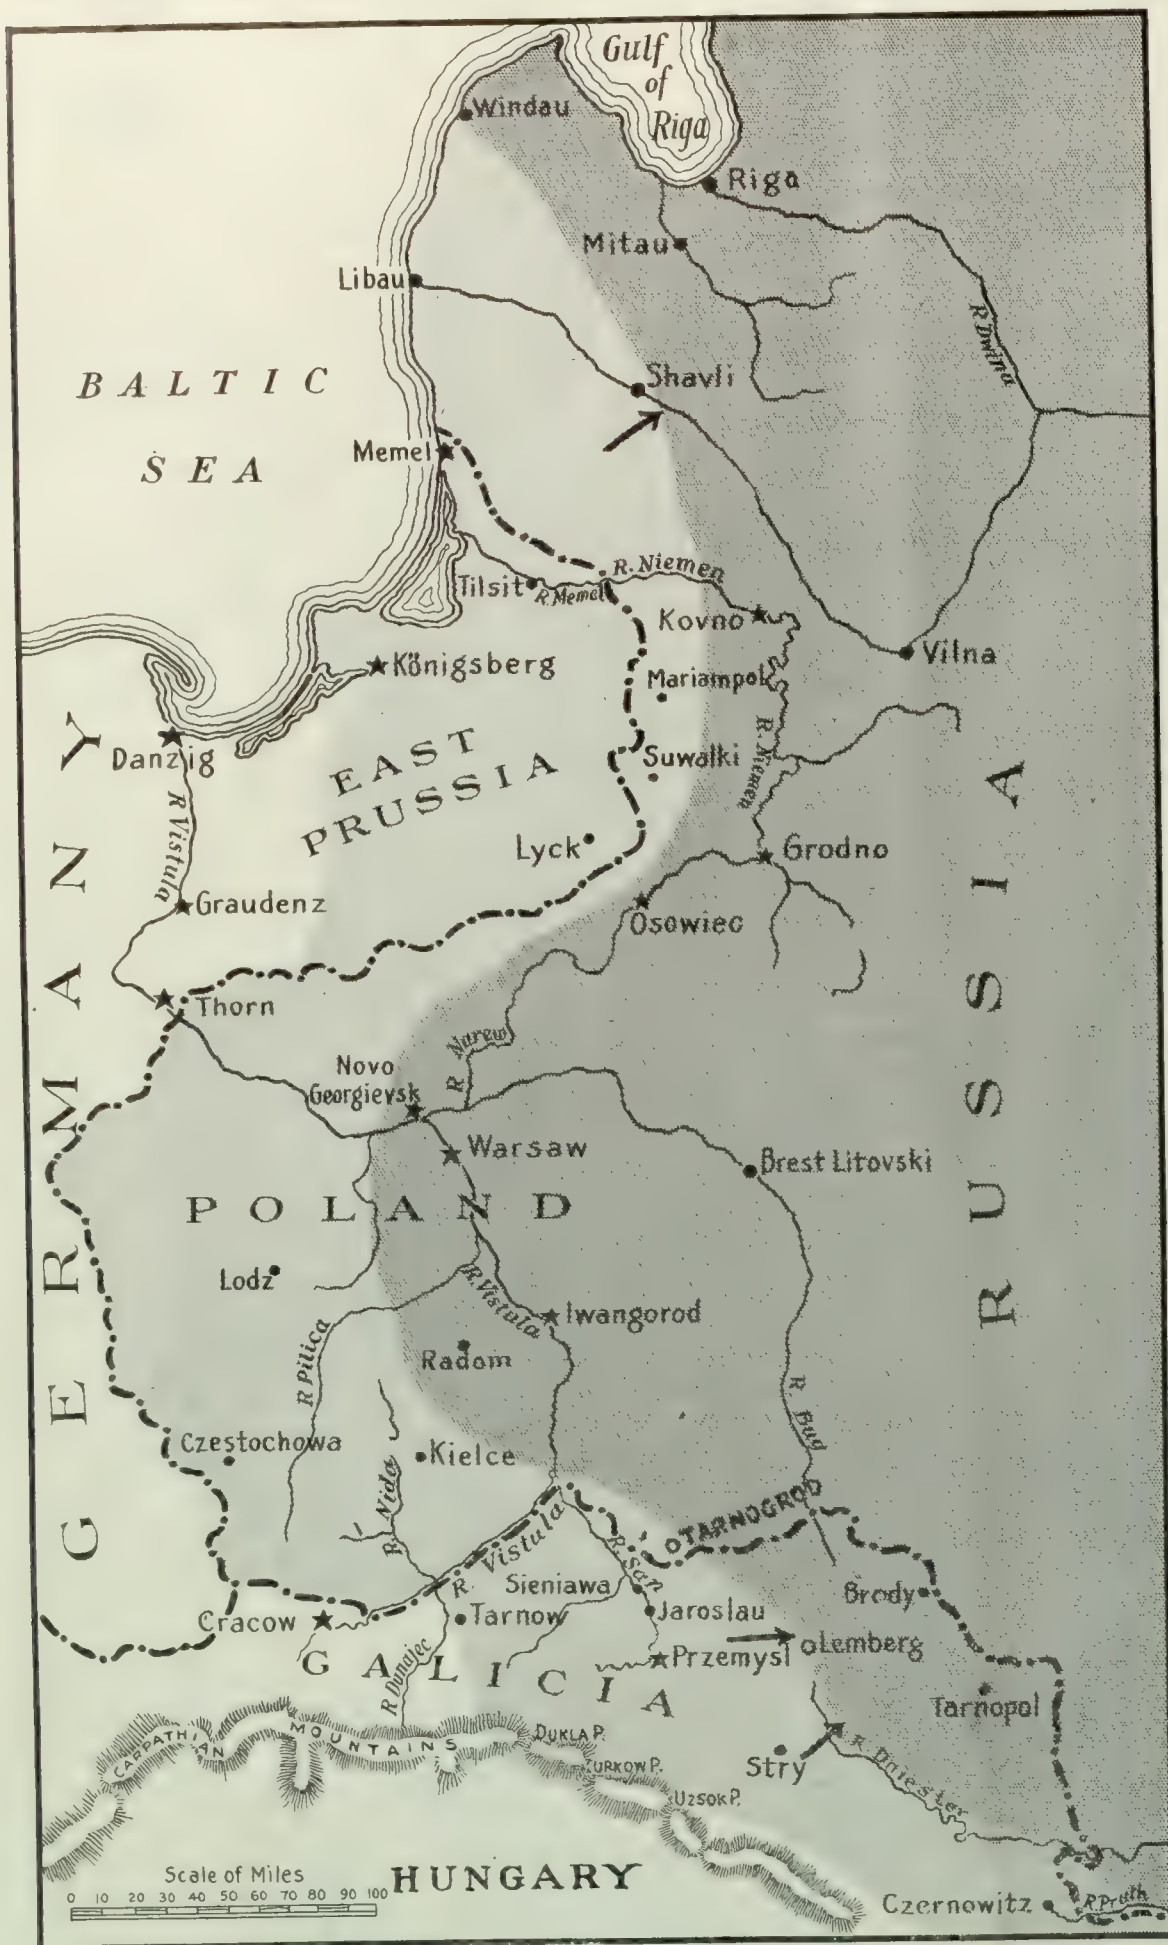

New York World

WHIPPING GERMANY

NOT THE WAY TO WIN

#### RUSSIA'S GAINS AND LOSSES

The reversal of fortune which has befallen Russia is graphically shown by the above map on which the darker shaded portion shows the territory now held by the Russians and the lightly shaded area that which they had occupied at some time since the war began, but have since lost. In the south the Russians have recently been driven out of Hungary and the Carpathian passes, have lost Przemysl and Czernowitz and are likely to lose Lemberg (Lvov). In central Poland the Germans still hold their advance positions not far west of Warsaw and the fortified lines of the Vistula and Narew. In the north the German invasion of the Baltic provinces has almost reached the Gulf of Riga. All of the fighting is now on Russian soil, except that about Lemberg in Austrian Galicia

against the Russian invasion. Lemberg itself is unfortified and will probably be evacuated by the Russians as it was by the Austrians once the armies defending it are defeated. The corner of Galicia about Lemberg is all the foreign territory the Russians now hold. All the rest of the 800-mile battle line from the Gulf of Riga to the Dniester is well inside the Russian boundary, in some

places over a hundred miles inside. So Russia's position today is much worse than on August 2 when she invaded Prussia. What is of more importance than loss of ground is loss of men and material. There are 1,240,000 Russians in the prison camps of Germany and Austria and about 800,000 Russians are supposed to have been killed and many more wounded. Considered nu-

merically this does not amount to much, for it is less than the annual increment of the population, but it will be difficult for Russia with her inefficient organization and industries to raise and equip another three million soldiers and provide them with trained officers. Russia has been saved from bankruptcy by the pledge of the British treasury to stand behind its obligations and the extent and resources of the country are so great that it must be regarded as virtually unconquerable in spite of its defeats and losses. The most that the Germans can hope to do is to inflict such blows as will cripple Russia for the rest of the summer and enable them to turn their attention to their new foe, Italy, and to the French frontier.

The Austro-German forces have carried the war into the enemy's country on both sides of the Lemberg region. On the east they have not only driven the Russians out of Bukovina but followed them into Bessarabia. On the west they have crossed the frontier into Russian Poland and taken Tarnograd. This is about forty miles to the north of Lemberg and a further advance of this left wing will leave no outlet for the garrison of that city except toward the east.

Vienna claims the capture during the first half of June of 122,300 Russian soldiers, 108 officers, 53 cannon and 187 machine guns. Petrograd claims during the same period the capture of 40,000 men, 860 officers, 24 cannon and over 100 machine guns.

**The Battle of Souchez** Few battles in the present war and certainly none in any preceding war can compare with that which has for its center the village of Souchez, about seven miles north of the ancient town of Arras. The "spring drive" of the Allies, about which so much was heard during the winter, was planned to break the German line in this section behind which are the towns of Lens and La Bassée. The British were stationed on the left of the line and the French on the right. The attack of the British was directed to Neuve Chapelle, fourteen miles north of Souchez, and they succeeded, on March 10, in making a perceptible dent in the German line tho at a terrible sacrifice. Since then the British have been inactive, either because of the insufficient forces or armament or because their part of the line was already in advance of the French segment.

Just above Souchez the German line makes a sharp salient toward the west whose apex is the hill of Notre Dame de Lorette. The attempt of the French to capture this point by direct attack not proving successful, they are cutting into the wedge at the lower side at Souchez and "the Labyrinth." Here the Germans have concentrated 220,000 men, according to French estimates, and doubtless the French have still more. The ammunition which the French arsenals have been manufacturing during the winter is being expended lavishly in the attack. The official report of the French states that

their artillery used some three hundred thousand shells on June 16 while the infantry charged the German entrenchments at Souchez with bayonets and hand grenades. By this they gained a footing in the park of the chateau, and took the cemetery at Souchez, the slopes of Hill No. 119 and a small wood to the south of it. The wood they were obliged to evacuate on the following day because of the heavy fire of the German artillery. More than six hundred Germans were taken prisoners, including twenty officers. The losses on both sides were severe. For the last six weeks the bombardment of the German lines about Souchez has been almost continuous and the attacks repeated day after day, and yet the gains are hardly discernible upon an ordinary map.

**Submarine Warfare** The German Government is reported to be undecided whether or not to comply with the American demand that the practice of torpedoing merchant vessels without warning be discontinued. The probability of a refusal is increased by the general belief in Germany that Weddigen came to his death thru British treachery. Otto Weddigen, the captain of "U-29," has been a national hero second only to Hindenburg ever since September 22, when he sank three British warships within an hour, the "Aboukir," "Cressy" and "Hogue." His exploits have been the theme of songs, sermons and stories in which he has been extolled as the model of Teutonic courage and chivalry. He had gained even the respect of his enemies and was called by the British "the Polite Pirate," because of his courtesy to the crews on the ships he overhauled and his considerateness in giving them warning and time to take to their boats before launching a torpedo.

According to German accounts it was because of this consideration that he lost his life. The German Admiralty announces that the "U-29" was rammed by a British tank steamer which flew the Swedish flag and refused to obey the order to stop. In reply the British Admiralty states that the "U-29" was sunk "by one of His Majesty's ships" but gives no particulars. On March 25 the Admiralty announced that it had "good reason to believe that the German submarine 'U-29' has been sunk with all hands."

In spite of our President's protest against the false use of the American flag in the war zone the British vessels have not discontinued the practice. The "Colonial" of the Leyland line flew the American flag for forty hours in passing thru the war zone in order to fool the German submarines.

The German submarine "U-19" was sunk some time in June. Six of her officers and twenty-one of her crew were captured by the British.

The inquiry of the British Government into the sinking of the "Lusitania" has brought out the reason why she was making such slow speed thru the war zone. Only eighteen of her

twenty-five boilers were in use because it was necessary to economize on coal. The experts differed as to whether she would have been less likely to have been hit if her speed had not been reduced to eighteen knots. It was also proved that the "Lusitania" was undermanned and that some of the life-boats were lashed down so they could not be launched and others left unplugged so they sank in the water with all their passengers.

For the first time in history a submarine has sunk a submarine. The Italian submarine "Medusa" and an Austrian submarine had been lying

submerged close together without suspecting each other's proximity. The Italian boat rose first and, nothing being visible thru her periscope, emerged. The Austrian came up shortly after and as soon as her periscope was above the surface caught sight of the enemy and discharged a torpedo which blew her up.

A flock of French Aerial Warfare aeroplanes bombarded Karlsruhe, the capital of the Grand Duchy of Baden, on the morning of June 15, by a skilfully planned attack. A number of decoy

#### SERBIA'S BIGGEST WAR SECRET

This picture showing British and Serbian soldiers assembling British six-inch guns at Semendria reveals a fact that the censorship had kept under cover for nearly three months—that Rear Admiral Ernest C. T. Troubridge and a large British force have been helping the Serbians since the end of March. A French aviation corps has also been serving there

aeroplanes were kept passing slowly back and forth over the frontier to attract the attention and draw the fire of the German gunners while the main fleet, composed of twenty-three aeroplanes in four squadrons, rose to an altitude of twelve thousand feet and passed unperceived over into Germany. Karlsruhe is on the other side of the Rhine and seventy-five miles from the nearest French soil.

The aeroplanes reached the place before six in the morning and diving down thru the clouds took the sleeping city entirely by surprise as they began dropping explosive and incendiary bombs. The first bomb fell in the Kaiserplatz, killing two people and nearly destroying the Karl Friedrich monument. The palace was made a special object of attack and one of the bombs passed thru the room occupied by the children of Prince Max of Baden, tho without harming them. Among the other buildings struck were two hotels, a synagogue, a nurses' training school, and the post office. Altogether 130 bombs were dropt, mostly four and six inch shells. All of the aeroplanes returned safely to France except two; one having been brought down by a shot from an airman and the two occupants killed, the other forced to alight on German soil and the occupants captured. The number of civilians killed in Karlsruhe is variously reported from twenty to two hundred. The raid has aroused great indignation

in Germany as the city was far outside the war zone and unfortified. The German press claims that hitherto the German aviators have confined their attacks to fortified towns and positions of military importance, but now "unscrupulous retaliation" is demanded.

Zeppelin raids were made on the eastern coast of England on the nights of June 6 and 15, but as usual the censor refuses to allow any detailed information to transpire as to the places visited or the damage caused. It is officially announced that in the first of these raids five men, thirteen women and six children were killed, and in the second sixteen persons were killed and forty injured. The Under Secretary for War told the House of Commons that the Government had ten times as many aeroplanes as when the war began and there were now eleven aviation schools capable of training over two hundred airmen. A larger type of aeroplane is being constructed by the British Government capable of carrying five men and five hundred pounds of bombs.

#### League to Enforce Peace

The conference in Independence Hall, Philadelphia, last week, for the organization of a League to Enforce Peace, was preceded by a dinner, on the evening of the 16th, at which the plan for an alliance of great powers to prevent war was outlined by ex-President Taft. Other speakers were ex-Judge Gray, Oscar S. Straus, Hamilton Holt

and President Lowell of Harvard. Mr. Taft explained that the plan provided for the use of force if any one of the signatory nations should attack another without resorting to the agencies established for the settlement of disputes, or while negotiations for settlement were pending. Force was to be exerted in defense of the nation thus attacked. There were to be an international or league court for disputes of a justiciable character, and a conciliation commission for the adjustment of controversies over non-justiciable questions.

At the conference, on the following day, Mr. Taft presided, and the League to Enforce Peace was born. After debate, the resolutions reprinted elsewhere were adopted by an almost unanimous vote. A few of those present objected to the use of the word "enforce" in the title, preferring "establish and maintain." The proposed change was rejected decisively.

Mr. Taft was elected permanent president of the organization and sixty vice-presidents were named. An executive committee of sixteen was appointed. It will hold meetings in the near future to adopt plans for the promotion of the League's aims.

#### End of the Chicago Strike

The strike of the 14,500 employees of the surface and elevated street railroads in Chicago was in force for only fifty-four hours. During that time, however, the people of the city suffered much inconvenience. Their needs were only partly satisfied by the thousands of vehicles offered as carriers, and by the increased service of the steam railways on suburban lines. Strike-breakers were engaged, and several hundred were on their way to the city when the settlement was reached. The companies say that no breakers were used, and that the few elevated trains remaining in service were manned by old employees who declined to go on strike. There was no violence which could be traced to a striker, and no arrests were required. The city was directly interested in a financial sense, for the municipal treasury receives about half of the surface railway net earnings, its share amounting to \$2,420,000 last year, and to \$12,000,000 since 1907. A board of mediation was appointed, composed of Mayor Thompson and five Aldermen. This board was successful, after the Illinois State Board of Arbitration had failed.

Success appears to have been due to the labors of Mayor Thompson. There was a conference at his office, which continued for fifteen hours behind locked doors, while he was appealing to and arguing with the union leaders and the railway companies' officers. At last arbitration was accepted, with an understanding that the decision of a board of three persons—the Mayor being one of the three and acting as umpire—should be in force for two years. It was also provided that if wages should be changed there must be an increase. During the conference the companies made three concessions. Associated with the Mayor in the board

## CHICAGO'S MAYOR-UMPIRE

William H. Thompson, who brought both sides in the Chicago traction strike, after a peaceful two-day tie-up of the city's elevated and surface lines, to the point of accepting arbitration. He is to be final umpire on an arbitration board of three

are Maclay Hoyne, the local prosecuting attorney, representing the unions, and, for the companies, John M. Sheehan, who was attorney for the western railroads during the arbitration proceedings relating to the recent controversy with their trainmen.

Encouraged by this settlement, Mayor Thompson attempted to adjust the dispute which has caused four strikes in the building industry at Chicago, making more than 100,000 men idle for several weeks past. But in this field he accomplished nothing.

## A Trust Case Lost

The Government has failed in another suit under the Sherman anti-trust law. Some time ago the Circuit Court of Appeals reversed the judgment of the Federal District Court in the case against John H. Patterson, president of the National Cash Register Company, and twenty-six other officers of the corporation. In the lower court, under the criminal provisions of the statute, all the defendants were convicted, fined and sentenced to be imprisoned. After this reversal, the Government asked the Supreme Court for a review, asserting that the case was one of great importance in its relation to enforcement of the Sherman act's criminal sections, and that the defendants were "steeped in deliberate guilt." The Supreme Court has now declined to review the decision.

It was held by the Court of Appeals that there should be a new trial on the first count of the indictment, because of erroneous rulings and the admission of certain evidence. At the same time it decided that two other counts were void. The Government can now seek a

new trial on the first count, but it is said to believe that it cannot make a strong case on that count because the rejection of the two other counts is virtually a decision that the acts charged in the first one were not unlawful. This is probably the end of the suit.

It is reported that this reverse, following the decisions in the Naval Stores, Shoe Machinery, Steel Corporation and Ship Trust cases, has caused an impression in Washington that there is a reaction against prosecutions under the Sherman act. If, however, the effectiveness of the Sherman act has been impaired, there is an impression that the recent action of the courts has added to the importance of the new Federal Trade Commission.

## The Mexican Problem

Replies from Carranza, Villa and Chazaro to President Wilson's warning leave little ground for hope that a settlement in Mexico can be reached by an agreement of the factions. Villa asserts that there have been reforms and improvements in the territory under his control, and that he has protected foreigners. He denies that there is danger of famine. "We have not arrived at such a state," he says, "that we require help from abroad." He incloses the message he sent to Carranza, urging the latter to accept a reconciliation and reunion in order that either a restoration of the Cientificos or intervention by the United States might be prevented. Chazaro, in his reply, curiously bombastic, like the others, accused Mr. Wilson of issuing a warning not consistent with one of his public addresses. If there should be pressure from this country, he remarked, he and his Government would "maintain the dignity of the Mexican people."

Carranza ignored three messages from Villa. Because he would not listen to suggestions that Mr. Wilson's attitude should be carefully considered, four members of his Cabinet resigned. Two of these, Rafael Zubaran and Luis Cabrera, have been well known in connection with Mexico's international relations. It is said that General Obregon (not dead, but recovering from his wounds) and General Gonzales are in sympathy with the retiring Ministers, and that for this reason Carranza has left his lighthouse home for a residence in a fortress in Vera Cruz harbor.

Our Government, it is understood, is seeking some one who can be made provisional president with Carranza's consent. Such a president would have recognition and be supported by American financial interests. The sale of arms or ammunition from this side of the line to any faction opposing him would be forbidden. Those most frequently named as eligible are Eduardo Iturbide, Vasquez Tagle and Pedro Lascurain. But Carranza is obstinate.

Admiral Howard was ordered to take 600 marines to the Mexican coast near Guayamas, and, if necessary, to land them for the protection of American colonists menaced there by the Yaqui Indians, who have declared war against the United States, Mexico and Germany. Villa's general there, Maytorena, sent 700 of his soldiers to the vicinity of the colony, saying he would give the needed protection and that he would resist the landing of marines with all the force at his command. It is expected that Carranza's army, under Gonzales, will soon take possession of the capital. Villa's men have captured Saltillo, but his main army, in the south, is retreating before Obregon.

## THE WORK OF A TORPEDO?

Fragments of metal found in the *Nebraska* after her injury by an external explosion on May 25, together with photographs of the damage done, have been forwarded to Washington by Ambassador Page, and a minute investigation is being made to discover whether a torpedo—as it now appears—or a mine—injured the ship

# THE COLLEGES AND NATIONAL DEFENSE

BY JOHN GRIER HIBBEN

PRESIDENT OF PRINCETON UNIVERSITY

THE problem of military preparedness is of particular interest in its bearings upon the young men of the higher schools and colleges of our country. I do not believe in the idea that we should endeavor to make our students soldiers, or to prepare them for a soldier's career, but it seems to me a matter of very serious consideration whether it is not wise to provide for them some opportunity to secure a minimum amount of knowledge which will make their services immediately valuable in the time of a great national emergency. In our colleges generally the undergraduates are taught to regard the privileges of an education as creating certain extraordinary responsibilities on their part to make their lives serviceable directly or indirectly to the nation. With this spirit largely prevailing thruout our country it is natural that our young men should consider among their other responsibilities that of preparing themselves in some slight measure at least to defend their land in the possible event of war.

It is certain that our college graduates and undergraduates as well would naturally be expected to enlist in their country's service if there should arise any necessity of a call for volunteers. If war should actually occur, forced upon us against our will and desire, it would not be difficult of course to secure volunteers, and altho many thousands would rally to the colors with admirable spirit and enthusiasm, nevertheless they would be untrained, undisciplined and withal densely ignorant of military theory and practice. It is on this account that the college man should have some little knowledge of military procedure so that he may be of assistance, at the first outbreak of hostilities, to the recruiting and training officers. He could help at a time when help would be most needed. The educated man at such a crisis should be able to offer something more than a willing spirit. He should have the knowledge as well as the disposition to serve his country's need. Courage will not compensate for ignorance.

The great argument for unpreparedness is that after war is declared the volunteer army can be trained for the needed defense of the country, but this policy in our past history has always increased the initial

knowledge and experience widely thruout the entire nation. What I would emphasize is the need of military strength without military display, a reserve power without the diminution of economic efficiency and the serious drain upon our resources which a large standing army necessitates. If we can secure military knowledge and skill in a potential rather than actual form we will avoid all the dangers of a self-sufficient and arrogant militarism. That which creates an aggressive war spirit is the elaboration of the war machine and the subordination of all other interests in a nation to it. Military strength, however, which is available but not visible, and therefore incapable of ostentatious display, will enable us to meet any critical emergency which may arise, and at the same time will leave us free from the domination of a militaristic caste and militaristic policy.

In the line of this idea I urge that kind of instruction in our colleges which can be carried on without any armory, or arms, or uniform, and where there will be no display whatsoever of the external symbols of war, but where instruction may be carried on thru lectures and the study of the problems of tactics in the field. We have planned to do this at Princeton, and to have the course an optional one. It is to be an extra-curriculum activity and is to be under the control of the undergraduates themselves. General Leonard Wood has promised to coöperate in furnishing officers from time to time to give lectures and tactical excursions thru the surrounding country. To supplement instruction of this kind an opportunity is given to all of the students of the higher schools and colleges of our country to attend the summer camps which have been planned by our Government. These camps have passed thru the experimental stage and have proved a great success. The course in these camps is under direct supervision and direction of army officers, and continues thru a period of only five weeks. This furnishes an admirable opportunity of intensive instruc-

*Brown Brothers*  
PRESIDENT HIBBEN

horrors of war and has caused a wholly unnecessary prolongation of the period of war, and an indefinite postponement of the return of peace. To send our untrained youth into battle against a highly trained and efficient military machine is not war; it is slaughter, most cruel and inexcusable, and he who assumes the responsibility of such a procedure is nothing less than a murderer. It is in order to save ourselves from such a bitter and humiliating experience that I feel it is incumbent upon our young men to prepare themselves for their part in the common obligation of averting a national catastrophe. There is a difference which must be kept in mind between a possibility which is one of fancy and purely academic, and a possibility which has a reasonable chance of being realized. The possibility of war is of the latter type and therefore must be reckoned with in all plans for the future.

There are two ways in which so great a people as ourselves may prepare for the defense of our country. One is the concentration of military knowledge and experience in a large standing army, and the other is the diffusion of military

tion in military affairs. While the course is a brief one, in that time quick-witted young men of disciplined minds are capable of remarkable progress both in the theory and art of military procedure.

The main feature of this plan of the summer camps is that intensive training will fit men for useful service in time of a great emergency, but does not aim to prepare them for the profession of arms; thus the professional idea is minimized. The plan can be carried out at a minimum expense both to the Government and to the student. No enlistment is required, no obligation is implied. The young men attending these camps are not liable thereafter to any external call whatever, but solely to that inner compulsion in time of need, such as every true patriot would naturally feel, and to which the man in him would naturally respond. I have been particularly interested in this enterprise, as I have been for the last two years the chairman of the committee of university representatives who have been coöperating with the Government in an advisory capacity to General Wood and his associates at these camps.

**T**HIS plan does not in any way tend to increase our standing army. It is on the contrary a most desirable method of decreasing it. Our actual strength in the field may be diminished in proportion to the increase of our potential strength in the growing military knowledge of our educated men. It is certainly little to ask of the young men of our country who are enjoying the privilege of a college education to give ten weeks of two summer vacations, a time which for the majority of college men is spent in the pursuit of pleasure. Incidentally such a summer course may properly be regarded as a very important and significant phase of one's education. It is no little thing that a young man in the midst of his preparatory years should be able to acquire habits of order, of system, of precision, of punctuality, and of crowding the working hours of the day with labor that tells. Such discipline is a tonic against all sloth and procrastination. Moreover, the association of young men from the various parts of our country in the summer camps emphasizes the group idea of combined effort in a common task. This must surely tend to create a spirit of mutual helpfulness and consideration, which is a lesson that when once learned will not soon be forgotten in after life.

Several objections may be urged to the ideas which I have present-

ed. One is that instruction in military procedure creates a taste for war. This in my opinion represents a very superficial view of the matter. The causes which produce a desire for war on the part of the people lie much deeper; they spring from those darker sources of national greed, the love of conquest, and the disregard of treaty obligations and the rights of a weaker nation. The desire to prepare oneself intelligently to serve his country's need at a time of possible peril does not in itself create the aggressive spirit of war. It serves rather to emphasize the idea of the seriousness of war, and the serious responsibility which any nation assumes which chooses to act as aggressor in so desperate an enterprise.

**A**NOTHER objection is that the exhibition of interest in military affairs by our colleges at this particular time will be surely misinterpreted; it will give the impression at least that war is one of the necessities of national experience. And it is still further urged that the total indifference concerning everything that pertains to war on the part of great intellectual centers is in itself a protest against warfare of any kind whatsoever. The only justification of such a point of view is the theory that war can never be justifiable and that there can be no emergency which would compel our country to take arms against a foreign foe, even tho our land might be invaded.

It is said, also, that if we busy ourselves with military instruction it will prevent our colleges and those of us who represent them from identifying ourselves with the peace movement of the day. I do not believe

this. I feel that if our young men wisely inform themselves concerning the possible military duties which they may be called upon to perform it will in no wise work against the desire to maintain peace in our land and to bring about the day of universal peace for all the earth. Preparedness and a desire for peace are not mutually exclusive ideas. It is not only illogical but morally wrong to assume that all who believe in a wise preparedness are therefore naturally to be regarded as so much inflammable material at the mere suggestion of war.

A fourth objection is that it will be time for us to prepare for an emergency when it comes; that the nation will prove its spirit and power in the time of its danger. This idea is folly. All the experiences of the past in our country and in foreign lands prove that such a fallacy must be paid for dearly in the needless and wanton sacrifice of the best blood of the youth of our nation, to say nothing of the possible horrors which may come to our defenseless women and children.

**F**INALLY, it has been urged that any effort at this time to prepare ourselves for any future emergency will be a manifest disadvantage to our nation when the day of peace comes to Europe. I do not believe this. As we have no desire to increase our army to any conspicuous degree whatsoever, this objection seems to me to have very little force. Our army could be doubled and quadrupled and still its members be such that if all of the standing armies of Europe were reduced to a like basis it would result substantially in a general European disarmament. Our influence can be exercised only in one way, by our stout and determined insistence upon the respect of treaty obligations, upon the rights of weaker nations, and upon a central world-power which will enforce the decrees of a supreme court of international arbitration. This is the field of our influence. The fact that we may endeavor to make proper preparation to defend our rights and liberties as a nation will in no sense prevent us from showing to the world a right disposition to serve the nations of the earth in the cause of our common humanity. The only thing that Europe will resent and will be justified in resenting on our part is a smug complacency or the evidence of any desire to profit as a nation thru the distress and disaster which must inevitably befall these warring peoples in the wake of this, the greatest of all world calamities.

*Princeton University*

## THE CASE IS CLOSED

BY HOWARD M. JONES

The case is closed—the lawyers leave,  
The judge descends, the clerk skips out,  
The jurors take a homeward route—  
What did the learned men achieve?

Well, saving pardon or reprieve,  
A man's to hang—no room for doubt,  
The case is closed.

No work, no home, drank, tried to thief,  
Murdered a man in drunken bout—  
Society looked on without,  
Nobody's business, none to grieve.  
The case is closed.

# A SHOP WINDOW OF CIVILIZATION

BY GEDDES SMITH

IN New York, in a building on Lispenard street, a phonograph is playing. Harry Lauder is singing "I Love a Lassie." In the seat in front of me a Chinese youngster, his eyes shining, is kicking his feet and waving his elbows in excited delight as the Scotchman's infectious laugh comes over—three thousand four hundred miles of wire.

For the Chinese youngster is in San Francisco. He is waving his elbows and not his hands because—like all the rest of us at the big telephone company's pavilion at the Fair—he is tightly clutching the receivers by which we share the use of the longest telephone line in the world.

I know of no better epitome of the Panama-Pacific Exposition than this. It is not merely the wonder of the mechanical triumph that makes it typical. It is not merely the shrewd advertising sense, or the generosity—you may call it either without mistake—which provides this costly entertainment for all comers. Not the cosmopolitan audience. It is all these. It is the effort to put up human achievement in individual packages for the world to come and take.

Yes? But around the corner they are selling carved ivory souvenirs and floor oil and neckties and popcorn and chewing gum. You begin to wonder if after all an exposition is anything more than a department store in costume. There are goods here to be sold and others to be looked at, places to eat and dance and rest. Much of the entertainment is free and some is not, and behind the whole enterprise there is one purpose—to make money.

There are thousands of things, to be sure, that one does not buy, at least not in an ordinary shopping tour. There are looms, presses, engines that tower up into the timbered vault of the great Machinery Hall. But they are here for the same purpose as the popcorn booths. Among the school children and very young wives and husbands and German singing societies and moneyed maiden ladies and the thousand and one other types of Exposition visitor there are not a few business men of importance even to the large-scale manufacturer. And at each booth there is a demonstrator whose duty it is to enlighten the public, to keep the boys from getting more than seventeen souvenirs in succession from the same place, and

—which is their real function—to get in touch with those potential buyers. A vivacious woman who was demonstrating gas-making appliances to a constant stream of interested housekeepers put the function of her class in a nutshell.

"No, I'm not making sales," she said, in answer to my question. "I suppose if any one wanted to buy I would. But I'm the circus parade and band-wagon. The sales come after."

She might have added that she was part of the subtlest and most appealing advertising device the world has ever invented. The exposition idea has so many ramifications that carry its effectiveness far down into the crevices of the public mind that it would be folly to attempt to enumerate them. When, as in the present case, world affairs turn the faces of a continent-full of travelers westward, and when the state to which they look is already running over with local pride and spectacular appeal, the advertising involved is as far-reaching as it is ingenious.

But San Francisco is discreet in the way in which she advertises herself. At San Diego the recipe is "Exploit Southern California." At San Francisco it is "Exploit the World." It is almost as if San Franciscans, when they launched this project three years after the great calamity, set themselves to prove that their city was not so "different" a place as Chinatown and the Barbary Coast and the earthquakes had made it seem. The Exposition is cosmopolitan, international. Tho the Oriental countries loom large among the foreign exhibitions—not only in the industries but also in transportation, education and public health—Californian resources are not greatly emphasized. The buildings are so grouped that they almost turn their backs on the white-flecked waters of the beautiful harbor. "California invites the world," according to slogan, and, with feminine shrewdness, when the world arrives, she entertains it with its own reflection, suggesting rather by implication than by argument San Francisco's fitness for that place in the sun which she expects the Canal to win for her.

This does not mean that the Exposition is lacking in individuality or atmosphere. If ever wood and staff and bunting could convey a definite flavor this work of eight distinguished architectural firms has done

so. The halls are of ivory stucco colored after Travertine stone. The colors against this background seemed to me finest not in the bright sunlight, but on a gray day. Then the buffs and rose and ivory of the buildings and the fluttering russets and saffrons of the pennants, borrowing no brilliance from the sun, radiated their own warmth, and filled the courts with a hint of old Castilian romance that no other part of the country could wear so well. At night, the white and pinky glow from millions of concealed lights, soft and clear as it is, hardly compensates for the braver coloring that the daylight reveals: it is a trifle too pretty. And as for the much-bruited Tower of Jewels, darkness finds that cold and glittering, for all its rosy cornices. It suggests Dobson's *belle marquise*, bejewelled, pale.

But this is digression. By way of frankly Californian interest there is the great state building, "by far the largest ever erected at any exposition in history." As the guide-book somewhat naïvely confesses, its architecture is a mixture of the California missions "so combined and developed as to form a structure which would certainly seem unfamiliar to the old Mission builders," and beside its generous facilities for entertainment it contains quite as much information about California products, county by county, as a visitor could well absorb. But in the swirl of exhibits this is far from pre-eminent.

California prides itself on a climate which makes it possible to exhibit sculpture—even plaster models—out-of-doors, and the charm of the Exposition reaches its zenith in the curving colonnade and lagoon about the Palace of the Fine Arts. By a skillful massing of foliage niche after niche is provided for the statuary that links the exhibit hall with its beautiful forecourt. Nowhere else about the grounds is there so intricate a blending of water and structure and greenery into a whole that literally rewards every forward step with a new bit of loveliness.

When you go out of fairyland, however, and into the businesslike exhibit "palaces," you are at once in the grip of the wonderfully various ingenuity of the publicity expert. If he is not very much of an expert he has simply stacked up his goods for you to see, counting on quantity

or geometrical comeliness to fix your attention. But that is no more than the shop-window of your corner grocery offers—if it is a good grocery—and while the Exposition may be the shop-window of civilization, you expect, quite rightly, something more than that. So the salesman-by-implication goes a step farther and makes his goods do something entirely irrelevant but yet amusing, and you linger long over a thrilling landscape with leaping cataracts and wriggling fauna all made out of hardware. The display has no bearing on the merits of the article, but it checks the flow of the sight-seeing crowd, and scores.

Of course the important thing is to make something move. "See the scissors cut," shout the small boys who approach the booth with the hardware landscape. "Loog, baby, loog, the wader how it splazh," says the not-too-American mother who strolls by the loveliest little fountain on the grounds. "Really mahvellous," murmurs the lady from the East as she surveys the huge Hoe press which is reeling out a San Francisco Sunday supplement right where everybody can see it. And they are all fascinated by the thing that goes.

There is a staggering amount of motion at the Fair. Photographs there are, to be sure, but the publicity experts have not lost sight of the fact that this is the first great exposition since the popularization of moving pictures, and you often find a dozen little cinema theaters in a single building. Pictures of tourist trips and of characteristic industries are shown by states and counties; shop scenes by great corporations; departmental activity by the Federal Government; and so on far into the everyday life that lies back of the Exposition. Where the genuine movie has not been prest into service there is the stereomograph—which is a machine shaped very

much like its name—that shows ordinary stereopticon slides automatically, caption and all.

But even the movie is a secondary sort of spectacle and on the "Zone" they are careful to specify nowadays that the *wonn-derful* attractions they offer you for your dime or quarter are *not* moving pictures. The exhibits that draw are those that show real machinery doing real work—looms that weave, pumps that pump, talking machines that talk. If the real machinery or real ranch is too big, a model that goes is almost as good. And when you make a mechanical toy out of a familiar machine—like the fourteen-ton typewriter that thuds out its bulletins on a giant sheet of paper high overhead—you have an exhibit that vies with the free food samples in its universal appeal.

The commodities which a government exchanges for the taxpayer's coin may not be comparable to simpler merchandise, but good salesmanship is just as important in one case as in the other. It is rather easier to persuade a man to buy your brand of safety razors than to make a really intelligent purchase of governmental service. "Avoid substitutes; ask for genuine democracy and take no oth-

er" is a pretty good slogan; if we had always observed it we should not have been tricked with adulterated liberty so often. Wherefore it is encouraging to observe that the men who are spending the public money are quite as enterprising publicity experts—at least so far as the Exposition goes—as the men who are luring the public to spend more money. If the National Government should ever appropriate its funds in the business-like way now followed in New York City, the generous representation at the Fair from thirty-odd different departments of the Federal service would make admirable stuff for a budget exhibit. Many of the states, too, are conspicuous for the ingenuity and significance of their exhibits, even in the intangible fields of education, public health and social service. Here sugar-coated statistics reach their most magnificent development. A great relief map flashes variously colored lights to show New York State's educational facilities; cost-of-living curves trace themselves in crawling lines of light; death-rates are bluntly illustrated by processions of manikins that run their allotted course and drop out of sight as tho on the bridge of Mirzah's Vision.

It is amusing to observe, among all this sober educational information, that Cuba enlight-

## THE LAST WORD IN AVIATION THRILLS—A

"ART" SMITH, WHO NOW WEARS THE PERILOUS CROWN OF POPULARITY AS A DAREDEVIL AVIATOR, MADE HIS COURSE AS HE CLIMBED GRADUALLY, SHUTTING OFF THE LIGHT ON HIS AEROPLANE AT HIS MACHINE LEFT. BELOW HIM ARE THE BUILDINGS OF THE BIG FAIR, TO WHICH

# ILLUMINATED AEROPLANE LOOPING THE LOOP

FLIGHT OVER THE PANAMA-PACIFIC EXPOSITION GROUNDS. THE LONG HORIZONTAL LINES SHOW  
A STARTLING DESCENT CAN BE TRACED IN THE TRAIL OF ILLUMINATED SMOKE WHICH  
METHODS OF INDIRECT ILLUMINATION HAVE BEEN APPLIED ON A GRAND SCALE

ens the public by several appalling models showing the imperative necessity of abolishing the fly. Colonel Gorgas taught that lesson well. And from Japan there is a relief map of Fuji—not as an object of mystic veneration, but as the hinterland of a modern health resort!

On every hand you heard it said that Canada was easily first among the foreign national exhibitors—nineteen of them in separate buildings in spite of the threatened “boycott”—and this altho agricultural products, *per se*, are unpromising material for display purposes. The publicity devices in its fine pavilion were unusually ingenious and there were placards with quaint comments which added a touch of good nature to the strictly business-like air of the average exhibit and left the visitor with a friendlier feeling for the great young commonwealth than for many of the dignified states whose exhibits were more conventional. Which, of course, was precisely their purpose.

It is just this underlying conviction that people are worth humoring—because they may some time change their country, their business, or even their favorite brand of baking powder or breakfast tea—that makes such publicity, like all advertising, socially significant. Because people do not stay put, it is worth while for California to tax itself generously and San Franciscans

to subscribe seven and a half millions and individual exhibitors to spend six and a half and other participants to contribute their share to the fifty millions which, it is claimed, are invested in the Big Fair. California particularly is an evidence of this American mobility, for the typical resident, at least of Southern California, is an Easterner transplanted—and rather recently transplanted. Indeed an enthusiastic Utah demonstrator at San Diego insisted that the great migration from the Middle West to Southern California is now being succeeded by a re-migration from the orange country to what there is left of Utah when you subtract the mountains!

The children, to be sure, have all their own choices to make, and their minds are virgin territory for the publicity man. Aside from the fact that the whole Exposition is directly aimed at the child in all of us—and that most of us, 50,000 a day, who visit the Fair, see the mechanical toys and the bright colors with a child's unreflecting delight—there is some deliberate catering to the real estate buyers of the next generation. Thus, this official if ungrammatical statement is made of the California counties exhibit: “For the future citizens, the children, will be made a display so attractive and out of the ordinary that there will be indelibly impress on their minds the importance of the County of Sonoma, believing there can be created in these future citizens walking advertising mediums.”

San Francisco is doing its part. Public school children, class by class, are sent to tour the buildings. The net educational results are problematical. I overheard one young lady in practical-looking pigtailed remark, as she stood in the midst of a fascinating display

of Oriental handiwork, “Oh, gee, we got to wait here an hour an' a half!” But perhaps her ennui was partly due to the pedagogical persistence of the teacher, who was utilizing the exhibits after this fashion: “All that's made out of ivory—where do we get ivory?”

Meanwhile, the barkers on the Zone add to their stock of dimes and the hostesses in the state buildings add to their stock of prestige and back of it all San Francisco waits for her own less tangible profits. She will earn them. The Exposition—like all its predecessors—may be no more than a great agglutination of units which could all be duplicated elsewhere. But the whole is greater than the sum of its parts. The curious mixture of everything, dissolved in the flowing stream of visitors from everywhere, is a new creation, no matter how familiar its elements. Even the Government exhibits alone are so far from the commercial as to nullify the department store analogy. Granted that back of the obvious cash returns there are tenuous and far-reaching publicity values sought after, still there are marginal aspects in which the Exposition becomes a disinterested educational spectacle. If it is, to repeat, the attempt to put up human achievement in individual packages, the enterprise is frankly one of profit-sharing.

Panama-Pacific Exposition

THE MAIN BUILDINGS ARE GROUPED ABOUT WARMLY-TINTED COURTS, EACH WITH A FAMILY OF SYMBOLIC STATUES

# OUR "INCORRIGIBLES"

BY MARION HARLAND

AUTHOR OF "WHERE GHOSTS WALK," "LITERARY HEARTHSTONES," "THE DISTRACTIONS OF MARTHA"

A PRECOCIOUS four-year-old boy saw a plate broken by the fall of a fork upon it. His mother picked up the fragments and inspected the edges of the fracture.

"It was cracked already," she pronounced, "or it would not have broken so easily."

An hour later the boy had a grievous fall and she ran to pick him up. "My darling! have you broken your poor little head?"

"I fink so!" sobbed the sufferer. "But it was cwackit a'weady, or it wouldn't have bwoke so easy!"

The anecdote recurs to me with whimsical persistency in reading disquisitions upon "The Modern Girl," set a-going in secular and religious papers by the appeal of a New York mother to the law for assistance in restraining her young daughters from associating with undesirable companions and from extravagant expenditure of liberal means. "Incorrigibility" was the form of arraignment before the court. The plea of the parent that she had done her best to restrain the wilful creature, who at seventeen supplied "copy" for the daily prints all over the United States, was confirmed by the evidence of friends and relatives.

It is not my intention to dwell upon the details and the result of this particular instance of defective family government. What struck me as significant in the affair was that nobody exprest surprize at the revelation. One mother had confest openly that she had been driven to extremity. If public opinion, as conveyed in newspaper and conversation, were to be credited, Society, in all walks of American domestic life, is so familiar with the idea of the Daughter's Domination and the Mother's Vassalage that the aforesaid extreme case was hardly a week's wonder.

The residuum of the ferment of talk was the general inquiry—"Who is to blame for this monstrous wrong to family and community?" With marvelous unanimity the verdict was rendered: "The mothers are more culpable than the daughters. What are they thinking of that they do not put an end to lawlessness of speech and behavior? The remedy is in their hands. Let them act, and promptly!"

"Incorrigibility," we were told, should not be so much as named in connection with the *débutante*. She should be wax in the deft fingers of the mother who bore her, and to whom she owes love and obedience.

The root of the evil is in the absorption of the matron of this generation in fashionable frivolities, and almost as fashionable philanthropies and politics, to the shameful neglect of home and offspring.

As I have said, it is in listening to these faultless theories that the story of my four-year-old's apology for his broken head comes back to me:

*"It was cwackit a'weady!"*

The mother who begins to "control" her prankish daughter when she is on the edge of early womanhood, is a matter of eighteen years too late. The noxious weed of Incorrigibility is not the growth of a single night—or of one season. The fine china of character was cracked already or it would not have broken so easily.

The Royal Preacher reprobates as unwise the lament over the "former times" as "better than these." His admonition is echoed with what I am tempted to call vicious emphasis, by latter-day writers upon Home Education. The nursery in which our grandmothers bore rule was "a despotic monarchy." Our children flourish under a republic. Self-development according to natural laws; the God-given right of the newly-made immortal being to live its own life and enjoy its own individuality, are no longer themes open to discussion. They are axiomatic. The rod is as obsolete as the thumbscrew; both were equally barbarous.

I would guard the reference to corporal punishment before I go a step further. In some of the happiest and most wisely governed households I have ever had the happiness to know, the rod, as a mode of chastisement, was unknown. I have yet to see a well-managed nursery in which punishment of some kind for wrongdoing was a dead letter. Wilful transgression and consequent penalty, sin and suffering, should stand for cause and effect the world over.

"When should I begin my child's education?" asked a young mother of a matronly friend.

"It should have been begun the day she was born!" was the rejoinder. "Weeds spring up sooner than flowers, and grow faster."

A disciple of the New Thought caught up the word:

"That is the cant of Maternal Servitude! I recognize the heading of 'Chapter First.' My dear lady! are you still lingering in the shadows of the Middle Ages?"

I maintain in defense of the "Middle Ages," that Motherhood, so far

from being servitude, is the noblest mission to which a woman can be called.

Moreover, I challenge contradiction of the assertion that there is the same difference between characters and minds molded by the mother who estimates aright her high and holy calling, and those committed to hirelings (no matter how faithful and expert) as between home-made and "contract" manufactures.

Sixty years ago a school-girl said to me:

"When I am in doubt as to the right or wrong of any course I am disposed to take, I ask myself—'Can I tell mother what I mean to do?' If I am not altogether willing to talk it over with her, I know there is something wrong about it."

The simple test was, for the daughter, the touch of Ithuriel's spear. She had learned by heart, and for life, the meaning of the first word of the Commandment with Promise. She "honored" her mother in word and in deed.

I wonder how much the failure to comprehend and to weigh aright this same "first word" may have to do with the mental attitude of "Incorrigibles." I am amazed and pained by the frequency of the confession on the part of affectionate, well-meaning mothers—"I am a back-number!"

One added yesterday in my hearing:

"We mothers are left clean out of sight in the running of girls, nowadays!"

I should have blushed to own it. She laughed!

The girl who has been taught from babyhood to honor her parents is incapable of the undutiful vulgarity of banning her mother as a "back-number."

Harking back to the homely illustration with which my Talk began, I submit another and yet more apposite figure. A builder once explained to me that hard-wood, even of excellent quality, must undergo a certain process of seasoning and manipulation before it could be warranted against "checking."

"That is, going into little cracks all over the surface," he explained at my look of inquiry. "When that happens, nothing can be done for it."

I set down the quaint phrase in my note-book.

It fits patly into the study of the eighteen-year-old "incorrigible" and her congeners.

New York City

# THE WORLD OVER

Formosa, Ceylon, or California, Ma'am?

"California? What do you mean? You can't grow tea in this country," you would probably reply if your grocer asked you such a question. But Sir

ONE OF THE PIONEER TEA PLANTS  
Goonatilleke stands behind it. The cloth protection is not to shade the plants, which need sunshine, but to keep off the direct salt wind

Thomas Lipton and Mr. Vincent Goonatilleke think that you can, and they are proceeding to find out by trying it.

Just across the way from the model five-acre ranch at the Panama-California Exposition in San Diego is a little garden with big possibilities. It contains two hundred tea plants brought straight from Ceylon. They were set out last December, partly as an added attraction for the big outdoor show, but chiefly to settle the fate of tea in California. Vincent Goonatilleke, Senegalese by race, came with the plants as their caretaker. They keep him busy.

"I can tend two hundred acres of tea in Ceylon," he says. "Only two hundred plants here." The trouble is mostly with the salt wind from the Pacific, which blights the leaves almost as soon as they appear. The pioneer plants have been hurt by storms, too, so that in six months they hardly suggest that the California soil is hospitable. But the climate is favorable and there is good hope yet for the new brand.

California tea will not necessarily be a new flavor, for the variety in teas results from the choice of drying methods—there are no less than seven in use in Ceylon—and not from differences between species. But we shall doubtless have new blends and trademarks; any-

thing else would be foreign to California enterprise. In Ceylon the picking is done for ten months out of the twelve, tho the little leaves are at their best in May, when the plants would blossom if they were allowed to do so.

Six months is, after all, not very long in the life of a tea plant. There are bushes in Ceylon, still bearing, forty-five years old, and Chinese growers claim that some of their stock is twice as old as that. The eagle may yet have occasion to scream over the cup that cheers but not inebriates.

## An Ounce of Prevention

As the chemist solves his problem by analyzing a compound into its elements, so the sociologist in his effort to deal with poverty breaks it up into simpler rudiments—accident, sickness, old age and unemployment. Thus reduced to concrete factors scientific procedure means striking at the causes rather than curing the disease. We seek to prevent more human misery instead of simply ameliorating what already exists.

Each of the four causes of human misery—industrial accident, sickness, old age and unemployment—are risks all working people run. Accident, sickness or unemployment fall with crushing weight upon the individual. At one stroke they cut away the foundations of self-support and make the victim destitute. Since all run the risk, the sensible way is to combine resources and distribute the burden over the larger group by means of social insurance.

Germany established her system of compulsory state insurance against industrial accident, sickness and old age more than thirty years ago. In 1902 some 19,083,000 workers were insured against accident, 10,320,000 against sickness, and 13,381 against invalidity. The cost is shared by employee, employer and state. The benefits paid in cases of injury from industrial accident, sickness or helpless old age are enough to keep a person from destitution. Following Germany, England has more recently completed a system of compulsory state insurance against industrial accident, sickness, old age and unemployment.

In England an insured workman receives free medical and

hospital care and \$2.44 a week for not more than twenty-six weeks when sick; in case of industrial accident he receives additional cash compensation for the injury; at seventy he receives a pension of \$1.25 a week when his other yearly income is not in excess of \$105; when unemployed he receives after the first week of unemployment, \$1.75 a week for not more than fifteen weeks a year.

In this way the workman is protected from misery in all the larger contingencies which are likely to arise in human life. The benefit, granted only after careful avoidance of fraud, is large enough, considering the standard of living of the working class, to tide the person over the period of helplessness. Thus the basis of self-respecting independence is maintained and the misery which would ordinarily result is prevented. By requiring all insured persons to contribute their share of the premium, a sense of responsibility essential to the preservation of their self-respect is fostered.

## Unbreakable Glass

Another seemingly impossible invention is to be credited to the demands of the motorist and to the ingenuity and zeal of the men who find it worth while to satisfy them. By placing a sheet of specially selected clear celluloid between two sheets of plate glass and pressing the three together hydraulically, a sheet of glass has been made which is admirably adapted for wind shields and windows in automobiles.

The glass is for all practical purposes as clear as any ordinary sheet of glass, and while it was found that dropping a two-pound weight on it made the glass bulge out on the opposite side, it did not splinter. So another old proverb is exploded. People in glass houses can throw all the stones they want to now, if their houses are made of the new unbreakable glass.

FOUR WAYS TO BE POOR

BEFORE

The seal which was cancelled on June 24, 1915

### An Old Seal and a New Flag

"The Mayor of the City of New York requests the honor of your presence in the Aldermanic Chamber, City Hall, on the occasion of the adoption of the new official City Flag and the celebration of the two hundred and fiftieth anniversary of the installation on the twenty-fourth of June, One thousand, six hundred and sixty-five, of the First Mayor and Board of Aldermen of the City of New York."

This invitation, engraved with the seal and flag of the City of New York, has all the impressive dignity of a royal command. For it promised an event of great importance in the life of the largest city in the world—a linking of the old with the new in the commemoration exercises of New York City's 250th anniversary, at which time the restored city seal and the new city flag were formally adopted.

New York, in common with the other hostesses of June's predominant festivities, followed the time-honored "good-luck" adage and wore "something old, and something new, something borrowed and something blue" on this great occasion. For the seal is an accurate reproduction of the one first used in 1686 and bears the symbols borrowed from the coat-of-arms of New Netherlands, from the equipment of an English sailor of the seventeenth century and from the costume and head-dress of the Manhattan Indians. But the flag is new—the first official city flag of New York—and is made of the orange, white and blue which were the first colors to float over the Island of Manhattan. These colors are arranged in wide vertical bars—the blue nearest the flagstaff and the white in the middle, with the seal of the city on it.

Mr. John B. Pine, chairman of a special committee appointed by the Art Commission Associates, explained in his report the aim of the committee to present a flag distinctively New York's, which should tell the story of the city's origin and growth. "To the courage and enterprise of the little band of Dutchmen who first landed on these shores the City of New York owes its beginning, and it is largely the love of

civil liberty and the ideals of democratic government which these men brought with them that have made New York what it is today. We ask you to commemorate this service and embody these ideals in the official flag of the city. In our flag the colors are Dutch, the arms are English, the crest is distinctively American, but the flag as such is the flag of the city, which has grown from these beginnings to be the home of all nations, the great cosmopolitan city of the world, the City of New York.

The design for the city seal represents a conscientious effort to restore the ancient corporate seal of the city so far as that is possible. It bears the date of 1664, when the city passed under English control and was named New York. The beavers which appear on the shield preserve the characteristic feature of the coat-of-arms granted to the New Netherlands by the States General of Holland, and the wind mill and flour barrels signify the prevailing commerce and industry of New York's early days. On the seal is the legend giving the name of New York in the Latin form. The general characteristics of this seal have been preserved from the date of its adoption to the present time.

### Our Happy Zinc Miners

The war has brought great prosperity to the district where zinc is mined in this country—southwestern Missouri, southeastern Kansas, northeastern Oklahoma and a little corner of Arkansas. Before the fighting began, the price of zinc ore was \$40 a ton, and zinc was selling at about five cents a pound. Now the ore is \$112 a ton, and eager buyers are paying 29½ cents a pound for spelter, or refined zinc, which is a large component part of the brass used in making cartridges and other ammunition. About one-seventh of the world's supply of spelter is produced in the district above mentioned, whose chief city is Joplin. In normal times nearly one-half of the world's output came from Germany and Belgium, but this half the Allies cannot have now.

In the Joplin district a year ago there were many abandoned mines and idle zinc mills, but now a great many men are hoisting ore from shafts, new and old, by horse power, washing it out and making from \$200 to \$300 a week. Mills that cost \$10,000 or \$20,000 have paid for themselves in thirty days. No mine shaft goes down more than about 200 feet. To sink such a shaft costs less than \$200, and there has been plenty of land which prospectors could lease for ten per cent royalty. Profitable ventures have been made by many little groups, in which are seen farmers, barbers, waiters and men of a great variety of callings.

Many stories of the success of prospectors are told. A young man named Davis, graduate of a mining school, bought, before the war, for himself and several associates, an abandoned mine for \$10,000. The entire investment was

AFTER

Now the official seal of New York City

only \$20,000, but when the price of ore had risen to \$75, the profits on one acre were \$280,000. Another investor, leasing an adjoining tract, has cleared \$75,000. Still another, leasing land near by, found no ore and lost \$15,000. Three who leased an abandoned shaft have been making several thousand dollars a week.

Before the war, two brothers named McDonald leased the property of a bankrupt miner. Their profits have been \$3000 a week. Altho they began with only a few hundred dollars they expect to clear not less than \$500,000. A woman loaned \$3 to pay the assessment of the owner of one-eighth of a mine, and is now receiving \$100 a week for the interest given to her by the borrower. A miner who stacked up his ore, beginning a year and a half ago, holding it by means of borrowed money because he believed the price would rise, has sold the ore at a profit of \$150,000.

And the price is still advancing. Many in the Joplin district who were poor are now rich, and their gains are growing.

### The Weather Man

To guess at the weather for a week ahead—and guess right, too—is the Government's latest venture in behalf of the farmers. The United States Weather Bureau has inaugurated a system of weekly weather forecasts, which are prepared at Washington on Tuesday morning and cover the week commencing Wednesday morning, when if the mails and the newspapers do their part, they should be a matter of common gossip at the corner store.

This service was planned for the special benefit of the corn, wheat and cotton districts and for any shipping centers where perishable goods need to be handled with reference to probable weather conditions. Five large districts have been mapped out—south Atlantic and east gulf states, Ohio valley and Tennessee, region of the Great Lakes, upper Mississippi valley and plains states, and west gulf states. Scattered thruout these regions are distribution centers, to which the forecast is telegraphed and from which it is sent by mail thruout the territory.

# A lather that really soothes your face

Most men look on their shaving soaps in a rather adventurous spirit—they will try anything *once*, whether powder, paste or stick.

But when they come to Resinol Shaving Stick they generally stop—or come back if some ingenious box or clever advertisement *does* tempt them afieid.

Its lather is really exceptional—a thick, creamy foam that dries slowly and thoroughly softens the stubbornest beard.

Its slight fragrance is carefully chosen to please the discriminating man who objects to soaps which leave any perfume or "barber-shop" odor on his face.

But, best of all, Resinol Shaving Stick contains just enough of that soothing,

healing Resinol medication\* to prevent all tense, smarting after-effects and to leave the skin comfortable, refreshed and free from shaving-rashes.

Men who are in the habit of using some application after shaving usually find that Resinol Shaving Stick makes this needless.

Resinol Shaving Stick is not an experiment—it has been sold by first-class druggists for many years. If your druggist *does not* carry it, send his name to Dept. 5-B, Resinol, Baltimore, Md., and we will mail you a trial size Resinol Shaving Stick—enough for twenty better shaves.

\*This Resinol medication has been prescribed by physicians for twenty years, in Resinol Ointment, to heal skin affections, and is widely used by careful women, in Resinol Soap, to keep the complexion clear and the skin free from irritations.

# Resinol Shaving Stick

### GRAY MOTORS AND BOATS

50 Leading Boat Builders have joined with the Gray Motor Company in issuing a catalog showing the specialties of each, which includes fishing launches complete from \$125 upward to mahogany finished express launches with Self-starting 6-Cylinder 4-Cycle Gray Motors for \$2500. Cruisers from \$450 up. This book helps you select just the model of boat you have been looking for and tells you where to buy it and what it will cost. Send for this big Boat Catalog today. Free. Also Gray Marine Engine Catalog showing full line of 2 and 4 cycle marine motors from \$55 upwards, one to six cylinders. Gray Motor Co., 356 Gray Motor Bldg., Detroit, Mich

## The New Books

### THE EDUCATION OF THE ADOLESCENT

Nothing in the contemporary readjustments is more striking than the emergence of the adolescent into the very center of social, economic and educational interest. With comparative suddenness he has been discovered by his "employer" to be woefully unprepared and "inefficient"; by the social worker to be exploited and demoralized only to be cast upon the scrap-heap; and by the educator to be at once more sensitive than the younger children and less amenable to the traditional school methods. An indication of the rapidity with which the adolescent has become a problem for the educator may be found in the fact that in two decades the high school registration has grown *ten times as fast as the general population*. We may well believe that those responsible for the organization and administration of these schools were not prepared to deal with the new situation. The difficulty is seen to be still greater when we recognize the far-reaching social and economic changes that have made upon the schools new and heavy demands.

We have before us seven of the season's books that deal specifically with the high school problem, and there are others that take up special phases of education touching more or less directly upon the adolescent period of the pupil. Professor Stout of Cornell College (Iowa) attempts to condense into one volume<sup>1</sup> of moderate size the principles pertaining to the organization and administration of high schools, together with a survey of the changing social and educational conditions that call for reorganization, and a discussion of the functions of the high school. To the traditional preparation for college, which is rapidly becoming a secondary—or even a subordinate—function, are to be added physical and health education, preparation for the enjoyment of leisure, vocational adjustment, and training for social efficiency.

In recognition of the complexity of the high school problem, Professor Monroe of Columbia and Professor Johnston of the University of Illinois have prepared two volumes in the manner of the symposium, specialists writing upon the various topics. What these books lack in unity of style and outlook, they make up in thoroughness and comprehensiveness. Monroe's book<sup>2</sup> may be considered as more general. After a survey of the scope and history of secondary education, there is a description of the systems of France, Germany, England and the United States. Nearly half of

## Longmans' New Books

### The Arya Samaj

An Account of its Origin, Doctrines and Activities, with a Biographical Sketch of the Founder

By **Lajpat Rai**. With an Introduction by Professor Sidney Webb, LL.B., University of London. With 10 Illustrations, including a Portrait of the Swami Dayananda. Crown 8vo, \$1.75 net.

This is the first systematic account in English of one of the most active intellectual movements in India, having some 250,000 adherents.

### What Should I Believe?

An Inquiry into the Nature, Grounds and Value of the Faiths of Science, Society, Morals and Religion. By **George Trumbull Ladd, LL.D.**, Emeritus Professor of Moral Philosophy and Metaphysics, Yale University. Crown 8vo, \$1.50 net.

Already Published: WHAT CAN I KNOW? WHAT OUGHT I TO DO?  
In Preparation: WHAT MAY I HOPE?

From the Marne to Neuve Chapelle  
Crown 8vo, 312 pp. \$1.75 net.

The book contains all the descriptive accounts by "an eye-witness present with General Headquarters," issued by the British Press Bureau up to the end of March, 1915, and is of singular importance.

### Railroads: Finance and Organization

By **William Z. Ripley, Ph.D.**, Harvard University. With 29 Maps and Diagrams. 8vo, \$3.00 net.

"No such exhaustive treatment of our railway problem has ever before been attempted, . . . pronounced success . . . this will long remain the standard authority on the subject."—*Nation*.

### The Cup of War

By the author of "Wayside Lamps," etc.  
Fcap, 8vo, \$1.35 net.

This is a story of a member of England's New Army, how he drove his own car in the service of King and Country, got a commission, set off for the front, and what happened to prevent his getting there.

### Hugh: Memoirs of a Brother

By **Arthur Christopher Benson**. Illustrated.  
\$1.75 net.

"The charm of the personality of the youngest brother (Mgr. Robert H. Benson) is admirably reflected in the charm of the literary style of the eldest."—*Boston Transcript*.

**Longmans, Green, & Co.**  
Fourth Avenue and 30th St., New York

### Portraits of the Author

The introduction is written by Bishop John H. Vincent, and the foreword by Dr. W. Garret Horder of England.

Price \$1.25 Postpaid

**THE NUNC LICET PRESS**

920 Nicollet Ave. Minneapolis, Minn.

the book is given up to the functions and methods of the various elements of the curriculum, with chapters on the social aspects and reorganization of secondary education. Johnston's book<sup>3</sup> assumes from the start that the problems of the high school have become specialized because of new social conditions, and deals with the socializing factors as paramount. It treats of the high school as a social, a business enterprise and as a legal institution; of its relation to the elementary schools, to higher educational institutions, and to the industrial life of the community.

An attack upon the psychological and physiological basis for segregating the adolescent for educational purposes is presented in compact and convenient form by Dr. Irving King.<sup>4</sup> This should be of interest not only to educators and administrators, but to all who have children of this critical age.

The organization of the high school as an administrative problem is analyzed in Dr. Ballou's volume<sup>5</sup> in the "School Efficiency Series." This is an elaboration of the material presented in the Hanus report on the schools of New York City. In the same series appears Professor Davis' High School Courses of Study.<sup>6</sup>

In Dr. Kemp's book<sup>7</sup> on methods for elementary and secondary schools, the adolescent hardly receives his due; he is being exploited for the widespread interest in his problems.

Professor Parker of the University of Chicago<sup>8</sup> discusses methods in terms of the relation between the child and his environment. The author aims to bring about a better type of school product by radically adapting all instruction to contemporary social needs; by basing methods of instruction, so far as possible, on psychological principles experimentally determined; and by applying principles of scientific management to the conduct of school operations.

One cannot avoid being impressed by two outstanding facts in the present educational ferment: we are moving steadily toward a socializing of the results of education, thru the process of individualizing all the methods employed.

### LOCAL COLOR

It is an illusive pigment—this local color—and many are the authors who grope for it. Mrs. Chetwood Smith saw the possibilities in a quaint spot on the Maine coast and staged her little romances there. But her delight in mere wordiness as an end in itself kills the real atmosphere of Cranberry Cove and her conventional eyes miss its simple romance.

Spinners of French-Canadian yarns,

## "We'll just put him on Sanatogen"

What a happy thought prompted that decision! He wasn't his "old self" at all—and try to mask it as he might, his face showed only too well how poorly he felt. And so when a friend—with conviction born of experience—spoke of Sanatogen, they "put him on Sanatogen."

Sanatogen—combining the tissue-building properties of a FOOD with the invigorating qualities of a TONIC—rejuvenated his appetite, improved his digestion, brought rest to his nerves, made good the over-drafts upon his energies—and little by little brought back that old-time vigor and sprightliness and joy in living.

Perhaps you have not yet had this happy thought—perhaps you haven't yet "put him on Sanatogen."

Then simply let us tell you this: Over 21,000 physicians have testified in writing to the value of Sanatogen after having observed its effects in daily practice. So, too, have hundreds of famous men and women whose very names must be convincing—people who know from personal experience the restorative help that Sanatogen gives. It is a verdict that cannot be mistaken.

When will you give Sanatogen the opportunity to help him, or her, or you?

Col. Henry Watterson, the famous editor, writes: "I feel I owe it to truth to state that I have made a thorough trial of Sanatogen and that I have found it most efficacious and beneficent. I do not think I could have recovered my vitality, as I have done, without this Sanatogen operating equally upon the digestive organs and nerve centers."

Sanatogen is sold by good druggists everywhere in sizes from \$1.00 up

Grand Prize, International Congress of Medicine, London, 1913

**SANATOGEN**  
ENDORSED BY OVER 21,000 PHYSICIANS

Send for Elbert Hubbard's new book—"Health in the Making." Written in his attractive manner and filled with his shrewd philosophy, together with capital advice on Sanatogen, health and contentment. It is FREE. Tear this off as a reminder to address THE BAUER CHEMICAL CO. 26-R Irving Place, New York

## Here Is the Camp for Your Boy

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 203 West 102nd Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

however, rarely fail of atmosphere, perhaps because if they would write at all they must know whereof they speak. J. F. le Rossignol found a splendid young habitant, *Jean Baptiste*, about whom to center his story, but his book is uneven, as tho he were in haste to be done, good where his story gripped him and poor where he gripped his story.

But *Zenas Henry* and *Local Color* walk arm in arm from start to finish of Sara Ware Bassett's delightful story of Cape Cod. *Zenas Henry* and his house were queerest of the queer. Then Abbie took the helm into her capable hands and both owner and house changed a bit, but so did Abbie and so did the three "washed-up" captains. The book is a treat—breezy and humorous with the kindness that laughs with, but never at, folk.

*Cranberry Cove Stories*, by Mary Chapin Smith. Boston: Richard G. Badger. \$1. *Jean Baptiste*, by J. F. le Rossignol. E. P. Dutton & Co. \$1.50. *Zenas Henry*, by Sara Ware Bassett. George H. Doran Co. \$1.25.

### WORK IN THE WOODS

The wholesome spirit of out-door life pervades *The Log of a Timber Cruiser*, a real record of the work of a United States forester in the mountains of southern New Mexico. William Pinkney Lawson has given us the intimate, interesting details of the forester's life as well as the big, underlying purposes of his work, and he compels the reader's interest by keen humor, clear-cut descriptions and breezy narrative.

Duffield. \$1.50.

### CORINTHIANS

A new volume in *The International Critical Commentary* emphasizes the excellent quality of this great coöperative work. Professor Alfred Plummer of Durham gives an admirable treatment of *Second Corinthians*. He regards the fragment in Chapter VI as an integral part of the epistle, but favors the hypothesis of a different letter covering the last four chapters.

Scribner. \$3.

### CLUES FOR FOREIGN SALESMEN

The needs, resources and the national traits and characteristics of each one of the South American republics as a foreign salesman must know them make up *Selling Latin America*, which W. E. Aughinbaugh has compiled from his eighteen years' experience. There is much useful information also on packing, finances, credits, etc., essential in foreign trade. In view of the centering of commercial interest in the southern continent the volume is particularly timely.

Small, Maynard. \$2.

### THE AWAKENING ORIENT

How the Far East, following its opening to the European, has reacted to the stimuli of Western civilization is the subject which G. Lowes Dickinson has developed in his *Essay on the Civilizations of India, China and Japan*, submitted as his report to the Albert Kahn Traveling Fellowship trustees. It is to be hoped that so fascinating a sketch will be later expanded and some of Mr. Dickinson's more striking deductions, slender as they now stand, set out at greater length.

Doubleday, Page. 60 cents.

### THE LOWLANDERS

From the day when Cæsar's legions faced the savage charge of the Nervii across the Sambre to the flight of Albert's army from shattered Antwerp the lowland countries have been the scene of reckless bravery, of most stubborn sacrifice for liberty. Charles Morris in *Famous Days and Deeds in Holland and Belgium* tells in spirited, straightforward fashion of the lives and deaths of heroes in the land of dykes—a narrative that is full of inspiration for young and old, European and American.

Lippincott. \$1.25.

## PEBBLES

The man who can size up the other fellow is clever—the man who can size himself up right is enlightened.—*Puck*.

Young Writer—What magazine will give me the highest position quickest?

Literary Friend—A powder magazine, if you send in a fiery article.—*The Ingleside*.

"The woman threw herself into the river," read the teacher. "Her husband rushed to the bank. Now tell me why her husband rushed to the bank?"

"To get the insurance money!" yelled the class.—*The Ingleside*.

## ESPRIT VERSUS KULTUR

Herr Hammerschlegel (winding up the argument)—I think you iss a stupid fool!

Monsieur—And I sink you a polite gentleman; but possible, is it, we both mistaken.—*Life*.

Suffraget—What is a party without women?

Mere Man (flippantly)—A stag party.

Suffraget—Exactly. And what, sir, would this nation be without women but stagnation?—*The Ingleside*.

No player shall pass the puck forward to any one of his teammates who is at the time of passing in advance of himself.—*New Haven Arena Program*.

Nor shall the player at any time be more than two yards behind himself.—*Record*.

Two men were seated in a small café. Eating limburger cheese and tripe; And one of them was heard to say, As he filled his corn-cob pipe, "My little doggie left me, Left me, sad to stay, Old Schmidt, the butcher, caught him yesterday."

Chorus:  
I didn't raise my dog to be a wiener,  
I brought him up to be my little pet;  
You never saw a puppy any cleaner,  
Oh, how I wish that he were living yet.  
I'd rather see him run around before me,  
Than have him served to me within a bun;  
But pup no more can run,  
They got him with a gun,  
I didn't raise my dog to be a wiener.  
—*Penn State Froth*.

Mrs. Atkins, dissatisfied with the number of times one man came to see her cook, spoke to her about it. "When I engaged you, Martha," she said, "you told me you had no man friends. Now whenever I come into the kitchen I find the same man here."

"Bress you, ma'am," smiled Martha, "dat niggah ain't no fren' ob mine."

"No friend? Then who is he?"

"He's ma husban'."—*Ladies Home Journal*.

## COMMENCEMENT CULLINGS

"Therefore, classmates, let us aim high; let us strive to be upright and true to our training."

"You young men are just embarking on the sea of life."

"Huh, it seems to me our Willie looks about as bright as any of 'em."

"As you bid farewell to these ivy-covered towers, whence so many have gone forth, let honesty and industry be your watch-words."

"Professor, that was a wonderful talk you gave them."

"Miss Gabby—Nellie!—I don't know how to say good-by, I—"

"Now, brothers, we all should have enough frat spirit to write to each other in the summer."

"You want to go to Europe? You'll go to work in the store next week, young man, or get out for good. I've paid your bills long enough."

"Are you coming back to this dub place? I'm not; I'm going to a live college next year."

"No, I didn't get that job, but I expect to hear from them any time; they said they'd keep my name on file."—*Puck*.

"Oh, the wind blows cool,  
And the wind blows free,  
And it brings a message of comfort to me."

THE cooling breeze that springs from foam-flecked waves is simply ordinary air in motion. You can enjoy the invigorating comfort, the exhilaration of moving air wherever you are, in home or office, from the silent wings of the

**G-E ELECTRIC FAN**

Automatically swinging from side to side its air flow is distributed to cool the whole room. The smooth-running mechanism of the G-E Fan is the result of over 20 years' experience. PHILIP S. WILSON, A. M., Prin., Box L, Newton, N. J.

## EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

Questions on health, work, business, home and everyday life will be answered by Mr. Purinton, in so far as may be possible, thru the Question Box or by personal letter. Please confine questions to one sheet. When books, institutions, manufactures, and other aids to efficiency are mentioned, they are not necessarily endorsed. The Service, being a clearing-house of information, assumes no responsibility for others.

93. Mr. T. A., Massachusetts. "A youth of eighteen, having pronounced musical ability, wishes to become a professional musician. His father, a successful business man, has long determined that the son shall follow his own career and later succeed to the business. How shall this conflict of wills and desires be settled? I believe such a problem is of frequent occurrence in American families."

First, the father should realize that a son's career is not a father's personal chattel, to be labeled and checked and dispatched, to order, like a piece of baggage. It is a law of heredity that the most brilliant children are often the opposites of one or both parents; and to choose a boy's work arbitrarily would be like forcing a lion to live in a dove's nest, or a dove in a lion's lair. Something will break.

But, secondly, the young man should make an honest effort to comply with his father's wishes, before deciding to follow his own sweet will. The father's experience of the world should be a fairly safe guide as to what the son should not do. Is the boy a real musical genius? Probably not. Find out—and act accordingly. Have his abilities tested by great teachers or performers in Boston or New York; they will probably furnish a cruel but kind veto on the young man's visionary career. Then he could learn music for his pastime and the pleasure of his friends, but adopt a line of work related to his father's business, and thus open the way for any future consolidation, as he progressed.

94. A DeWitt Clinton Student, New York City. "Kindly tell me how I can apply myself to a systematic cultivation of tolerance. I am sixteen years old. Minor things excite me greatly, and this seems bad for my health and efficiency."

You are to be congratulated on your humility and power of self-analysis, at your age. You are probably high-strung and intense, with nerves that will make you a dynamo of energy and influence, when you have learned to control them. Do not try to feel less—try to think more, and you will find how unimportant most things in life really are.

Intolerance is but ignorance, soured on itself. Read philosophers like Emerson, Plato, Confucius, Epictetus, Marcus Aurelius, and learn how the wisest men schooled themselves to be calm under all circumstances. Look thru the Psalms and memorize a few of those that especially breathe faith, contentment and poise. Study the life of Benjamin Franklin, learn how he applied himself to the cultivation of the different human virtues. Go to the broadest-minded man you know and ask him how he became so. When trivial things happen, say to yourself "nothing really matters but doing my best, and nothing shall disturb my peace of mind." Be in the open air all you can; exercise in a gymnasium

if possible; form the habit of breathing slowly and deeply at all times; get nine hours of sleep; make yourself eat and talk and move slowly; believe in the good which lies at the heart of everybody and everything; and finally, be patient with your own impatience. Tolerance is the ripe fruit of experience; too much of it in youth is premature and abnormal.

95. Prof. E. J. C., Texas. "Has a cure ever been found for waywardness in a boy who seems incorrigible, failing to respond to the best efforts of parents and teachers? If so, where can I obtain particulars?"

When your "wayward" boy is cured, he will probably become a leader in his family, school and community. A wayward boy is that rare individual—a human being with a will of his own; it is merely turned in the wrong direction. Ask Judge Ben B. Lindsey, care Juvenile Court, Denver Colorado, for his opinion as to the method, book or institution likely to solve your problem.

96. Mr. A. H. B., Ohio. "A young friend of mine who has a great desire for traveling has already traveled over four continents during the past eight years; altho having a good position, he yet feels unhappy, restless and discontented. What is the cause, and the means of relief?"

Travel is a diversion—not a life work. The very habit of being constantly on the go tends to produce a feeling of restlessness. Moreover, the lack of a permanent home and place of business, which the professional traveler is forced to undergo, does not fit in with our present stage of development. When we were nomads, we were rudiments.

What your friend needs is to travel not over the world, but into himself. It is a matter of common observation that those who have a mania for travel do not know the meaning of self-resource. The real mission of travel is to develop those perceptions and faculties which otherwise would remain dormant. Self-analysis and self-improvement wisely conducted will take the place of travel.

It is utterly impossible to tell the cause of anything without knowing all the conditions. The unhappiness of your friend might be traced to one of a hundred causes in the physical, mental, emotional or spiritual realms—entirely apart from the element of travel. We would suggest a personal consultation with an experienced, broad, sympathetic psychologist.

97. Mrs. D. P., New York City. "I am a widow in low financial circumstances. Thru no fault of mine but the dishonesty of a person whom I trusted, I have lost a sum of money that represented hard work for years. Can I hope to recover this, without having to pay an expensive lawyer? Your answer will oblige a friend also, who has met with a similar loss."

Apply to the Legal Aid Society, 239 Broadway, New York. Avoid cheap lawyers, particularly those who advertise. Many New York attorneys who would take a small case like yours would be small enough to take what was left of the proceeds.

98. Mr. S. F., Chicago. "Is advertisement writing a paying profession? Several schools, advertising a course of instruction, give the impression that their graduates easily earn \$100 a week. I have a steady position at low wages, and would give it up if I were sure of making even a third of \$100 a week, when graduated from the advertising school."

Dear man, hold on to that position, heed not the wiles of any rainbow-specialist with a \$100 salary wafted before you on a cloud of superheated atmosphere. If he would offer you a job writing "ads" for schools that teach ad-writing, we surmise that you could make this fat, fictitious wage. But not otherwise, in many years. Advertising writers and managers of great manufacturing concerns and department stores have reached a salary of \$15,000 a year. But where one man receives this, a hundred make not a fifth of it, and a thousand

Deposits made on or before July 10, 1915, will draw interest from July 1, 1915.

ALFRED ROELKER, President  
A. KOPPEL, Treasurer

barely get a living. Study books and magazines on advertising before you enroll with any school. Some advertising agencies keep their office open at night; connect with one of these and put in several evenings a week at a real apprenticeship of actual work. Then if you have talent in publicity lines, you should soon become aware of it.

99. Prof. H. E. M., Illinois. "For a number of years I have taught in a small school, giving the best service of which I am capable, and adopting improved methods when allowed to do so. There is no possible chance of promotion here, and I am greatly dissatisfied with so limited a field of usefulness. How can I change to a larger sphere?"

Obtain from your school, city or state librarian a list of the standard reviews, bulletins, and monthly or weekly magazines devoted to educational work. In these you should find advertisements of teachers' agencies, whose business it is to put efficient teachers in places where they will be appreciated and rewarded. Send for particulars of all these agencies; follow your best judgment in comparing their claims and enroll where the facilities and opportunities look most promising.

100. Mr. J. G. D., New Jersey. "I believe I could increase my efficiency by taking a course in Business English. What kind (school or home study) and whose course can you recommend?"

We should say that, in general, a home study course in English would be better than a class course, provided you have in your mental make-up the regularity, perseverance and self-winding motive necessary to complete a home study course. The choice largely depends on the use to be made of your linguistic knowledge. Would you be a more efficient salesman, or stenographer, or manager, or attorney, or what? Among the courses likely to benefit you are these: The Sheldon Course in Salesmanship (Sheldon School, Chicago); the I. C. S. Course in Advertising (International Correspondence Schools, Scranton, Pennsylvania); the Dickson Course in Memory Training (Dickson School, Auditorium Building, Chicago); the Kleiser Course in Public Speaking (Funk and Wagnalls, New York).

101. Miss M. J., New York City. "I hold a clerical position, which offers time for study in spare hours, and I do not like to waste this time. For years my desire has been to qualify for some kind of charitable work or social service, the mere fact of making a living does not seem worth while. Where can I get in touch with the right opportunities?"

Consult the American Institute for Social Service, Bible House, Astor Place, New York. Apply also to the School of Philanthropy, 105 East Twenty-second street, New York. Investigate the activities of the departments and organizations of Cooper Union, Ninth street and Third avenue, New York. And write to the secretary, Hull House, Chicago, for printed matter describing the social settlement work led by Miss Jane Addams.

102. Mrs. F. B. Y., Connecticut. "When a food or drink is guaranteed under the Pure Food and Drug Act of June 30, 1906, does not this mean that the product is warranted safe, by the Government? I have been doing my household buying on this understanding, but am told that certain foods thus guaranteed are injurious. What does the label, with U. S. Serial number, really mean?"

Nothing beyond the personal guarantee of the manufacturer or vendor. The U. S. Government does not officially approve the contents of any package bearing the label in question. The intent of the pure food law was to fix responsibility on the maker and seller of any commodity, so that in case of lawsuit or other prosecution by consumers or inspectors, the guilty party might be reached. While this law tends to make druggists and grocers more careful in avoiding contamination or adulteration, the law itself does not affirm the quality of an article which it labels.

## GREENWICH SAVINGS BANK

(Incorporated 1833.)

S. E. Cor. 6th Ave. and 16th St., New York.

### TWO-RATE INTEREST-DIVIDEND

SIX MONTHS ENDING JUNE 30, 1915.

On all sums from \$5 to \$3,000 to depositors entitled to interest under the by-laws at the rate of **FOUR PER CENT.** per annum on so much of every account as shall not exceed \$1,000; and at the rate of **THREE and ONE-HALF PER CENT.** per annum on so much of every account as shall exceed \$1,000, payable on and after JULY 19, 1915.

Deposits made on or before JULY 10, will draw interest from JULY 1, 1915.

JAMES QUINLAN, President  
CHARLES M. DUTCHER, Treasurer  
FRANCIS M. BACON, JR., { Secretaries  
B. OGDEN CHISOLM, }

## WESTINGHOUSE

### ELECTRIC & MANUFACTURING COMPANY.

A quarterly dividend of 1 1/4% on the PREFERRED stock of this Company will be paid July 15, 1915.

### PAYING FOR WAR SUPPLIES

The decline of sterling exchange last week to 4.76¼, the lowest figures reached in forty years, has excited much discussion in financial circles here and abroad as to the manner in which the Allies are to pay for the supplies bought in the United States. At present, the pound sterling is at a discount of about two per cent in comparison with the American dollar. It is by no means clear that this indicates any actual depreciation of the English currency. The discount is due mainly to the failure to pay war supply debts directly and promptly in gold, and to the volume of bills or drafts offered in New York by creditors to those who buy such bills. Prices decline when sellers outnumber buyers or when sellers compete in dealing with those who are not eager to buy.

This downward movement of exchange could be checked by the shipment of sufficient gold to meet the growing obligations, by the sale of large quantities of American securities held by residents of the debtor countries, or by establishing large credits for England—and also for France and Russia—in New York.

England desires to keep her stock of gold, as security for her great issues of war notes. There is a similar desire in France. We have been receiving gold, but the quantity has not been sufficient. Shipments to New York since January 1 amount to \$117,000,000, and \$90,000,000 of this came from the Bank of England's reserve in Canada. Soon after the beginning of the war, when our own country was the debtor, \$102,000,000 was sent to Ottawa from New York and other cities, to meet the obligation. But in a short time our country became the creditor, and the fund was not needed. Nearly all of it has come back, and \$50,000,000 of it has been received by J. P. Morgan & Co., the British Government's fiscal or purchasing agents. When the Ottawa fund is exhausted, gold will be shipped, it is said, from South Africa. But the shipments will be inadequate. It is estimated that the Allies will probably need \$100,000,000 worth of supplies from this country every month. The shortage of ammunition in the Russian armies is well known. France makes 170,000 shrapnel shells a day, but this is not enough. England's insufficient home supply has been the subject of much debate. It is said that the Allies' machine guns on both fronts use 30,000,000 cartridges a day.

## BE CAREFUL AND CAREFREE

CAREFREE bonds must be carefully selected. This is the kind of security we offer you. Our list includes a choice of short and long term bonds—all possessing the desirable features demanded by the most conservative investors.

We are successfully handling a varied list of Corporation and Municipal Bonds with several large Banks and are now in a position to offer this same class of security direct to individual investors.

**\$46,000,000.00—4½%**

Gold Corporate Stock of the City of New York

Payable June 1, 1965,  
—and—

**\$25,000,000.00—4½%**

Gold Corporate Stock (15-Year Serial) of the City of New York

Maturing annually from June 1, 1916, to June 1, 1930, inclusive.

The latter class will be sold only in series. For example: A single bid for \$15,000 is a proposal for 15 \$1,000 items maturing from one to fifteen years. No bids will be accepted for separate maturities.

Separate Proposals must be made for each class.

The Greater New York Charter provides that bids may be made for as small an amount as \$10 and in multiples of \$10 for each maturity. No bid for Corporate Stock in the serial form can be accepted for less than \$150.

Send bids for each class in separate sealed envelopes, enclosed in other envelopes addressed to the Comptroller. A deposit of Two Per Cent. of Par Value must accompany each bid. Such deposit must be in money or certified check upon a New York State Bank or Trust Company, or any National Bank.

For fuller information see "City Record," published at Nos. 96 and 98 Reade Street, New York, or consult any Bank or Trust Company. Send for descriptive circular to

**WILLIAM A. PRENDERGAST, Comptroller, City of New York,**  
Municipal Building, New York

English investors have sold a part of their American securities—from \$100,000,000 to \$200,000,000 worth—since the reopening of the New York Stock Exchange. Some think they still have \$1,000,000,000 worth. Reports from London say that they are not now inclined to sell. These securities, issued in the greatest of neutral countries, which is now enjoying a fair measure of prosperity, they regard as their most valuable possessions of the kind. They do not care to exchange them for British war bonds that yield only 4½ per cent. And the market value of these bonds will probably be depressed by enormous additional issues soon to be made.

If the English investor clings to his American securities, however, some of his French brothers are willing to see the French Government use their American bonds and stocks as collateral for a loan or a credit in New York. The movement was started by the Government in Paris, which has been buying, it is said, two standard issues of American railroad bonds and has procured the aid of the leading banks and credit companies. These, by circular, have urged their patrons and other holders to send in their American securities, which, having been exchanged for war bonds, are to be used in New York as security or collateral for the needed credit. The Government's direct participation is said to be limited to \$20,000,000, but the private companies may increase the credit to \$50,000,000 or even \$100,000,000. It is asserted that a part of the collateral thus procured is now on its way across the ocean.

The failure of England to establish a large credit in New York has not been explained. Some say that it has been due to negotiations for the joint guarantee of a very large sum by England, France, Russia and Italy. Reports from London intimate that the British Government may decide to offer Treasury bills in New York. As the price would probably be not lower than 98, and the interest is only 4 per cent, such bills might not find a good market here. Unless some earnest effort is made to sustain sterling exchange, the rate will continue to decline. But the present discount of about 2 per cent is not large when compared with the discount against us of more than ten times as much soon after the war began, when the pound sterling was \$6 and even \$7 in New York.

The following dividends are announced:

D. C. Heath & Co., preferred, quarterly, 1¾ per cent, payable July 1.

Importers' and Traders' National Bank, 12 per cent, free of tax, payable July 1.

Bank of America, semi-annual, 14 per cent, free of tax, payable July 1.

Electric Storage Battery Company, 1 per cent on both common and preferred, payable July 1.

American Telephone and Telegraph Company, coupons from 4 per cent Collateral Trust Bonds, payable July 1.

United Shoe Machinery Corporation, preferred, quarterly, 1½ per cent; common, 2 per cent; extra 10 per cent in cash, 10 per cent in common stock, all payable July 6.

Standard Milling Company, common, 3 per cent, payable July 15.

United Fruit Company, quarterly, 2 per cent, payable July 15.

American Agricultural Chemical Company, preferred, quarterly, 1½ per cent; common, quarterly, 1 per cent, payable July 15.

# Insurance

Conducted by

W. E. UNDERWOOD

L. H. L., Devil's Lake, N. D.—The company is financially sound and its policies are properly protected by reserves. I do not share the opinions of its managers respecting its dividend-producing ability and consequent lower net cost, as compared with well-managed annual dividend companies. The advantages it claims are prospective rather than obvious and, as I view it, will not yield the results predicted.

M. M., Marion, Ind.—The situation is a difficult one. Your contract with the other policyholders provides that you must carry the policy to maturity or forfeit the accumulated dividends. I have never been able to discover an alternative that did not result in sacrificing the dividends. I doubt the ability of even the executive department of the company to afford you any relief; but will nevertheless advise you to write to the New York office, giving number and amount of policy, stating case fully and asking if they can, by exchanging what you have for an annual dividend policy, save all or a part of its dividends. The prospect is not encouraging.

D. W. T., Des Moines, Iowa.—In the matter of security furnished policyholders by such life insurance companies as have the approval of the several state insurance departments, there is no difference between the stock and mutual organizations. The rates of the stock companies which issue non-participating policies are from twelve to fifteen per cent lower than the companies, either stock or mutual, the policies of which provide for participation in "dividends," or savings. There is rivalry between the non-participating and participating companies on the score of net cost, the decision always resting with the prospective insured. While the expense ratios of the different companies vary, there is little to choose between them in considering the older, well established, capably managed companies.

E. C. S., Madison, Wis.—As I understand your communication, you are about to enter the life insurance business as a solicitor and want information on three points: (1) the financial standing and general reputation of a company which you name; (2) the comparative advantages and disadvantages of the stock and mutual systems; (3) what influence is exerted by personality in the work of a solicitor. I answer in order. (1) The company named is financially sound; has a good average management; is conducted on sound underwriting lines; possesses an active agency force and writes a comparatively large new business each year. (2) Stock life companies may be divided into three general classes: those which issue non-participating policies only, those which write participating policies only and those which write both. All of these are controlled by the stockholders who, of course, get dividends on their investments. Mutual companies seldom write anything but participating policies and all of them are controlled by the policyholders. Most of the time this control is not exercised, but in times of stress and strain it is easily set in motion. (3) Personality is a tremendous force; it oftentimes "makes the worse appear the better cause" in life insurance.

The drastic and revolutionary fire insurance bill formulated by Superintendent Potts of the Illinois Insurance Department for the consideration of the legislature of that state, is probably dead. The legislative commission appointed to hold hearings on the bill reported against it, presenting instead a substitute bill along reasonable lines.

## Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of \$100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of.....	\$27,964,578,109.00
Received premiums thereon to the extent of.....	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers.....	90,801,110.00
Of which there have been redeemed.....	\$3,811,450.00
Leaving outstanding at present time.....	6,989,660.00
Interest paid on certificates amounts to.....	23,020,223.85
On December 31, 1914, the assets of the company amounted to.....	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

# A Number of Things by Edwin E. Slosson

THE silhouette is coming again into fashion. There is a suspicion of crinoline about the new dresses. I see stylish young ladies wearing cameo pins such as I saw as a child on my mother's breast, but which in the later years of her life she kept laid away in her bureau drawer, too old-fashioned to wear and yet too endeared to discard. Sea stories are again popular and a sort of transcendental mysticism bobs up unexpectedly in the newest fiction.

Unless then all signs fail the time has come for a Melville revival. Fashions in books like fashions in dress recur in cycles by some mysterious law of mass psychology which if one could diagram and prognosticate by correlation with sunspots or otherwise would make his fortune either as costumer or publisher. Herman Melville is due like other fashions of the fifties and if he does not again ride the wave of popularity 'tis no fault of the prophet's but due to unkennd influences.

I seem to see before me a stately *Typee*, a proof before letters, *edition de luxe*, with colored views of the Marquesas and, of course, the frontispiece, by John La Farge, of Fayaway standing like a mast in the canoe using her tappa robe as a sail. And a companion volume of *Omoo*, but the pictures of the Tahitians are not by Gauguin, St. Caxton forbid! Perhaps even the books of his later life now pronounced unreadable may at length be elucidated by the coöperative study of Melville societies. What a chance for an annotated edition of *Moby Dick* with the symbolism classified, the cetology corrected and "the illusions all explained away" as the Freshman said of his English teacher's methods. There's opportunity for a fine discussion on whether the White Whale, which Captain Ahab pursues thru the four oceans, stands for the Devil or the Ideal. And was Ahab mad like Hamlet or like Hamlet sane? How the commentator's teeth must ache to get hold of such passages as these:

Is it I, God, or who, that lifts this arm? But if the great sun move not of himself; but is as an errand-boy in heaven; nor one single star can revolve, but by some invisible power; how then can this one small heart beat; this one small brain think thoughts; unless God does that beating, does that thinking, does that living and not I? By heaven, man, we are turned round and round in this world like yonder windless, and Fate is the handspike. Look! see yon Albicore! who put it into him to chase and fang that flying fish? Where do murderers go, man? Who's to

doom, when the judge himself is dragged to the bar?

Ye two are the opposite poles of one thing; Starbuck is Stubb reversed and Stubb is Starbuck; and ye two are all mankind; and Ahab stands alone among the millions of the peopled earth, nor gods nor men his neighbor! Cold, cold—I shiver!—

Ahab is forever Ahab, man. This whole act's immutably decreed. 'Twas rehearsed by thee and me a billion years before this ocean rolled. Stand round me, men. Ye see an old man cut down to the stump; leaning on a shivered lance; propped up on a lonely foot. 'Tis Ahab—his body's part; but Ahab's soul's a centipede, that moves upon a hundred legs.

Ahab is mad with the madness of Nietzsche, obsessed by the fright of the endless return. "Men tragically great are made so thru a certain morbidness"—that's Nordau. "Thou great democratic God"—that's Overstreet. Melville is very modern.

*Moby Dick* is filled with all the faults the rhetorics condemn but filled with a vitality that no rhetorician can impart. A woof of Conrad crost by warp of Blake makes up the web of it. Or if we must be biographical we should say rather Dana and Hawthorne. The plot is that of the pirate scenes of *Peter Pan* where the crocodile who has bit off the captain's leg chases him to get the rest. Only Ahab is more courageous than the pirate and pursues the great White Whale who "unmasted" him. But does he really pursue the Whale or does the Whale tow him by the harpoon rope? Is a push different from a pull or are they merely different aspects of one indivisible operation?

But this is anticipating the Melville Society and robbing my hypothetical commentator of his glory by making things plain before he gets a chance at them. Epictetus diagnosed the commentator when he said: "If Chrysippus had not been obscure, thou hadst not been famous."

Away with allegory! *Moby Dick* is a rattling good sea-yarn with much valuable information on the mammals of the sea, especially whales and whalers. Here is a passage that recalls the days, now vanished utterly, when America sent out 700 whaling vessels, manned by 18,000 men, which brought back from the deep sea an annual harvest of \$7,000,000:

And thus have these naked Nantucketers, these sea-hermits, issuing from their ant-hill in the sea, overrun and conquered the watery world like so many Alexanders; parcelling out among them the Atlantic, Pacific and Indian Oceans, as the three pirate powers did Poland. Let America add Mexico to Texas and pile Cuba upon Canada; let the English overswarm all India and hang out their blazing banner from the sun; two-thirds of this terraqueous globe are the Nantucketer's. For the sea is his; he owns it, as Emperors own Empires; other seamen having but a right of way through it. Merchant ships are but extension bridges; armed ones but floating forts; even pirates and privateers, though following the sea as highwaymen the road, they but plunder other ships, other fragments of the land like themselves, without seeking to draw their living from the bottomless deep itself. The Nantucketer, he alone resides and riots on the sea; he alone, in Bible language, goes down to it in ships; to and fro ploughing it as his own special plantation. *There* is his home; *there* lies his business, which a Noah's flood would not interrupt, though it overwhelmed all the millions in China. He lives on the sea,

as prairie cocks on the prairie; he hides among the waves, he climbs them as chamois hunters climb the Alps. For years he knows not the land; so that when he comes to it at last, it smells like another world, more strangely than the moon would to an earthsman. With the landless gull, that at sunset folds her wings and is rocked to sleep between billows; so at nightfall, the Nantucketer, out of sight of land, furls his sails, and lays him to his rest, while under his very pillow rush herds of walruses and whales.

From a Hungarian journalist who is in this country engaged in preparing a three-volume book on the United States we have received an offer of services couched in the following language:

I had not found a single criticism in the American Press in the present cataclystical world-war, which would have dived in the fountain-head of the reasons and premisses with scientific intensity. For example, the American Press—generally—omits from point of view the analization of that facts, that—up to this time—only one compact and a national-state-life living Nation stands besides the German Nation in its life struggle: the Hungarian Nation.

Well, the subject of my offer is this, that setting out from this very interesting fact and through a par excellence Hungarian national point of view: I will reduce the premisses of this gigantic war of such preliminaries, which yet are unknown for the most part and the recognition of this, will put these into a very surprising and interesting dilucidation even from the historical side.

I have heard that the Hungarian is an agglutinative language, but I never realized what that meant before. Still I have no fault to find with his English. It's infinitely better than my Magyar.

A theater in the next block offers this program:

## HOME SWEET HOME AND THE BATTLE OF THE SEXES

Two magnificent features for ten cents.

The movies are getting very close to life nowadays. Many a man who has entered for the first of these has found himself let in for the second.

The London *Times* in discussing the temperance movement in America says that prohibition has been adopted in ten states including "Washington, the seat of Government." Westward the star of empire takes it way, but this is anticipating by a long shot the ambitions of the Pacific Coast.

The New York *Times* heads its account of the relaxation of the requirements for recruits to Kitchener's second army in this fashion:

## BRITONS OF 5 FEET 2 UP TO 40 MAY ENLIST

The soldiers near the upper limit should be tall enough to do battle in inundated Flanders where even Frederick's famous grenadiers were too short to go.

The thing we long for that we are for one transcendent moment.—Lowell.

Then I'm a lobster at this moment.

The evil that men do lives after them. The good is oft interred in their books.
